Mosques commonly owned libraries containing manuscripts, and not exclusively of the Quran. Some of them are even renowned for the antiquity of their collections (Qarawīyīn/Fez, Qayrawān/Tunisia). It would have been surprising if the Great Mosque of Damascus, one of the oldest in the Muslim world, had not been in the same position. In fact, this was the case, but unfortunately it suffered from several fires which destroyed most of its original structure. The last one happened in 1893 and at that time the Ottoman authorities decided to transfer to Istanbul all the manuscripts that had survived, even incompletely. They were installed in the collections of the Museum of Turkish and Islamic Arts where a rough handlist was drawn up (Şamdan gelen evrak: Damascene papers). Nobody studied them until 1963 when the Sourdels heard of their existence. They were presented with thousands of fragments of manuscripts and documents written on parchment or paper, most of which had been damaged by the fire or water. Going through them, they soon realized that they mainly consisted of religious works, but surprisingly some archival material of a private nature was noticed. They soon published the results of their discovery in two articles describing the contents of the collection.[167] If the Quranic fragments, some of which go back to the first centuries of Islam, were examined quite quickly, the other documents have not so far been fully considered. The Sourdels published some of them, mainly dealing with the Fatimid and Ayyubid periods.[168] Two of their articles dealt with three documents going back to the beginning of the thirteenth century.[169] One example concerns a particular kind attested from the Fatimid period: the certificates of pilgrimage by proxy. These have been the subject of several articles by the Sourdels covering different periods,[170] and recently the documents pertaining to the Mamluk period were

studied.[171] This article focuses on 21 of the certificates that have survived. Some of them are dated, others are not but can be dated quite precisely thanks to the study of the stylistic evolution noticed by the Sourdels. They all go back to the Qipchak period (the oldest dated 1282, the most recent 1304–5). Written on the same kind of scroll used by the chancery (the longer measures 1.60 m., but was originally bigger [2 m.]), these certificates were displayed by their owners. These documents might seem anecdotal as they give little historical information (rather religious formulas, few names, except that of the beneficiary). However, once more, it is the study of the evolution of this kind of document over the centuries that is more meaningful for history. Indeed, the Sourdels demonstrated that a comparison with other periods clearly indicates that in the Mamluk period this kind of document was no longer produced for prominent figures of Damascene society (princes, etc.), but rather only for other classes. This could indicate that during the Mamluk period, the military aristocracy of governors and officers who succeeded one another at a frenetic pace had little concern for their local reputations, since the role of capital city had been transferred from Damascus to Cairo. The ruling amirs in Damascus had no incentive to make a show for the local population of the importance that the pilgrimage to Mecca held for them.

2. Maktabat al-Asad (Damascus)

The recent publication of a book gives me the opportunity to speak about a kind of document rarely mentioned by the sources: reading certificates. This is perhaps due to the fact that this kind of document is only found in manuscripts, yet these certificates are authentic documents, important in many respects. It was Georges Vajda who first studied the collection of manuscripts in the Bibliothèque Nationale, the result of which was published in book form.[172] Others of his articles were devoted to manuscripts held in Damascus (the then Ẓāhirīyah) and Tunis.[173] The Ẓāhirīyah library (now at the al-Asad Library) was known to have rich holdings of this sort of document, given that an important part of its manuscripts came from the library of an influential Hanbali family, the Maqdisīs, who were originally

[173]Georges Vajda, *Le Dictionnaire des Autorités (Mu‘ǧam aš-Šuyūḫ) de ‘Abd al-Mu′min ad-Dimyāṭī,* Publications de l′Institut de recherche et d′histoire des textes: documents, études et répertoires, no. 7 (Paris, 1962); idem, ″La mašyaḫa d′Ibn al-Ḥaṭṭāb al-Rāzī: Contribution à l′histoire du sunnisme en Egypte fāṭimide,″ *BEO* 23 (1970): 21–99.

from Jerusalem and settled in Damascus in the twelfth century.[174] Most of these manuscripts were read during recitation sessions and the names of all the participants were written at the end of the work read on that occasion. The structure of the reading certificate is invariably the same: it provides the names of the participants, the shaykh who listens *(musmiʿ),* the reader *(qāriʾ),* the writer of the certificate *(kātib),* the date, and finally the place. These certificates are thus significant documents for social history: they provide us with precious information on the way texts were transmitted, the education system, the biographies of scholars, the culture of Damascene inhabitants, the families, their occupations, the toponyms, and last but not least the role played by women in this particular case. This important collection has finally been studied at length by Stefan Leder with the help of other researchers.[175] They went through 86 manuscripts collecting 1,350 certificates that appear on 524 folios and date from 1155 to 1349. The results are impressive: more than 10,000 names and 250 toponyms listed. The work is to be commended given the difficulties presented by the discouraging scripts, but also because a volume of facsimiles for all the certificates was published subsequently.[176] There is no doubt that such a book will foster further research on the ulama in Damascus, and in this sense it is to be hoped that other studies will be published for the remaining certificates held in the Maktabat al-Asad, as well as elsewhere in Cairo, Istanbul, India, and in European and North American libraries.

3. Private collections

Private collections which hold family archives must exist in the Middle East. Most of them date from the Ottoman period, though even in this case they can still be useful for Mamlukists as some of them consist of copies made during the Ottoman period of earlier specimens. An interesting example of this was recently studied by Marco Salati,[177] who edited and studied a document dated 1066/1656, but dealing with matters of the Mamluk period, preserved in the private archives

of the Kawākibī family in Aleppo. Such discoveries will probably be made in the future, depending on the good relations established by a scholar with a local family.

UNSUSPECTED PLACES

I will finish this census with an account of the most recent and challenging discovery in terms of Mamluk documents. These have been found in what might be called an unsuspected place. As early as the nineteenth century, it was known that Islamic documents could have been recycled as new writing material in Europe, at a time when paper was still rare in this part of the world. A unique example of this reuse was published at that time by Michele Amari.[178] In this case, the fragments were found in the notarial records of Giovanni Scriba of Genoa, where contracts dating from 1154 to 1166 constitute a *terminus ante quem* for the reuse of these fragments of an Arabic document. In Amari's eyes, it could be nothing other than an official document from the Fatimid period, though the surviving parts of it did not allow a reconstruction of a coherent text or precise date.

This example makes us wonder if such reuse of old documents was not also prevalent in Islam for the same reason (scarcity of paper).[179] I have answered this question with the discovery of an unpublished autograph manuscript of al-Maqrīzī.[180] One of the main features of this notebook is that it was partly written on Mamluk chancery documents (scrolls) that were cut into pieces at a given period due to the high cost of paper. Put together to form quires, they were used by this historian as scratch paper for his drafts and notebooks. The greatest challenge was to develop a technique that would allow a coherent reconstruction of the original documents, hoping that they could be dated quite accurately. Fortunately, this was the case, and among the five documents reconstructed, I was able to precisely date three of them from 1344, demonstrating, thanks to the sources, that these were grants of fiefs (sing. *manshūr iqṭāʿī*).[181] This sort of document was previously attested only by a unique example from the reign of Qānṣūh.[182]

While the document discovered by Amari was of no great interest, the fragments preserved in al-Maqrīzī's autograph manuscripts are undoubtedly valuable and

current research should be directed to the other autograph manuscripts of al-Maqrīzī, where more than 400 leaves have been identified as recycled documents.

Conclusion and Prospects

We may conclude that the situation of documents for the Mamluk period is not as disastrous as it has generally been presented. An approximate figure would be meaningless given that, as we have seen, several collections still remain to be studied. Compared to other periods and areas in Islam, Mamluk documents offer the researcher more than expected at first sight. Rather than lamenting our situation, research should proceed in various ways: edition with translation and diplomatic commentary, thematic studies, and searching for new documents.

The first of these issues should receive more attention: the temptation to study large sets of documents rather than editing, translating, and commenting on individual documents prevails in some cases. One should keep in mind that published documents, besides the fact that they enlarge the corpus and offer new elements for the comparison of formularies, provide not only data for further research on a subject, but also for related topics like diplomatics, paleography, the history of paper, and other matters unsuspected by the editor.

In this sense, the following *vade mecum* should be observed step by step by any person wishing to publish a document:

(1) physical description: description of the support material and of the physical appearance. Paper is preeminent for documents from the Mamluk period. Our knowledge of the paper of this period, and of Arabic paper in general, limits itself to a few certitudes. For sure, codicology and all related topics are still in their infancy and will not grow without detailed analysis of individual items. Careful description of the paper found in Mamluk documents will make it possible to distinguish it from paper used in manuscripts of this period.[183] If possible,[184] paper should be described in detail, indicating its color, the presence of chain lines (number, assembled or not, distance between groups) and laid lines (thickness, space occupied by 20 of them). Furthermore, the physical appearance provides a mass of information on the nature of the document itself, especially in the case of chancery documents where strict rules prevailed. The document should be accurately

---

[183]For a first attempt to study this kind of paper, see Geneviève Humbert, "Le manuscrit arabe et ses papiers," *Revue des mondes musulmans et de la Méditerranée* 99–100 (2002): 55–77, particularly 68–74 for papers used by the chancery.

[184]It is true that most scholars studying Arabic documents usually work with a reproduction (photograph, microfilm) which does not allow this kind of analysis.

measured[185] and different measurements taken into consideration (width of the space between two lines of text and between introducing and concluding formulas, width of the right and upper margins).

(2) paleographical description: Arabic paleography has also been quite neglected although Greek, Latin, and Western scripts have been categorized for a long time. The editor should not forget to mention all the peculiarities of the script as well as orthographical features.

(3) grammatical commentary: all the inconsistencies noted in comparison with the standard rules of Arabic grammar. Philological notes will help future editors to understand some seemingly incoherent readings, as well as linguists working on the various levels of Arabic in the Middle Ages.

(4) diplomatic commentary: due to the lack of a manual of diplomatics for the Mamluk period, this kind of commentary is a must and should not be neglected. Comparison with the sources (manuals and chancery anthologies) and evidence preserved from all periods, due to the relative continuity of formularies through the various dynasties, allow an improved knowledge of the features of diplomatics in Islam.

(5) historical commentary: the editor must consider all the data provided or not by the document itself (identification of persons, places, explanation of technical terms, study of the context, of what is implied by the document, etc.).

(6) reproduction: Reproduction is essential for many reasons. A reproduced document will be available to all and for centuries. Furthermore, all the descriptions made and the readings proposed by the editor can be checked by anyone else wishing to study the document for another purpose. Several systems have been developed, some being preferable to others. The best solution, I believe, is to be found in Risciani's book,[186] where the document is reproduced in the left margin with the proposed reading in the other part of the page, respecting the spacing between lines, the disposition of words (horizontally and vertically), and even the size of characters noticeable in some parts of the document.

Besides this, there are urgent requirements which must be met. It remains true that few students are interested in the study of Arabic documents. Perhaps the difficult handwriting commonly used by careless clerks[187] discourages them. Courses devoted to paleography are not to be found in the curricula of most universities. In

---

[185]In the case of scrolls, the approximate measurements of a single sheet should be indicated as well as the width of the glued part.

[186]Risciani, *Documenti e firmani*.

[187]As quoted by Richards, "The qasāma in Mamlūk Society," 251, "al-Asyūṭī strongly recommended that clerks, especially the clerk of the court, should write well and not curtail letter shapes nor run

this respect, the project of the Arabic Papyrological School[188] could help as a first step to attract students, but a more profound reflection on the necessity of reintroducing this discipline in the programs of universities is required.[189]

There is a pressing need for a microfilming project for various reasons. Firstly, it allays the danger of destruction of documents. Secondly, we can see that once a collection is put at the disposal of the scientific community (via printed catalogues, microfilms, or photographs), the documents are studied by a wide range of scholars and research moves forward quickly. The foundation of an institute for Arabic archives, similar to the Institute of Arabic Manuscripts in Cairo, would be most welcome. Before this ever happens, an easy way to foster research would be the use of the Internet. Collections that have already been microfilmed could easily be made available to the scientific community through this medium (at least those already published).

An intermediate measure would be the publication of an analytic bibliography classified according to the different kinds of documents published with mention of the place of conservation, date of the document, content, and type. What we need is something similar to what Roemer did in 1966 for the Mamluk official documents,[190] a work which has to be reexamined in view of the new discoveries made since that date.

Finally, there is an urgent need for a manual of diplomatics for the Mamluk period. In 1966, Hans Roemer already stressed this lacuna in these words: ". . . die Diplomatik der Kanzleien des islamischen Orients den Kinderschuhen noch nicht entwachsen ist."[191] It is not at all scientifically acceptable that this matter has been dealt with for other periods and areas for which fewer or an equal number of documents have been preserved.[192] Since that statement, substantial contributions to the field of diplomatics have been made, but always on specific types of

---

them one into another, all of which produces error. He recalls that a certain Qadi in Egypt chastised careless clerks, with the result that legal documents of all sorts in his time were written accurately and clearly."

The Conquest of Arsūf by Baybars: Political and Military Aspects*

A modern-day visitor to Arsūf[1] cannot help but be struck by the neatly arranged piles of stones from siege machines found at the site. This ordering, of course, represents the labors of contemporary archeologists and their assistants to gather the numerous but scattered stones. Yet, in spite of the recent nature of this ″installation,″ these heaps are clear, if mute, evidence of the great efforts of the Mamluks led by Sultan Baybars (1260–77) to conquer the fortified city from the Franks in 1265. This conquest, as well as its political background and its aftermath, will be the subjects of the present article, which can also be seen as a case-study of Mamluk siege warfare.

The immediate backdrop to the Mamluk attack against Arsūf was the events of the preceding weeks. At the end of 1264, while Baybars was hunting in the Egyptian countryside, he received reports that the Mongols were heading in force for the Mamluk border fortress of al-Bīrah along the Euphrates, today in south-eastern Turkey. The sultan quickly returned to Cairo, and ordered the immediate dispatch of advanced light forces, which were followed by a more organized, but still relatively small, force under the command of the senior amir (officer) Ughan Samm al-Mawt (″the Elixir of Death″), and then by a third corps, together with

---

*I would like to thank Prof. Israel Roll of Tel Aviv University, who conducted the excavations at the site, and was most helpful when he showed us the site. He also kindly gave permission to reproduce maps and illustrations. The assistance of the archeologist Mr. Haggi Yonatan, the manager of the newly-established national park at Arsūf, is gratefully acknowledged. I am very thankful to my colleague Dr. Roni Ellenblum (Hebrew University), who has been my main interlocutor on Muslim-Frankish warfare for almost two decades, and with whom I discussed many of the matters that arise in this article. Finally, I would like to record my appreciation to my student, Ms. Kate Raphael, who coauthored the article which follows this one, and brought some of the archeological evidence to my attention.

[1]Grid reference for the entire site in maps of the Survey of Israel: 1317–1325/1775–1783. During classical times, the city here was known as Apollonia. Today, the site falls within the municipal boundaries of Herzliyya. Some 500 meters to the south is the important Maqām Sīdnā (<Sayyidunā) ʻAlī, about which see below. For recent archeological work on the pre-Islamic periods, see *Apollonia-Arsuf: Final Report of the Excavations,* vol. 1, *The Persian and Hellenistic Periods,* ed. Oren Tal and Israel Roll (Tel Aviv, 1996). A general survey of the Crusading period is found in I. Roll, H. Yonatan, Y. Tepper and T. Harpak, ″Apollonia-Arsuf in the Crusader Period in Light of Recent Discoveries,″ *Qadmoniot* 33, no. 1 (1999): 18–31 (in Hebrew).

important officers. Orders were also dispatched to Syria so that the governor of Aleppo and the Ayyubid prince of Ḥamāh would join the expeditionary force, together with the troops of Damascus. Finally, the bedouins of northern Syria, under the command of their leader (ʻĪsá ibn Muhannā) were ordered to cross the desert so as to raid Ḥarrān, apparently to act as a diversion.[2] It should be noted that according to Ibn ʻAbd al-Ẓāhir, Baybars′ privy secretary and the main source for these and the following events, the sultan also received intelligence that unspecified Franks had informed the Mongols that at this time the Mamluk army was split up throughout the country for the (annual) grazing of their horses, and thus it was an appropriate time to launch a raid on the northern frontiers of the sultan′s realm.[3]

Throughout the month of January 1265, Baybars busied himself with preparing the lion′s share of his army for the campaign. He left Cairo on 27 January and arrived at Gaza thirteen days later. Initial reports from al-Bīrah indicated that this was a large-scale Mongol raid, perhaps the beginnings of a serious offensive into Syria. The sultan wrote, ordering Ughan to make haste, although he himself elected to remain in Palestine. It appears that Baybars thought it prudent to wait upon developments before committing his forces to the north. He devoted himself to hunting in the region. Subsequently at his camp near Yabnā (Ibelin), he received a report that the Mongols—facing concerted opposition from the garrison at al-Bīrah and learning of the approach of the relieving force—had withdrawn.[4] Baybars received this happy news on 26 Rabīʻ II 663/15 February 1265, four days after the Mongols′ retreat, a clear indication of the efficiency of the Mamluks′ communication network, based on a pigeon-post and horse relays. The commanders of the expeditionary force received orders to remain in the area of al-Bīrah to assist *inter alia* in the repair of the fortress. A large share of the army, then, would not be participating in the events in Palestine of the next few weeks, although the sultan still had a significant force with him.[5]

The danger from the Mongols having been averted for the time being, the sultan now turned his attention to the local Franks. First, he organized a hunting expedition in the forests of Arsūf, interestingly enough to hunt lions *(al-sibāʻ)*. It is clear that the sultan′s goals were more than just sport: he was able ″under cover″

---

[2]For these events, see Peter Thorau, *The Lion of Egypt: Sultan Baybars I and the Near East in the Thirteenth Century,* tr. P. M. Holt (London and New York, 1992), 158–59; Reuven Amitai-Preiss, *Mongols and Mamluks: The Mamluk-Ilkhānid War, 1260–1281* (Cambridge, 1995), 111–12.

[3]Ibn ʻAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir,* ed. ʻAbd al-ʻAzīz al-Khuwayṭir (Riyadh, 1396/1976), 222.

[4]It is also possible that news had reached the besiegers that Hülegü Ilkhan had just died. See the discussion in Amitai-Preiss, *Mongols and Mamluks,* 113 and note 29.

[5]Ibid., 112–14; Thorau, *Lion of Egypt,* 112.

to gather intelligence about the nearby fortifications; the large-scale hunt was also an opportunity to put the troops through maneuvers.[6] Thereupon, he made a quick jaunt to Arsūf and Caesarea (Qayṣarīyah) to check them out before returning to his camp, now at the Awjā' or Yarkon River. From there he ordered the construction of unspecified siege machines *(manjanīqāt)* from locally gathered wood: four large ones were built, besides numerous small machines. Orders were sent out to unnamed castles to assemble more siege machines, as well as skilled workers and stonemasons *(al-ṣunnā' wa-al-ḥajjārīn)*. Meanwhile, the already present troops were ordered to build ladders, probably also from locally-collected wood. From Awjā' the sultan moved with his troops to 'Uyūn al-Asāwir. Al-Maqrīzī writes that this location was in Wādī 'Ārah and 'Ar'arah.[7] Although this is not in his apparent source (Ibn al-Furāt), al-Maqrīzī appears to have acquired reliable information, either from an independent source or from his own geographical knowledge.[8] In Sheet XII of the maps of the *Survey of Western Palestine* (ca. 1880), I have found a site called 'Uyūn al-Asāwir, but it is in the Jordan Valley, near Wādī al-Māliḥ, about 50 kms southeast of Caesarea. This is clearly not a candidate for the location in question. But in Sheet VIII, one finds immediately south of the entrance of Wādī 'Ārah a location called Tall al-Asāwir.[9] This surely must be the location referred to by the sources, and is about 15 kms in a straight line from Caesarea. Although it may have taken Baybars a bit out of his way, it is not illogical for him to have gone there: this may have been a feint, and in any event he could make sure that no Frankish forces were going to surprise him from the north, via one of the main routes through the Carmel range. From there the sultan moved to the coast: on 9 Jumādá I 663/27 February he appeared suddenly at Caesarea.[10] I can do no better than quote Peter Thorau's biography of Baybars at this point:

---

[6]This is similar in intent, if not in scope, to the hunting circles organized by the Mongols; see David Morgan, *The Mongols* (Oxford, 1986), 84–85; S. Jagchid and Paul Hyer, *Mongolia's Culture and Society* (Boulder and Folkestone, 1979), 27–37. This evidence leads me to revise a statement in *Mongols and Mamluks,* 218, that the Mamluks did not conduct cavalry exercises *cum* hunting expeditions.

[7]Wādī 'Ārah (in Hebrew: Nahal 'Īrōn) cuts across the Carmel range from the southwest to the northeast; the northern entrance is near Megiddo, while its southern opening is about 15 km as the crow flies to the east of Caesarea. 'Ar'arah is a village some five miles to the north of the southern entrance of Wādī 'Ārah. Following the modern roads, it is about a 25 km march from this village to Caesarea.

[8]Al-Maqrīzī, *Kitāb al-Sulūk li-Ma'rifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah et al. (Cairo, 1934–74), 1:526. On his reliance for these events on Ibn al-Furāt, *Tārīkh al-Duwal wa-al-Mulūk,* who in turn cites by name Ibn 'Abd al-Ẓāhir, *Rawḍ,* see below.

[9]C. R. Condor and H. H. Kitchener, *Maps of Western Palestine* (London, 1880), sheets VIII and XII.

[10]This summary is based on Ibn 'Abd al-Ẓāhir, *Rawḍ,* 229–30.

> [Caesarea] was immediately encircled and stormed by the Muslim army. Taken by surprise, the defenders gave up the gates and walls after a short resistance, and withdrew into the citadel, while the attackers stormed into the town. Now began the struggle for the citadel. It lay on a peninsula, which, without naval support, could in practice be attacked from the town on one side only. . . . [T]he citadel was the target of stones and Greek fire from the catapults, and its defenders were overwhelmed by a shower of arrows from the siege-towers. . . . When a siege-tower was successfully brought up to the wall, the sultan himself joined in the fighting, and satisfied himself of *[sic]* the siege operations. . . . On 15 Jumādā I/5 March the defenders in Caesarea surrendered the citadel, withdrew to ships . . . and sailed to Acre. Baybars ordered the town and citadel to be razed, probably in order to prevent once and for all Caesarea ever again being used as a bridgehead for a Crusading army.[11]

During the siege, Baybars had dispatched small forces to raid in various directions: Syrian troops went off to Baysān, while nomads—bedouins and Turcomans—harried the region of Acre.[12] No doubt these raids were aimed at both gathering intelligence and keeping the Franks off balance and thus unable to extend assistance to their brethren in Caesarea. In the aftermath of the conquest, while the majority of the army was busy dismantling Caesarea, Baybars himself raided the outskirts of ʻAthlīth, before succeeding in taking Haifa, which was also destroyed.[13] He thereupon returned to Caesarea, where the destructive work continued. There a Frankish delegation of unknown provenance was warmly received. Meanwhile, more siege machines arrived from al-Ṣubaybah in the Golan, and Baybars was ready for his next goal, which he kept secret for the time being. On 29 Jumādá/19 March he left Caesarea; two days later he took up position at Arsūf.[14]

Before proceeding to the description of the actual siege of Arsūf, I would like to make two points. The first is of a historiographical nature. Virtually all of our information on the conduct of the siege, as well as the preceding events and

[11]Thorau, *Lion of Egypt,* 160–61.

[12]Ibn ʻAbd al-Ẓāhir, *Rawḍ*, 231.

[13]Ibid., 234, who also describes the dispatch of a force which destroyed a castle *(qalʻah)* called al-Mulūḥah, whose location is unclear. See Thorau, *Lion of Egypt,* 180, note 11. Haifa was later recovered by the Franks, and it was finally occupied by the Mamluks after the fall of Acre in 1291 ("Hayfā," *The Encyclopaedia of Islam,* 2nd ed., 3:325.)

[14]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 234–35.

subsequent developments, is derived from the Arabic sources, although some details can be gleaned from the Frankish sources. As is well known, Mamluk historiography is extremely rich and voluminous. At times, however, this gives a mistaken impression of a surfeit of different accounts, when really all we have is the same account repeated or summarized, usually more or less faithfully, by a series of writers. (Although, it should be noted, that even in this case, all versions should be checked, since occasionally a later author introduces significant information from a different source, even one which is not extant, and which may not have come down to us otherwise.) Such is the case in the present circumstances. All the usual Arabic sources for the modern studies of these events—al-Nuwayrī,[15] Ibn al-Furāt,[16] and al-Maqrīzī[17] are the most prominent—are derived directly or otherwise from the account of Muḥyī al-Dīn ibn ʻAbd al-Ẓāhir′s biography of Baybars, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir*. In fact, al-Maqrīzī′s account in his chronicle *Kitāb al-Sulūk li-Maʻrifat Duwal al-Mulūk,* the mainstay of much scholarship on Mamluk-Frankish relations at this time due to its availability in Quatremère′s translation,[18] is a somewhat shortened version—and not always an accurate one—of that related by Ibn al-Furāt in his *Tārīkh al-Duwal wa-al-Mulūk.*[19] As usual, the latter does a credible job of relating Ibn ʻAbd al-Ẓāhir′s narrative, and even adds to it from another source.[20] Yet in spite of the very good edition of the relevant portion by U. and M. C. Lyons, and their fine translation, the following discussion will be based on the ″real thing,″ as given by Ibn ʻAbd al-Ẓāhir, who besides his access to the sultan and at least some of his secrets has the added

[15]Al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1923–97), 30:268–72.

[16]Ibn al-Furāt, ″Tārīkh al-Duwal wa-al-Mulūk,″ Staatsbibliothek (Vienna) MS 814, fols. 69b–72b; most of this section is found in the partial edition published as *Ayyubids, Mamlukes and Crusaders: Selections from the Tārīkh al-Duwal wa′l-Mulūk of Ibn al- Furāt,* ed. and trans. U. and M. C. Lyons, with introduction and notes by J. S. C. Riley-Smith (Cambridge, 1971), 1:91–97; Arabic text, 2:73–78.

[17]Al-Maqrīzī, *Sulūk,* 1:528–32. As mentioned above, this author does provide one interesting original, and apparently correct, additional tidbit of geographical information.

[18]M. Quatremère, *Histoire des sultans mamlouks de l′Égypte* (Paris, 1837–42); this translation only runs up to 708/1308–9.

[19]The relationship between the two works is discussed in R. Amitai, ″Al-Maqrīzī as a Historian of the Early Mamluk Sultanate (or: Is al-Maqrīzī an Unrecognized Historiographical Villain?),″ *Mamlūk Studies Review* 7, no. 2 (2003): 99–118; one of the examples adduced in that article is the siege of Arsūf.

[20]This is the passage with which he opens the entire section on the siege, taken from Ibn Shaddād al-Ḥalabī′s historical-geographical work *Al-Aʻlāq al-Khaṭīrah fī Dhikr Umarā' al-Shām wa-al-Jazīrah,* vol. 2, pt. 2, *Tārīkh Lubnān wa-al-Urdunn wa-Filasṭīn,* ed. S. Dahhān (Damascus, 1963), 253–54.

advantage of having been present on this campaign.[21] This author has his disadvantages, not the least of which is that he was not a military man, and also his penchant for hyperbole and pro-Baybars panegyric. These, together with some lacunae, can be at least partially rectified by the use of some critical sense, and a look at the physical remnants of the city and the battle.

The second point demands a longer discussion: why is it that Baybars had decided to commence the conquest of Frankish territory in general, and why at this time? The sultan's relations with the Franks of Palestine had hitherto not been a bed of roses but they did not differ dramatically from those of his Ayyubid predecessors in Syria. True, raiders had set out from Acre in the winter of 1260, evidently hoping to take advantage of the confused state of the country; these, however, were trounced in the Golan by local Muslim troops.[22] But in September of the following year, the sultan had reached a *modus vivendi* with John of Ibelin, ruler of Jaffa. This was of some importance, as Baybars around this time used that harbor to import grain from Egypt to Syria to help relieve famine in the latter country. By the early fall of this same year, Baybars concluded a treaty with the Franks of Acre, based on one concluded several years before with the last Ayyubid ruler of Damascus, al-Nāṣir Yūsuf; this recognized the status quo and stipulated the exchange of prisoners. This latter provision, however, was not fully carried out, because of Frankish dithering.[23]

---

[21]See Ibn ʿAbd al-Ẓāhir, *Rawḍ,* 237, for proof that this writer was present at the siege. Some early Mamluk authors—such as Ibn al-Dawādārī (*Kanz al-Durar wa-Jāmiʿ al-Ghurar,* vol. 8, ed. U. Haarmann [Cairo, 1971], 107), al-Yūnīnī (*Dhayl Mir'āt al-Zamān* [Hyderabad, 1954–61], 2:318–19), Baybars al-Mansūrī al-Dawādār (*Zubdat al-Fikrah fī Tārīkh al-Hijrah: History of the Early Mamluk Period,* ed. D. S. Richards [Beirut, 1998], 96)—give accounts independent of Ibn ʿAbd al-Ẓāhir, but these are so short that they have little if any value; the last mentioned, however, notes that he himself participated in the campaign. J. Prawer, *Histoire du royaume latin de Jérusalem* (2nd ed., Paris, 1975), 2:467, note 41, remarks on the problematic—if not confused—nature of al-Maqrīzī's account, and the superiority of Ibn al-Furāt's report, but did not notice that the former is derived from the latter. At the time of his writing, Ibn ʿAbd al-Ẓāhir's text had not been published, let alone translated, and therefore it is understandable that Prawer would not have known of its importance. The annals for the early years of the reign of Baybars are missing in the biography by ʿIzz al-Dīn ibn Shaddād al-Ḥalabī, *Tārīkh al-Malik al-Ẓāhir (Die Geschichte des Sultan Baibars),* ed. A. Ḥuṭayṭ (Wiesbaden, 1983), and thus there is no description of the siege there. The last mentioned writer's *Aʿlāq,* 254, gives a very terse account . Shāfiʿ ibn ʿAlī, *Ḥusn al-Manāqib al-Sirrīyah al-Muntazaʿah min al-Sīrah al-Ẓāhirīyah,* ed. ʿAbd al-ʿAzīz al-Khuwayṭir (Riyadh, 1976), 89–90, only gives a summary of Ibn ʿAbd al-Ẓāhir's account, and adds nothing new.

[22]Peter Jackson, "The Crisis in the Holy Land in 1260," *English Historical Review* 95 (1980), 509 and note 4.

[23]See Thorau, *Lion of Egypt,* 143–44; Prawer, *Histoire,* 2:442–47.

In 1263, when Baybars was in Syria dealing with various matters, he launched a series of raids in Palestine, whose targets included the Church of St. Mary in Nazareth and the environs of Acre, where he reached as far as the gates of the city. The sultan′s large army camped at Mt. Tabor and his belligerent rhetoric convinced the Hospitallers to abandon the site without a fight. In the aftermath of these actions, the Franks of Palestine concluded agreements with Mamluk governors in the area to cease hostilities (December 1263). In spite of this, a month later Templars and Hospitallers raided in the area of al-Lajjūn (Megiddo). In the early spring of 1264, Mamluk troops raided Ramla, while in June the Franks launched a foray against Ascalon. Baybars retaliated by ordering his governor in the area to raid Caesarea and ʻAthlīth, laying waste to the territory between them. The Franks of Acre, reinforced by the arrival of Oliver of Termes, attacked Baysān in November of this year, causing some damage.[24]

There is little here to signal a departure from the decades-long policy adopted by local Muslim rulers, although Baybars′ actions were certainly on the militant side, reflecting perhaps his growing self-confidence as he gained control over all Muslim Syria. Why, then, the apparent sudden change *vis-à-vis* the Franks around 1265, and the adoption of a much more belligerent mien? I think that the explanation is tied to Baybars′ perception of the growing Frankish-Mongol relationships and the attempts to formulate a common policy against the Muslims.[25] The name Frank here can refer to both local Franks and their mentors across the sea. Yet with regard to the latter, the first explicit evidence that the sultan knew that the Ilkhans of Iran were maintaining diplomatic contact with Latin rulers to arrange a joint campaign against the Mamluks is only from 1267, when Jaime I of Spain launched an ill-fated crusade after corresponding with Abagha Ilkhan. There are, however, indirect indications that Baybars may have learned from Manfred of Hohenstaufen, ruler of Sicily and southern Italy, that Hülegü had been trying to contact Louis IX of France for the same purpose.[26] On the other hand, Mamluk sources give clear evidence that Syrian Franks, and not just those in Antioch—who were known for their pro-Mongol attitudes—were already passing on intelligence to the Mongols. In early 1261, unnamed Franks in Acre had notified Mongol raiders near Aleppo that a Mamluk force was on its way to attack them.[27] More to

[24]Thorau, *Lion of Egypt,* 143–50; Prawer, *Histoire,* 2:460; Amitai-Preiss, *Mongols and Mamluks,* 53–54. Towards the Franks of Antioch, Baybars adopted a much more truculent policy at an early date, surely caused by the unequivocally pro-Mongol policy of its prince, Bohemond VI; see ibid., 54.

[25]The following is based on the argument in my article ″Mamluk Perceptions of the Mongol-Frankish Rapprochement,″ *Mediterranean Historical Review* 7 (1992): 50–65.

[26]Ibid., 52–53; a mistaken date appears on p. 53: it should read 664/1265–66 and not 644/1264–65.

[27]Ibn al-Dawādārī, *Kanz al-Durar,* 8:71–72; al-Yūnīnī, *Dhayl,* 1:439, 2:93.

the point in the present context, as mentioned above, Ibn ʿAbd al-Ẓāhir reports that one of the reasons why the Mongols had chosen to attack al-Bīrah at this time was that Franks of unknown provenance had informed them that the Mamluks were split up and that their horses were out to pasture. After the Mongols had withdrawn, Baybars is said to have complained to the Castellan of Jaffa about the Frankish leaders: ″Those people have committed many wrongs against me, such as their writing to the Mongols to attack my territories.″[28]

I am suggesting, therefore, that besides an upgrade of anti-Frankish feeling, albeit within the parameters of traditional policy towards them, a new element had been introduced by the Mamluks under Baybars by the mid-1260s. This was the increasing realization that Frankish leaders in Syria were in contact with the Mongols, assisting them with intelligence, encouraging them to attack the Muslims, and possibly even planning a joint campaign with them (although this is not stated explicitly). In any case, it was becoming increasingly clear to the Mamluk leadership that the Frankish neutrality of 1260, so well analyzed by Peter Jackson in his 1980 article ″The Crisis in the Holy Land in 1260,″ had been replaced by an ever stronger pro-Mongol tilt. It may be that one contributory factor in Baybars′ growing truculence towards the Franks in the Levant, including the adoption of a strategy of conquest, was the desire to nip the problem in the bud. Even the initial execution of such a strategy would have weakened the local Franks; reduced territory would have meant less of a beachhead for a new crusade if the Franks from across the sea decided to launch an attack in cahoots with the Mongols.

Before getting on with the description of the siege, I will make two more short remarks regarding Arsūf. Firstly, in 1263 Baybars had exchanged letters with Hugh Revel, grandmaster of the Hospitallers. In his letter, Baybars complained that the fortifications of Arsūf had been strengthened in contradiction to a previous agreement.[29] Secondly, in spite of this complaint, around this time Baybars warmly received envoys from Yaffa and Arsūf. The sultan, having received gifts from them, assured both parties that they would not be attacked.[30] As will be seen, neither the improved fortifications nor the sultan′s assurances were to avail the defenders of Arsūf even in the short run.

The siege and conquest of Arsūf have been studied in some detail in previous works.[31] These studies have much value, but a number of difficulties remain,

---

[28]Shāfiʿ ibn ʿAlī, *Ḥusn al-Manāqib,* 87–88; translation in P. M. Holt, ″Some Studies on Shāfīʿ ibn ʿAlī′s Biography of Baybars,″ *Journal of Semitic Studies* 29 (1984): 127.

[29]See Ibn ʿAbd al-Ẓāhir, *Rawḍ,* 153, who writes that the Hospitallers built a suburb (*rabaḍ*); cf. Shāfiʿ ibn ʿAlī, *Ḥusn al-Manāqib,* 57, who writes that they constructed a wall around the *rabaḍ,* which seems more logical. This is an interesting example of Shāfiʿ improving on his source.

[30]Thorau, *Lion of Egypt,* 154, note 21.

[31]See M. Benvenisti, *The Crusaders in the Holy Land* (Jerusalem, 1970), 132–33; Prawer, *Histoire,*

which I will raise in the following discussion. The beginning of the story is simple enough: Baybars arrived at the city on 1 Jumādá II/21 March. He immediately ordered the construction of ″covers″ *(satā'ir),* possibly mantlets (mobile shields).[32] This makes perfect sense, given the ready supply of wood, and a large garrison with its own fire-power.

The next stage, however, is not completely clear. According to Ibn ʻAbd al-Ẓāhir′s account, the sultan ordered that two tunnels *(sarābayn)*[33] were to be dug from ″the moat *(khandaq)* of the city to the moat of the citadel.″ These tunnels were roofed *(suqqifat),* i.e., reinforced, with wood. Each tunnel was entrusted to several senior officers along with lesser commanders. Thereupon, ″a way *(ṭarīq)* was made from the moat to the citadel.″[34] The language is clear enough: mines reinforced by wood had been dug up to the inner moat, and from there some type of path had been made up to the citadel. What is really going on can be inferred from continued reading of the source and looking at the map.

At this stage there was a Frankish sortie, which attempted ″to ignite the wood″ (more about this below). The Mamluks, led by Qalāwūn—one of the previously mentioned senior commanders—succeeded, however, in dousing the flames. Here, Ibn ʻAbd al-Ẓāhir tells us that at this point, ″. . . the barrier of wood in the moat was completed . . .″ *(. . . takāmala radm al-aḥṭāb bi-al-khandaq . . .)*.[35] The key word here is *radm,* which Lane translates *inter alia* as: ″. . . an obstruction; a barrier . . . a rampart, or a fortified barrier . . .″[36] It seems, then, that we have some type of wood covering which was found inside the citadel moat, which abutted the exit of at least one of the mines and led at least to the foot of the citadel. This was the ″way″ *(ṭarīq)* to the citadel described above, and it was intended to provide

2:467–69; Steven Runciman, *The History of the Crusades* (Cambridge, 1951–54), 3:318–19.

[32]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 235 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:91 [tr. 2:73]; mantlets is given in this translation).

[33]This word as written causes some problems. E. W. Lane, *Arabic-English Dictionary* (London, 1863–93, rept., Cambridge, 1984), 1:1341–42, gives the following meaning for *sarab* (with no long vowel over the second *a*): ″A subterranean excavation . .. .a habitation of a wild animal . . . in, . . . or beneath . . . the earth, or ground . . . [A] secret or hidden place of passage; or . . . it means a road, or way . . . And *sarab ṭarīq* means [a] way, or road, in which people follow one another continuously.″ The form *sarāb* exists, but it describes a mirage ″or the semblance of water.″ This is obviously not the case here. It seems rather that in this particular context, in spite of the slightly different (and probably mistaken) spelling, the first meaning is clearly meant, and we are dealing with two underground tunnels or mines. It should be noted that subsequently Ibn ʻAbd al-Ẓāhir (*Rawḍ*, 236) uses the form *sarab* to refer to the same tunnel. D. Ayalon, in his article ″Ḥiṣār, iv.-The Mamlūk Sultanate,″ *EI*^{2}*,* 3:473, notes that mines were usually known as *naqb*/*nuqūb,* but occasionally the term *sirb*/*asrāb* or *surūb* is found.

[34]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 235–36 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:91–92 [tr. 2:73–74]).

[35]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 236 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:92 [tr. 2:74].

cover for advancing Mamluk troops, who would either try scaling the walls at the foot of the citadel or begin mining underneath it.

Since the distance between the moat of the city and the moat of the citadel was quite short on the north, it makes sense that at least one of the mines described above was dug from that direction. It may be, as will be soon seen, that another mine may have run east to west, more or less across from the gate of the citadel; at this point, the distance between the two moats was also not great, although it was longer than on the north. Given that the distance between the southern wall of the city was quite far from the citadel, it seems highly unlikely that tunnels were dug from that direction. Thus the suggestion by M. Benvenisti that the attack on the city commenced from the south is not convincing.[37]

One might ask how the Mamluk soldiers could construct the *radm* in the inner moat, when on both sides—the citadel and the city—Franks would be raining upon them arrows, stones, and other objects. It may be possible that the north and northeast of the city, which—as noted above—were very narrow at this part, may have been partially or completely abandoned at this point, perhaps due to the slightly higher lay of the land to the north of the city, which gave a certain advantage to the Mamluk archers and artillery. It may be that these sections of the city suffered from heavy fire from both arrows and siege engines, and thus were abandoned—perhaps only temporarily—by the inhabitants, even if the walls there were still at least partially manned. The Mamluks tunneling under this part of the city and then erupting into the inner moat would have therefore been undisturbed from one side. This is all admittedly speculative, but I cannot do better at this point.

The Franks in the citadel, however, were not ready to just sit and watch the Mamluks advance. According to Ibn ʻAbd al-Ẓāhir, ″The Franks used a stratagem when they dug a mine *(naqabū)* from inside the citadel until they arrived underneath the barrier [in the moat]; they pierced the earth up to the wood.″ The Franks thereupon lit barrels of grease and fat, and whipped up the flames with bellows in the tunnels *(nuqūb)*. This indeed was a well-planned action, showing the sophistication and determination of the Hospitallers, and caught the Mamluks completely off guard. All attempts to quench the fire were unsuccessful.[38]

It should be noted that a tunnel about 70 meters long, most probably of Frankish construction, has been discovered underneath some of the citadel. One end was to the southwest of the citadel, below the moat; the earth here has

---

[36]Lane, *Arabic-English Lexicon,* 1:1069.

[37]Benvenisti, *Crusaders in the Holy Land,* 133. Raphael and Tepper reach the same conclusion as expressed here by me through examining the archeological evidence, as seen in the accompanying article.

collapsed into the sea below, and thus the tunnel is entered further in than originally planned (it can be reached at the present time by descending a hanging ladder on a cliff). As the enclosed map shows, the tunnel, which is well built, ran along the south wall, and in one spot—towards the middle—continued under the southern barbican. It appears that the planned second entrance was in the moat, just beyond the entrance to the citadel. At the same time, there is a second branch of the tunnel, about 10 meters in length, which branched off close to this latter opening. This branch has the appearance of being hastily dug. Both of these latter openings are today blocked. The fact that the majority of the tunnel is well and carefully constructed, and given its location and length, leads to the conclusion that we are dealing with a Frankish tunnel that was prepared before the siege. The branch, however, may have been dug during the siege itself, and it may have been the means by which the Franks were able to launch their sortie which led to the destruction of the Mamluk wooden barrier in the moat. It hints that perhaps one of the Mamluk tunnels came in from the east, and abutted the inner moat more or less across from the gate of the citadel.

At about this time, Baybars probably came to the conclusion that these underground probes into the city were not going to bring about the capture of the citadel, and it would thus be pointless to continue the above-described tactic. To successfully attack the citadel across the wide moat, first the entire city had to be taken. To achieve this goal, the sultan ordered a massive engineering project under the direction of two senior amirs. The first, Sunqur al-Rūmī, was to lead a significant part of the officers and troops, and dig a trench *(ḥafr),* ″along the border of the [city] moat″ *(min ḥāfāt khandaq),* from the mouth of one of the above-described tunnels (here referred to as *sarab,* without the long vowel over the second *a*) to the sea. The second amir, Qalāwūn al-Alfī, with the remainder of the troops, was to do the same thing from the other tunnel, running along the wall in the other direction to the sea. The trenches were to be hidden by the ″wall″ *(ḥā'it)* of the moat of the city, referring, it would seem, to the outside wall of the moat. In this wall, openings *(abwāb)* were to be dug, and the earth from these was to be dispersed (literally ″thrown from″ *[wa-yurmā al-turāb minhā]*). The trench was to be as deep as the moat. An officer known as Aybeg al-Fakhrī, one of the Atabeg Aybeg al-Musta'rib′s men, was placed in charge, and he in turn brought in the construction experts to execute this work.[39]

---

[38]Ibn 'Abd al-Ẓāhir, *Rawḍ,* 236 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:92 [tr. 2:74]).

[39]Ibn 'Abd al-Ẓāhir, *Rawḍ,* 236–37 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:92–93 [tr. 2:74]). The translation of Ibn al-Furāt is a bit confusing: ″Openings were to be dug in this wall from which soil could be thrown down into the ditch until the earth reached the level of that in the moat.″ I have translated *muhandisīn* as ″construction experts,″ since engineers here might be anachronistic. On this matter, see R. Amitai, ″An Arabic Inscription at al-Ṣubayba (Qal'at Namrûd) from the

This description is not completely clear. This fuzzy account may be due to the fact that Ibn ʿAbd al-Ẓāhir was not a military man. It seems, however, that we can reconstruct the project as follows: parallel to most of the outside perimeter of the city′s moat, a large and deep trench was excavated at some distance, but not too far (as implied by the text, which has the trench ″hidden″ by the wall of the moat). From the trench, short connecting ditches were dug to the wall, in which openings were made (to enable passage of attackers directly into the moat). The dirt extracted from the excavation was piled up, thereby providing some more protection for the Mamluk soldiers and sappers. It would appear that much of the external wall of the city was abandoned or poorly manned, since otherwise the Mamluks would have encountered difficulty executing the project. No archeological evidence of this massive project has been found yet, but this is not surprising: to the north and south of the city walls, roads and deep drainage trenches have been dug in recent decades (with complete disregard for the archeology of the site, it might be added), and the eastern wall has yet to be excavated.

The above-described excavation work continued for some time, during which the bombardment by the siege machines was kept up. The sultan participated in both activities as well as constant inspections and lobbing off of arrows. Ibn ʿAbd al-Ẓāhir takes care to emphasize Baybars′ frenetic yet heroic activities, during which he was often endangered.[40] That this is more than panegyric or a topos is seen by the numerous examples from the sources attesting to Baybars′ bravery and energy during and between his many campaigns. While standing at a firing post, the sultan was confronted by a Frankish *chevauchée*. Together with some senior amirs, including Sunqur al-Rūmī (who was wounded) and his trusted mamluk and viceroy Bilik al-Khaznadār, he beat back the Franks.[41]

In the case of the siege of Arsūf, we have few details about the nature and size of the artillery actually used, called here by the generic terms *majānīq* or *manjanīqāt*. But before the attack on Caesarea—as noted above—when Baybars was laying the groundwork for this campaign, he had some *manjanīqāt* constructed from local wood (four large ones and other small ones), and others were brought from

Reign of Sultan Baybars,″ in M. Hartal, *The al-Ṣubayba (Nimrod) Fortress, Towers 11 and 9,* Israel Antiquities Authority Reports, no. 11 (Jerusalem, 2001), 116; Doris Behrens-Abouseif, ″Muhandis, Shâd, Muʿallam—Note on the Building Craft in the Mamluk Period,″ *Der Islam* 72 (1995): 293–309. The amir Aybeg al-Fakhrī subsequently was one of the officers who received an entire village in the environs of the city as private property, surely in recognition of his work in the siege. See R. Amitai-Preiss, ″The Mamluk Officer Class during the Reign of Sultan Baybars,″ in *War and Society in the Eastern Mediterranean, 7th–15th Centuries,* ed. Yaakov Lev (Leiden, 1997), 298 (no. 45). The information from the siege cited above clears up any question about his private name and his affiliation.

[40]See the appreciation of his deeds and personality in Thorau, *Lion of Egypt,* 251–55.

fortresses, probably transported disassembled and then rebuilt on the site. These included the timber for Maghrabi and Frankish-type *majānīq,* or counterweight trebuchets.[42] During the actual attack on Arsūf, additional, unspecified machines arrived from Damascus. The exact types of artillery used in the campaign are also not specified. There is here no mention of Maghrabi or Frankish machines, although it seems that they would have been in the area, and there is no reason not to have used them. On the other hand, from the extant stones found in and around the citadel,[43] it appears that mainly artillery of somewhat modest size and power was employed; one wonders about the whereabouts of the large stones that would have been thrown by the counterweight trebuchets. There is, however, some evidence that traction machines were used. Ibn ʿAbd al-Ẓāhir reports that Baybars joined the soldiers in pulling the siege machine *(fī jarr al-manjanīqāt*; also *yajurru fī majānīq),* meaning that the sultan participated in the all-important slinging of the stones, by pulling on the rope which propelled the beam that in turn slung the stones.[44] While this may have been important for morale, and his image as a fighting sultan, no less significant was his constant inspection of the machines. One notable piece of artillery was built by Geremün Agha,[45] whose device was able to shoot seven bolts at one time; one large "arrowhead" has been discovered at the site which might be from a bolt of this type.[46] The commander of the artillery, Aybeg al-Afram, is commended for his diligence in his work.[47]

It was, however, not all work and fighting for the sultan and his troops. The army was accompanied by "pious people, ascetics, legal scholars, and indigent Sufis" *(al-ʿubbāb wa-al-zuhhād wa-al-fuqahāʾ wa-al-fuqarāʾ)* and others. How

[44]Ibn ʿAbd al-Ẓāhir, *Rawḍ,* 237 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:94 [tr. 2:75], which gives a paraphrase).

[45]On this officer, an important Mongol who had fled to the Sultanate several years before and received a high rank in the Mamluk army, see Amitai-Preiss, *Mongols and Mamluks,* 108–9.

[46]See the article by Raphael and Tepper. For this type of trebuchet, see Paul Chevedden, "Black Camels and Blazing Bolts: The Bolt-Projecting Trebuchet in the Mamluk Army," *Mamlūk Studies Review* 8, no. 1 (2004): 227–77.

[47]Ibn ʿAbd al-Ẓāhir, *Rawḍ,* 238 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:95 [tr. 2:76]). Aybeg al-Afram, a member of the Ṣāḥilīyah (i.e., the unit from which Baybars himself hailed) known as *amīr jāndār,* was a senior officer who received part of a village as freehold in the aftermath of the campaign. See Amitai-Preiss, "The Mamluk Officer Class," 296 (no. 29). This amir can probably be identified with ʿIzz al-Dīn Amīr Jāndār, who had brought the wood for the siege machines early in the campaign; Ibn ʿAbd al-Ẓāhir, *Rawd*, 230 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:85 [tr.

many of each category were actually present at the siege is unclear: the importance of rhyme in this list cannot be denied. In any event, three Sufi shaykhs who were present are named: ʻAlī al-Majnūn (″the crazy one″), Ilyās, and ʻAlī al-Bakkā' (″the weeper″), who all enjoyed the sultan′s largess. Although the Mamluk army was basically a professional army of cavalrymen, and non-professionals and militiamen had been pretty much pushed to the side in these major campaigns (and the Mamluk army in general),[48] a large crowd of religious figures, with an emphasis on Sufis of various ilks, was deemed desirable so as to encourage the fighters in their efforts for the sake of jihad. During the campaign, Baybars took time off to visit the nearby tomb of Shaykh ʻAlī ibn ʻAlīm, known as Sīdnā ʻAlī. It was particularly convenient to have a Muslim saint just ″down the block,″ especially one whose tomb could not be defiled by the Franks, try as they had.[49]

The siege machines, reinforced by new ones brought from Damascus, kept up their pounding of the walls and city, and began to have an effect. When the trenches (here called, to confuse us, *sarābāt;* N.B. the long vowel over the second *a*) along the moat were completed, the gates referred to were opened into the moat. The assault was commenced on Monday, 8 Rajab/26 April, i.e., some five weeks after the investment had begun. Unfortunately, Ibn ʻAbd al-Ẓāhir gives us no details beyond the fact that the city was taken that very day.[50] We can imagine that the Mamluk fighters rushed across the moat of the city, threw up ladders, and scaled the walls, while being covered by missiles launched from bows and heavier weapons.

Having taken the city, it can be assumed that the Mamluks took up position along the inner moat, across from the citadel. For three days they probably maintained a withering fire of arrows, stones, and other missiles. This is testified to by the large concentration of arrowheads around the citadel on the barbican, as described in Raphael and Tepper′s article that follows this one. The large number of trebuchet stones and the clearly-perceived impact points on the extant walls shows that artillery was also trained on the citadel, although it is unclear how much of this

2:69]).

[48]On this matter, see R. Amitai, ″Foot Soldiers, Militiamen and Volunteers in the Early Mamluk Army,″ in *Texts, Documents and Artifacts: Islamic Studies in Honour of D. S. Richards,* ed. C. F. Robinson (Leiden, 2003), 232–49.

[49]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 238–39 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:94–95 [tr. 2:75–76]). Interestingly enough, Baybars′ Sufi mentor Khaḍir is not mentioned by this source, although he may have been in the vicinity and even predicted the date of the city′s capture; Ibn Shaddād, *Tārīkh*, 272–73. Ibn ʻAbd al- Ẓāhir may have deliberately suppressed the information on Khaḍir, since he later fell afoul of the sultan and was imprisoned. On this matter, see P. M. Holt, ″An Early Source on Shaykh Khaḍir al-Mihrānī,″ *Bulletin of the School of Oriental and African Studies* 46 (1983): 33–39, esp. 35.

was from outside the city and how much from newly-erected or moved machines. The great number of arrowheads and trebuchet stones found in the environs of the citadel gate shows that the Mamluks especially concentrated their fire there, as would be expected.

After three days of softening up the citadel, the Mamluks commenced their final assault. Ibn ʿAbd al-Ẓāhir mentions the attack against the *bāshūrah,* the barbican or forward fortification surrounding the main citadel wall,[51] which is clearly seen on the map of the site. On Thursday, 11 Rajab/29 April, the *bāshūrah* fell, with some of its wall collapsing; it is not stated why this happened, but it was surely due to either mining or the bombardment (or a combination of the two). The Mamluk soldiers scaled the walls of the *bāshūrah* and were among the Frankish defenders there before the latter knew what was upon them; the Muslim banners were soon flying from there. But the main citadel was still in the hands of the Franks. At this time, the sultan, who evidently was not in the thick of the fighting, offered an *amān,* or guarantee of safety, to the Franks. This was accepted, and a Mamluk officer was hoisted up to the citadel by ropes, with the sultan's banner *(sanjaq);* the citadel gate must have been well barricaded from the inside or blocked with rubble. The officer took possession of the citadel, the Franks handed over their swords, and were taken into captivity. Forty days of fighting were now ended.[52]

There is no description of fighting within the citadel. On the other hand, as seen in the article by Raphael and Tepper, a large number of arrowheads were found inside the citadel. These may be the remnants of Frankish arrows which were left behind. Possibly these were Mamluk arrows which were shot over the wall of the citadel. Finally, it may be that small groups of Mamluks managed to penetrate the citadel before it surrendered and these arrowheads are evidence of fighting at close quarters. This is a matter upon which it is difficult to decide, although I must admit that none of these possibilities are very satisfactory.

We should first examine what the reasons for the Mamluk victory here were, and then see whether one can find here indications of a general Mamluk strategy for the taking of fortresses. The Mamluk conquest of Arsūf was not a foregone conclusion at the commencement of the campaign, as the city was well fortified and garrisoned. Baybars, however, had several advantages: while much of his army was off in the north, and some had remained in Egypt, he still commanded a relatively large force of several thousand, perhaps even more than ten thousand, trained fighters. His army therefore greatly outnumbered the defenders, who have

[50]Ibn ʿAbd al-Ẓāhir, *Rawḍ,* 238–39 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:95 [tr. 2:76]).

[51]On this term, see R. Amitai, "Notes on the Ayyūbid Inscriptions at al-Ṣubayba (Qalʿat Nimrūd)," *Dumbarton Oaks Papers* 43 (1989): 114, note 9.

been estimated at 270 knights, plus auxiliary troops and civilians who could contribute to the defense.[53] Secondly, once the Mongol threat was temporarily removed, the sultan could devote his full attention to the Franks virtually where he chose. Thirdly, it became increasingly clear as the siege wore on that the defenders at Arsūf had almost no hope of receiving reinforcements. The raiding forces which Baybars sent in various directions before and during the siege reduced any chance of such help being dispatched. There was hardy any possibility that the Franks could slip in help by sea, in spite of their almost total control of the sea along the Levant. The little harbor of Arsūf, such as it was, was totally covered by the Mamluk positions, including their artillery; Baybars himself is recorded shooting at ships.[54] This also meant the Franks probably could not withdraw in a serious way by sea. Fourthly, as has been seen, the Mamluks employed sophisticated engineering techniques, as well as much artillery. Fifthly, Baybars´ presence and hands-on leadership meant that discipline and alertness among the Mamluks was at a fairly high level during the campaign. This is related to the sixth, and last, reason: morale. As the siege continued, it became increasingly clear that the Muslim army would prevail, spurring on the soldiers even more. The presence of Sufis and other religious figures contributed to the atmosphere of jihad which in turn strengthened morale. As the *élan* in the Mamluk camp increased, desperation among the Franks would have also become amplified. In the long run, barring unexpected news from another quarter, an outbreak of disease among the besiegers, or serious—but increasingly unlikely—Frankish reinforcements, the Mamluk victory was almost a certainty.

In this campaign, we can already discern several of the characteristics of early Mamluk siege warfare: (1) a large concentration of troops; (2) careful logistical planning; (3) mining and other sophisticated engineering techniques; (4) massive use of artillery; (5) attention to matters of morale, discipline, and motivation; 6) a frontal attack after attrition and the completion of preparations. Most of these characteristics are found in Baybars´ later sieges, such as Safad, Beaufort (Shaqīf Arnūn), Montfort (al-Qurayn) and Crak des Chevaliers (Ḥiṣn al-Akrād), as well as the sieges of his successors, e.g., Tripoli and Acre. The Mamluks, then, were not only first-class cavalrymen, but could transform themselves into infantrymen and sappers if the need arose. It was the latter skills which contributed much to their successes against the Franks.[55]

[54]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 237 (=Ibn al-Furāt, *Tārīkh al-Duwal,* 1:93 [tr. 2:75]).

[55]For some general but important considerations of Mamluk siege warfare, see D. Ayalon, ″Ḥisār,″ 472–76; David Nicolle, *The Mamluks, 1250–1517,* Men-at-Arms Series, no. 259 (London, 1993),

As is well-known, among Baybars′ acts after the conquest was the destruction of the city, its fortifications, and its harbor. To carry out the work, he divided different sections among the commanders.[56] That this destruction was far from complete is seen by the impressive remnants of the moats and citadel. The policy of deliberate destruction of coastal cities which were conquered by the Mamluks had already been initiated in the aftermath of the Muslim victory at Caesarea, and would be continued virtually without exception after every Mamluk conquest along the coast. This strategy was examined in detail by the late Prof. David Ayalon,[57] and there is therefore no reason to expand upon it here. Suffice it to say that Baybars had a keen understanding of the Mamluks′ weakness on the sea, as well as the numerical limitations of his army. Unable to devote large forces to garrison the conquered port cities, he deemed it wise to destroy them with their harbors to hinder a new Frankish landing and occupation. Long-term Mamluk security in the area was not to be guaranteed by large static forces divided into garrisons, but rather the existence of a fairly large and powerful, highly mobile army, which could be moved to meet every danger.

In the aftermath of the conquest of Caesarea and Arsūf, Baybars divided all the villages in their agricultural hinterland, 37 in number, among many of his officers, in total 61. This land, by the way, was not given as *iqṭā‘,* or the right to collect revenue to pay for one′s military household, but rather as *mulk,* that is, private property. The recipients of this largesse were both senior and junior officers, including some rather obscure individuals. Most were being rewarded for their actions on the present campaign on the Palestinian coast, but a few were commanders who took part in the operation at al-Bīrah, demonstrating the sultan′s concern that they should not feel that they had been left out of the action, profitable as it was.[58] The list of villages has been analyzed by several scholars, and virtually all have been identified and placed on the map, thereby providing us with a fairly accurate idea of the scope of the lordships of both Caesarea and Arsūf, although perhaps the border between them is not completely clear.[59]

Finally, the conquest of these two towns, the fate of their inhabitants, and their destruction, must have made it clear to all—Franks, local Christians, local Muslim civilians, and members of the military elite—that there was a ″new sheriff″ in

19–22.

town with an unequivocal anti-Frankish policy. Baybars had commenced a strategy which was to result in the sizeable reduction of the Crusading entity; his successors, of course, were to bring this policy to fruition some fourteen years after his death. It is not a coincidence that it was about this time that Baybars adopted in inscriptions the sobriquet of *mubīd al-tatar wa-al-ifranj,* "the annihilator of Mongols and Franks,"[60] giving clear expression to the double-headed policy which he so forcefully adopted in 1265.

The Archaeological Evidence from the Mamluk Siege of Arsūf

During the past five seasons of excavations at the Crusader fortress of Arsūf, over a thousand arrowheads were found along with close to three thousand catapult stones. It is important to note that those numbers will change once the excavation of the moat is completed. The aim of this article is to map the distribution of the arrowheads and catapult stones, and try to determine the location of the Mamluk siege machines and archers that were employed throughout the battle. We shall also discuss some of the problems that Baybars encountered and solved while preparing his siege engines.

Each arrowhead and catapult stone was marked on the map of the site according to where it was found. Due to rain and landslides the original location may have shifted somewhat, so the locations given here are approximate.

As we were mapping out the location of each arrowhead and catapult stone on the map of the fortress of Arsūf, the full scale of the final stage of the Mamluk siege slowly became clear. One can easily imagine the force of the attack, the heavy bombardment and the horrifying sound of *majānīq* stones continually thundering and crashing down on the citadel during the final three days after the city itself had been taken; there would have been scarcely a place within the walls of the citadel that was safe or protected.

1243 Arrowheads and 2748 Catapult Stones

The arrowheads are all of the same design. Made of iron, their average length was 4.5 cm and their width approximately 1 cm. In cross section they are square or diamond shaped. The shaft was secured to the arrowhead with a tang that was driven deep into the wood (Fig. 1). Similar arrowheads were found on various Crusader and Mamluk sites: Montfort (al-Qurayn), Chastel Pèlerin (ʻAthlīth), Yoqne'am, Safed, Burj al-Aḥmar, Ḥamāh, Vadum Jacob (Bayt al-Maḥāzin), and Belvoir (Kawkab al-Hawā').[1] This design seems to have been dominant throughout

[1]D. Bashford, ″A Crusader Fortress in Palestine,″ *The Bulletin of the Metropolitan Museum of Art*, Sept. 1927, pt. 2, Fig. 53:N; C. N. Johns, ″Excavations at Pilgrims Castle ʻAtlit (1932–3):

the twelfth and thirteenth centuries. From the evidence gathered so far, they were used by both Frankish and Muslim archers.[2] They were designed to penetrate armor, and once imbedded in the flesh, pulling them out became a tricky maneuver, since the shaft was more than likely to break, leaving the arrowhead buried deep inside the flesh. The shafts were made out of pine or cedar.[3] Only five arrowheads differ from those described above. Those five are kite shaped and flat (Fig. 2). They were often used for hunting game or for wounding horses in times of battle.[4] Although the Mamluk archers played an important part in the siege, the main role belonged to the teams that operated the siege machines, and the engineers who assembled them. The masons who quarried the stone saw that the weights matched the required order and shaped the stones into suitable projectiles.

Arsūf has so far been the only site within the boundaries of the Crusader kingdom that has yielded such a large number of trebuchet stones. Although many sieges were recorded by both Latin and Muslim sources, very few sites have supplied the archaeological evidence to support the historical sources. While some sites have not yet been excavated, others have simply been resettled and the archaeological evidence lost or scattered. Much has been written on siege warfare in the Latin East, the invention and development of siege engines, and the changes that followed in the field of military architecture. Most of those works rely on the examination of historical sources, some on experimental archaeology, but very few have gathered evidence from the actual fortresses, towns, or cities where those sieges occurred.[5] The importance of Arsūf lies in the fact that in addition to

the historical references, we can map and analyze the catapult stones and arrowheads that have been left as testimony to the Mamluk siege that took place in the spring of 1265.

Out of the 2747 catapult stones that were found, 800 were measured and weighed (Chart 1). While working on the typology, we noticed that the catapult stones that were found to the north of the gate, among a pile of burnt cedar logs, were larger in diameter and heavier than the stones that were collected from the main area within the citadel walls (Map 1). It is more than likely that the siege engine, which dealt with the Frankish defenders who evidently took refuge under the wooden construction, was of a different type and was capable of hurling stones of greater diameter and weight. The prevalent weights of the catapult stones that were found in the area of the burnt cedar logs were 16 kg, 20 kg, 28 kg, and 35 kg (Chart 2).

Although the majority of catapult stones are carved out of limestone, they vary a great deal in weight, diameter, shape, and quality of the stone dressing. The table below gives the dominant weights and diameters among the catapult stones that were found within the fortress walls.

WEIGHTS AND DIAMETERS OF THE CATAPULT STONES IN ARSŪF

Weight (kg)	Diameter (cm)
8	20
10–11	21–23
16	25
20	27–28
28	30
35	31
40	33–34
41–42	35–37
48	40

The heaviest catapult stone reached 78 kg, but altogether only 11 catapult stones weighed over 70 kg. The lowest weights recorded are 1–3 kg. Almost 50 stones weighed less than 3 kg.[6] While the majority are carved, some are more like huge pebbles (Fig. 3), and appear to have been gathered from the mouth of a riverbed at

Circle of War in the Middle Ages: Essays on Medieval Military and Naval History, ed. D. J. Kagay and A. J. A. Villalon (Suffolk, 1999), 33–43; K. DeVries, *Medieval Military Technology* (Peterborough, Canada, 1998), 133–40; Swietoslawski, *Arms and Armour,* 70–71.

[6]Some of those stones may have broken and therefore these figures may not represent the original weight.

the foot of the Samarian hills to the east of Arsūf.[7] Among the catapult stones that are dressed, a small percentage has an almost perfect round shape (Fig. 4); most are roughly round and dressed in a coarse manner. Very few are just large stones that have not been dressed and simply left with jagged rough edges (Fig. 5). Five catapult stones were carved out of a marble Roman-Byzantine column (Fig. 6). Two are from flint, and four from kurkar (calcareous sandstone, found along the coast of Israel), which would have left very little impact on the fortress walls.

One of the problems Baybars encountered while laying out the plan and setting up the logistics for the siege of Arsūf would have been finding a nearby quarry that could supply the stone for the making of stone projectiles. The cliffs overlooking the sea are made of kurkar, which was used for the construction of the fortress, but is not quite suitable for the making of catapult stones. Prior to the beginning of the siege and possibly while the fighting was taking place, a group of masons were busy preparing catapult stones at nearby quarries. The stones were probably then loaded on large wagons that were sent off to the Mamluk siege camp. As noted above, the source of the limestone has been identified at the foot of the nearby Samarian hills which lay approximately 15 km to the east of Arsūf.

In order to try to calculate the location of the Mamluk archers and siege machines, each arrowhead and catapult stone was marked on the map of the fortress. Both maps show a similar distribution. The majority of the arrowheads, 812 (65%), were found between the two towers of the main gate (Map 1). This correlates with 1112 (40%) catapult stones that were gathered from around and between the walls of the gate (Map 2). The majority of the catapult stones in the region of the main gate fell somewhat closer to the northeastern gate tower. This may indicate that a siege machine was stationed almost opposite, at an angle of fire that gave a clear view and turned the northern gate tower into a relatively easy target. On the other hand, the southern gate tower yielded less than 75 catapult stones. The front wall of the southern tower is slightly damaged on the side facing the northeast (Fig. 7), giving a clear idea of the angle of fire. As noted above, one of the larger or stronger siege engines was positioned directly in front of the wooden construction. The markings left on the southeastern peripheral wall (Fig. 7) indicate that at least one of the siege engines must have been carried through the town after it fell and stationed on the southeast edge of the fortress moat.

---

[7]According to the geological survey conducted by Ram Ben-David.

In an analysis of the siege given by Meron Benvenisti it is proposed that Baybars opened his attack from the south.[8] This view seems quite unlikely, as the distribution of catapult stones is mainly in the northern section of the fortress.[9]

The land to the north and the northeast of the fortress is slightly elevated, so that the Mamluk siege engines may have gained sufficient advantage, until the city wall was breached. It seems, though, that the Mamluk force concentrated most of its efforts opposite the main gate. From the archaeological evidence it appears that a fierce attack was carried out by both siege engines and a strong group of archers that was stationed almost opposite the gate. The following description may indicate that a great crossbow was used in the attempt to break through the main gate.

Among the arrowheads that were found between the gate towers was a huge bolt made of iron (Fig. 8a–b).[10] While cleaning the bolt under a magnifying glass strands of rope could be seen. The rope had been tightly tied around the bolt and one of the knots is still quite visible.[11] The size and weight of the bolt present the possibility that it was shot out of a large crossbow that was probably mounted on a wooden frame. As the bolt is covered with burnt fragments of wood it is possible that it served as a torch and the rope secured a thick piece of cloth that was lit and aimed at the wooden doors that secured the main entrance to the fortress.

The southwest corner of the fortress yielded 187 arrowheads. There are a number of explanations that may be given in order to understand this scattered distribution. It could indicate that those arrows were shot once the fortress was entered and close combat took place within the fortress walls. Or, they may have been shot by a group of archers that made its way through the city and stood south of the fortress moat.

When it comes to establishing the type of siege engines that Baybars used, the task becomes rather difficult. Although the weight of the catapult stones varies a great deal, most stones could be lifted by one man, while the heavier stones required two people, who could handle each stone without much strain. This does not fit the descriptions of weights given by some of the Latin and Muslim chronicles and the modern historians that have dealt with the subject of early medieval siege warfare.

---

[8]M. Benvenisti, *The Crusaders in the Holy Land* (Jerusalem, 1976), 133. It is not clear if this refers to the attack on the town or the fortress.

[9]For the development of the siege, see the article by R. Amitai in this volume.

[10]With it were two fragments that seem to belong to bolts of a similar size and design.

[11]We would like to thank Mimi Lavi, who heads the conservation laboratory in the Institute of Archaeology of the Hebrew University, for pointing out this incredible find to us.

Paul Chevedden states that the hybrid trebuchet that the Franks operated during the siege of Damietta launched projectiles that weighed 185 kg. The counterweight trebuchet launched projectiles that probably reached a common maximum of 300 kg, while the counterweight trebuchet used at the siege of Ḥimṣ (1248–49) threw projectiles weighing 259 kg. At the siege of Acre (1291) the large Frankish trebuchet employed by the Mamluks threw stone projectiles that weighed 185 kg. The only weights that are close to those measured in Arsūf are the weights of stone projectiles from Qal'at Sahyūn,[12] and even those are heaver than the average weight found in Arsūf. Donald P. Little quotes al-Yūnīnī, who reports—evidently on the authority of an eyewitness at the siege of Acre—that the Frankish mangonels employed by the Mamluks could fire a shot of 45 kg and more.[13] Christopher Marshall quotes a modern experiment in which a model of a counterweight trebuchet hurled stone projectiles that weighed 100 to 150 kg to a distance of 150 m.[14] The siege engines used by Baybars at Arsūf were probably not quite as powerful as those described above. Very few of the stone projectiles that were found at Arsūf reach those weights. The majority weigh well under 45 kg. And yet the damage that those siege engines caused was encountered throughout the excavation.

There are still quite a few enigmas left. No evidence has been found of the Mamluk sappers′ tunnels described by Ibn 'Abd al-Ẓāhir. There are very few clues as to the methods the Hospitaller garrison used in order to defend the fortress. Could they have possibly mounted artillery on the citadel′s towers or roofs? And what was the exact nature of the wooden construction, the pile of burnt cedar logs on the northeastern side of the citadel? We may find some of the answers to those questions as the excavation continues in the grounds around the fortress and once the moat is cleared.

Tales of a Medieval Cairene Harem: Domestic Life in al-Biqāʿī′s Autobiographical Chronicle

Among the findings of recent scholarship on medieval Arabic autobiography[1] is a reaffirmation, or redefinition, of the long-held notion that the realm of ″private″ life was ″never the central focus of pre-modern Arabic autobiographical texts.″[2] To address this paradoxical contradiction between the business of ″self-representation″ and the obvious lack of ″private″ material in such texts, four sets of recurring features have been identified to help in uncovering the ″modes″ the medieval Arabic authors used to construct their individual identities: portrayals of childhood failures, portrayals of emotion through the description of action, dream narratives as reflections of moments of authorial anxiety, and poetry as a discourse of emotion.[3] Other related areas, such as domestic life, gender, and sexuality, are largely left out. The ″autobiographical anxiety,″ after all, has perhaps more to do with the authors′ motivations to pen elaborate portrayals, in various literary conventions, of themselves as guardians of religious learning and respected community members (and in some cases, to settle scores with their enemies and rivals) than self-indulgence and exhibitionist ″individuating.″ In this regard, a good example is perhaps the universally acclaimed autobiographical travelogue, the *Riḥlah* of Ibn Baṭṭūṭah (d. 770/1368), who married and divorced over a period of thirty years of globetrotting more than twenty women and fathered, and eventually abandoned, some seventy children. However, little, if any, information is provided

[1]The term autobiography is broadly defined in this essay. It includes autobiographies proper as well as autobiographical materials found in chronicles and biographical dictionaries. The latter is particularly important with regard to the later Mamluk period, which saw a surge of autobiographical writings of all kinds. Recent studies have demonstrated that Mamluk historians, especially those who wrote in the fifteenth century, tended to insert the autobiographical materials into their chronological works, thus combining memoirs and history; see Donald Little, ″Historiography of the Ayyubid and Mamluk Epochs,″ in *The Cambridge History of Egypt,* ed. Carl Petry (Cambridge, 1998), 412–44, especially 413–14. For a comprehensive survey of medieval Arabic autobiographical writings, see *Interpreting the Self: Autobiography in the Arabic Literary Tradition,* ed. Dwight Reynolds (Berkeley and Los Angeles, 2001).

[2]*Interpreting the Self,* 243.

[3]Ibid., 242–43; also see 28–29, 30–31.

in Ibn Baṭṭūṭah's accounts about these women and children, most of whom remain nameless.[4]

Such, however, is not the case with the Mamluk alim Burhān al-Dīn Ibrāhīm al-Biqāʻī (d. 885/1480), in whose autobiographical chronicle, entitled *Iẓhār al-ʻAṣr li-Asrār Ahl al-ʻAṣr* (Lightening the dusk with regard to the secrets of the people of the age), various aspects of his private life loom large.[5] In this remarkable, and somewhat odd, work, the author's colorful life and eventful career, as well as the historical events in which he participated, witnessed, or otherwise learned about, are wrought in a narrative that combines conventional *tārīkh* narration, Quranic exegesis, and dream interpretation,[6] and is constantly switching between the third person voice—that of a chronicler—and the first person—that of an autobiographer. The extraordinarily intimate nature of the text is best illustrated by the author's tell-all accounts of his own messy domestic life: failed marriages, family feuds, harem melodrama, as well as childbirth, nursing, and infant mortality. The personal nature of the material thus offers glimpses into the autobiographer's mindset and sheds light on his personality and emotions, a rarity in pre-modern Arabic autobiographical writing.

A Syrian immigrant later based in Cairo, al-Biqāʻī's life and career, as he tells it, saw highs and lows. He studied with the great masters in Damascus, Jerusalem, and Cairo; among his teachers was Ibn Ḥajar al-ʻAsqalānī (d. 852/1449). Through his connection to Ibn Ḥajar, he was appointed to serve as a scholar-in-residence to the Mamluk sultans Jaqmaq (r. 857/1453) and Īnāl (r. 857–65/1453–61). Although hailed by many as one of the best minds of his generation, al-Biqāʻī never attained in his lifetime the status of a leading figure among the intelligentsia in Cairo and Damascus, although he tried very hard to present himself as such in his writings.[7]

---

[4]See Ross Dunn, *The Adventures of Ibn Battuta: A Muslim Traveler of the 14th Century* (Berkeley, Los Angeles, and London, 1989), 39, 44, 62, 67, 176–77, 195, 207, 224–29, 233–34, 236–37, 247–48, 269.

[5]Also known as *Tārīkh al-Biqāʻī;* the first half of the work, covering 855–65/1451–61, has been published in three volumes (ed. Muḥammad Sālim ibn Shadīd al-ʻAwfī [Riyadh, 1992]). The remainder is still in manuscript form: MS Medina, Maktabat al-Shaykh ʻĀrif Ḥikmat 3789 (microfilm: Cairo, Maʻhad al-Makhṭūṭāt, tārīkh 893). The folios of the original manuscript are not numbered; the pagination given in this article is therefore my own. The work is not included in "An Annotated Guide to Arabic Autobiographical Writings, Ninth to Nineteenth Centuries, C.E.," in *Interpreting the Self,* 255–88 (whereas al-Biqāʻī is mentioned as a major author of autobiography, 271).

[6]Li Guo, "Al-Biqaʻi's Chronicle: A Fifteenth Century Learned Man's Reflection on his Time and World," in *The Historiography of Islamic Egypt (c. 950–1800),* ed. Hugh Kennedy (Leiden, 2001), 121–48.

[7]The situation has been improved only in recent years. Among some sixty works attributed to him, the *Naẓm al-Durar fī Tanāsub al-Āyāt wa-al-Suwar,* a Quranic commentary in 22 volumes (Hyderabad, 1969–84), is perhaps better known. Of his history works, several have been published:

His scholastic achievements were overshadowed by his highly publicized and ill-fated attacks on the saint-like Sufi poet Ibn al-Fāriḍ (d. 632/1235) and his resulting estrangement from the Cairene ulama establishment.[8] He was also battling against chronic poverty and hardship, compounded with a series of disastrous turns in his personal life.

While in the *Iẓhār* he talks about the glories and failures of his lifetime with equal enthusiasm and attention, it is his recounting of his domestic life that will be the focal point in the following pages. Based on a close reading of the intensely personal and anecdotal accounts, I will discuss three intertwined episodes concerning the various aspects of his domestic life: his infamous divorce case, the harem politics among his concubines, and the premature deaths of his children. Through an analysis of the dynamics of various storytelling strategies, the larger question of presentation and self-presentation in Mamluk autobiographical writings will be assessed as well.

DOOMED MARRIAGE: THE CASE AGAINST SU'ĀDĀT

By all accounts, al-Biqā'ī married and divorced numerous times; some of these occurred prior to the time period covered by the *Iẓhār* and are therefore not documented. His marriage to, and eventual divorce from, Fāṭimah bint Muḥammad (d. 884/1479), the daughter of a Cairene merchant, are recounted in a brief and scathing account by his contemporary al-Sakhāwī (d. 902/1497), which is nothing short of the tale of a poor immigrant marrying into a "good" local family only to have second thoughts when his luck changed for the better.[9]

As his career began to take off in Cairo, al-Biqā'ī married well, at least in appearance. On Friday, 24 Ṣafar 858/23 February 1454, al-Biqā'ī, then forty-eight

in addition to the *Iẓh*ār, we have the *'Inwān al-Zamān bi-Tarājim al-Shuyūkh wa-al-Aqrān,* a biographical dictionary of the learned men al-Biqā'ī had personal contacts with (vol. 1 ed. Ḥasan Ḥabashī [Cairo, 2001]) and the *'Unwān al-'Unwān bi-Tajrīd Asmā' al-Shuyūkh wa-Ba'ḍ al-Talāmīdh wa-al-Aqrān,* an epitome of the above (ed. Ḥasan Ḥabashī [Beirut, 2002]). The interconnectedness, in both form and content, of these works is discussed in Guo, "Al-Biqa'i's Chronicle," 137–38.

[8]For a detailed account of this debate, see Th. Emil Homerin, *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse, and His Shrine* (Columbia, SC, 1994), 62–75; Guo, "Al-Biqa'i's Chronicle," 123–24.

[9]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi' fī A'yān al-Qarn al-Tāsi'* (Cairo, 1934–36), 12:105 (no. 664). Al-Sakhāwī's wording also seems to suggest that Fāṭimah was not the only woman who fell victim to al-Biqā'ī's opportunistic marriage scheme (*kānat mimman tazawwajat bi-al-Biqā'ī fī ḥāl qillihi wa-faqrihi* . . , "she was one of those [women] who married al-Biqā'ī when he was a poor nobody. . . ."). Al-Sakhāwī was a fellow student of al-Biqā'ī under the tutelage of Ibn Ḥajar and later became his archrival; his negative take on al-Biqā'ī should come as no surprise; for more details on this rivalry, see Guo, "Al-Biqa'i's Chronicle," 122–24.

years old and riding high thanks to his association with Sultan Īnāl, married Su‘ādāt,[10] the daughter of the late Nūr al-Dīn ‘Alī al-Būshī (d. 856/1452), a prominent former head of the prestigious Nāṣirīyah *khānqāh* in Siryaqus on the northern outskirts of Cairo.[11] The engagement *(al-‘aqd),* held at the *khānqāh,* was attended by the sultan (al-Biqā‘ī was his personal secretary) and his son-in-law, the powerful Mamluk amir Buradabek (al-Biqā‘ī was his confidant and advisor). The author tells us that this was "the first wedding ever" in this small backwater town attended by the Mamluk officials and civilian elite *(a‘yān)* from Cairo. A long list of prominent guests includes the Hanbali chief judge, the leading shaykhs of nearly all the major madrasahs in Cairo, several Mamluk amirs, the Treasurer *(wakīl bayt al-māl),* the head of the State Hospital *(nāẓir al-māristān),* the chief of the State Stable, the sermon-giver at the Grand Mosque in Mecca, and various Sufi masters, among others.

On the night of 7 Jumādá I, three months after the engagement, the bride was brought to the groom for their first night together *(juliyat ‘alayya wa-zuffat ilayya).* It is here that the author's elaborate narrative gets interesting. First, he introduces the idea of divine blessings on his marriage. Not only were the festive events marked by a "God-sent aura of dignified peace and tranquility," they were also highlighted by many "coincidences" *(al-ittifāqāt),* not least of which is the date of the engagement, which happened to be on a Friday, the day the author usually held his weekly Quran commentary sessions *(mī‘ād).* The material for that day "happened" (*ittafaqa*) to be Quran 43:67–70 and 47:15: "Enter Paradise, you and your wives, walking with joy. . ."; "This is the similitude of Paradise. . . therein are rivers of water unstaling, rivers of milk unchanging in flavour, and rivers of wine. . . ."[12]

The Quranic prophecy of the author's marital happiness is further recast by the bride's dream, which occurred on 5 Sha‘bān, three months after the couple's first coition. The dream narration is itself a fine piece of belletristic prose:

> [She said: In her dream,] a man came to her. He wore fine white garments and an exquisite turban the likes of which she had never

---

[10]Her biography is found in al-Sakhāwī, *Al-Ḍaw',* 12:62–63 (no. 377); she was still alive at the time of al-Sakhāwī's writing. A discussion of al-Biqā‘ī's two marriages is found in Yossef Rapoport, "Marriage and Divorce in the Muslim Near East, 1250–1517," Ph.D. diss., Princeton University, 2002, 273–75.

[11]Founded by Sultan Malik al-Nāṣir Muḥammad ibn Qalāwūn for the Sufis, the construction was completed in 725/1325; see al-Maqrīzī, *Kitāb al-Mawā‘iẓ wa-al-I‘tibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1853–54), 2:422.

[12]Translations of the Quranic passages are from A. J. Arberry, *The Koran Interpreted* (New York, 1955).

> seen before; his long hair flowed over his shoulders. Although wearing a veil, his face radiated with lights and halo. He stood in front of our door and said: ″Come on!″ She said: ″So I dressed up and went along with him, and you [i.e., al-Biqāʻī] followed behind me. He took us not far, then opened a door and said: ′Come on in *(udkhulū)*!′ We entered *(dakhalnā)* a garden full of trees, apple trees, pear trees, lotus, and more. Rivers ran here and there without courses. Birds were perching on the trees, warbling the most beautiful songs. We kept walking, and all of a sudden over our heads there were fruits, and the grounds appeared yellow as the color of saffron. The grounds, the trees, and the aromatic plants all had this incredible fragrant scent I had never smelled before. We ended up in a corner; when we looked up, there was a thing that looked like a bed; then we sat in that bed, leaning on each other. The fruits were above us, and we began to pluck them, and ate.″ As if thinking that we were heading home, she said to me [i.e., al-Biqāʻī]: ″Take these fruits with you!″ Then that man said: ″You should not leave this place.″ When we entered the garden, he [i.e., the strange man] gave us white and green garments, and told us to take our clothes off, throw them away, and put on these garments. We did so. . . . Then she woke up while we were in such a happy state. God made all this happen. Amen![13]

This account gets a little fuzzy at the end of the narrative as it weaves the wife′s narration, of *her* dream, with the author′s explanatory note. But the basic elements and their symbolism are clear. The biblical reference to the Garden not only underlines the heavenly bliss of matrimony, but also alludes to pleasure-seeking sensuality. All this is done through the guidance of the strange man, who fits the descriptions, in popular religious lore, of the Prophet Muḥammad. The pun on the words derived from the root *d-kh-l, udkhul,* ″enter!,″ *dukhūl al-jannah,* ″entrance to Paradise,″ and *laylat al-dukhūl,* ″the night of coition,″ links the spiritual enlightenment directly to the earthly pleasure of the flesh. The repeated reference to ″fruits,″ and the Prophet′s warning against ″leaving this paradise,″ bear yet another biblical topos of the forbidden fruits and the resulting Fall of Adam and Eve. Following the biblical line, the blame rests squarely on the woman: it is Suʻādāt the bride that insisted on taking the fruits and leaving paradise. The implication of this ″blame the woman″ topos is fully explored later in the narrative.

The marriage produced a son, Abū al-Yusr Muḥammad, who was born in

---

[13] *Iẓhār,* 2:22–23.

859/1455, one year after the wedding. Al-Biqāʿī was at the time traveling in Syria where he received the news from a letter by the boy's maternal step-grandfather. The birth of Muḥammad was an important event in the author's life,[14] to which a lengthy section of the text is devoted (we will come back to this point soon). However, the marriage itself was doomed. During his trip to Syria, which lasted approximately a year,[15] something happened.

What happened exactly in Damascus, where al-Biqāʿī stayed to supervise the building of a *khān al-funduq* on behalf of Sultan Īnāl's son-in-law, the Mamluk amir Burdabek, is not very clear. In the *Iẓhār,* al-Biqāʿī only has this to say:

> I arrived at al-Khānkah [on the outskirts of Cairo] on the night of Saturday, 19 [Shawwāl 859/September 1455]. I stayed the night with my in-laws. They blamed me for my marriage in Damascus. I explained to them that I was unable to endure celibacy *(ṣabr . . . ʿan al-nikāḥ)* for such a long period, and that I had already divorced her [i.e., the woman in Damascus] prior to my return [to Egypt]. I then took off for Cairo and slept in my own house Sunday night, the end of Shawwāl. They did not treat me well at all. They did not show any hospitality for the homecoming man.[16]

More trouble was waiting for the returning alim. In his usual self-righteous tone, al-Biqāʿī recalls the ensuing battle over custody of his newly-born son. It is noted here that Suʿādāt's voice is never heard in the whole process. The major figure leading the fight on her behalf was al-Biqāʿī's soon-to-be ex-mother-in-law,[17] who mobilized an army of relatives and supporters marching on Cairo to confront the disgraceful al-Biqāʿī. Tempers ran short while tensions rose high. "Things got so bad that its ugliness is unheard of. . . . But I stayed calm and remained patient, because I did not want to risk losing my son."[18] The standoff lasted for a few days before a great number of the Cairene elite (*ghālib ruʾasāʾ,* literally "most of the leading scholars," obviously an exaggeration) felt compelled to intervene. The matter was even brought to the attention of Sultan Īnāl himself, who, by the way,

---

[14]Al-Biqāʿī had a son named Abū Ḥātim Muḥammad, from an earlier relationship, who died in 853/1449 (*Iẓhār,* 3:119). Suʿādāt's son Abū al-Yusr Muḥammad would be his first boy since then.

[15]He left Cairo shortly after Dhū al-Qaʿdah 858 and returned from Damascus in Shawwāl 859; see *Iẓhār,* 2:87, 141.

[16]Ibid., 2:143–44.

[17]Aṭlas bint ʿAlī Ibn al-Bilbīsī (d. 884/1479); her biography is in al-Sakhāwī, *Al-Ḍawʾ,* 12:7 (no. 7).

[18]*Iẓhār,* 2:144.

was very satisfied with al-Biqāʻī′s work in Damascus where all the trouble had started. It is, as the author pointedly informs us, under the direct intervention of the sultan that the divorce was finalized. The date was Friday, 19 Dhū al-Qaʻdah 859/31 October 1455. The marriage made in heaven lasted exactly a year and a half on earth.

Al-Biqāʻī apparently got himself a very good deal in the settlement. We do not know much about the details of the legal maneuvers. But it is obvious that al-Biqāʻī gained what he wanted, including sole custody of his son *(asqaṭtu ḥaqqahā min ḥiḍānat waladī minnī lī),* and a pledge by Suʻādāt that at any time if she, or her legal representative, wanted visitation rights, ″or anything else,″ she would have to pay al-Biqāʻī five hundred dinars up front *(ḥālatan).*

It is here that al-Biqāʻī′s account differs drastically from that of al-Sakhāwī. In al-Biqāʻī′s account, the harsh terms, at the expense of Suʻādāt′s rights, were approved by *(wa-ḥakama lī bi-dhālika)* a local Maliki deputy *(nā'ib)* named Badr al-Dīn Muḥammad ibn Muḥammad Ibn al-Mukhallaṭah. In al-Sakhāwī′s version, however, this settlement was in fact vehemently rejected *(ṣammama ʻalá al-imtināʻ)* by a Maliki deputy by the name of Muḥammad ibn Muḥammad al-Maḥallī, on the grounds that according to a famous hadith, ″He who separates a mother from her son, God will separate him from his loved ones″ *(man farraqa bayna wālidah wa-waladihā farraqa Allāh baynahu wa-bayna aḥibbatihi),* affirming that the rights of a child′s biological mother in such a custody dispute should not be denied.[19]

There are two interesting things about the contradictory accounts of this settlement. First is the identity of the Maliki qadi(s) in question. It is likely that the Muḥammad Ibn al-Mukhallaṭah in al-Biqāʻī′s account is the same as Muḥammad al-Maḥallī in al-Sakhāwī′s version. If that proves to be the case, then the question would be: who, al-Biqāʻī or al-Sakhāwī, lied? Even if there were *two* Maliki deputies named Muḥammad whose opinions al-Biqāʻī sought, then our historian still had something to hide in that only the judgment in his favor, a claim al-Sakhāwī′s account flatly rejects, is reported. And this leads to our next point: the fact that al-Biqāʻī, a Shafiʻi by training and affiliation, would seek the approval of a Maliki—the least popular and influential legal branch in Mamluk Egypt—deputy judge in the first place, certainly says something about his cunning. This was most likely for practical reasons: Yossef Rapoport has speculated that al-Biqāʻī′s choice of legal venues in this particular case has to do with the notion that the Maliki school in general allowed greater freedom of contract for men in custody settlements.[20] Furthermore, given the often hostile receptions our historian received

---

[19]Al-Sakhāwī, *al-Ḍaw'*, 9:113–14.

[20]Rapoport, ″Marriage,″ 274 (with bibliographical references).

from the ulama at large, and the fact that his soon-to-be ex-mother-in-law's husband was a Shafi'i qadi,[21] his being selective in choosing the "right" person to do the job is justifiable.

This perhaps also explains the seemingly unnecessary ranting from a man who appears to have it all. Su'ādāt's family "did not give truce a chance," al-Biqā'ī bitterly complains, "despite my efforts to settle *(al-i'tirāḍ)*. . . , leaving the matter in God's hands."[22] Perhaps as a gesture of goodwill, al-Biqā'ī was willing to allow Su'ādāt to stay with her family during the entire *'iddah,* or waiting period, before she could legally remarry. However, Su'ādāt's family would not cooperate: they refused to accommodate the divorced woman, but instead chose to move her around "whenever and wherever they, and she, so desired."[23] And more importantly, they did not give in under pressure, refusing to give up the family's claims of Su'ādāt's rights, including custody of the boy.

This whole affair, al-Biqā'ī assures us, like many others in his life, could not have taken place without divine intervention. Around the time when the divorce was finalized, the triumphant alim, in his regular *mī'ād* session, began to teach the surah the title of which happened to be *al-mumtaḥanah*, "The Woman Tested."[24] The relevance of the themes of this surah, chief among them how to handle marriages between the "true believers" and those "unbelieving women" (60:10–12), is evident. In addition, the mention herein of Abraham's example in "justice," "love," and "virtue" also alludes to a parallel between Abraham's domestic situation, seen in a wife (Sarah) vs. concubine (Hagar) conflict, and that of al-Biqā'ī, the details of which will be discussed below. Here again, al-Biqā'ī is using hermeneutic tools in an attempt to interpret the events taking place in his own life and to justify these less-than-holy developments.

Al-Biqā'ī's insistence on using this technique, which at times seems far-fetched, did not come from a vacuum. In this regard, one should bear in mind that the combative alim perhaps had to fend off the attacks launched by the likes of al-Sakhāwī. In his account, al-Sakhāwī insisted that Su'ādāt, the "virgin daughter" of a highly respected shaykh "could not take it any more" and *asked* for a divorce,[25] and that the marriage was just one means used by the opportunistic Syrian immigrant

---

[21]For more details of his troubled relationship with the Cairene establishment, see Guo, "Al-Biqa'i's Chronicle." Al-Biqā'ī's ex-mother-in-law married Shams al-Dīn Muḥammad al-Wannā'ī after the death of Su'ādāt's father al-Būshī; see al-Sakhāwī, *Al-Ḍaw',* 12:7.

[22]*Iẓhār,* 2:144.

[23]Ibid.

[24]Ibid., 2:144–45; al-Biqā'ī cited Quran 60:1–9.

[25]Al-Sakhāwī, *Al-Ḍaw',* 12:62; Rapoport, "Marriage," 274.

to consolidate his status among the Cairene elite.[26] It is perhaps against this backdrop that al-Biqāʿī's elaborate narrative strategy, which is rich in scriptural allegories, makes more sense. If al-Sakhāwī's emphasis on the innocence and frailty of Suʿādāt was meant to make the groom look bad, then al-Biqāʿī would assure us: it was not the marriage itself that went wrong, but rather that the "woman tested" turned out to be the wrong one; and, consequently, all the "love" and "affection" underlined by divine bliss and lavished on her were largely wasted. It follows that the son should stay with the right person, that is, his father, who is the true guardian of his children, just like Abraham was. The case against Suʿādāt is, al-Biqāʿī would like us to believe, closed. Or is it?

Harem Politics: The Plots of Ḥasbiya Allāh the Concubine

Al-Biqāʿī maintained a modestly-sized harem. A number of women, whom he calls *fatātī,* literally "my slave girl," *amatī,* "my house maid," and *surrīyatī,* "my concubine," are named in the *Iẓhār*. It should be pointed out here that the distinction among these terms is not always clear-cut, in that a woman could be mentioned as a *fatāh* in one place, an *amah* in another, and a *surrīyah* yet elsewhere. In addition, the term *fatāh,* in al-Biqāʿī's usage, also denotes wives of his male slaves *(fatá)*.[27] We have reason to believe, as the text hints, that al-Biqāʿī the master enjoyed sexual rights to many, if not all, of these *fatāh*s in his harem.

These maids/concubines were of various ethnic stocks. There was, for example, an Indian woman, Thurayyā, "Stellar," to whom our author variously refers to as *surrīyah, fatāh,* and *amah*.[28] She died during the Black Death. "For an Indian woman," al-Biqāʿī reflects in her obituary, "she was obedient *(rayyiḍah),* pious, quiet, and soft-mannered."[29] There was an Ethiopian woman named Ḥulwah, "Sweetie," who is mentioned as *jārah* (for *jāriyah*?), *amah,* and *fatāh*.[30] This concubine sometimes also served as an informant for our historian; for example, she saw the locusts that struck the village in the year 861/1456 and reported it to al-Biqāʿī, who recorded the event in his chronicle.[31]

Among the many women in the household, none seem to have generated as much attention and fuss as one Ḥasbiya Allāh, who was, it seems, constantly in the thick of harem intrigue. An African princess of sorts (she was the daughter of

[31]Ibid., 2:235.

Khaliṣṣah, the king *[sulṭān]* of the land of al-Masalāt),[32] Ḥasbiya Allāh al-Zanjīyah, ″The Black Girl,″ was purchased by al-Biqāʻī in Rajab 853/1449 under unknown circumstances. There are two peculiar events that put this African concubine at the center of controversies. First is her bizarre story of a multi-year pregnancy, which is recounted in detail by al-Biqāʻī, an aficionado of medicine.[33] The story goes something like this: when al-Biqāʻī first purchased the young woman, she was menstruating *(ḥā'iḍ),* but one month later stopped having periods. Everyone thought she was pregnant, presumably by her new master. Nothing happened, though. Then the woman developed a series of strange symptoms the details of which are recorded meticulously by al-Biqāʻī. The symptoms— irregular menstrual cycles, chronic fatigue, lack of appetite, and persistent stomach pains—convinced al-Biqāʻī and a local physician that she suffered from a condition called, in the Avicennian terminology, *al-rajā',* that is, false (literally ″wishful″) pregnancy. But Ḥasbiya Allāh insisted that she was *actually* pregnant and that the baby was in her womb. The unsettling situation continued to baffle and trouble everyone involved until years later, in the month of Jumādá I 863/1459, Ḥasbiya Allāh finally gave birth to a son, to be named Abū al-Luṭf Aḥmad.

The story did not stop here. The woman claimed that this was the same boy conceived nearly ten years earlier shortly after she was purchased by al-Biqāʻī. What concerns us here, of course, is not the truth of such a fable, but rather the extraordinary attention paid to its documentation. If one bears in mind that al-Biqāʻī's narrative is based on observations made over a period of more than nine years, the sheer tenacity, on the part of both the concubine and the master, to hold the miraculous story together is incredible:

> Then she developed what one might call pregnant woman's ″craving″ for food *(waḥam al-nisā')* . . . to the extent that she could not observe the rituals of fasting during Ramaḍān. She lacked the resolve *(futūr al-quwwah)* to fast in the year [8]54. She would force herself to keep the fast until noon for a couple of days, then she would feel dizzy and nauseous *(dawkhah wa-qay')* and would break the fast; after eating, she would feel fine. The same happened in Ramaḍān 855. She was able, however, to fast in the year 866 and [the year] after that, and everything was fine. . . . And then all of a sudden, she began to have periods [again], all the while her womb remaining lean. . . . Her menstrual cycle was irregular: sometimes it occurred

---

[32]Bilād al-Masalāt, on the Mediterranean shore, is thirty-five miles from Tripoli in present-day Libya; see *Iẓhār,* 3:42 (note 2).

[33]For al-Biqāʻī's interests in medicine, see Guo, ″Al-Biqaʻi's Chronicle,″ 132.

> earlier than expected, and sometimes it was late; sometimes it was cut short by a few days, and sometimes it lingered for a few more days; sometimes she would menstruate once a month on a regular basis, and sometimes every two months, making it hard to calculate and predict. This continued until the year 859 when a bit of milk was found in her breasts. The milk was not white, but of a dusty color, and this continued until she gave birth [in the year 863]. When Ramaḍān 862 came, her periods stopped totally, and her belly began to swell, exceeding the normal size. I thought it would at least be twins![34]

If Ḥasbiya Allāh's motive was to attract attention and lay the grounds for bettering her position in the harem, al-Biqāʻī's attitude towards, and treatment of, the incident is quite revealing. Alongside his year-to-year account of the physical condition of his concubine are citations from Avicenna and Ibn al-Nafīs, an obvious attempt to reconcile the inexplicable phenomenon with mainstream medical literature.[35] Worth notice also is his note that in recording the story, he consulted with other women in the harem. The result is a "paraphrased" account *(ḥarrartuhu)* based on claims by the protagonist, i.e., Ḥasbiya Allāh, as well as confirmation from witnesses. If the excessive details of his concubine's menstrual cycle, eating habits, changing belly, and even the color of her milk, sound a bit "kinky" for an alim, he keeps a straight face throughout.

Women have always played a central role in folklore and popular traditions, such as medical care and superstitious beliefs and practices, in the Islamic Near East.[36] Viewed from this perspective, al-Biqāʻī's acceptance of, and respect for, tales of marvels and miracles perhaps should not be seen as out of place. As the text shows, the high-minded alim was in fact taking sides in this debate by openly challenging those "[ignorant] people who have yet to put their feet in the field of knowledge *(al-ʻilm)* and let their minds wander in the garden of learning *(al-jawalān fī fayāfī al-maʻārif)*."[37] By "knowledge" and "learning" he meant not only a recognition of the works by the likes of Avicenna and Ibn al-Nafīs, but also an acknowledgment of miracles and wonders *(ʻajā'ib wa-gharā'ib)* and their role in worldly affairs

[37] *Iẓhār,* 3:45.

and the human condition, a major topos in medieval Arabic historiography.

As is usually the case, miracles and wondrous stories are substantiated by visions. Ḥasbiya Allāh′s dreams about her miraculous marathon-pregnancy are cited, with an interesting note stating that our historian was in the habit of writing down his and others′ dreams in ″large notebooks″ for future reference.[38]

Next time we hear from Ḥasbiya Allāh, she is once again in the center of harem politics. This time, she offered an apocalyptic vision supporting al-Biqā‘ī′s case against his wife Su‘ādāt, which we discussed earlier in this essay. In the dream, Ḥasbiya Allāh claimed she saw a female sheep give birth to a strange creature, in the shape of a fish, that was barely alive. The next thing she knew, a group of ″strange women″ approached her, asking, ″What do you think? Do you want the baby dead or do you want us to bring life to him?″ Those strange women, Ḥasbiya Allāh recalls, ″looked very vicious *(laysa fīhim khayr).* I turned to them, and suddenly realized that they were none other than your wife and mother-in-law! I cried out, ′Please save the baby, and do whatever you want with the sheep!′″ The dream concluded with a series of allegorical images—among them a dying fish, a big jar *(zīr)* filled with a mixture of milk and greenish paste, some holy smoke—and then Ḥasbiya Allāh woke up to realize that ″there is no fish, no sheep, no Su‘ādāt, and no other harem women at all.″[39]

What grudges this concubine harbored against her mistresses we do not know. If a person′s dream reveals some truth, then we are certain that no love was lost between the two women. Here one may be surprised by such poisonous assaults coming from the mouth of a concubine, but bearing in mind that childbirth has always been a source of tension among the jealous and competitive wives and concubines in the harem, Ḥasbiya Allāh′s tales are by no means beyond reason. In this regard, one may place all of her dream-related stories in a context: the plot was, first, to allude to the notion that Ḥasbiya Allāh′s son somehow had more seniority than Su‘ādāt′s (although the former was born after the latter, he was ″conceived″ earlier in Ḥasbiya Allāh′s account); and next is a crafty allegory aimed at damaging Su‘ādāt′s and her family′s credibility. Al-Biqā‘ī′s ulterior motive in penning such tales, on the other hand, stems from his own overall strategy: it all has to do with a continuous spin on his divorce and child custody case against Su‘ādāt, whom, for some reason, our author seems to have been unable to let go.

---

[38]Ibid. For the use of wives′ dreams to verify dates and events in medieval Arabic autobiographical writings, see, for example, Nicholas Heer, ″Some Biographical and Bibliographical Notes on al-Ḥakīm al-Tirmidhi,″ in *The World of Islam: Studies in Honour of Philip K. Hitti,* ed. James Kritzeck et al. (London, 1959), 121–22.

[39]*Iẓhār,* 2:89.

In this connection, it is also evident from the narrative that al-Biqāʻī′s principal motive for keeping records about his harem women derives largely from his concerns about their, and his, children. We hear about Ḥasbiya Allāh a few years later, in the year 865/1461, when she gave birth to a second son, Abū al-Luṭf Aḥmad II, this time after a ″mere″ fourteen-month pregnancy, according to her own count. The birth, ″an extremely easy one,″ as our author happily informs us, is described with repeated elaborate textual devices aimed again at showing divine intervention in his personal affairs. The scriptural quote this time is from Quran 12:43–57, the story of Joseph and his brothers. The significance of this newborn is underlined by the fact that his birth came after the death of Abū al-Yusr Muḥammad I, Suʻādāt′s only son, and after the outbreak of plague, in 863–64/1459–60, that killed his older brother Abū al-Luṭf Aḥmad, Ḥasbiya Allāh′s first-born. Detailed descriptions of the birth of the boy and the ensuing celebration of his circumcision and other related activities are given. The proud father was so overwhelmed with joy that he took upon himself the task of cutting the baby′s hair for the *ʻaqīqah* ceremony, and decided to shower all the neighbors with free bread and watermelons in celebration, twice. That must have been extra sweet for Ḥasbiya Allāh, the African concubine: not only was her rival Suʻādāt now long gone, but more importantly, the *tafriqah,* or giving gifts to celebrate the birth of a son, was offered on the occasion of the birth of Muḥammad I, the precious son of the formal wife Suʻādāt, only once.[40]

About A Boy: Birth, Rearing, and Death of Children

The accounts of childbirth, rearing, and infant mortality in the household constitute a considerable part of the *Iẓhār.* The birth of a child is always celebrated and accorded rhetorical notice. The reason for this intense attention perhaps lies in the fact that, as the narrative shows, none of al-Biqāʻī′s sons survived. Was it a curse, or God′s plan? Our historian certainly had some explaining to do.

Among the several elaborate accounts of the birth of a child is that of Abū al-Yusr Muḥammad I,[41] whose custody case became a bone of contention in al-Biqāʻī′s divorce battle against the boy′s mother Suʻādāt. There were, as al-Biqāʻī tells it, many ″marvelous and spectacular things about this boy *(ʻajā'ib hādhā al-walad).*″ Foremost of these was his birthday, 12 Rabīʻ I, corresponding to that of the Prophet Muḥammad. The proud father, then in Damascus, composed a poem to celebrate the occasion. The poem is replete with the formulaic panegyric elements celebrating the *mawlid,* or birth, of the Prophet. Its motif is a confirmation of the coincidence of the birthday of his son and that of the Prophet; this is

---

[40]Ibid., 3:355–56.

[41]Ibid., 2:85–89.

achieved through word-play with repeated juxtaposition, and deliberate mixing, of the *mawlid* of the Prophet Muḥammad and that of the boy, whose name is, of course, Muḥammad.

As can be expected, the wonders also have to do with dreams and ″coincidences″ (*ittifāqāt*) prior to, and after, the boy′s birth. Al-Biqāʻī′s own dream, we are told, occurred on the eve of receiving the good news from Egypt. In the dream, he was crossing a road and stumbled upon a piece of paper containing the names of God. This reminded him of the famous incident involving the Sufi Bishr Ibn al-Ḥārith, known as al-Ḥāfī, ″the Barefooted″ (d. 226/841?). Legend has it that Bishr, having accidentally trampled the paper underfoot, heard God saying, ″If you honor my name, I will honor your name in this world and the hereafter.″ Following the Baghdadi saint′s footsteps, our Cairene historian duly placed the paper on his forehead, honoring God′s names. For al-Biqāʻī, this dream, like many others recorded in the *Iẓhār,* was a sure sign of divine intervention. Furthermore, by showing respect to God, he was also betting on the future, ″hoping that a great deal of benefit will befall my newborn son.″[42]

The joyful father was apparently not the only one who saw this coming. On the eve of al-Biqāʻī′s trip to Damascus, the Shafiʻi judge Nāṣir al-Dīn Muḥammad al-Ziftāwī[43] told of a similar, but more complex, dream he had: while contemplating the reading of the phrase *wa-yazīdahum* (or was it *yazīduhum*?) *min faḍlihi* (Quran 24:38), the shaykh fell asleep and had a vision that his father, the prominent Shafiʻi scholar Shams al-Dīn Muḥammad, was standing in front of him, chanting the correct reading of the Quranic verse in question (it is *yazīdahum,* to be sure). Surprised, Nāṣir al-Dīn asked his father, ″Why are you here?″ The father said, ″Shaykh Burhān al-Dīn′s [i.e., al-Biqāʻī′s] son just went downstairs, carried by a servant; . . . I am here to watch over him lest the boy fall.″ ″But Shaykh Burhān al-Dīn has no son!″ the bewildered Nāṣir al-Dīn protested. ″He surely does now,″ the father replied. After telling the bizarre anecdote, Nāṣir al-Dīn turned to al-Biqāʻī and inquired, ″Is any one in your household pregnant?″ ″Yes indeed,″ al-Biqāʻī assured him, and then went on, ″God has brought the pregnancy to term, in the form of a boy, and He is solely responsible for materializing the remainder of the Quranic verse,″ which reads: ″God may recompense them for their fairest works and give them increase of His bounty; and God provides whomsoever He will, without reckoning.″

The wonder-boy′s marvelous stories never ceased to dazzle our keen-eyed historian. The baby, we are told, not only resembled his father in looks, he also acted like him: an anecdote related to al-Biqāʻī by his own mother Fāṭimah has it

---

[42]Ibid., 86.

[43]He died in 876/1471; for his biography see al-Sakhāwī, *Al-Ḍawʼ,* 9:116 (no. 302).

that when al-Biqāʿī was born, he did not cry and showed no sign of life; assuming he was dead, people left him aside, uncovered. Then some female relatives took a closer look at the baby and realized that he was still alive. They quickly poured sulfur powder around the baby's nose; after a sniff came a big sneeze and the happy sound of a baby crying. The same thing, al-Biqāʿī writes, happened to his own son. What comes next is perhaps central to the whole story:

> I was told by his mother [i.e., Suʿādāt] and other women, who are experts in this matter, that the baby was delivered in the eighth month of the pregnancy—may God make all His blessings available to him and protect him from all evils! But two months after the birth, the baby still could not suckle the breasts [of his mother for milk]. So his aunt Fāṭimah, the daughter of Shaykh Nūr al-Dīn al-Būshī, would squeeze milk from her breasts and then drop the milk to his mouth. It was only after two months that he began to suckle [his mother's] breasts; but he did not like her milk at all. From her left breast, he did not drink a thing; and from her right breast, he would suck and drink with reluctance *(ʿalá kurh),* and then he would throw up most of what he had consumed.[44]

As a result, the baby, we are told, was nursed by a group of concubines and maids in the Biqāʿī harem: among them the above-mentioned Ḥasbiya Allāh, "only in whose arms the baby would become calm and content," and ʿAzīzah, the daughter of a male slave *(ghulām)* owned by the family, whose milk "was preferred by the baby boy."[45]

There are, to be sure, some obvious holes in the whole story, not least of which is the availability of milk at the exact time in question from so many women other than the nursing mother, Suʿādāt. As the narrative proceeds, the underlying theme is unmistakable: that Suʿādāt is an unfit mother by any standard. It follows that al-Biqāʿī's harsh, and seemingly unfair, custody claim, discussed above, is not only legally sound but also morally right and biologically appropriate. The fact that the newborn baby was raised largely by the father, with the help of other women in the harem, "is proof," the author claims, "that what happened as a result of the evil-doings wrought by his mother, which led to the separation [of the baby and the birth mother], turned out to be God's merciful blessings. Amen!"[46]

---

[44]*Iẓhār,* 2:88.

[45]Ibid., 89.

[46]Ibid. For Islamic legal discourse on the subject, see Avner Giladi*, Infants, Parents and Wet Nurses: Medieval Islamic Views on Breastfeeding and their Social Implications* (Leiden, 1999),

Sadly, this heaven-bestowed son was not to live long. He died on 12 Shaʻbān 860/1456, at the age of "one year, four-and-a-half months, and two days," by al-Biqāʻī's own count.[47] The exact cause of death is unknown. From the symptoms described in great detail (nearly two pages), one learns that the boy suffered from diarrhea, vomiting, loss of appetite, and perhaps high fever. In a poignant passage, the lamenting father recalls what happened during the final hours: when the dying boy showed signs of thirst, the father asked a slave girl to hurry to fetch some melon juice; however, the boy's body language made it clear that he would only drink from a jar *(zīr),* a reference to the *zīr* that saved him at the time of his birth, in Ḥasbiya Allāh's above-mentioned dream version of the event. Now the tale has come full-circle: the boy—who in the concubine's dream was a dying fish taken out of the sea and later rescued in a big "jar" of water—then drank from the jar, on his deathbed, and stopped crying. "He remained very calm and content, till he passed away," our historian recounts.[48] The grief-ridden father then goes on to devote a long passage to describing the final moment:

> He continued in this state up until Thursday morning, . . . and every passing hour was a struggle. Despite that, he seldom complained, nor did he utter a sigh of pain. . . . Then I heard a moan from him . . . and rushed to his side as he was dying: his head became stiff up to the upper palate, and his gaze became frozen . . . , his eyes closed . . . , and he showed no sign of movement except for his lower palate and below. His chest began to clatter, with continuous moans. . . . I felt a profound sense of compassion *(al-wijd)* that no words can describe, and I sought comfort in prayers. I ordered the maids to perform the ritual ablution *(wuḍū'),* that each of them should bow two prostrations, asking God to ease the pain of death. I then washed myself and started performing the ritual. During my second prostration, I heard women's whispers, which indicated to me that he was dead. I hastened to his bedside and he was gone.[49]

This account offers one of the most poignant moments in the entire *Iẓhār,* the likes of which, to the best of my knowledge, is rarely seen in Mamluk historical writings. Adding to the sadness is the fact that even in the boy's death, his mother,

---

especially 45–62 (maternal breastfeeding vs. wet nursing), 94–101 (parents; father's responsibility and legal rights).

[47] *Iẓhār,* 2:192.

[48] Ibid., 193.

Su'ādāt, was kept totally out of the picture. No word of her reaction is even mentioned.

The cycle of childbirth and infant mortality occurred again a few years later, in Ramaḍān 861, when the Ethiopian concubine Ḥulwah gave birth to a son. In celebrating the coming of the new boy, who was named after his late half-brother Abū al-Yusr Muḥammad I, and perhaps in an attempt to eradicate the memories of the tragic loss of Muḥammad I, al-Biqā'ī threw a big party on the occasion of his *'aqīqah,* or hair cutting ceremony and circumcision for the newly born. More than a hundred notables, among them Sufi masters from Mecca and Medina, attended the feast. Food was distributed to all of his neighbors. Panegyrics, including the ones praising the virtues of "Ethiopian women," were presented.[50] Al-Biqā'ī once again takes pains in describing the marvels and wonders *('ajā'ib)* of his newborn son. Among these is his account of a rift between the boy and a neighbor's naughty children, "the most evil creatures on earth," in al-Biqā'ī's characterization. When the bullying boys were about to harm the then two-year-old Muḥammad II in front of the mosque where al-Biqā'ī was teaching, the boy was miraculously rescued by his father and nanny.[51]

This younger Muḥammad was a lovely boy, indeed, the proud father repeatedly emphasizes. He was "smart, confident, and full of self-esteem," and had a vigorous intellectual curiosity. He began to crawl when he was eight months old, began to comprehend the world around him from the ninth month, and started walking in the next. He was weaned on 18 Ramaḍān 863, that is, two full years after his birth,[52] by which time he had the appearance of a five-year-old toddler. "He was able to ride on horseback. He would ask for a whip, and would hold it in his hands, in the manner of a horseman." The proud father also predicates the boy's "potential for future greatness."[53] Unfortunately, the promising boy would soon perish, this time during a new outbreak of the Black Death in 863–64/1459–60.[54] Muḥammad II, we are told, was "martyred" by the epidemic *(shahīdan maṭ'ūnan),* the infection from which "started creeping up from his left armpit," at the age of "two years and nine days, no more and no less."[55]

---

[49]Ibid.

[50]Ibid., 299–301.

[51]Ibid., 3:54.

[52]Ḥasbiya Allāh's second son was also weaned after two full years; see *Iẓhār,* 3:356. This seems to follow a common medical recommendation in the Islamic Near East; see Giladi, *Infants,* 62–67.

[53]*Iẓhār,* 3:118.

[54]Two outbreaks of the plague hit Egypt during the period in question, first in 858–59/1454–55, and then again in 863–64/1459–60; see *Iẓhār,* 3:114 (years 863–64); Michael Dols, *The Black Death in the Middle East* (Princeton, 1977), 217, 312.

Al-Biqāʻī's documentation of the Black Death presents a vivid firsthand personal account of the events. In the *Iẓhār,* aside from many obituaries of the Cairene notables who fell victim to the epidemic, we also find a long list of casualties in the author's own household. Among them was Shahīdah, a female slave *(fatāh)* who died in Jumādá II 863;[56] Ghāliyah, her daughter, and Thurayyā, the Indian concubine, both died in the same month;[57] Abū al-Luṭf Aḥmad, Ḥasbiya Allāh's first son, died five months later, in Dhū al-Qaʻdah.[58] All told, in a few months, the plague claimed a handful of lives in this household alone. The dead were all buried in the family cemetery, next to the corpses of many sons, daughters, and concubines who had died earlier.[59]

More births are reported in the remainder of the *Iẓhār*. For example, Ḥulwah, the Ethiopian concubine, gave birth to another son named, again, Abū al-Yusr Muḥammad in 866/1461.[60] All in all, infant mortality seems to have been a curse hovering over al-Biqāʻī's head. Even for those who managed to survive temporarily, destiny was never in their favor. Ḥasbiya Allāh's second son, Abū al-Luṭf Aḥmad II, for example, would later suffer from developmental problems; not only was he slow in learning to walk and talk, but was also, worst of all, always sick, "with gross sores on his face and body all the time."[61] Eventually the boy died when he was three years old.[62] Ḥulwah's son Abū al-Yusr Muḥammad III died when he, too, was merely three years old.[63] We don't know much about the fate of al-Biqāʻī's daughters.[64] As far as the period covered by the *Iẓhār* is concerned, none of al-Biqāʻī's sons survived. All told, this is, in the end, a very sad story, indeed.

Concluding Remarks: Private Life and Autobiography

The various episodes presented above form the story of an eccentric Mamluk alim's turbulent domestic life. In the category of dysfunctional families, our protagonist and narrator al-Biqāʻī was not alone, given the extremely high rate of

[64]One daughter, Umm Hānī Fāṭimah, was born to Thurayyā, the Indian concubine, in 862/1457 (*Iẓhār,* 2:367); another daughter, Umm al-Ḥasan Zaynab, was born to Ḥulwah, the Ethiopian concubine, in 869/1464 (*Iẓhār,* MS, 486).

divorce in the Mamluk era.[65] However, as Leo Tolstoy′s adage about unhappy families goes, everyone′s story is unique. When it comes to the various factors that caused a marriage to collapse and a family to dissipate in medieval Muslim societies, little is known beyond the legal (and economic) parameters.[66] This, of course, has largely to do with the nature of our sources. While ″family″ occupies substantial importance in Islamic legal discourse, historians, on the whole, usually have little, if anything, to say on the subject. Even in autobiography, a presumably ″ideal″ genre for such a pursuit, one is confronted with the predominance of generic narratives over individual voices. In al-Biqāʻī and his *Iẓhār,* the subject of the present study, we find a rather special voice.

The first remarkable thing about al-Biqāʻī′s *Iẓhār* is its blending of literary genres. This is evidenced by the at-times-confusing narrative structure, constantly switching back and forth between a chronicle and an autobiography. Very often the awkwardness of the seemingly bungled narrative is obvious. For instance, al-Biqāʻī′s wedding to Suʻādāt is narrated in a strictly third person tone, as part of a larger narrative frame of the sultan′s, not the author′s—that is, the groom′s—activities. It begins with an account of: on such-and-such day, ″he [i.e., the sultan] came to″ the Nāṣirīyah *khānqāh*, ″to marry off his secretary *(li-tazwīj kātibihi)* [i.e., al-Biqāʻī] to Suʻādāt. . . .″ The author then abruptly switches to first person narrative in the next paragraph when the groom, ″he,″ becomes ″I.″[67] Another example of this oddity is seen in the obituary of al-Būshī, al-Biqāʻī′s late father-in-law, who had died two years prior to al-Biqāʻī′s marriage to his daughter Suʻādāt. This relationship, although posthumous, is never acknowledged.[68] This kind of inconsistency may reflect the raw condition of the unfinished autograph manuscript, a work-in-progress *musawwadah*-draft; the author was perhaps writing a chronicle on the basis of his own diary. However, the possibility that such a narrative strategy was so designed cannot be ruled out. In the case of al-Būshī, the silence on the relationship between the two may have to do with al-Biqāʻī′s awareness of the accusations, by al-Sakhāwī and the like, of his opportunistic marriage schemes for career advancement. And in the case of his wedding, the interpretive tension between a heavenly matrimony and its eventual ugly reality is

---

[65]Thirty percent of marriages in the Mamluk period ended in divorce; see Rapoport, ″Marriage,″ 268. A quick glimpse at vol. 12 of al-Sakhāwī′s *Al-Ḍaw',* the most extensive Mamluk biographical work covering women′s lives and careers, will give the unmistakable impression of the frequency of divorce.

[66]For the most up-to-date bibliography of the current scholarship on marriage and divorce in the Islamic Near East, see Rapoport, ″Marriage,″ 300–25. The literature on women and family in Muslim societies in general is very extensive and need not be repeated here.

[67]*Iẓhār,* 2:20–21.

[68]Ibid., 1:193.

reconciled by a multiple-narrative line with various voices and perspectives. By switching back and forth between the first person narrative and the third person commentary, as both protagonist *and* eye witness, the narrator is in total control of the narrative.

The second remarkable thing about al-Biqāʻī's *Iẓhār* is its rare insights into the author's personality and emotions, an element that is commonly held to have been largely missing from medieval Arabic autobiographical writings. In this respect, his poignant depictions of the births and deaths of his children come to mind immediately. Despite the common attitude of treating such disastrous events as a manifestation of God's unknowable plans for His creatures, al-Biqāʻī seeks some concrete explanations for, and human elements in, the tragedies. As the text attests, in telling the heart-wrenching stories, the author's emotions are genuine and sincere. This is in sharp contrast to his tell-alls about his sinister ex-wives and in-laws. Full of grudges, voluntary self-voyeurism, and vendetta, these flashy tales further expose, by default, the author's true character and attitudes. What we see here is a far cry from a calculated, self-righteous, stoic alim, but rather a man full of contradictions: an overzealous moralist, a caring father, a wife abuser, and finally, a big-mouthed jackass. During his entire life, there were too many battles to fight and too many scores to settle. In the *Iẓhār*, his many smear campaigns and personal vendettas are always in full swing, with all the trimmings of literary manipulation. You would not want to be on al-Biqāʻī's enemy list.

The third thing that sets al-Biqāʻī aside from his peers is his portrayal of his relationships with women. While women are relatively well represented in Mamluk autobiographies, the authors tend to talk more about their mothers and daughters than about their wives and concubines,[69] much less about their perspectives on their relationships with them. In al-Biqāʻī, however, we have someone who lets us into these areas of his world and psyche. His support of Ḥasbiya Allāh the concubine against Suʻādāt the wife in the baby-bearing melodrama is but one example of such personalized and overtly biased interpretive narrative. It obviously has to do with his overall plan to defame Suʻādāt; but on the other hand, it does allow the reader to appreciate his plain style in voicing his likes and dislikes of the women in his harem. Compared with his peers, this certainly marks a leap; but unfortunately it perhaps is not big enough. Al-Biqāʻī's women, in the final analysis, are like those in a Dostoevsky novel: they do not have their own personal history and voice—they enter the male heroes' lives, constitute part of their fate, and disappear.[70]

For al-Biqāʻī, the "autobiographical anxiety" stems directly from his need to

---

[69]Rapoport, "Marriage," 13–17.

[70]Konstantin Mochulsky, Introduction to *The Brothers Karamazov,* by Fyodor Dostoyevsky (New York, 2003), xxi.

explain many seeming downturns in his life experiences: failed marriages, messy domestic situations, and worst of all, the endless deaths of male descendents, the utmost blow to a man whose very existence was facing the danger of eternal oblivion and meaninglessness. Thus writing his autobiography perhaps became, in a sense, his way of finding salvation. Call it egocentric or self-serving, al-Biqāʻī´s writing is always of, and for, himself. The depiction of his domestic life serves as part and parcel of this salvation history project. It is through his overtly subjective lens and intimate personal experiences that we are able to view the history of the time period he covered. It is true that many things are not entirely novel here: the *ʻajāʼib* and *nawādir* elements, the use of dream interpretation, the apocalyptic spins, and hermeneutic manipulation, all point to a continuation of the traditions in Arabic historical writing, but it is the sheer volume of using such devices, and the way they are put together, that distinguish al-Biqāʻī from his predecessors and contemporaries. Although his story-telling is not always elegant and convincing, his story is unusual and his voice unique.

The Construction of Gender Symbolism in Ibn Sīrīn´s and Ibn Shāhīn´s Medieval Arabic Dream Texts*

INTRODUCTORY AND METHODOLOGICAL REMARKS

It was years ago when I first bought my Bulaq edition of Arabic dream texts authored by the three canonical interpreters: Ibn Sīrīn, Ibn Shāhīn, and al-Nābulusī. In the eighties it was a favorite pastime among some Cairene intellectuals to read such popular classics, a way to converse with and learn more about the past. But what began as a pastime developed into an exercise in cultural and historical probing, a wish to use the dream text as a potential source for examining the cultural assumptions that shape us as social beings. In this article, I propose to use a gender-sensitive reading of selected narratives so as to explore both accepted and undetected cultural constructs of gender, and to examine how the text re-enforces or subverts conventional notions of gender hierarchy. In doing so, a dialogue is established with the text, infusing it with new grounds of sensibility, with memory, and questions that may help us understand the genealogy of cultural assumptions.

It is important to bear in mind, however, that although linguistic symbols reflecting a dichotomy between masculinity and femininity may not be remarkable in and of themselves, they do serve as reminders of the underlying connection between the textual or ideological construction of gender and the existing structures of order which constitute the social ground of the text. An interactive relationship between the symbols used in the dream text and its social context is thus expected to be at play. Notions of gender, economic status, age, religion, and sometimes race and color closely intersect in dream imagery, just as they do in the existing social context. And as Toufy Fahd rightly remarks, these texts may be considered as mirrors of society, providing reflections about everyday life in medieval Arab-Muslim society that cannot be found in conventional historical texts.[1]

Apart from a few recent studies, modern scholars still show little interest in the use of the dream text as a source for understanding the cultural assumptions of

---

*I would like to thank my colleagues Garay Mennicucci, Ferial Ghazoul, and Martina Reiker for the thoughtful remarks they made on this article.

[1]Toufy Fahd, ″The Dream in Medieval Islamic Society,″ in *The Dream and Human Societies,* ed. Gustave. E. von Grunebaum and Roger Caillois (Berkeley, 1966), 362.

Arab-Muslim society.[2] Such lore of dreams has been doubly ignored: historians dismiss it as not pertaining to facts and events, psychologists and psychoanalysts follow Freud's famous devaluation of such popular manuals in his *Interpretation of Dreams*. For him, the key to a dream was to be sought in the unconscious of the dreamer, and not in manuals that simply offer ready-made correspondences between dream motifs and their meanings. My approach in examining the dream narrative does not simply focus on the psychological, but rather on how the dream text might be helpful in contributing to our knowledge of cultural constructs. This study therefore will draw attention to the wealth of social implications latent in the dream narrative, to the complexity and ambivalence of its mode of symbolizing, without however appropriating its meaning.

While many of the Arabic dream texts still survive in manuscript form, only a few of these texts have been published. However, the fact that these three canonical dream texts have been published together and continue to circulate widely in the Egyptian Bulaq edition is significant in its own right, for it implies that these dream texts continue to have a certain level of credibility and relevance in the popular imaginary of the Egyptian-Arab reader. For the purposes of this article, I will examine in some detail two of these three dream texts. The first is the text attributed to the eighth-century interpreter Ibn Sīrīn (born in Basra, died there in 110/728), and who is unanimously acknowledged by later Muslim scholars to be the greatest master in the field. It should be noted, however, that Ibn Sīrīn may not have written this text himself, but most probably it was his disciples who collected his teachings in a text that was later attributed to him and which is entitled *Muntakhab al-Kalām fī Tafsīr al-Aḥlām* (A concise guide for the

For a more detailed discussion of Arabic dream texts, see idem, *Le Livre des Songes* (Damascus, 1964); see also his *Les Songes et leur Interpretation*, Sources Orientales, vol. 2 (Paris, 1959). More recently, Leah Kinberg published a critical edition of Ibn Abī al-Dunyā's dream text entitled *Morality in the Genre of Dreams* (Leiden, 1994). See Steven M. Oberhelman's recent study of medieval Greek and Arabic dreams, *The Oneirocriticism of Achmet: A Medieval Greek and Arabic Treatise on the Interpretation of Dreams* (Lubbock, TX, 1991). See also his article "Hierarchies of Gender, Ideology, and Power in Medieval Greek and Arabic Literature," in *Homoeroticism in Classical Arabic Literature,* ed. Jerry Wright, Jr., and Everett Rowson (New York, 1997), 55. For a comparative approach on dreams, see *Dream Cultures: Explorations in the Comparative History of Dreaming,* ed. David Shulman and Guy Stroumsa (New York, 1999). Western scholarship has produced numerous studies on dreams; for example, see Michel Foucault's classic work *The Care of the Self,* trans. Robert Hurley, The History of Sexuality, vol. 3 (New York, 1988); John Winkler, *The Constraints of Desire: The Anthropology of Sex and Gender in Ancient Greece* (New York, 1990); Patricia Miller, *Dreams in Late Antiquity: Studies in the Imagination of a Culture* (Princeton, 1994).

interpretation of dreams). The second text which I will examine is authored by the Mamluk statesman and scholar Ibn Shāhīn al-Ẓāhirī (born in Jerusalem, died in 873/1468 in Tripoli), and is entitled *Al-Ishārāt fī ʻIlm al-ʻIbārāt* (Signs in the science of dream interpretation). In light of its authoritative status in the Arabic dream tradition, Ibn Sīrīn′s text will be used as a basic reference source against which Ibn Shāhīn′s later text is compared and examined, thus allowing us to investigate the degree of continuity or discontinuity within the tradition of dream interpreting. As for ʻAbd al-Ghanī al-Nābulusī′s text (born in Damascus, died there in 1143/l731), it is used more as a supplementary source for the useful commentaries that the author makes on interpreting dreams, and when necessary, for further comparative purposes.[3]

The Arabic medieval dream text is an encyclopedic maze. Whereas Ibn Sīrīn′s earlier text comprises 59 chapters, Ibn Shāhīn expands them to 80, each dealing with related dream motifs. The list of such motifs is exhaustingly long and varied, and a few examples of these will suffice to give the reader an idea of their rich variety: death, heaven and hell, sacred spaces, religious rituals, the Prophet and his Companions, food, sexual relations, man, woman, slaves, children, body parts, houses, furniture, funerals, festivals, torture, plants, beasts, insects, birds, etc.[4] Given such a wide variety of topics, I decided to narrow down the data to be studied to a more manageable size. Out of the various chapters dealing with animals, I chose the one on the bird kingdom, and out of the numerous chapters dealing with human actors and related activities, I chose two: one dealing with men, women, children, and slaves; the other dealing with sexual and marital relations. For analytical and comparative purposes, textual choice of chapters from the two dream texts was based on the detected similarities in title and content. Furthermore, the choice of examining and comparing two different dream motifs, one dealing with birds, the other with humans, allows us to investigate how the two interpreters constructed correspondences between animal and human

[3]For this article, I have used the Bulaq two-volume edition, reprinted by Maṭbaʻat ʻĪsá al-Bābī (Cairo, n.d.). The edition includes the three dream texts attributed respectively to al-Imām Muḥammad Ibn Sīrīn, Ibn Shāhīn al-Ẓāhirī, and the eighteenth-century scholar ʻAbd al-Ghanī al-Nābulusī. On the upper section of the first volume is al-Nābulusī′s text entitled *Taʻṭīr al-Anām fī Tafsīr al-Aḥlām*. Ibn Sīrīn′s text *Muntakhab al-Kalām* is printed on the lower section of the same volume. Al-Nābulusī′s text is continued in the second volume, but on the lower section of this volume is Ibn Shāhīn′s *Ishārāt*. For more information on these three authors, their lives, and their works, see Yehia Gouda, *Dreams and Their Meanings in the Old Arab Tradition* (New York, 1991), 29–34. On the importance of Ibn Sīrīn as the most authoritative oneirocritic, see Fahd, ″The Dream in Medieval Islamic Society,″ 360–61.

[4]For a full English translation of Ibn Sīrīn′s table of contents, see Gouda, *Dreams and Their Meanings,* 21–25.

symbols. In the first part of this article findings based on the bird chapters will be examined, and in the second part such findings will be compared with those deduced from chapters directly dealing with human actors.[5] While animals, birds, and insects are generally used in the dream texts to signify events or actions relating to human subjects, the choice to examine the bird, as opposed to any other animal category, is based on the observation that the dream narratives of the bird kingdom appear to be analogously constructed according to the social structures that informs them.

Closer examination of our two historically disparate dream texts reveals more similarities than differences in structure and content, suggesting a high degree of continuity within the tradition of dream interpretation. Both Ibn Sīrīn′s and Ibn Shāhīn′s texts follow a thematic classification that demonstrates similarity in content and structural sequence. For instance, both texts begin with introductory chapters on the theoretical principles of dream interpretation, followed by those on dreams dealing with eschatological and religious themes, and then by those dealing with mundane matters. Finally, both conclude with anecdotes about master interpreters, addressed primarily to those who wish to study the discipline of dream interpretation. The two texts also reveal close parallels in the manner symbols are interpreted, which is not surprising, given the well-known dependence of later interpreters on earlier masters. Ibn Shāhīn seems to have had great respect for Ibn Sīrīn′s teachings, for the latter is frequently used as one of his authoritative sources.[6] Nonetheless, some thematic differences or emphases may be noted; a notable example of this is the subject of human torture and violence, a theme which does not merit a separate chapter in Ibn Sīrīn′s text, but to which Ibn Shāhīn devotes four chapters. The prevalence of torture in Mamluk society is

---

[5]The chapter I used from Ibn Sīrīn′s text *Muntakhab* are 21, 35, and 54. Chapter 21 is entitled ″Fī Ru'yā al-Nās: al-Shaykh minhum wa-al-Shābb wa-al-Fatāh wa-al-'Ajūz wa-al-Aṭfāl″ (The vision of people: the old man, the young man and woman, the old woman, and children); Chapter 35 is entitled ″Fī Ru'yā al-Ṭuyūr al-Waḥshīyah wa-al-Ahlīyah wa-al-Mā'īyah″ (The vision of wild, domesticated, and water birds); Chapter 54 is entitled ″Fī al-Nikāḥ wa-Mā Yaṭṭasilu bihi″ (Concerning marriage and other matters which relate to it). Chapters from Ibn Shāhīn′s *Ishārāt* are 16, 27, and 60. Chapter 16 is entitled ″Fī Ru'yā al-Rijāl wa-al-Nisā' wa-al-Ṣibyān wa-al-Ṣighār wa-al-Ṭawāshiyah wa-al-'Abīd wa-al-Khadam wa-al-Khinathá″ (The vision of men, women, male adolescents, children, eunuchs, slaves, servants, and hermaphrodites); Chapter 27 is entitled ″Fī Ru'yā al-Khuṭbah wa-al-Tazwīj wa-al-'Urs wa-al-Ṭalāq wa-al-Jimā' wa-al-Qublah wa-al-Mulāmasah wa-Mā naḥwahu″ (The vision of engagement, marriage, weddings, divorce, sexual intercourse, kissing, touching, and other matters relating to it); Chapter 60 is entitled ″Fī Ru'yā Sā'ir al-Ṭuyūr min al-Jawāriḥ wa-Ghayrihā″ (The vision of birds, those that are predatory and otherwise).

[6]In his introduction, Ibn Shāhīn lists at least thirty master interpreters whom he cites as his sources (*Ishārāt,* 3).

confirmed by contemporary historical sources, suggesting that the practice may have reached special heights during this period.[7] Furthermore, on examining al-Nābulusī's eighteenth-century dream text, which is structured along alphabetic rather than thematic lines, I have observed that the interpretive meaning of bird symbols does not seem to have changed in substantial ways. In a general statement on this textual tradition, Toufy Fahd tells us: "This seemingly very rich literature will appear in rather more modest dimension, I think, when all known manuscripts have been collated."[8]

THE MEDIEVAL ARABIC TRADITION OF DREAM INTERPRETATION

Medieval Arabic dream texts were primarily written by men and for men, for they were mostly addressed to the male dreamer, his desires, anxieties, hopes, and obsessions relating to society. The female dreamer, on the other hand, makes fewer appearances in these texts, and when she does, her dreams appear to relate primarily to household matters such as marital or domestic affairs, physical looks, pregnancy, and birth of children.[9] This being so, the dream discourse may be viewed more as an expression of the Arab-Muslim masculine imaginary, one in which the male author replays, among other things, cultural notions of difference, interdependence of gender, and other social boundaries. How much of what the interpreter says is a reflection of his social and cultural makeup is a question that will be addressed in the course of this article.[10]

The belief that dreams could have a predictive value was almost universal in both ancient and medieval cultures of the Mediterranean region. To fulfill the need to understand the symbolic value of the dream, interpreting dreams developed as a profession performed by the ancient priestess and priest of the temple. But it was in the precincts of the market place that dream interpreters were readily accessible to their clients, and where much rivalry between different prognostic practices prevailed. In time, dream texts were produced recording standard interpretations of culturally defined and shared dream symbols. And while there is evidence that an extensive literature has been written on the subject, we are told that most ancient dream texts have been lost.[11]

[8]"The Dream in Medieval Islamic Society," 362.

[9]For example, see Ibn Sīrīn, *Muntakhab,* 58, 59, and Ibn Shāhīn, *Ishārāt,* 133–34.

[10]On this question, see Oberhelman, "Hierarchies of Gender, Ideology, and Power," 56.

[11]Fahd, "The Dream in Medieval Islamic Society," 351, 359–63. Fahd argues that while the Greco-Romans seem to have produced a large body of dream literature, very little survived apart from Artemidorous of Ephesus's text, which was translated into Arabic from Greek by Ḥunayn

Arabic medieval dream texts did not suffer such a loss, for a large legacy of manuscripts on dreams still survives. ″Enriched by a Greek element working within like ferment, Arab-Muslim oneirocriticism reached heights no other civilization seems to have known.″[12] Despite its discomfort with earlier pagan practices, medieval Muslim discourse privileged dream interpreting with an honored status not accorded to any of the other common prognostic practices. Visions conveyed through dreams were taken seriously because they were considered to be intimately connected to prophecy. Consequently, the ″science of dream interpreting,″ as our Arab-Muslim scholars liked to call it, enjoyed the same respectability bestowed on canonical religious sciences.[13]

The profession of dream interpreting came to be primarily perceived in the written texts as the reserve of the male scholar who has received training in the formal religious sciences. And despite the fact that women continued to be dream interpreters, they do not appear to have enjoyed the status they had occupied in earlier historical periods.[14] The dream texts that I have examined also testify to the less important status given to female interpreters; thus whereas master male interpreters are normally mentioned by name, female interpreters only appear in anonymous terms. For example, in Ibn Sīrīn′s dream text they are referred to simply as *al-mu*ʿ*abbirah* (female interpreter) or *al-*ʿ*ālimah* (female scholar).[15] Moreover, although Ibn Shāhīn meticulously lists his bibliographic sources in his introductory chapter, I have not been able to find any reference to names of

---

Ibn Isḥāq (d. 873/260). On the practice of dream interpreting in the ancient world, see A. Leo Oppenheim, ″Mantic Dreams in the Ancient Near East,″ in *The Dream and Human Societies.* On the significance of dreams in the Indic tradition, see Wendy O′Flaherty, *Dreams, Illusion and Other Realities* (Chicago, 1984).

[12]See Fahd, ″The Dream in Medieval Islamic Society,″ 359 ff.

[13]See ʿAbd al-Raḥmān Abū Zayd ibn Muḥammad Ibn Khaldūn, *The Muqaddimah,* trans. Franz Rosenthal, abridged edition by N. J. Dawood (London, 1967), 371, 367. On dream interpretation, Ibn Khaldūn states:

> This is a science resplendent with the light of prophecy, because prophecy and dreams were related to each other. . . . This is one of the sciences of the religious law. It originated in Islam when the sciences became crafts, and scholars wrote books about them. The science of interpretation implies a knowledge of general cultural norms upon which the interpreter bases the interpretation and explanations of what *he* is told. . . . The dream interpreter knows these general norms by heart and interprets the dreams in each case as required by the data establishing which of these norms fits a particular dream vision best.

[14]In the ancient Near East dream interpretation was largely practiced by women. For more details, see Oppenheim, ″Mantic Dreams in the Ancient Near East,″ 350.

[15]Ibn Sīrīn, *Muntakhab,* 143, 144, 150. All translations of the dream texts I have used are mine, unless otherwise stated.

female interpreters. This inadequate recognition of women´s contribution confirms what we already know of the authorship of the medieval text, for it was more the prerogative of the male-author to inscribe his society´s cultural traditions and values. Perhaps the question of literacy among women interpreters might also explain why they were less likely to have left a written record of interpretations.

Whereas Ibn Sīrīn´s earlier text does not contain explicit restrictive statements with regard to who should or should not practice dream interpretation, by the time we reach the fifteenth century we find Ibn Shāhīn emphatically insisting that ˝visions should not be related except to an interpreter *(mu'abbir).* As for those who are not versed in the ˝*science* of interpretation˝ *('ilm al-ta'bīr),* they should not interpret dreams for anyone. For if he does so he sins, because it is like issuing a religious decree *(fatwá).* Indeed this is a demanding science.˝[16] Ibn Shāhīn here is defining the boundaries within which only those who belonged to a professionally trained elite could practice interpreting. In effect, he is calling for the censoring of the unprofessionally-trained interpreter, who may have been nonetheless an equally talented interpreter. Furthermore, he seems to elevate the interpreting of dreams to the status of issuing a religious decree *(fatwá),* which we know could only be performed by professionally recognized male scholars. Two interpretive traditions may very well have coexisted here, a written one that is accorded respectability, and an orally popular tradition that is considered suspect. It was probably within the latter tradition that women performed the practice of dream interpreting. And while our dream texts furnish little evidence for the existence of a separate oral feminine tradition, we can assume the earlier presence of one practiced by and for women within the context of the household. For we can still find today *baladī* Egyptian women continuing the practice of interpreting dreams for neighbors and members of their family.[17]

What constituted the required training in the formal discipline of dream interpretation seems to have already been in the making as early as the ninth century, when Muslim scholars were earnestly synthesizing, recording, and codifying what they constructed as the cultural canons. For such purposes, the famous ninth-century literary scholar and critic Ibn Qutaybah outlined a demanding curriculum for the dream interpreter:

> For every scholar of some branch of the sciences, the tool of his science can be sufficient for practicing it; but the oneirocritic has

---

[16]Ibn Shāhīn, *Ishārāt,* 361.

[17]The term *baladī* here refers to urban traditional women of Cairo. On the living practice of interpreting dreams by Cairene women, I have consulted Ḥasan Surūr, an Egyptian anthropologist who works on Egyptian folklore, and who confirmed that Egyptian women in the traditional quarters of Cairo continue to interpret dreams for their neighbors and relatives.

> to be a scholar of Quran and hadith in order to interpret dreams according to their ideas, to be acquainted with Arab proverbs and rare verses of poetry, to have a knowledge of Arabic etymology and of current colloquial speech. Besides, he has to be an *adīb*, gentle, sagacious, endowed with a capacity to judge the countenance of people, their character-features, their rank and state, to have a knowledge of analogy *(qiyās)* and an acquaintance with the principles *(uṣūl)* of oneiromancy.[18]

Again, such statements remind us that the profession of dream interpretation is cast in preference for a male practitioner. The professional interpreter seems to be at once a religious scholar and a connoisseur of his culture, as well as of people. Such scholarly consensus to define the practice of dream interpreting as a formal science has significant gender implications, as it may have contributed to marginalize the practice of female interpreters who lacked such training.

Just like other canonical religious sciences, dream interpreting also developed its own parameters of interpretation as well as its own biographical narrative. Following the canonical model of the science of the principles of jurisprudence *(uṣūl al-fiqh),* the science of dream interpretation also developed its own principles of interpretation *(uṣūl al-taʿbīr)* inscribed by male scholars who pronounced its interpretive rules. The tradition also produced its own specialized biographical dictionaries *(ṭabaqāt al-muʿabbirīn),* classifying its interpreters according to chronological categories that stretch back as far as pre-Islamic times.[19]

---

[18]M. J. Kister, ″The Interpretation of Dreams: An Unknown Manuscript of Ibn Qutayba′s *ʿIbārat al-ruʾyā,″* in his collected volume entitled *Society and Religion from Jāhiliyya to Islam* (Hampshire, 1990), 75.

[19]See *Ṭabaqāt al-Muʿabbirīn* by al-Ḥasan ibn Ḥusayn al-Khallāl (before 400/1000), which al-Nābulusī summarizes in his dream text *Taʿṭīr,* 355. On al-Khallāl, see Fahd, ″The Dream in Medieval Islamic Society,″ 359. Al-Khallāl′s biographical text of dream interpreters comprises fifteen categories *(ṭabaqah),* bestowing top ranking to monotheistic prophets, such as Abraham, Joseph, and Muḥammad. The Medina Companions of the Prophet and their followers occupy the second and third categories. Interpreters from the earliest generations of pious Muslim scholars *(al-fuqahāʾ)* and ascetics *(al-zuhhād)* follow these, then Arab-speaking master interpreters, authoring the earliest written texts of dreams. In this category, the ancient Greek interpreter Artimedorous and the Arab speaking Ibn Sīrīn rank the highest. Philosophers and physicians versed in the Hellenistic tradition come next in importance, followed by famous interpreters from the Jewish, Christian, and Magian religious traditions. Lastly, Arab pagan interpreters, soothsayers *(al-kahanah)* and specialists in physiognomy *(al-firāsah)* are ranked in the lowest categories. A special status seems to be bestowed on Greek interpreters in this hierarchy, for they are ranked above their Jewish, Christian, and Magian counterparts, and honored with a category separate from other pagan interpreters. This is an implicit recognition on the part of Arab interpreters of the importance

While Ibn Sīrīn's and Ibn Shāhīn's dream texts demonstrate that pre-Islamic Arab, Greek, and Persian master interpreters were incorporated as authoritative sources, a monotheistic, and more particularly, an Arab-Islamic preference is to be noted. Understandably, Arab Muslim interpreters used their own cultural iconography as the primary source for interpreting dreams encoded in the Arabic language. This may be readily seen in the primacy given to the Quran and hadith, to classical Arabic poetry, and to popular sayings *(al-amthāl al-sā'idah, al-amthāl al-mubtadhalah)*.[20] Yet this did not preclude dream interpreters from freely using the wisdom and knowledge of ancient masters, such as Artemidorous, for they continued to believe that these classical traditions conveyed universal truths about human dreams and experiences. This is evident not only from the numerous bibliographical references to be found in our dream texts, but also from what dream specialists say about the ancient principles of interpretation. Ibn Sīrīn tells us that "the ancient principles of dream interpretation *(uṣūl al-ru'yā al-qadīmah)* have not changed, but it is people's conditions that constantly change with regard to their daily worries, manners, and their preference for the mundane as opposed to the sacred."[21] Likewise, but much later, al-Nābulusī modestly states that his work is simply a synthesis of earlier texts, to which he added little.[22] Despite this respect for early authority, interpreters seem to have been equally aware that interpreting dream symbols was not a fixed or mechanical exercise. For we are told that "dream interpreters invented innumerable ways of interpretation which are always subject to new additions, depending on the knowledge of the interpreter, his sharp perception and intuition."[23] Two complementary views may be seen here, one respectful of the ancient tradition, the other giving more leeway to the creativity of the individual interpreter. To come up with the best interpretation possible, the interpreter was probably expected to combine both, his creative intuition and his thorough knowledge of interpretive principles.

Not all dreams possess a predictive value, for many were classified as muddled dreams unworthy of the interpretive endeavor. Dreams of predictive value were classified into two categories: the non-allegorical dream, which is straightforward and does not need interpretation, and the allegorical dream which makes use of ambiguous symbols to convey its message. It is the latter type of dream that demanded the attention of the interpreter. But this was no simple matter, for symbols often conveyed rich and contradictory meanings. The interpreter's awareness of the elusive nature of a symbol, one that defies precise and simple

---

of Greek influence on their tradition.

[20]Ibn Sīrīn, *Muntakhab,* 3–4.

[21]Ibid., 13.

[22]Al-Nābulusī, *Ta'ṭīr,* 351.

[23]Ibid., 8; see also Ibn Shāhīn, *Ishārāt,* 6.

definitions, explains the relative flexibility adopted in decoding it, and thus it was agreed that more than one interpretation could always be possible. While interpreters assumed the principle that a symbol must in some way be related to the meaning, as connoisseurs of culture, they also recognized that symbols did not possess fixed intrinsic meanings, and therefore they perceived them as culturally specific constructs. The interpreter came to understand this to be an important working principle. Thus in his discussion on how to interpret dream symbols, al-Nābulusī stresses the significance of the cultural factor, which in turn is defined by such variables as geographical location and climate:

> Know that the soil of each country is different from others, due to the differences in water, wind, and geographical location. This explains why the interpretation *(ta'wīl)* of every group of interpreters from the community of unbelievers and Muslims differs according to variations in character and geography. For example, if a dreamer living in a hot country dreams of snow or ice, this signifies famine and high prices, but in a cold country, it may signify prosperity and wealth.[24]

In another passage al-Nābulusī stresses the significance of cultural difference, pointing to variations in religious morality and people´s customs *('ādāt al-nās)* as important principles to be considered in interpreting symbols:

> For example, if one dreams of wine, it is interpreted as illegal wealth for those who consider it a forbidden object, but as a blessing for those who do not. Similarly, if a woman dreams that she is committing adultery in the mosque, this would signify a great evil or misfortune in Muslim culture. In contrast, the same image in Indian religious culture would signify worship and virtue. This is because the sexual act in Indian culture is linked to the sacred, and hence receives approval.[25]

Here al-Nābulusī aptly demonstrates how symbols are culturally constructed, confirming the presence of a dynamic, interactive relationship between symbolic language and the social ground which informs it.

The idiosyncratic factor is another important principle in interpreting dream symbols. Relevant personal details relating to the dreamer´s life must be revealed

---

[24]Al-Nābulusī, *Ta'ṭīr,* 5.
[25]Ibid., 360–61.

in order for the dream to be aptly interpreted. As with culture, the meaning of a symbol may also differ along idiosyncratic or personal lines. The pomegranate, for instance, may signify multiple meanings. Round and impregnated with seeds, the fruit is readily used as a symbol of femininity. Thus for the sultan, the pomegranate in his dream signifies a city to rule; for the single man, it is a wife or concubine; while for the pregnant woman, it is a female baby.[26] Sultan to city, man to wife or concubine, mother to baby, are all pairs in which the first party dominates the second, revealing the constructed power dynamics in play.

Interpreters also resorted to interpreting the linguistic signifier *(al-ta'wīl bi-al-asmā')* as a way of understanding dream symbols; thus we are told that if one dreams of a bird with a feminine name like *al-ansīyah,* a derivative from the Arabic root *uns* (intimacy), it is interpreted as a symbol of a friendly woman.[27] However, interpreting the signified meaning (*al-ta'wīl bi-al-ma'ná)*[28] seems to have been the most commonly-used method, primarily mediated through the logic of analogy *(al-qiyās)*.[29] A mountain in a dream may thus be likened to the erect phallus, not because of its lexical root, but because of the shared attribute of erectness.

In addition, dream interpreters adopted an overall system of taxonomy which proved quite useful in examining dream symbols, and which further informs us of their methodological principles of interpretation. Such taxonomy is made up of three differentiating categories: genus *(al-jins);* type *(al-ṣinf);* and behavioral nature *(al-ṭab').*[30] Accordingly, trees, animals, and birds may be classified under different genus categories. The latter is further sub-divided into two more categories: type and nature. What follows is an example of how the palm tree may be interpreted. Given their erectness, all trees (as genus) are constructed as masculine symbols, and since the palm tree grows in the territory of the Arabs, it is used to signify an Arab male. To define the behavioral traits of the palm tree, interpreters refer to Quranic iconography, which describes the tree as noble and giving. Hence the palm tree in a dream is said to signify a generous and pleasant-natured Arab man. In Table 1, I would like to demonstrate the rationale of this taxonomy and its significance in relation to the classification of birds, which will be examined later in greater detail.

---

[26]For more details on the multiple meanings of the pomegranate, see Ibn Sīrīn, *Muntakhab,* 5.
[27]Ibn Shāhīn, *Ishārāt,* 298.
[28]Ibn Sīrīn, *Muntakhab,* 8.
[29]Ibid., 10.
[30]Ibid., 10–11.

Table 1: Bird Taxonomy

Genus:	**Bird**	
Type:	**Predatory**	**Non-predatory**
	Falcon	Dove
Nature:	swift aggressive powerful	slow peaceful domesticated

Here we see how the bird as a genus is classified according to two different main types, predatory and non-predatory. Perceived as swift, aggressive, and powerful, the falcon is classified as predatory, while perceived as peaceful, slow, and domesticated, the dove is classified as non-predatory. What is more relevant to our analysis is to explore how the text uses such behavioral patterns in constructing the gender of birds. In defining docility as a feminine trait, our interpreters consistently construct the dove as feminine. Conversely, constructing aggressiveness as a masculine trait, the falcon is assigned masculinity. Clearly, such an interpretation reflects the interpreter's cultural assumptions with regard to gender roles, and confirms the close connection between symbols and the cultural ground that informs them. The examples of the falcon and the dove are also useful in demonstrating what medieval Arab-Muslim culture perceives to be the "normative" feminine and masculine behavioral traits. Moreover, the construction of such a sharp opposition between the essential feminine and masculine traits demonstrates how this culture defines the constitutive difference between femininity and masculinity.

Further examination of how the dream text genders other symbols shows that it is not always immediately clear why different symbols such as the horse, lion, mountain, tree, and predatory birds are all used to signify masculinity. Here we need to understand how the symbolic language of dreams creates relations of resemblance or association between objects that may seem far apart. Symbols such as the lion, wolf, and predatory birds share the qualities of power, swift movement, and aggressiveness, and therefore are constructed as masculine traits which constitute the cultural model of masculinity. Similarly, the horse, being closely associated with masculine martial behavior in medieval Arab culture, is used to signify masculinity. In the same vein, given that mountain, tree, spear, and dagger share the qualities of hardness and erectness, they are readily likened to the erect male sexual organ, and therefore are constructed as symbols of masculinity.

In such cases analogy is based on either resemblance or association.

Woman is also symbolized by diverse objects, such as the saddle, ship, glove, *sirwāl,* non-predatory birds, and cattle. The saddle and ship metaphors are likened to the image of the conventional female sexual posture in relation to the male, while the glove is likened to the enveloping womb of the female. The *sirwāl*, typical attire of Arab-Muslim medieval women, having become so closely associated with the female body, is metonymically used to signify woman. The symbol of the cow is commonly used as the archetypal feminine symbol, evoking the female role of the good, docile, and nurturing mother.[31] Dream interpreters use docility and gentleness as essential behavioral traits of the female, and thus animals that exhibit ″passive″ behavior are almost always used as symbols for women and occasionally for children. Interestingly, the inverse notion of the predatory woman may also be detected in the dream text, and as we shall see in the following section, the symbol of the wild and untamed female bird (signifying woman) seems to always receive negative recognition.

The Structuring of the Bird Kingdom

The bird often appears as a favorite topos in the medieval Arabic literary tradition.[32] Here, I would like to examine how our interpreters constructed the bird kingdom as a sort of metaphorical reflection of human social hierarchy, and how they constructed correspondences between behavioral patterns on the one hand, and

[31]Ibid.

[32]There are numerous examples of classical Arabic and Persian works which use bird or animal motifs in their literary works. *Kalīlah wa-Dimnah,* a literary fable in which animals play the role of human actors, became a classic shortly after its translation into Arabic by Ibn al-Muqaffaʿ. The famous ninth-century scholar and writer al-Jāḥiẓ also wrote another Arabic classic on animals which he entitled *Kitāb al-Ḥayawān* (The book of animals) and which is considered a masterpiece of both Arabic literature and zoology. Medieval Sufi writers often used animals and birds as important metaphors in their spiritual teachings. Persian Sufis such as ʿAṭṭār and Rūmī are important in this respect; the former wrote a brilliant work devoted totally to the quest of the birds to discover the Divine, which he entitled *Manṭiq al-Ṭayr* (The conference of the birds). Ikhwān al-Ṣafāʾ also used animals as allegorical characters in their pedagogical treatises, the most famous of these being the one entitled *Tadāʿī al-Ḥayawān* (The complaint of animals), which Denys Johnson-Davies has translated into English as *The Island of Animals* (Austin, 1994). In addition there is also a rich zoological literary tradition that deals with the animal kingdom, and in which Arab-Muslim zoologists used cultural and scientific data to describe the animals. An example of such classical works is the one written by the fourteenth-century zoologist Muḥammad ibn Maḥmūd al-Qazwīnī, which he entitled *ʿAjāʾib al-Makhlūqāt* (The wonders of created beings); the fifteenth-century author Muḥammad ibn Mūsá al-Damīrī wrote another classical zoological work, entitled *Ḥayāt al-Ḥayawān* (The life of the animal). Such zoological studies contain large sections on birds, which also include an examination of the symbolic significance of birds in dreams. The works of both al-Qazwīnī and al-Damīrī are available in one edition (Cairo, 1978).

gender or social roles on the other. By way of introduction, I would like to give a brief synthesis of the principles of bird interpretation *(uṣūl ta'wīl al-ṭayr)* as expounded by both Ibn Sīrīn and Ibn Shāhīn:[33]

Anonymous birds *(al-ṭuyūr al-majhūlah)* are variously interpreted as the human spirit, the angel of death, or simply as human deeds. Given the taboo against usage of the figurative to signify the Divine, Muslim interpreters have censored this ancient symbolic meaning in their text.

The behavioral nature of birds, and sometimes their size, are used to determine both their gender and social status. Predatory birds in general are gendered as masculine, and predictably, the most powerful or aggressive of these birds often denote the highest social status. On the other hand, non-predatory birds may be gendered as both masculine and feminine, but some are viewed as more feminine and others as more masculine. Birds that devour dead corpses, or steal things that belong to others, signify outcasts or criminals who subvert social boundaries, and thus signify deviant masculine types. Small size birds may sometimes signify lowly or parasitic status; thus they are the lowliest *(al-arādhīl)* of the bird kingdom. They are also interpreted as female slaves, servants, or children, but more frequently as male rather than female children.

Birds that fly close to the ground, and hence are more easily domesticated, are almost always gendered as feminine. Water birds are mostly gendered as feminine, but they also signify nobility, wealth, and fertility, for they control two domains, air and water.

Movement or flying indicate acquisition or loss of status, travel, or death, depending on the bird′s gender. Birds that possess the capacity of flying long distances are exclusively gendered as male birds. Conversely, a female bird flying away from home may indicate divorce or separation, or death, hence loss of status for the male.

Possession of a large numbers of birds may indicate both power and wealth. Similarly, their flesh, bones, and feathers indicate economic status.

The act of slaughtering or cutting a female bird, a common dream motif in our bird text, signifies the deflowering of a female virgin in the sexual act. The slaughtering of the female bird is understood as a masculine act of conquest of the female body. Conversely, the slaughtering or capturing of a male bird signifies the defeat of a male opponent, hence equating male sexuality with power and conquest.

Catching or hunting a female bird signifies marriage or union with a woman. But if this involves a male bird it signifies victory, power, and wealth for the victorious male hunter. A similar interpretive rationale may be detected here, however, since interpreters also interpret marriage as power and wealth for the

[33]Ibn Sīrīn, *Muntakhab,* 146; Ibn Shāhīn, *Ishārāt,* 303–4, 356.

male. Thus, for the male hunter, catching a female or a male bird carries similar connotations in terms of social status.

Bird eggs are interpreted variously as women, children, and family; a large number of eggs may signify wealth.

Color is often used to signify social status; thus the whiteness of a dove or a duck may signify high social status.

Drawing on both dream texts, I have a sample of seventy-six different bird types, constituting what our interpreters call the bird kingdom. Bird entries differ greatly in size, and depending on the symbolic significance of the bird in question, these may vary between two words and a paragraph. The crow, though perceived as the least favored predatory bird by both Ibn Sīrīn and Ibn Shāhīn, occupies the longest entry in their bird narrative, for it is assigned the significant social role of the extreme ″other,″ the archetypal evil male. In collating the two bird texts, I observed that Ibn Shāhīn′s narrative is more systematically structured than Ibn Sīrīn′s, suggesting perhaps a later textual maturity that is absent in the earlier text. But it may also be that Ibn Shāhīn′s membership in the Mamluk establishment could have made him more conscious of the significance of social hierarchy, which in turn becomes reflected in his structuring of the bird kingdom narrative. Both texts, however, seem to assume, and thus reify, some sort of hierarchy in the kingdom of birds, just as would be assumed for human society.

Some difference in bird taxonomy is observed between the two texts. Whereas Ibn Sīrīn′s bird text is more or less organized around three categories: wild birds *(al-waḥshīyah),* domestic birds *(al-ahlīyah),* and water-birds *(al-mā'īyah),* Ibn Shāhīn′s taxonomy seems to be based more on aggressive power and its absence. The latter′s entire system of bird classification appears to be based on whether birds have the power to aggress or not. Thus predatory birds *(al-ṭuyūr al-jawāriḥ)* occupy the top category, followed by non-predatory birds *(al-ṭuyūr al-khārijah ʻan al-jawāriḥ),* and finally by the category of small birds *(al-ʻaṣāfīr).*[34] Bird power is primarily defined by such traits as size, physical strength, aggressiveness, and swift capacity of movement, as well as intelligence. It follows then that birds exhibiting these traits are classified as the most powerful and deserving of high status. More important for our gender analysis is the fact that the most powerful birds are almost always defined as symbols of masculinity, while those least exhibiting of such powers signify femininity, or persons of lower social status, such as servants, slaves, youth, or children, confirming that woman as a social category is perceived to be of a lower status than man. In the following statement, Ibn Sīrīn aptly demonstrates how the socially constructed informs the bird narrative:

---

[34]See Ibn Sīrīn, *Muntakhab,* 146; Ibn Shāhīn, *Ishārāt,* 295.

> The bird is a man among men, whose status corresponds to a specific bird among birds, depending on his capacity, weaponry, power, feathers, and his ability to fly and soar in the sky. Known birds are therefore interpreted according to their power. Thus large and predatory birds signify the kings, the leaders, the notables, the scholars, and the wealthy. As for corpse-eaters, like the crow, the kite, and the vulture, these are trespassers, thieves, and evil. Water birds signify noble people *(ashraf),* who obtain high status through two powers, the power of water and wind. They may also signify male travelers by land or sea. . . . Birds who sing or wail signify people who sing or wail, be they masculine or feminine birds. As for small birds, such as sparrows and nightingales, these are young males.[35]

This allocation of gender or social roles, however, does not seem to be as rigidly defined as Ibn Sīrīn would like us to believe. For on closer analysis we can detect shifting definitions in the gendering process. And while these may not appear to be remarkable in themselves, they allow us to understand the rationale behind such flexibility. Both seem to agree on assigning masculinity to the most powerful of the predatory birds. They disagree only on three predators, which turn out to be the least significant of them. Thus, whereas Ibn Sīrīn assigns neutrality to the owl, Ibn Shāhīn assigns it masculinity. Ibn Sīrīn assigns both femininity and masculinity to the kite, Ibn Shāhīn assigns it masculinity. There is also disagreement on the vulture. Defined as neutral by Ibn Sīrīn, it is described as a stupid and useless woman by Ibn Shāhīn *(al-mar'ah al-balhā' al-qalīlat al-fā'idah),* suggesting a negativity with regard to predatory birds gendered in the feminine.[36]

Likewise with non-predatory birds, out of seventeen cases, five are differently gendered by our two interpreters. For instance, the gendering of the sandgrouse *(al-quṭāh)* is inverted; Ibn Sīrīn assigns it femininity, the other masculinity.[37] The case of the pheasant *(al-tadruj)* is also interesting for us, for Ibn Sīrīn tells us that this bird underwent transformation from a domestic to a big wild bird, hence changing from a female to a male bird.[38] On the whole, it may be argued that a sharp gender dichotomy is mostly reproduced with regard to the most aggressive or the most docile birds. However, when bird traits seem to be more ambiguous in

---

[35]Ibn Sīrīn, *Muntakhab,* 151, 146.
[36]Ibn Shāhīn, *Ishārāt,* 298; Ibn Sīrīn, *Muntakhab,* 148.
[37]Ibn Sīrīn, *Muntakhab,* 146; Ibn Shāhīn, *Ishārāt,* 298.
[38]Ibn Sīrīn, *Muntakhab,* 147, 149.

terms of defining gender construction, this bipolarity becomes less clear, permitting simultaneous gendering, flexibility, and even reversals in roles.

Predatory Birds

As mentioned earlier, hierarchy is most emphasized among predatory birds, especially by Ibn Shāhīn, who carefully places the masculine-gendered falcon at the top and the feminine vulture at the bottom.[39] In contrast, the vulture in Ibn Sīrīn's text is not even given a specified place within the constructed hierarchy of predatory birds, for even though it is considered a predator, it is textually placed in the midst of non-predatory birds.[40] In total, out of sixteen predatory birds, eleven are identified as masculine, three as feminine, and two as masculine and feminine simultaneously. Both interpreters define the most powerful of the predatory birds as royal masculine archetypes. We are told that they are the kings and masters of the bird kingdom. Ranked at the top of this category are the three predatory birds: the falcon, the eagle, and the hawk. The textual language used by our interpreters is noteworthy, for the Arabic terms *mulūk wa-asyād al-ṭuyūr* (the kings and lords of birds) clearly reproduce the same linguistic terms that are used to refer to kingship and nobility in medieval Arab-Muslim society. A number of common traits describe these masculine-gendered predatory birds, which appear to be the very same traits constituting the male stereotype: physical power, aggressiveness, courage, swift and powerful movement, honor, respect, spirituality, and intelligence.[41] However, parallel to these positive traits of masculinity, there is an underside that is negatively perceived in the text. This is detected in the usage of highly negative traits to describe most of these masculine-gendered birds, such as stubbornness, injustice, oppressiveness, deceit, religiosity, and theft.[42] Interestingly, both dream texts seem to view masculine power in suspicious terms, reflecting a strong fear of the powerful male figure whose abuse of power may violate the patriarchal norms of society. Two of the three royal birds appear to be constructed as symbols of degenerate power, whose strength is based more on oppressive physical force and usurpation than on justice. In this bird imagery, the ancient link between divinity and kingship seems to have been lost, revealing instead a low opinion of kingship. The eagle, though, deserves special attention, for it uniquely combines the attributes of power, honor, and spirituality, making it a more appropriate symbol of ideal royal masculinity. Absence of these royal birds as signifiers of the ancient goddess-queen must be noted, for these powerful

---

[39] Ibn Shāhīn, *Ishārāt,* 296.
[40] Ibn Sīrīn, *Muntakhab,* 148.
[41] Ibn Shāhīn, *Ishārāt,* 295–96; Ibn Sīrīn, *Muntakhab,* 146–47.
[42] Ibn Sīrīn, *Muntakhab,* 146.

bird types appear to signify exclusively masculine as opposed to feminine power, suggesting that royal power in medieval Arab-Muslim culture was ideally perceived in masculine terms only.

While the eagle is constructed as the ideal masculine prototype within the kingdom of predatory birds, the crow is depicted as the male villain par excellence. Both dream interpreters employ strong negative terms to describe the crow, for it commits the worst of social crimes: trespassing and disrupting social boundaries. It is described as a murderer, an adulterer, an unjust sultan, and a thief. Furthermore, its name *(al-ghurāb)* signifies, through its etymology, that it is the ultimate ″other″ or stranger *(al-gharīb),* whose presence signifies corruption in both the domestic and public spaces. Ibn Sīrīn tell us that ″if a man dreams that a crow is in his house, it signifies both an attack from the sultan and a man betraying him with his wife.″[43] Why is the crow chosen to signify the archetypal male villain? It turns out that in actuality the bird eats anything and attacks birds′ nests to eat their eggs and young ones.[44] Though a large variety of traits are used to describe the crow, the bird is rarely assigned femininity. It represents a negative masculinity which violates social boundaries, and hence its denunciation in the two dream texts.[45]

Predatory birds gendered in the feminine signify the prototype of the evil or the useless woman. However, woman-as-predator makes only fleeting appearances in the bird texts under study, and when she does, she is portrayed negatively. Given that social norms equate ideal femininity with passivity, this may explain why Ibn Shāhīn establishes a direct correlation between the trait of wildness and the negative traits of evilness or stupidity in woman. As we have seen earlier, Ibn Shāhīn defines the vulture *(al-rikhmah)* as a stupid and useless woman. As for the gold crest *(al-ṣafāwah)* it signifies for him a chaotic woman who commits ugly actions, particularly if the bird is wild *(mudabbirah sayyi'ah, dhāt af'āl qabīḥah khuṣūṣan in kānat barrīyah).*[46] If wild predatory birds are free-moving and able to fly long distances, hence uncontrollable, we can understand why they are more readily constructed as symbols signifying the feminine figure of disorder, depicted as evil, treacherous, disastrous, disorganized, useless, sinful, stupid, and finally,

---

[43]Ibid., 149.
[44]Ibn Shāhīn, *Ishārāt,* 297.
[45]Ibn Sīrīn, *Muntakhab,* 146; Ibn Shāhīn, *Ishārāt,* 296. Other masculine-gendered predatory birds used as symbols signifying different male types are the petty prince, the irreligious scholar, the thief, and the soldier; most share the essential trait of physical aggression. Once again, adjectives describing these figures appear to be predominantly negative; they are depicted as envious, corrupt, destructive, sinful, vain, untrustworthy, and lazy. Cleverness and self-control seem to be the only two positively-constructed traits in this group of male predatory birds.
[46]Ibn Sīrīn, *Muntakhab,* 146; Ibn Shāhīn, *Ishārāt,* 296.

predictive of misfortune.[47] For both interpreters, however, predatory birds generally signify human figures of power and evil, causing tyranny and brutality in the world *(al-ẓulmah wa-al-ghashmah)*. Such acts, however, are predominantly perceived as man′s rather than woman′s domain of activities.[48]

NON-PREDATORY BIRDS

Non-predatory birds are also gendered according to what is socially perceived as feminine or masculine, belonging to either high or low social status. Among the masculine-gendered birds, the cock, the peacock, and the griffin signify the status of petty kings and the wealthy. Similarly, among the feminine-gendered birds, the dove, duck, and goose signify women of wealth and nobility.[49] In between, there is a wide variety of birds, representing various urban social classes. Dream language has even invented bird symbols signifying the riffraff of society *(al-arādhil)*. Tables 2 and 3 are specifically constructed to demonstrate which of these non-predatory birds are gendered as masculine or feminine.

Table 2: Non-Predatory Masculine-Gendered Birds

Bird Type	**Signified Activity**	**Attributes**
Cock *(al-dīk)*	petty prince, religious scholar, muezzin, soldier, chief male slave	courageous, honest, pious, evil
Starling *(al-zarzūr)*	male traveler, ascetic	irreligious, untrustworthy, liar, infidel, thin
Hoopoe *(al-hudhud)*	male traveler, scholar	perceptive, knowledgeable, highly professional, irreligious
Blackbird *(al-shuḥrūr)*	ascetic monk, captive lover	
Parrot *(al-babaghā')*	slave merchant, philosopher	unjust, liar

[47]See cases of other female birds signifying evil and misfortune in Ibn Shāhīn, *Ishārāt,* 296.
[48]Ibid.
[49]Ibid., 298–303.

Stork *(al-luqluq)*	noble man, weak king, peasant, guardian, ascetic	harmless, respectable, wise, strange
Partridge *(al-ya'qūb)*	man of war, soldier	
Palm dove *(al-dubsī)*	preacher	
Swan *(al-tamm)*	petty king	
Quail *(al-summānī)*	male servant, male youth *(ghulām)*	

Table 2 depicts masculine-gendered birds signifying males who represent a wide range of urban professions, such as the petty prince or king, the soldier, the scholar, the intellectual, the ascetic monk, the philosopher, the preacher, the muezzin, the traveler, the merchant, the broker, as well as the slave and servant. Only in one instance do we encounter the solitary figure of the peasant, betraying the urban bias of our texts. Male figures of high power and wealth appear less prominently here than they did among predatory bird types. Instead, we see a predominance of the intellectual and religious professions among these non-predatory birds. The gendering of the long-distance traveling bird in the masculine deserves special attention. Though delicate in size and gentle in behavior, birds such as the hoopoe and the starling are known to fly long distances, and hence are gendered in the masculine, again demonstrating how the text reflects the normative in gendering social space. Both dream interpreters appear to reinforce the notion of public space as the legitimate and primary domain of the male. With the exception of the starling that is said to signify a thin man, little interest is expressed in describing the physical attributes of the male body. More interest is reflected in attributes reflecting economic, social, and ethnic status. Thus some figures appear as rich, noble, powerful, poor, or of slave origin, and are simultaneously depicted in ethnic terms such as the Iraqi, the Arab, and the Persian.[50] It is interesting to note here that the appearance of such varied ethnic categories seems to be more characteristic of Ibn Sīrīn's text than Ibn Shāhīn's, reflecting perhaps the existence of a wider range of ethnicity in Ibn Sīrīn's socio-historical context.

[50]For more details on ethnic identities, see Ibn Sīrīn, *Muntakhab,* 146–51, and Ibn Shāhīn, *Ishārāt,* 295–305.

Table 3: Non-Predatory Feminine-Gendered Birds

Bird	Profession/status	Attributes
Dove *(al-ḥamāmah)*	slave, noble	virtuous, good, faithful to spouse, most beloved by man
Goose *(al-awz)*	noble, wealthy	corpulent, fertile body
Duck *(al-baṭṭ)*	white: noble, wealthy black: slave	fertile
Chicken *(al-dajājah)*	slave, domestic servant	beautiful, frivolous, virgin
Ring-dove *(al-fākhitah)*	--	evil, unfriendly, defective in religion, domineering, liar, unveiled around people
Partridge *(al-ḥijlā)*	slave	beautiful woman, unfriendly, wild
Al-ansīyah (?)		friendly, sharp, coherent mind, good, harmless
Woodpecker *(al-shufruq)*	rich	beautiful
Sandpiper *(al-ṭīṭawá)*	slave	virgin
Al-ḥurayrah (?)	slave	black
Turtledove *(al-qumrīyah)*	--	pious
Dipper *(al-ghaṭṭās)*	--	religious

An almost equal number of non-predatory birds are gendered as feminine by our two interpreters. These seem to be depicted more in terms of their character traits and physical attributes, rather than by their vocational activities. The few, but most typical, female activities that appear in this table are the wife, slave, servant, and the ″beloved″ of man, reflecting characters defined in relation to the male and

the household. The figure of the wealthy woman is signified by such birds as the goose, the duck, and the dove. Color seems to be used as a sign of status; thus in the case of the duck, white stands for the noble and wealthy woman, whereas black stands for a fertile slave. As with the masculine-gendered birds, feminine traits are described in oppositional terms: virtuous, pious, good, faithful, and friendly, as opposed to frivolous, unfriendly, evil, domineering, unveiled, and irreligious. In only one case is she described by her intellectual capacity: the *ansīyah* signifies a woman with a sharp and coherent mind. In contrast to the male birds, depictions of the body abound in this small sample, revealing an emphasis on the female body and its sexuality. Thus it is described as beautiful, fertile, corpulent, unveiled, and most importantly as virginal. Male dreams depicted in the bird narrative seem to confirm that virginity is a highly prized trait in the female. Imagery of possessing, hunting, or slaughtering the virginal slave or woman abounds in dreams of domestic birds.[51] And as we shall see later, this is also a common feature in the dream chapters dealing with man, woman, slaves, and sexuality.

Among the feminine-gendered birds, both the dove and the streptopelia or wild dove *(al-fākhitah)* deserve special attention, for they are constructed as opposite feminine prototypes. The dove, archaic symbol of feminine divinity and the spirit, is perceived here as the noble, virtuous woman, and most importantly, as the good and faithful wife. The wild dove on the other hand is constructed as the evil woman par excellence. Arab zoologists depict this bird as a liar that possesses a sharp voice and is most feared by snakes.[52] Like the predatory bird *al-ṣafāwah* whom we have encountered earlier, *al-fākhitah* is described in negative terms, as a woman who is untamed, irreligious, and who does not cover her body before strangers. But most importantly, she is a woman possessing an unrestrained tongue *(salīṭah).* It is interesting to note that the word *salāṭah* comes from the verb *tasallaṭa,* and it is also related to the noun *sulṭān*. In contrast to masculine power, primarily defined in our bird text in terms of physical force and aggression, this feminine trait of *salāṭah* (absence of restraint) is linked to the power of the tongue *(salāṭat al-lisān),* a trait that seems to be most feared in women. According to medieval Arabic lexicography a person who possesses *salāṭah* is defined as someone who possesses a strong, firm, glib, sharp, loose, and vicious tongue.[53] Thus the aggressive-tongued woman is perceived as a powerful and therefore dangerous character; so threatening is she to man that elsewhere in our dream text we are told that ″if a man dreams of a woman who is *salīṭah* his dream signifies that he

---

[51]Ibn Shāhīn, *Ishārāt,* 300, 302; Ibn Sīrīn, *Muntakhab,* 150.
[52]Al-Damīrī, *Ḥayāt al-Ḥayawān,* 2:135.
[53]Muḥammad ibn Yaʻqūb al-Fīrūzābādī, *Qāmūs al-Muḥīṭ* (Cairo, 1911), 2:363.

will be killed."[54] Inasmuch as dream language seems also to establish a close correspondence between the tongue and the phallus as symbols of sexual power,[55] the *fākhitah* becomes most feared because her "long tongue" may be considered as a weapon that corresponds to and therefore threatens male sexual power. Both the *ṣafāwah* and the *fākhitah* signify two of the most threatening feminine traits, wildness and verbal aggressiveness, and are therefore perceived as disruptive figures that contest normative gender roles.[56] The *fākhitah* and the *ṣafāwah,* however, are more exceptions to the rule, for birds that are gendered as feminine typically share the common trait of gentleness, and hence are constructed as symbols of domesticity. Among these, the dove, duck, goose, and chicken represent the archetypal feminine sacrificial birds, restricted in mobility, and most ubiquitous within the domestic space.[57]

Non-predatory birds may also be simultaneously gendered as masculine and feminine. Understanding the rationale behind this simultaneous gendering is equally important because it may help us to find out why our interpreters no longer observe the sharp dividing lines between birds exclusively gendered as masculine or feminine. In Table 4, I would like to correlate these simultaneous traits so as to examine the blurred or gray areas in gender construction.

Table 4: Simultaneous Gendering of Non-Predatory Birds

Bird	**Male Attributes**	**Female Attributes**
Pheasant *(al-tadruj)*	deceitful	beautiful
Griffin *(al-ʻanqā')*	heretic, noble easygoing, reasonable	beautiful noble, reasonable, pleasant
Francolin *(al-durrāj)*	mamluk, treacherous, infidel	Persian, treacherous
Ostrich *(al-naʻāmah)*	eunuch	bedouin

---

[54]Ibn Shāhīn, *Ishārāt,* 129.

[55]See Gouda, *Dreams and Their Meanings,* section on the tongue, 421; Ibn Shāhīn, *Ishārāt,* 79–80.

[56]Oberhelman discusses the image of the "talkative woman" and how it provokes men; see "Hierarchies of Gender, Ideology, and Power," 92. Also, in her study *Tales of Sex and Violence,* 102, O'Flaherty discusses the threatening power of "long-tongued" women depicted in Vedic texts. We may also find a similar attitude to the "long-tongued" woman in Shaykh Nafzāwī's classical text on sexuality, *The Perfumed Garden,* trans. Richard Burton (New Jersey, 1964), 37, 109.

[57]Ibn Shāhīn, *Ishārāt,* 302; for other examples, see ibid., 300.

Nightingale I *(al-'andalīb)*	singer, Quranic reciter	eloquent and pleasant
Nightingale II *(al-bulbul)*	rich, Quranic reciter	rich woman
Nightingale III *(al-hazār)*	boy singer, Quranic reciter, eloquent cultured scholar	good looking, good voice, slave singer
Swallow *(al-sunūnū)*	male slave, Quranic reciter, pious man of culture, rich, stupid	slave, rich
Peacock *(al-ṭāwūs)*	noble Persian or Persian king	beautiful noble Persian, slave girl, corrupt woman
Sparrow *(al-'uṣfūr)*	big, dangerous man, rich and of high status	beautiful
Pelican *(al-baja'ah)*	judge	uncouth, gluttonous
Bustard *(al-ḥubārá)*	wealthy, generous, gluttonous	butcher, wealthy
Bat *(al-khuffāsh)*	ascetic monk	sorceress
Parrot *(al-durrah)*	good servant, ascetic	virgin

Table 4 shows that more activities and professions are assigned to the male as opposed to the female of the same bird type. In addition to some male figures of authority, such as the petty king, the vizier, the judge, and the soldier, we encounter a few male figures of wealth and noble status. But what is worth observing here is the prevalence of male figures of cultural, spiritual, and artistic inclinations, such as the singer, the Quranic reciter, the heretic, the eloquent scholar, the eunuch, and the ascetic.[58] Figures of a lower status may also be found among these male types. More female vocational activities appear in this sample. In addition to the

---

[58]See Ibn Sīrīn, *Muntakhab,* 148–51; Ibn Shāhīn, *Ishārāt,* 298–303.

wife, the beloved of man, the domestic slave, and servant, we encounter for the first time the female slave singer, the female butcher *(al-laḥḥāmah),* and the sorceress, figures that may be considered of a lower social status. Table 4 also shows that beauty and other physical descriptions recur as the most common description of the female figure. The dream text establishes a close link between the trait of female physical immodesty *(lā tastatir amāma al-nās)* on the one hand, and corruption or treachery on the other, suggesting that the unveiled woman is perceived as a corrupt figure in her social surroundings. This is confirmed elsewhere in the chapter on animals in our dream texts, where the she-goat is singled out as signifying a corrupt woman who shamelessly exhibits her body.[59] Different social status and ethnic categories appear to closely intersect here; thus the female is depicted variously as wealthy, noble, or poor, as well as of bedouin, Arab, or Persian origins. Once again, Ibn Sīrīn's bird text makes more references to ethnicity than does Ibn Shāhīn's.

A closer examination of these simultaneously-gendered bird types help us in understanding how feminine and masculine traits correlate. Whereas the male bat is cast as an ascetic *(nāsik),* his female counterpart is cast as a sorceress *(sāḥirah),* assigning a dangerous spirituality to woman, but a more respectable one to man. Likewise, the bird text casts the male pelican as a judge, but denies this to his female counterpart; instead she is perceived as an uncouth and gluttonous woman. Equally interesting is the case of the parrot, which, as a male bird, signifies a religious or ascetic man, but as a female bird, signifies a virgin. This parallelism between female virginity and male asceticism is confirmed elsewhere in the bird text, allowing us to observe how the dream text differently perceives male and female states of purity.[60] Table 4 also suggests a correlation between the feminine attribute of beauty and masculine attributes such as deceit, heresy, innovation, wealth, and danger, revealing a fear and suspicion of physical beauty as an attribute of female power. In some cases, though, similar traits are assigned to both the male and female bird; thus the *hazār,* a type of nightingale, signifies both a boy singer and a female slave singer, indicating a close connection between lower social status and the profession of singing, as well as the equally low status of children and women. Equating women with children is a stereotype which is repeatedly found in our dream texts, and which is confirmed by the insistence of existing legal and social norms within medieval Arab-Muslim culture that both children and women must have male guardianship. Finally, if this bird sample generally represents men and women of less privileged social status, then it is

---

[59] Ibn Sīrīn, *Muntakhab,* 139.

[60] Ibn Shāhīn, *Ishārāt,* 302. For comparative purposes see *Sexual Asymmetry: Studies in Ancient Society,* ed. Josine Blok and Peter Mason (Amsterdam, 1987).

easier to understand why such birds may be gendered either way, for the social stakes do not seem to be so high.

Sexuality and Dynamics of Power

How do men′s dreams about sexuality and marital dynamics reveal their obsessions, fears, and anxieties? In the remaining sections of this article I would like to further examine the bird narrative along with those directly related to human actors, so as to explore points of convergence and divergence between them. Men′s dreams relating to sexuality and marital dynamics seem to be generally centered on the male agent, and are structured around the act of penetration. A close correlation between social power and sexual posture can be clearly observed in reading sexual dreams—this is so with regard to both the heterosexual and the homosexual act. Following their own social parameters, our dream interpreters view the male partner who initiates the act of penetration as the one who is in a position of power or in a position to receive benefit. Difference or sameness of the biological sexes of the persons engaged in the sexual act does not seem to be a crucial factor in interpreting the sexual dream; what is more important here is to determine its predictive significance for the dreamer. To determine the predictive value of the dream, actors—regardless of their sex—are classified according to two basic categories, the active *(al-fāʻil or al-nākiḥ)* and the passive *(al-mafʻūl or al-mankūḥ).* But while the dream chapters on sexuality and marriage seem to generally assume a relationship of dominance in the heterosexual act, where the male is normally expected to be the sexually dominant partner, this is not so in the homosexual act. As will be seen, with the exception of pederasty, homosexual acts are interpreted alternately in terms of power and social benefit, receiving little negative judgment on the part of the interpreter.

Numerous passages in the bird text reflect the all-important male desire to marry, inherit, or receive wealth from a rich wife. Here, Ibn Shāhīn reminds us that water birds, primarily gendered as feminine, ″are better off than any of the other birds in dreams; their flesh, feathers, and bones signify great wealth and status.″[61] But it is the female duck that is viewed as the best signifier of wealth and prosperity in the bird text: ″the white duck is wealth or a rich woman. . . . Thus if a man dreams that he slaughtered a duck or ate its flesh, he inherits from his wife a lot of money or hoards it.″[62] This dream motif is reiterated in the case of other female birds as well.[63] It is not surprising therefore to find that possession of a

---

[61]Ibn Shāhīn, *Ishārāt,* 303.
[62]Ibid., 299.
[63]For instance, ″if a man dreams that he caught the children of a *fākhitah,* it signifies the birth of male children, and its flesh signifies receiving money from women″ (ibid., 300). For other examples of female birds, see the case of the dove, the ostrich, and the griffin, ibid., 299–300.

woman reflects a major desire in men´s dreams, for it ultimately signifies increase in his social status and power. This may partly explain why the bird text is replete with images of slaughtering, catching, or hunting female birds.[64] On the other hand, if a man dreams of slaughtering, catching, winning, or possessing a male bird, it is interpreted as attaining power or success, vanquishing an enemy, or befriending a man. This seemingly variant interpretation is illustrated in the cock and chicken dream:

> If a man dreams that he is fighting a cock and he gets hurt it means he will get hurt by an evil man, if he dreams that he slaughtered a cock, it means the death or sickness of his male slave, and if he dreams that he caught a cock and held it, he will achieve far reaching aims.[65] . . . But if a man dreams that he slaughters a chicken it means that he will marry a virgin female slave.[66]

One may argue, however, that the cock and chicken dreams seem to be equally inspired by the same male desire to attain power, benefit, and high social status. The close link between male sexual potency and attainment of power and status is brilliantly demonstrated by male dreams of the archetypal woman, which are best illustrated in Ibn Sīrīn´s narrative of the sexual conquest of the female virgin:

> As for deflowering the female virgin, this signifies confronting difficult matters such as meeting sultans, war, sword fighting, conquering the city, digging underground granaries and wells, hunting treasures, *dīwān*s, searching for difficult sciences, hidden wisdom, and entering in all tight matters *(al-umūr al-ḍayyiqah)*. Thus if he performs the opening *(fataḥa)* and penetrating *(awlaja)* in his sleep, he succeeds in his quest in his state of awakening. But if his penis goes limp, or its head is hidden, or if he ejaculates without penetration, this signifies that he will receive much harm and his vigor will be weakened.[67]

---

[64]Thus ˝if a man dreams that he caught *(amsaka)* a partridge it signifies that he will get married . . . and if a man dreams that he cuts *(qaṭa‘a)* her, it signifies that he penetrates a virgin female slave˝ and ˝if a man dreams that he slaughters *(dhabaḥa)* a *ḥurayrah* (?) it signifies that he will deflower a virgin female slave˝ (ibid., 300, 299). For other cases, see the chicken, the peacock, the female ostrich, the griffin, the hoopoe, and the starling, ibid., 298, 299, 301, 302.
[65]Ibid., 300.
[66]Ibid., 302.
[67]Ibn Sīrīn, *Muntakhab,* 264.

Woman is perceived here as crucial in defining masculine power. Her sacrifice or conquest seems to be essential in order that man may achieve social greatness and wisdom. But this is also a dream that reflects the thing most feared by men: failure in fulfilling the sexual or sacrificial act, and hence great social harm. Moreover, this dream celebrates man as the phallic conqueror and woman as the object of his conquest. In his dreams she stands for all that he aims for: power, cities, wealth, science, knowledge, and wisdom, and most of all, she is the fulfillment of his sexual and erotic desires. For the male dreamer then, the successful act of female defloration or possession signifies the magical attainment of his desires, and conversely, the failed sexual act signifies great harm and loss of social power.

Linguistic terms denoting the masculine act of conquest or sacrifice in the bird text are also revealing, for the dreamer frequently appears in the act of catching *(amsaka),* killing *(qatala),* slaughtering *(dhabaḥa),* or hitting *(aṣāba),* an imagery that is reminiscent of the language of the male hunter who masters the act of sacrifice through ″slaughtering″ or ″killing″ the female in the sexual act.[68] An equally revealing vocabulary is used in the dream text on the sexual act between man and woman. Here the term commonly used for the heterosexual act is *al-waṭ'* (intercourse) which we are told is analogous to the act of killing *(al-waṭ' ka-al-qatl);* the tool used in such an act is the phallus *(al-dhakar),* likened in dream language to the dagger and the arrow.[69] We are also reminded that sexual intercourse is analogous to man′s achievement of desired goals *(al-waṭ' bulūgh al-murād)*, because as Ibn Sīrīn states, ″it is pleasure and benefit achieved as a result of man′s hard work.″[70] Moreover, if the erect penis is used as a symbol of male power, the flaccid one is often used as a symbol of powerlessness.[71] One might also add that the significance of the male phallus as an important tool of masculine power is corroborated in other dream texts by the lengthy attention it receives there.[72] The metaphor of deflowering or marrying the virgin appears to take pride of place in man′s sexual dream imagery. Here, the virginal slave seems to be more favored than her free-born sister, suggesting perhaps a male preference for the more submissive of the two. The virginal body is assumed to be still intact and therefore uncontaminated, hence, the male who lets its blood can take full possession of it, assuming the uncontested position of master. Not surprisingly, the dove, faithful wife par excellence in the bird text, is used to signify the archetypal metaphor of

---

[68]On the significance of sacrifice, see O′Flaherty, *Tales of Sex and Violence,* 15–28.

[72]Drawing upon the content of several Arabic classical dream texts, Gouda assigns the longest coverage to the symbol of the phallus. See *Dreams and Their Meanings,* 311–15.

the sacrificial virgin.[73]

The close link between the sexual or marital act and achievement of male social power may be further observed in the dream narrative on marriage. Marriage is perceived as a significant achievement of power *(sulṭān),* depending on the social status of the woman, her beauty, and her virtue. On this Ibn Sīrīn tells us that if the man dreams that he marries ten wives, then all the more power to him. Similarly, if a woman dreams that she takes a second husband, this would also signify more benefit for her.[74] Marriage to a close relative is viewed with much favor, for it signifies that the dreamer will dominate his household, a situation that is highly favorable in a society where kinship relations determine much of male social power.[75] On the whole, marriage is perceived according to the expected husband-wife roles: for the man it signifies power, for the woman benefit. But not all marriages signify power or benefit; again this depends on the woman in question. Accordingly, Ibn Shāhīn tells us that if a man dreams that he marries a Jewish, a Christian, or a Mazdian woman, these signify acts of abomination, futility, confusion, and distraction from religion. Such reservations, though, seem to be more of a worry to Ibn Shāhīn than Ibn Sīrīn, for in the latter′s text, marriage simply signifies both power and social benefit. This difference between our two interpreters may demonstrate that Ibn Sīrīn′s social context allowed more openness to mixed marriages than Ibn Shāhīn′s.[76]

Male Anxieties over Domestic Boundaries

Dreams expressing male anxieties about marriage, seduction, promiscuity, adultery, divorce, and restriction of female movement abound in the bird text. Once again the dove, as archetypal wife, occupies a prominent place in domestic and sexual dynamics. Fear surrounding wife seduction or betrayal naturally produces images of anxiety in male dreams: ″if a man dreams that he is using tricks to catch domestic doves *(al-ḥamām al-ahlī),* this means that he is seducing women of the household.″[77] Ibn Shāhīn also tells us ″that if a man dreams that he caught a dove, he will commit a forbidden act with a woman if she is a domestic dove *(ḥamāmah ahlīyah).* However, if she happens to be a wild one, then there is no harm.″[78] Unlike hunting or catching wild birds, which is considered fair game, catching domesticated birds, which stand for women of the family, is interpreted as a taboo *(ḥarām),* hence reflecting a close parallelism between the text and the existing

[73]Ibn Shāhīn, *Ishārāt,* 300; see other cases as well, 299–305.
[74]Ibn Sīrīn, *Muntakhab,* 265.
[75]Ibn Shāhīn, *Ishārāt,* 129.
[76]Ibid.
[77]Ibid., 300.
[78]Ibid.

social values of domestic integrity. Moreover, if a man dreams that a peacock and a dove, or a peacock and a francolin, are intimate with one another, this denotes corruption *(fasād)* in the family, or encouraging corrupt sexual behavior between women and men.[79] The rationale behind such an interpretation may not be immediately clear, but I have observed in other cases as well that dreams of cross-intimacy of different types of birds are almost always interpreted as transgression of social boundaries or classes, and hence perceived negatively in our texts, just as they would be in the interpreters′ social setting.

Dream imagery also reflects male anxieties about divorce, death, and movement of the wife outside domestic boundaries. Imagery of flying birds is of particular significance, and, as we have already seen, is interpreted differently depending on the gender of the bird. Thus, ″dreaming of doves flying away from the house signifies divorce of the woman.″[80] Moreover, ″if a man dreams that he saw a female peacock fly away from his house, it signifies that he will divorce his wife or she will die.″[81] On the other hand ″if a man dreams that a griffin carried him and flew into the sky, it signifies that he will meet a noble man in his traveling.″[82] Similarly ″if he dreams that a parrot flew from his hands, it signifies travel of his male slave or his servant.″[83] Traveling, or free movement in the public space, is repeatedly viewed in our texts as a male prerogative, reifying the moral values of the urban middle and upper middle classes to which our interpreters belonged. Such concerns do not necessarily reflect the reality of everyday life of working or middle class women in the urban context, for as I have shown in an earlier study of Mamluk Cairo, women appear to have been moving in a relatively free manner outside their domestic boundaries.[84] Male anxiety over women′s movement outside the domestic space is nonetheless detected in the following dream depicted by Ibn Shāhīn. Thus ″if a man dreams that he cuts the wings of the dove, it signifies restricting his wife from going outside the house.″[85] This imagined act of physical aggression against the female body perhaps allows us to sense the vulnerability of

---

Nikki Keddie and Beth Baron (New Haven, 1991). In this article I showed that, much to the discontent of some religious scholars, women from the lower and middle classes in medieval Cairo were moving with relative freedom in the public space.
[85]Ibn Shāhīn, *Ishārāt,* 300.

male power over the female, one that may burst into acts of physical aggression in his dreams.

Male anxiety over separation or divorce in the domestic space is also reflected in dreams relating to marital and sexual acts. Here also, divorce signifies a decrease in male honor and power. This is because—as both dream interpreters keep reminding us—"women, like kings, possess the feared power of '*kayd*'"—an Arabic term which denotes multiple meanings signifying ruse, artifice, and subtle cunning, practiced by both women and kings alike.[86] Like *salāṭah* (aggressive tongue), *kayd* is another feminine power trait feared by men. Most important for us is the parallelism drawn between woman and power; thus we are told that if a governor or a king has a divorce dream, this signifies loss of their power or office. Worse still is the case of the monogamous dreamer, for his divorce dream signifies his pending death.[87] Given such a negative charge in divorce imagery in our dream texts, we may get a sense of the degree of cultural anxiety over matters concerning domestic rupture. The dream text clearly reflects the significance with which the culture in question views the crucial role that women play in upholding or disrupting the integrity of the basic social structure.

Children in Male Dreams

Dreams about children receive much attention in the dream texts, reflecting a major recurrent concern of the male dreamer—sometimes joy, other times intense anxiety and worry: "Dreams about children in general signify worry *(hamm),* because they are brought up through pain and suffering."[88] But the child's gender is important in determining the joy or sorrow to which the dream points. In the bird text, the male child *(al-walad)* is signified by the young or small bird,[89] while the female child *(al-bint)* is signified by the bird nest or egg.[90] Elsewhere in Ibn Shāhīn's text, "the testicles of a man signify his power or his male children *(bayḍ al-insān quwwatuhu aw wilduhu)*.[91] Here we can see the close link between male power and the possession of male children, and since the desire to possess power is often accompanied by emotions of anxiety, this might explain why dreams about male children in particular evoke contradictory feelings of extreme tension or joy. Conversely, dreams about female children appear to signify release of tension and absolute joy. On this Ibn Shāhīn tells us that while dreaming about a

[86]Ibn Sīrīn, *Muntakhab,* 265. On the notion of *kayd* see also Oberhelman, "Hierarchies of Gender, Ideology, and Power," 89.
[87]Ibn Shāhīn, *Ishārāt,* 130.
[88]Ibn Sīrīn, *Muntakhab,* 57.
[89]Ibn Shāhīn, *Ishārāt,* 297.
[90]Ibid., 300, 305.
[91]Ibid., 305.

male child may be variously interpreted as good fortune, worry, an enemy, or a bad omen, dreaming of a female child simply signifies release *(faraj)* from worry and restraint.[92]

The desire to beget a male child occurs more frequently in dreams of the royal masculine-gendered bird. Here, there is hardly any mention of the female baby. Thus young predatory birds are almost always interpreted as male children: "If a man dreams of a wild hawk, it signifies a stubborn son, and if he dreams that he caught a hawk, but did not use him in hunting, he receives a son, and if he dreams that he eats the flesh of the hawk, he receives a son, who will cause him pain and difficulty when he grows older."[93] As for the young of the eagle, it is interpreted as a son who will become famous; similarly with the falcon, he will become a great and courageous son.[94] It may be argued here that such anxiety over begetting the male child may be said to reflect the obsessive desire on the part of the noble and the wealthy to produce male heirs, who will bring an extended increase in social power. Generally, female children appear less frequently in the bird texts. This may be readily observed from a simple statistical count—the son appears thirty times, the daughter only three times.[95] Moreover, fear of death, poverty, difficulties, or misfortunes appear to revolve more around the son than the daughter;[96] for instance "if a man dreams that he is holding a sparrow in his arms, which flew away and did not return, it signifies the death of his son."[97] Desire for a son who will bring benefit to the father also seems to be strongly reflected in male dreams; thus "if he sees that a young bird comes out of an egg, it signifies benefit from male children."[98] And "as for the nightingale, it signifies an eloquent son, of pleasant voice and speech, or a boy who will become a Quranic reciter."[99]

Anxiety over the sexuality of the child is another important theme in dreams about children. In both dream texts sexual penetration of a male child *(ṭifl)* signifies sorrow and difficulties. Textual references to the act of molesting boys are more explicit than those referring to girls: "If a man dreams that he is stitching shut the eyelids of sparrows, it signifies that he is deceiving boys *(yakhdaʻu al-ṣibyān),"* and once again, "if he dreams that he is fondling *(yaʻbathu)* sparrows or their young ones, it means that he is fondling boys."[100] Reference to pederasty appears

---

[98]Ibid., 304.
[99]Ibid., 301.
[100]Ibid., 303.

more frequently in Ibn Shāhīn′s bird text than in Ibn Sīrīn′s, and more than any other sexual act, it seems to demand his moralizing intervention:

> Some interpreters say that if a man dreams that he is playing with doves *(al-ḥamām)* and he belonged to the people of corruption *(min ahl al-fasād),* it signifies that he is a homosexual *(lūṭī),* because this was part of the rituals of the people of Lūṭ. And nowadays, there are many who take a great liking *(yaghwī)* to this art of playing with doves. They should fear God![101]

In this passage there is a double play on the meaning of the term *ḥamāmah* (dove), which we have come to know in the bird text as the good wife. In this context, however, Ibn Shāhīn may be using the term *ḥamām* as a metonym for boy. The terms used to describe dreams of child molesting call for some attention, for they denote that serious harm, deceit, or corruption is done to the child. Pederasty here is perceived as a form of sexual transgression socially harmful to the family and society at large, and therefore is negatively depicted by the dream interpreter. Moreover, Ibn Shāhīn′s remark that ″nowadays there are many who take a great liking to this art″ coupled with his admonition that ″they should fear God″ suggest his disapproval of the prevalence of pederasty in his society.[102]

In contrast, when it comes to dreams about the sexuality of the female child, the text seems to be more ambivalent. Thus ″if a man dreams that a francolin is sleeping beside him, it signifies that someone is trying to mislead his children *(yakhda'u 'iyālahu).*[103] Here, it is unclear whether the Arabic term *'iyāl* refers to sons or daughters, or both, for it simply refers to dependent children of the family. But nowhere else in the bird text or in the other examined texts is there explicit mention of the sexual molesting of young girls. Textual ambivalence, or perhaps one should say silence, over the sexuality of young girls may reveal an even greater male anxiety over the sexual chastity of the female child.

THE ARCHETYPAL WOMAN, THE ARCHETYPAL MAN

Equally important for our gender analysis are the symbolic notions of man, woman, and their reversed or inverted models in the dream text. Here, I would like to further explore how the dream text on human actors reflects gender relations. In male dreams about the archetypal woman, she appears to occupy a special centrality,

---

[101]Ibid., 300.
[102]On pederasty in the Mamluk period, see Everett Rowson, ″Two Homoerotic Narratives from Mamluk Literature,″ in *Homoeroticism in Classical Arabic Literature,* 158–91.
[103]Ibn Shāhīn, *Ishārāt,* 301.

appearing as an awesome figure, unfamiliar in the bird text where she is depicted more in a subordinate relationship to the male. In this narrative the archetypal woman is perceived as the earth with all its earthly things and concerns. She is the source of fertility and movement in life because ″she adorns herself, brings forth children, and pours milk.″[104] She has tremendous power over man, leading him either to temptation *(fitnah)* or salvation. As in the bird text, woman is also depicted in oppositional terms: she is either good or evil, the force behind the world of material pleasure, as well as the world of the spirit. She is described as beautiful, virginal, smiling, corpulent, clean, and adorned as opposed to old, ugly, emaciated, dirty, hairy, unkempt, and nude. As we have seen in the bird text, physical attributes seem to be crucial in defining the female body, and once again feminine beauty appears to be the most important attribute of female power. Conversely, male repugnance at female ugliness is reflected in the way it is used, signifying reversal of matters *(inqilāb al-umūr)*.[105] Thus the old, ugly, or defective woman is used as a metaphor of the deceptive material world, the source of all temptation and evil. On the other hand, the good, beautiful, and clean woman signifies the spiritual world and the hereafter.[106] We are repeatedly reminded that the good accruing from woman is determined by the degree of her beauty, adornment, and perfume, for we are told that in the ugly one there is no benefit, but only harm.[107] Male fear of the threatening power of woman may also be seen in dreams about the frowning, or the quarrelsome, woman. Here, Ibn Shāhīn warns the dreamer that if ″he dreams that he saw many women quarreling, this is predictive of strange events, resulting in social confusion.″[108]

Male dreams of the archetypal man occupy a shorter narrative space than that on woman. One could even argue that man, as a dream symbol, does not seem to evoke the strong emotions of fear, desire, admiration, hate, and love that are reserved for woman in male dreams. In this text, he is depicted in a straightforward manner, for he appears primarily in the role of bestowing wealth, benefit, and security. Age is significant, for the old man seems to be a more positive masculine symbol, signifying at once benefit, grace, wisdom, knowledge, fulfillment of needs, and security.[109] Unlike the bird text, physical looks seem to be an important attribute of the male in this narrative. Hence terms indicating both beauty *(jamāl)*

[105] Ibid., 56–57. The female slave is often used as a feminine symbol, but what has been said of the free-born woman may apply to her as well.
[106] Ibid., 258.
[107] Ibid., 259, 57. See also Ibn Shāhīn, *Ishārāt,* 62, who states that a beautiful and smiling woman signifies joy, benefit, and a fertile year.
[108] Ibid., 63.
[109] Ibid., 62.

and good looks *(ḥusn)* are used to describe the male figure. And while ugliness is equally disliked in men, signifying the male enemy, the language used here does not betray the same intense fear and anxiety reserved for the ugly woman. In addition to physical appearance, other attributes seem to constitute the male image; thus traits such as social or cultural refinement *(al-adab)* seem to be more typically masculine.[110] To sum up, while this dream narrative seems to betray the typical gender construct of woman as nature versus man as culture, it strongly reflects a male anxiety regarding woman′s awesome power.

THE DYNAMICS OF GENDER INVERSION

Earlier, we have seen how the bird text negatively constructs the images of the wild dove and the crow, reinforcing their otherness or marginality as social actors. The notion of social or gender inversion will be further examined here, for it allows us to examine gender relations beyond the simple dichotomy of the ″ideal″ or ″evil″ man or woman. What happens when gender roles are reversed or undergo transformation? More imagery of gender reversals appear in dreams relating to man, woman, marriage, and sexual acts than in the bird dreams: women in male dress, women with a beard or penis, menstruating men, or men giving birth to children, bisexuals, homosexuals, eunuchs, and hermaphrodites.

Unable to cast the latter in either role, interpreters do not know what to do with the figure of the hermaphrodite.[111] And whereas Ibn Shāhīn is ready to entertain several interpretations in relation to the hermaphrodite, Ibn Sīrīn gives a gloomy image of this socially ambivalent figure, for he tells us that ″if a man becomes a hermaphrodite it is predictive of a great catastrophe and grief.″[112] Ibn Shāhīn′s interpretation, though less gloomy, still points to a lack, for he asserts that ″dreaming of becoming a hermaphrodite may be interpreted in several ways: absence of sexual intercourse and progeny, lowering of status *(ta'khīr manzilatihi),* weak power, but also affection and sympathy.″[113] Predictably, low status here is juxtaposed to two defective attributes: lack of sexual potency and of children. Hence, the hermaphrodite is a symbol of a low social status, lacking in what our interpreters consider to be two of the most important ingredients of male social power. This reminds us of what we already know from the bird text: the close connection constructed between male power and sexual potency, and between male social status and male children. Attributing other positive traits to the hermaphrodite, however, compensates for this lack of social status and social

---

[110]Ibn Sīrīn, *Muntakhab,* 56.

[113]Ibn Shāhīn, *Ishārāt,* 65.

power: the more affective, perhaps feminine, traits of affection and sympathy.

In a different vein, the eunuch, presumably a male figure without phallic power, is perceived as an angelic and spiritually virtuous being who possesses knowledge and wisdom.[114] But instead of the positive qualities of affection and sympathy found in the hermaphrodite, the dream text assigns the eunuch the masculine spiritual qualities of knowledge and wisdom. Like the hermaphrodite, however, he seems also to be perceived as a marginal social figure; the eunuch here corresponds to the bat, the male ascetic that we have encountered in the kingdom of birds.

As for the bisexual male, he is seen as both an outsider to the household and a trespasser of social boundaries, corresponding perhaps to the crow in the bird text, a figure who disrupts boundaries. But he is not perceived as an inherently defective social figure, for as the dream text tells us, he needs only to repent in order to return within such boundaries.[115] Similarly, a woman who dreams of having a lesbian relationship signifies that she will be widowed or separated from her husband, suggesting again that reversal or subversion of ″normal″ sexual roles leads to disruption of the domestic order.[116] Conversely, Ibn Sīrīn tells us that male homosexuality signifies both victory and impoverishment, depending on sexual posture and social status. Therefore, if a man dreams that he is penetrated or mounted by his male slave, this would signify a drastic decline in both power and wealth, but if the sultan or an older man penetrates him, this would signify receiving benefit or enhancement of power.[117]

While the dream texts allow a positive interpretation of male homosexuality, it is less so for female homosexuality. The image of the masculine woman, who grows a beard or a penis or who dresses in men′s attire, inspires various interpretations. According to one, a woman turning into a man signifies a loss of her femininity and therefore the impossibility to relate in a ″normal″ fashion to the male. As in a lesbian relationship, this gender reversal is perceived in terms of social displacement, and hence threatening to acceptable social relations. Another interpretation of the masculine woman signifies the acquisition of masculine behavioral traits, allowing her to assume a position of dominance, but still perceived as violating the normative power relationship between man and woman.[118] Similarly,

---

[114]Ibid., 64.
[115]Gouda, *Dreams and Their Meanings,* 85.
[116]Ibid., 258.
[117]On homosexual acts in dreams see Ibn Sīrīn, *Muntakhab,* 263, 266; Ibn Shāhīn, *Ishārāt,* 130. See Oberhelman on homoerotic acts in dream texts in ″Hierarchies of Gender, Ideology, and Power,″ 70.
[118]For instance, if a man dreams that he is ″holding firm a woman′s vagina with his hand, which turns into a penis, her morals will change. If it remains a penis, she will remain authoritarian,

the image of a woman who imitates men *(al-tashabbuh bi-al-rijāl),* who behaves socially like men or adopts their attire, may signify improvement in her status, but on condition that ″this dress or behavioral reversal is not exercised in excess″ *(ghayr mujāwiz lil-qadr);* otherwise, as Ibn Sīrīn tells us, it will bring grief and fear for the woman.[119] This note of warning against excess is significant because it cautions against the complete blurring of gender boundaries, which according to Ibn Sīrīn is a prescription for social disaster. Even though we could argue that these different interpretations of gender reversals may signify gain in status and power for the woman, it is power illegitimately gained, and hence its negative portrayal.

How does the man fare if he becomes more like a woman? Here also we have different and sometimes contradictory interpretations. Thus if a man dreams that he has a vulva *(farj),* it signifies freedom from social restraints. According to one interpretation, the dream interpreter is making use of the literal meaning of the Arabic term *farj,* a derivative of the root *faraj,* which carries the multiple meanings of freedom from grief, release from suffering, joy, pleasure, and relaxation. Thus the vulva, metaphor of femininity par excellence, signifies a state of freedom and joy for the male dreamer. Conversely, the same dream may also be interpreted as loss of status and humiliation; thus ″a man with a vagina does not fare well and is humiliated.″[120] The dream text also depicts men as pregnant or delivering children. Pregnancy, symbol of feminine fertility, signifies benefit for both men and women. Thus if a man dreams that he is pregnant, he receives benefit in the world.[121] Less accommodating of the image of the pregnant male, Ibn Shāhīn offers conflicting interpretations, for while pregnancy may signify wealth for women, it may bring grief for men. But then he quickly adds that pregnancy may also signify wealth and benefit for either man or woman, suggesting gain of status for the male as well.[122] Such textual uncertainties are important to note, for they always reveal moments of conflict in the interpreter′s mind, where both mixed feelings and value judgments color his perceptions. Even though women may sometimes be perceived in a secondary relationship to men, feminine fertility here is viewed as an attribute of immense power in both the dream and social world of our interpreters. Imagery of gender inversions or changeability in the dream text seem to point to areas of tension in which different forms of gender transformation are depicted in conflicting terms, sometimes as experiences of grief, strife, and humiliation, but in other instances as experiences of benefit and gain. More importantly, they seem to point to experiences of social rupture: women or men who experience some

sort of gender transformation or reversal are more often than not perceived as transgressors of social boundaries. And since such transgressions often result in non-procreative practices, they often seem to be judged in our texts by the potential social disorder that they may cause.

CONCLUDING REMARKS

The simplistic formula of gender hierarchy, which normally portrays man in a dominant relationship to woman, does not receive consistent confirmation in our analysis, for the advantage does not seem to be completely with the male. Conflicting messages can be detected in the dream narratives that have been examined. And whereas gender hierarchy seems to privilege male power in the more structured kingdom of birds, this is not the case in dream narratives relating to marital and sexual acts, or to those relating to men, women, children, and slaves. Textual ambivalences can certainly be revealing, even if they occupy less narrative space or can only be read between the lines. Moments of textual hesitations, backtracking, or silence must be further examined in future studies of the dream text to show the plurality of practices and perceptions that may otherwise be left undetected if such textual ambiguities are ignored.

It seems to me that woman's loss in the kingdom of birds is compensated for by her gain in other dream narratives. Cryptic, almost unnoticeable references in the dream text refer to the generic term "woman" as equivalent to power. Thus in a short but significant reference in his chapter on marital relations, Ibn Sīrīn sets for us the most important principles that constitute the symbol of woman in dreams: "Woman signifies *sulṭān* (power) in accordance with her status, her political importance *(khaṭaruhā),* the meaning of her name, and her beauty."[123] Here woman is not considered in abstract terms; her power is qualified by specific attributes: economic and political status, as well as beauty. Furthermore, the notion of woman as the conquered object or sacrificial object of male power, a predominant trope in the bird text, is paradoxically reversed by Ibn Sīrīn who tells us in the following passage that it is ultimately woman who rules over man who, in turn, emerges as her slave. It is important to note here that while I found no corresponding passages or similar views on woman in Ibn Shāhīn's dream text, I found al-Nābulusī's text on *al-mar'ah* to be more in line with Ibn Sīrīn's. Can it be argued then that in the more militaristic society of the Mamluks, male dream interpretation developed an increasingly more fearful stance of, or hesitation in, recognizing woman's symbolic power and her crucial role in holding together the threads of the social order?

The perfect woman *(al-mar'ah al-kāmilah)* is simultaneously of

[122]Ibn Shāhīn, *Ishārāt,* 133.

> this world, because she is the world *(al-dunyā),* joy and pleasure, and of the hereafter *(al-ākhirah)* because she improves spirituality. She may also signify power *(sulṭān)* because woman rules over man *(ḥākimah ʻalá al-rajul)* through love and passion. And he, in his toil and pursuit after her good, is like a slave.[124]

According to this interpretation, the perfect woman symbolizes both the sensual as well as the spiritual world. She stands for joy and bliss, for spiritual enlightenment, for expansion and release of tension, and also for sexual pleasure; and man is perceived as her slave working to satisfy her needs. In this short but significant narrative attributed to Ibn Sīrīn, the notion of woman as the mistress of man reverses the conventional construct of gender hierarchy in which it is always assumed that man is favored over woman, revealing instead a construct in which woman is placed in a dominant relationship to man. Following Ibn Sīrīn´s rationale, if the man is dependent on the woman for his pleasures in this world and the hereafter, he is inevitably bound to become her slave. In retrospect, this male perspective of the feminine may help us understand the background of man´s fear of woman, and hence his strong desire to possess and control her in both his social and dream worlds. She happens to be at the source of both his pleasures and his pains. Though we can argue that women´s desires and fears may also be inextricably linked to those of men, we have less to say about them here, for we have only been able to examine man´s constructed dreams about woman.

Notes on the Contemporary Sources of the Year 793

I will leave to others the responsibility of speaking about Donald P. Little's career and the pivotal place he occupies in the field of Mamluk studies. As for me, perhaps the most appropriate way to pay tribute to him is to provide readers with the results of a study[1] which uses the method that he pioneered and which has ever since been identified with him.

In Little's words,

> The nature of the method is disarmingly simple; it is nothing more than comparison, close word-by-word comparison of individual accounts of topics within annals and biographies,[2] with a threefold aim. One, given the fact that historians followed in most cases the conventions of the annalistic and biographical genres almost slavishly, what variations can be found in the treatment of individual authors? It is obvious that the variations constitute the author's originality, whether they consist of stylistic innovations, departures from the conventions of the genres, or the introduction of original subject matter. . . . A second, related, purpose is to characterize Mamlūk historiography in general . . . ; in other words, having pointed out variations, I would attempt to establish the similarities in approach, technique and subject matter. Included under this purpose is the desire to indicate the type of data which can be gleaned from Mamlūk sources, both as to the quantity and quality, so that the beginner in Mamlūk studies can readily discover what variety of subjects the historians both discuss and omit, as well as the difficulties which he can expect to encounter as a result of the mode of presentation. Third and most importantly, I am trying to

[1]The study presented here is culled from my on-going Ph.D. research, which deals with the historiography of the early Circassian period, and particularly from Chapter Two, the topic of which is the year 793. Chapter One deals with the year 778 and is still unpublished, but I will be making systematic reference to it throughout this article.

[2]In this article, I will be dealing only with *ḥawādith*.

> establish what Claude Cahen calls a ″repertorium″[3] of the sources of the period, by which I mean an analytical survey of the sources which aims at classifying them in terms of their value to modern historians. All the goals can be achieved by comparison, which, in the last analysis, aims at disentangling the inter-relatedness and inter-dependence of the sources so as to discover the original contribution of each historian. . . .[4]

Little chose to compare annals, by means of textual collation, in order to identify similarities and variations that would explain the complex of borrowings and indebtedness amongst the historians he studied and their works. One advantage of such a ″micro″ approach to historiography is the detailed knowledge it gives researchers into the events of a given year. Such intimate knowledge will help in exploring, when possible and relevant, the scope and impact of some given events, and their interrelations; in other words, what do the sources tell us about important historical occurrences and how do they impact on our knowledge and understanding of them? This endeavor overlaps with the third objective highlighted above by Little, namely the relative merit of a given source not only on historiographical, but also on historical grounds.

The choice of the year 793/1390–91 as the focus of my research is not accidental. Chronologically, this year falls almost in the middle of the early Circassian period, which ran roughly from the late 770s/1370s until the early ninth/fifteenth century.[5] From the standpoint of historiographical production, this span of time is truly crucial as it witnessed the withering away of an entire generation of historians, those who had lived through and beyond the reigns of al-Nāṣir Muḥammad ibn Qalāwūn (d. 741/1341). Thus, Ibn Kathīr′s (d. 774/1373) *Al-Bidāyah wa-al-Nihāyah* does not extend beyond 768/1367,[6] and the two works

[4]Donald P. Little, *An Introduction to Mamlūk Historiography: An Analysis of Arabic Annalistic and Biographical Sources for the Reign of al-Malik al-Nāṣir Muḥammad ibn Qalā'ūn* (Wiesbaden, 1970), 2–3 (hereafter cited as *An Introduction*).

[5]This would correspond roughly to the reign of Barqūq as *amīr kabīr* (779–84/1378–82) then sultan (784–91, 792–801/1382–89, 1390–99).

[6]The last entry of the book is the report about the murder of Yalbughā al-'Umarī; *Al-Bidāyah wa-al-Nihāyah,* ed. Aḥmad Abū Milḥim (Beirut, 1987), 14:338–39. On the later parts of Ibn Kathīr′s chronicle see Ashtor′s contention, originally advanced by Laoust, that the last part of *Al-Bidāyah* was written not by Ibn Kathīr himself but by one of his students, probably Ibn Ḥijjī: ″Études sur quelques chroniques mamloukes,″ *Israel Oriental Society* 1 (1971): 284. Al-'Umarī had led a revolt in 762 against his *ustādh* and sultan al-Nāṣir Ḥasan (d. 762/1361), which resulted

of another Syrian historian who was not connected to the Syrian school,[7] Ibn Ḥabīb al-Ḥalabī′s (710–79/1310–77) *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh*[8] and *Durrat al-Aslāk fī Mulk Dawlat al-Atrāk*[9] end respectively in 770 and 777. As for Egypt, the other major pole of the Mamluk Sultanate, the *Naṭr al-Jumān fī Tarājim al-A'yān,* the chronicle of al-Muqrī (who was still alive in 766/1364–65), the last of the Egyptian historians to have been a contemporary of al-Nāṣir Muḥammad, ends in 745/1345.[10] It is true that a new generation of historians like Ibn Khaldūn[11] (732–808/1332–1406), Ibn al-Furāt[12] (735–807/1335–1404-5), Ṣārim al-Dīn Ibrāhīm Ibn Duqmāq[13]

---

in the latter′s assassination. See al-Maqrīzī′s *Kitāb al-Sulūk li-Ma'rifat al-Duwal wa-al-Mulūk,* ed. Sa'īd 'Abd al-Fattāḥ 'Āshūr (Cairo, 1970), 3:1:155 (hereafter cited as *Al-Sulūk*) for a brief summary of Barqūq′s travels and activities following the murder of Yalbughā al-'Umarī in 768/1366; see also Walter J. Fischel, ″*Ascensus Barcoch* (I) and (II): A Latin Biography of the Mamlūk Sultan Barqūq of Egypt (d. 1399) Written by B. de Mignanelli in 1416,″ *Arabica* 6 (1959): 64 ff.

7On the debate concerning the appropriateness of differentiating between Syrian and Egyptian ″schools″ of historical writing, see Little, *An Introduction,* 46, 95, 98; Li Guo, ″Mamluk Historiographic Studies: The State of the Art,″ *Mamlūk Studies Review* 1 (1997): 29–33, 37–39; and David Reisman, ″A Holograph MS of Ibn Qāḍī Shuhbah′s *Dhayl*,″ *Mamlūk Studies Review* 2 (1998): 24–25, 27–28 and the references therein. See also below.

8Edited by Muḥammad Muḥammad Amīn with an introduction by Sa'īd 'Abd al-Fattāḥ 'Āshūr, (Cairo, 1976–86) (hereafter cited as *Tadhkirah*). This work covers the years 687 to 770.

9Of the three manuscripts available of this work, two, MSS Bodleian Marsh 591 and Bodleian Marsh 223, start at the year 648, and the third, Bodleian Marsh 319, at the year 762. The three manuscripts end respectively in 777, 714, and 801. It is MS Bodleian Marsh 319 which will be used throughout this research since it is the only one to include the annals 778 to 801 (fols. 134a ff) ostensibly written by Zayn al-Dīn Ṭāhir (after 740– 808/1340–1406), Ibn Ḥabīb′s son. Contrary to what 'Āshūr claims in his introduction to the *Tadhkirah,* this *dhayl* (hereafter cited as *Dhayl Durrat al-Aslāk*), at least MS Bodleian Marsh 319, ends in 801 and not 802; see his introduction to the *Tadhkirah,* 1:20. More on Zayn al-Dīn Ṭāhir below. The *Durrat al-Aslāk* and its *dhayl* were apparently edited and translated by A. Meursinge and H. F. Veijers in the middle of the nineteenth century, but I have not been able to get hold of their work; see *Orient* 2 (1840–46): 195–491.

10On this author and his work, see Little, *An Introduction*, 40.

11*Kitāb al-'Ibar wa-al-Mubtada' wa-al-Khabar* (Beirut, 1971) (hereafter cited as *Al-'Ibar*); *Al-Ta'rīf bi-Ibn Khaldūn wa-Riḥlatihi Gharban wa-Sharqan,* ed. Muḥammad ibn Tāwīt al-Ṭanjī (Cairo, 1951).

12*Tārīkh al-Duwal wa-al-Mulūk,* ed. Qusṭanṭīn Zurayq and Najlā' 'Izz al-Dīn (Beirut, 1936–38) (hereafter cited as *Tārīkh al-Duwal*); ″Al-Muntaqá min Tārīkh Ibn al-Furāt,″ MS Chester Beatty 4125, fols. 2b–178b (hereafter cited as ″Al-Muntaqá min Tārīkh Ibn al-Furāt″).

13Three editions of *Al-Jawhar al-Thamīn fī Siyar al-Khulafā' wa-al-Mulūk,* the lesser of the two extant histories written by Ibn Duqmāq, are available: Sa'īd 'Abd al-Fattāḥ 'Āshūr′s edition (Mecca, 1983) (hereafter cited as *Al-Jawhar* 'Āshūr); Muḥammad Kamāl al-Dīn 'Izz al-Dīn 'Alī′s edition in two volumes (Beirut, 1985) (hereafter cited as *Al-Jawhar* 'Alī); and 'Umar 'Abd al-Salām Tadmurī′s edition entitled *Al-Nafḥah al-Miskīyah fī al-Dawlah al-Turkīyah* (Sidon and

(745–809/1349–1407), Ibn Ḥijjī (751–816/1350–1413),[14] Badr al-Dīn al-ʻAynī[15] (762–855/1361–1451), al-Maqrīzī[16] (766–845/1364–1441), Ibn Ḥajar al-ʻAsqalānī[17] (773–852/1372–1449), Ibn Qāḍī Shuhbah,[18] and others would insure a solid transition in historical writing from the Turkish to the Circassian period. But globally, whereas Bahri Mamluk historiography has been subjected to rigorous and comprehensive source analysis,[19] with the exception of a certain number of studies of a limited scope,[20] nothing of the sort has been undertaken with regard to the early Circassian period.[21] Consequently, beyond general historiographical surveys, we still have not established the value of Burji[22] historical works in their

---

Beirut, 1999) (hereafter cited as *Al-Nafḥah*), which corresponds to volume two of ʻIzz al-Dīn ʻAlī′s edition, namely the Mamluk period. The appellation of *Al-Nafḥah al-Miskīyah* was given by Tadmurī to the MS of *Al-Jawhar* that he edited and which extended, contrary to the other two, to the year 805. Throughout this article, it is this latter version of *Al-Jawhar* which will be used since its edition is more recent and since also the overlapping sections do not differ significantly from one edition to the other (ibid., 18–19). Also by Ibn Duqmāq is the more substantial *Nuzhat al-Anām fī Tārikh al-Islām,* ed. Samīr Ṭabbārah (Beirut, 1999) (hereafter cited as *Nuzhah* Ṭabbārah) and MS Gotha Orient. A 1572, fols. 1b–137a. More on Ibn Duqmāq below.

[20]To my knowledge, there are studies that do just that, but they are very much limited in scope: Amalia Levanoni, ″Al-Maqrīzī′s account of the Transition from Turkish to Circassian Mamluk Sultanate: History in the Service of Faith,″ in *The Historiography of Islamic Egypt (c. 950–1800),* ed. Hugh Kennedy (Leiden, 2001), 93–105; Reisman, ″A Holograph MS,″ 19–49; Donald P. Little, ″A Comparison of al-Maqrīzī and al-ʻAynī as Historians of Contemporary Events,″ *Mamlūk Studies Review* 7, no. 2 (2003): 205–15; Sami G. Massoud, ″Al-Maqrīzī as a Historian of the Reign of Barqūq,″ ibid., 119–35. In his ″Circassian Mamluk Historians and their Quantitative Economic Data,″ *Journal of the American Research Center in Cairo* 11–12 (1974–75): 75–87, Jere L. Bacharach does survey and compare Circassian sources but his focus is entirely on economic data.

[21]Donald P. Little, ″Historiography of the Ayyūbid and Mamlūk Epochs,″ in *The Cambridge History of Egypt 640–1517,* ed. Carl Petry (Cambridge, 1998), 433.

[22]Notwithstanding David Ayalon′s argument in favor of not using the term Burji to describe the Circassian period, I will use this word interchangeably with that of Circassian to describe the

own right and in relation to one another. But even at this level, the key period which witnessed the end of Qalāwūnid rule and the rise of Barqūq and the Circassians is particularly understudied: with the exception of a few words scattered here and there in scholarly articles and monographs, and in the introductory notices of editions of primary sources, nothing compares with the surveys authored by Linda S. Northrup[23] on the early Bahri period, and by Carl S. Petry on the late Circassian era.[24]

Beyond these historiographical considerations, other factors also weighed into the selection of the year 793 for analysis. On the political level, it is undoubtedly one of the most remarkable years of the reign of al-Ẓāhir Barqūq (784–91, 792–801/1382–89, 1390–99).[25] It represents the culmination of a series of events that started with the rebellions of Minṭāsh[26] and Yalbughā al-Nāṣirī,[27] respectively at the end of 789 and in Ṣafar 791,[28] his eviction from power by the latter pair in

---

Mamluk polity which came into existence with the advent of Barqūq and ended in 922/1517 with its defeat at the hands of the Ottomans; Ayalon, "Baḥrī Mamlūks, Burjī Mamlūks—Inadequate Names for the Two Reigns of the Mamluk Sultanate," *Tārīkh* 1 (1990): 3–53.

[25]On Barqūq, see Gaston Wiet, "Barḳūḳ, al-Malik al-Ẓāhir Sayf al-Dīn," *Encyclopaedia of Islam,* 2nd ed., 1:1082; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá ba'd al-Wāfī,* ed. Muḥammad Muḥammad Amīn et al. (Cairo, 1986), 3:285–342 (hereafter cited as *Al-Manhal*). See also references in The Chicago Online Bibliography of Mamluk Studies:
http://www.lib.uchicago.edu/e/su/mideast/mamluk.

[26]Tamurbughā al-Ashrafī, also known as Minṭāsh, was a mamluk of al-Ashraf Sha'bān who succeeded in finding himself a place in the sun in the first part of Barqūq's reign, a period whose political history still needs to be written. It was his rebellion at the end of 789 in the city of Malaṭya where he was viceroy, and the subsequent rallying of Yalbughā al-Nāṣirī to his cause, which eventually led to the downfall of Barqūq in 791. On Minṭāsh, see *Al-Manhal,* 4:94–99, no. 782.

[27]Yalbughā al-Nāṣirī was a member of Yalbughā al-'Umarī's inner circle *(khāṣṣakīyah)* but was superseded in the quest for power by al-'Umarī's younger mamluks, chief among them Barqūq. He joined the rebellion against the sultan in 791 when he was the viceroy of Aleppo, the very city where he would meet his maker in 793. On him, see "Al-Manhal," Dār al-Kutub MS 13475 *Tārīkh,* fols. 842a–845a (hereafter cited as "Al-Manhal").

[28]Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* ed. Muḥammad Ḥusayn Shams al-Dīn (Beirut, 1992), 11:206ff, 210ff. Within the framework of this article, I will make use of *Al-Nujūm al-Zāhirah* when making casual references to political events that took place

Jumādá II 791,[29] his exile to al-Karak and his escape therefrom in Ramaḍān,[30] his military feats and defeats in Syria in late 791 and early 792,[31] and his return to the throne in the middle of Ṣafar 792.[32] After 793, Barqūq was not to suffer from any *major* threat until his death in 801/1399.

What also stands out in the year 793 is the Syrian dimension of a large proportion of the events that were the object of reports. What took place in Syria in 793 ran the gamut of problems often encountered by Mamluk rulers in that part of their empire: intrigue on the part of former and present foes and friends, the involvement of Arab and Turcoman nomadic formations in the political and military affairs of the region, the power relations between the Mamluk polity and its vassal states, etc.[33] To this one ought to add Barqūq's own visit to Syria from Ramaḍān until Dhū al-Ḥijjah, because of the inability of Yalbughā al-Nāṣirī[34] to score a decisive victory against Minṭāsh, let alone capture him. Last but not least is the particular state of war brought about by the quasi-"siege" of Damascus by Minṭāsh and his allies, from the beginning of Rajab until the middle of Sha'bān. During this period, the Minṭāshīs, who were entrenched outside the western wall of Damascus, fought against the loyalists under the command of Yalbughā al-Nāṣirī, while the links of both groups to the Syrian hinterland remained uninterrupted.[35]

A few words concerning the sources are in order here. First, we are clearly dealing with two different sets of sources which will be studied as such: one group comprises the Egyptian Ibn Duqmāq, Zayn al-Dīn Ṭāhir,[36] Ibn Khaldūn,

---

during the period at hand. Three editions of *Al-Nujūm* will be used here: Shams al-Dīn's edition mentioned above (hereafter cited as *Al-Nujūm*); *The History of Egypt, 1382–1467 A.D.,* part 1, *1382–1399 A.D.,* trans. William Popper, University of California Publications in Semitic Philology 13 (Berkeley, 1954); and *Abû'l-Mahâsin Ibn Taghrî Birdî's Annals,* ed. idem, University of California Publications in Semitic Philology 5, pts. 1–3 (746–800 A.H.) (Berkeley, 1932–35).

[29] *Al-Nujūm,* 11:234ff.

[30] Ibid., 268ff, 287ff.

[31] Ibid., 294ff.

[32] Ibid., 12:3ff.

[33] On all this, see below.

[34] After they had taken power in Cairo following their successful rebellion against Barqūq, Yalbughā al-Nāṣirī and Minṭāsh ended up fighting it out as a result of the coup undertaken by the latter against the former. Upon the return of Barqūq to power, Yalbughā al-Nāṣirī was released from prison and later nominated viceroy of Damascus, a position that entailed, among other things, the prosecution of the war against Minṭāsh. More on this below.

[35] See especially Ibn Ṣaṣrá, *Al-Durrah al-Muḍī'ah fī al-Dawlah al-Ẓāhirīyah,* ed. and trans. William M. Brinner as *A Chronicle of Damascus, 1389–1397* (Berkeley, 1963), 76–91 (hereafter cited as *Al-Durrah al-Muḍī'ah* and as *A Chronicle of Damascus* for the English text); and "Tārīkh Ibn Ḥijjī," MS Köprülü 1027, fols. 94b–99b (hereafter cited as "Tārīkh Ibn Ḥijjī").

[36] More on the nature of Zayn al-Dīn Ṭāhir's *Dhayl Durrat al-Aslāk* below.

and Ibn al-Furāt, and the other, the Syrian Ibn Ḥijjī and Ibn Ṣaṣrá. As will become apparent below, the distinction established between the two groups has more to do with the geographical home-base of these writers than with the existence of Syrian and Egyptian ″schools″ of historical writing. Second, all the above-mentioned historians were contemporaries of the events of 793 and included in their works original data.[37] While al-ʻAynī at thirty-one years of age, al-Maqrīzī at twenty-seven, and al-ʻAsqalānī at twenty were young men, they were old enough to have heard of, followed, or been impressed by the events of that year. Two of them, al-ʻAynī and al-ʻAsqalānī, actually intervened directly in the main body of their respective works as self-conscious narrators: the former in signaling his return from Aleppo to Cairo[38] and the latter in mentioning his trip to Qūs in the Ṣaʻīd.[39] But despite the importance of these ″newcomers″ and the fact that their works merit systematic analysis in their own respect,[40] they and later historians like Ibn Qāḍī Shuhbah, Ibn Taghrībirdī (812–74/1409–70), al-Jawharī al-Ṣayrafī[41] (819–900/1416–94), Ibn Iyās[42] (852–930/1427–97), ʻAbd al-Bāsiṭ Ibn Khalīl al-Malāṭī[43] (844–920/1440–1515), and others were yet to make their mark in terms of producing primary historical data *for this particular year:* globally, with the notable exception of al-ʻAynī, who presented in his *ʻIqd* reports about Syria that are not found elsewhere,[44] all these historians owe the overwhelming majority of their *akhbār* either to Ibn al-Furāt and, possibly, to Ibn Duqmāq,[45] or to al-Maqrīzī, whose *Al-Sulūk,* though written differently, is nothing but a shorter yet almost identical copy of *Tārīkh al-Duwal.* It is for this reason that the works of these newcomers will not be studied here, even though reference to them will be made when needed.

[37]Even though some of them did rely on other histories in the elaboration of their own work.

[38]″ʻIqd,″ MS Ahmet III 2911/B2, fol. 99a.

[44]See for example the details he gave about the execution of Yalbughā al-Nāṣirī at the hands of Barqūq in the citadel of Aleppo at the end of Dhū al-Qaʻdah: ″ʻIqd,″ MS Ahmet III 2911/B2, fol. 98a, ″ʻIqd,″ MS Dār al-Kutub 1584 *Tārīkh,* fols. 433–34. Al-ʻAynī's account is similar, though not identical, to Mignanelli′s for the same event; see Fischel, ″*Ascensus Barcoch* (II),″ 161.

[45]See below.

Ibn Duqmāq is undoubtedly one of the most original historians of the early Circassian period. Already in the opening pages of his *Inbā'*, Ibn Ḥajar readily stated that "most of what I have copied [in the *Inbā'*] is from [Ibn Duqmāq] or from what Ibn al-Furāt had copied from him."[46] On the same page, Ibn Ḥajar also noted that al-'Aynī had so extensively borrowed from Ibn Duqmāq that he copied entire pages from his work, spelling mistakes and all.[47] Ibn al-Furāt and al-'Aynī's indebtedness to Ibn Duqmāq, alluded to by Ibn Ḥajar, has been confirmed by my own study: at least for the year 778, the *Tārīkh al-Duwal*[48] is more copious in terms of sheer data than Ibn Duqmāq's major work *Nuzhat al-Anām fī Tārīkh al-Islām,*[49] but the accounts of the latter form the backbone of the former to which Ibn al-Furāt added his own original material; as for al-'Aynī, the annal of the year 778 in his *'Iqd al-Jumān* is basically an identical copy of Ibn Duqmāq's *Nuzhah.*[50]

---

[46]1:3.

[47]Ibid. Ibn Ḥajar wrote that al-'Aynī "mentions in his description of some events what indicates that he actually witnessed them . . . [but] the event would have taken place in Egypt while he was still in 'Ayntāb. . . ." (ibid.). The maliciousness displayed here by Ibn Ḥajar towards al-'Aynī can be attributed to the academic clash between them concerning diverging ways of interpreting al-Bukhārī's *Ṣaḥīḥ;* on this, see Anne F. Broadbridge, "Academic Rivalry and the Patronage System in Fifteenth-Century Egypt: Al-'Aynī, al-Maqrīzī, and Ibn Ḥajar al-'Asqalānī," *Mamlūk Studies Review* 3 (1999): 98–101; and Aftāb Aḥmad Raḥmānī, "The Life and Works of Ibn Ḥajar al-'Asqalānī, *Islamic Culture* 47 (1973): 59–61, 172–74.

[48]The *Tārīkh al-Duwal* annal of the year 778 is found in MS Chester Beatty 4125, fols. 28a–45b; on the "survival" of parts of Ibn al-Furāt's work in excerpts made by Ibn Qāḍī Shuhbah, see Reisman, "A Holograph MS," 26–27, 31–32.

[49]See previous note.

[50]The value of Ibn Duqmāq as a major historian of the period at hand is corroborated by a host of other factors. For example, the secondary sources that deal with his works (Muḥammad Kamāl al-Dīn 'Izz al-Dīn 'Alī, *Arba'at Mu'arrikhīn wa-Arba'at Mu'allafāt min Dawlat al-Mamālīk al-Jarākisah* [Cairo, 1992], 122–23; Tadmurī's introduction to *Al-Nafḥah,* 16–17; Eliyahu Ashtor, "Some Unpublished Sources for the Baḫrî Period," in *Studies in Islamic History and Civilization,* ed. U. Heyd [Jerusalem, 1961], 28–29) mention a host of people whose historical writings he used as sources, but none of these save three, namely Badr al-Dīn Ibn Ḥabīb al-Ḥalabī, his son Zayn al-Dīn Ṭāhir, and al-Nuwayrī al-Iskandarī (still alive in 775/1372), the author of a history of Alexandria (*Kitāb al-Ilmām bi-al-I'lām fīmā Jarat bi-hi al-Aḥkām wa-al-Umūr al-Maqḍīyah fī Wāqi'at al-Iskandarīyah*, ed. 'Azīz Suryāl 'Aṭīyah [Hyderabad, 1968–76]), lived during this period nor wrote about it. One then might assume that Ibn Duqmāq relied on oral information or eyewitness accounts, his and other people's, to write "the history of events of his own time" (Ashtor, "Études," 28). This might actually explain the absence, in his historical narrative, of references to sources which are nevertheless to be found in the text of his obituaries, where Badr al-Dīn Ibn Ḥabīb al-Ḥalabī, his son Zayn al-Dīn Ṭāhir, and the poet al-'Aṭṭār are very frequently copied and, more often than not, acknowledged; on al-'Aṭṭār, see *Al-Manhal,* 2:177–79.

If one were to place the Egyptian historians of the year 793 in descending order of importance, circumstantial factors would however place Ibn Duqmāq at the bottom of the list. The only extant work by Ibn Duqmāq that deals with this year is his *Al-Jawhar al-Thamīn fī Siyar al-Khulafā' wa-al-Mulūk,*[51] a dynastic history covering the entirety of the Burji period until 805,[52] which is however poorer in information than his more detailed annalistic history, the *Nuzhat al-Anām fī Tārīkh al-Islām,* upon which it is based.[53] As a matter of fact, there is nothing in the meager, slightly more than two pages[54] of *Al-Nafḥah* dealing with 793. The existence in this work of a cluster of ″meaty″ *akhbār* that deal with Barqūq′s stay in Aleppo at the end of Dhū al-Qa'dah[55] will allow us to formulate tentative conclusions regarding the genealogy of accounts found in Ibn al-Furāt′s *Tārīkh al-Duwal,* but there is hardly anything original in the rest of the text except the mention by the author of the sultan′s stop, unreported by others, at Irbid on his way to Damascus.[56] To be able to reconstruct the major events of the year, especially those taking place in Syria, one has to turn to sources other than *Al-Nafḥah*.

More informative than Ibn Duqmāq′s *Al-Nafḥah* is *Dhayl Durrat al-Aslāk.*[57] In his introduction to the edited text of *Tadhkirat al-Nabīh,* a work written by Ibn Ḥabīb al-Ḥalabī, Sa'īd 'Abd al-Fattāḥ 'Āshūr advanced the hypothesis that Zayn al-Dīn Ṭāhir had not only written a continuation of his father′s *Durrat al-Aslāk*, from 778 until 801, *Dhayl Durrat al-Aslāk,*[58] but that the whole of the former work as well as its *dhayl* were actually authored by none other than Zayn al-Dīn

[51]See above, n. 13.

[52]Both *Al-Jawhar* 'Āshūr and *Al-Jawhar* 'Alī end in 797, and *Al-Nafḥah* in 805.

[53]According to Sa'īd 'Abd al-Fattāḥ 'Āshūr, two manuscript volumes of the *Nuzhah* that start respectively in 659 and 777 are available at Dār al-Kutub al-Miṣrīyah in MS 1740 *Tārīkh* (*Al-Jawhar* 'Āshūr, 13). No indication of the year with which volume two ends is provided. However, in his introductory comments to his edition of the *Nuzhah* covering the years 628–59, Samīr Ṭabbārah wrote that Dār al-Kutub al-Miṣrīyah has an eighty-page manuscript of this work which starts with the reign of al-Manṣūr 'Alī in 778 and ends in 804 (*Nuzhah* Ṭabbārah, 15). Whether or not he his referring to the second volume of Dār al-Kutub MS 1740 *Tārīkh* is not clear. Regardless, all attempts to get hold of this *Nuzhah* manuscript, which supposedly contains the annal of the year 793, have led to naught as it was apparently lost! Incomplete sections of the years 804–5/1401–3 from the *Nuzhah* have been preserved in selections made by Ibn Qāḍī Shuhbah in ″Al-Muntaqá min Tārīkh Ibn Duqmāq,″ MS Chester Beatty 4125, fols. 197a–206a; see Reisman, ″A Holograph MS,″ 27, 31, 39, 40.

[54]*Al-Nafḥah,* 262–64.

[55]Ibid., 263–64.

[56]Ibid., 263.

[58]MS Bodleian Marsh 319, fols. 134a ff.

Ṭāhir himself.[59] Both external[60] and internal[61] evidence seem to indicate a certain consensus which goes against ʻĀshūr′s reasoning, namely that Ibn Ḥabīb al-Ḥalabī wrote *Durrat al-Aslāk* and that his son continued it as a *dhayl* from 778 onward. But perhaps the strongest evidence against the principal argument advanced by ʻĀshūr in support of his contention, namely the striking similarity between *Durrat al-Aslāk* and its *dhayl* in terms of the heavy and systematic use of *sajʻ*,[62] is to be found in the *Dhayl Durrat al-Aslāk* itself. My research on the annal of the year 778 has shown that the narrative of political events was dwarfed by the sheer quantity of biographical data, principally obituaries.[63] But starting with the year

---

[59]According to ʻĀshūr, many aspects of the subject matter of both *Tadhkirah* and *Durrat al-Aslāk,* notably the overlapping years from 678 to 770, are so similar that it is more likely than not that the former served as the *muswaddah* for the latter: the text of *Tadhkirah* was subjected to *tasjīʻ,* and the years 648 to 677 and 771 to 777 were added to it in order to produce *Durrat al-Aslāk.* Furthermore, ʻĀshūr commented that the similarity between that section of *Durrat al-Aslāk* attributed to Ibn Ḥabīb al-Ḥalabī, and *Dhayl Durrat al-Aslāk,* which was written by his son Zayn al-Dīn Ṭāhir, is so evident in terms of style and tone that it is difficult to differentiate between the two (Introduction to the *Tadhkirah,* 28–29).

[60]Ibn Ḥajar commented in his obituary of Ibn Ḥabīb al-Ḥalabī that one of his literary productions consisted of the adaptation in *sajʻ* of another author′s work, and that he had written *Durrat al-Aslāk* in the same style, something which ″is indicative of great knowledge and proficiency in verse and prose, even though he was not of the highest caliber in either one;″ *Al-Durar,* 2:29, no. 1534. This might indicate that Ibn Ḥabīb was *capable* and *willing* to use *sajʻ* and/or other styles of writing: it is possible then that he wrote the two works, that is *Tadhkirah* and *Durrat al-Aslāk,* for different audiences, and that he wanted in the latter work to show what a *littérateur* he was. ʻĀshūr did fault Ibn Ḥajar for having said in his *Inbāʼ* (1:250) that both works were written in prose, and in his *Al-Durar* (2:30), that Ibn Ḥabīb al-Ḥalabī used the same method in writing *Tadhkirah* as in *Durrat al-Aslāk*: ″the study [?] proved that what Ibn Ḥajar advanced is far from the truth, as the style of the *Tadhkirah* is far removed from heavy *[mutakallif] sajʻ* and prose, so that such a statement applies only to the *Durrat al-Aslāk*″ (Introduction to *Tadhkirah,* 30). ʻĀshūr did not, however, take into consideration the passage written by Ibn Ḥajar and quoted at the beginning of this footnote that highlighted Ibn Ḥabīb′s editorial prowess and versatility, which could have undermined his own line of argument.

[61]In the obituary he wrote of two of his brothers in the annal of the year 777 of *Durrat al-Aslāk,* Ibn Ḥabīb al-Ḥalabī specifically referred to them as *″ikhwatī″* (MS Bodleian Marsh 319, fols. 132b–133a); see also *Al-Durar,* 2:65, no. 1607, 4:104, no. 284. In support of ʻĀshūr′s contention, one might have argued that Zayn al-Dīn Ṭāhir wanted his father to assume the authorship of something he himself had produced. This is possible but very unlikely especially since none of the contemporary sources saw fit to mention such a feat of filial love and loyalty. Last but not least, if Zayn al-Dīn Ṭāhir were indeed the author of all of *Durrat al-Aslāk,* why would he not have laid claim to the authorship of the entire work instead of simply stating in the margin of the first folio of the 778 annal that he was continuing his father′s history?

[62]MS Bodleian Marsh 319, fols. 134a ff.

[63]The section of *Dhayl Durrat al-Aslāk* comprising appointment and political reports covers

788,[64] and especially with 789,[65] one notices a propensity on the part of Zayn al-Dīn Ṭāhir to use less and less *saj‘* in his reports, save for those with some degree of biographical content,[66] and to make more and more space for political events.[67] This trend is evident in the annal of the year 793: of a total of about twenty-four folios, eleven report political and military events as well as appointments.[68]

These reports do not cover the whole range of events included by, say, Ibn al-Furāt and Ibn Ḥijjī. Zayn al-Dīn Ṭāhir does not seem to have departed from the fundamental format he adopted from his father′s *Durrat al-Aslāk,* in that he paid little attention to issues which were unimportant to the eyes of the Aleppo-born-and-raised Egyptian *littérateur*[69] and civil servant that he was.[70] Thus, with

---

twelve folios (ibid., 133b–139), while obituaries take up nineteen folios (ibid., 139b–148b). However, much of the appointment reports are basically long biographical sketches, and the narrative of what could be construed as ″political events″ *per se* covers only four folios out of a total of thirty-one.

[64]In the annal of the year 788, the account of the completion of Barqūq′s Bayn al-Qaṣrayn madrasah complex contains no discernible signs of *saj‘* (″Dhayl Durrat al-Aslāk,″ MS Bodleian Marsh 319, fols. 220b–221a). The same cannot be said of the other non-biographical account, that relating the plague in Alexandria (fols. 222b–223a), which is replete with *saj‘;* maybe its very topic, one that deals with such a great calamity, made it prone to such a stylistic treatment. Regardless, a scientific edition of *Durrat al-Aslāk* and its *dhayl* is needed before any conclusions about the modality of the use of *saj‘* by Zayn al-Dīn Ṭāhir and his father can be formulated; see above, n. 9.

[65]Ibid., fols. 228a–b, the account of the expedition sent by Barqūq to the northern marches of Syria to deal with Minṭāsh′s rebellion and Tamerlane′s incursions in Anatolia.

[66]Namely those dealing with appointments and obituaries. There are parts of reports concerning events of a political nature where Zayn al-Dīn Ṭāhir did use *saj‘,* but these are confined to *akhbār* prone to stylistic licence: for example, those dealing with a characteristic ″villain″ such as Yalbughā al-Nāṣirī in the annal of 791 (ibid., 237b–238a; 239a; etc.) or where the author utilized panegyrics to relate something about the sultan, such as his entry into Damascus in Ramaḍān 793 (ibid., 268a–b), etc.

[67]To the extent that important events worthy of reporting did take place during a year, given Zayn al-Dīn Ṭāhir′s lack of interest in stories which were however faithfully noted by historians such as Ibn al-Furāt and others. Thus, the annal of 790, an admittedly uneventful year, contains nothing but appointments and obituaries; see ibid., fols. 233b–236b.

[68]Appointment reports that contain a core of historical data but which are submerged by the usual stock formulae used by Zayn al-Dīn Ṭāhir have not been included in the calculation. See for example the *khabar* concerning the appointment of Jamāl al-Dīn al-Qayṣarī as chief Hanafi qadi in Cairo: ibid., fols. 264b–265a.

[69]The obituaries written about him are replete with verses he composed on a variety of occasions; see *Al-Manhal,* 6:366–68, no. 1220; al-Sakhāwī, *Al-Ḍaw' al-Lāmi‘ li-Ahl al-Qarn al-Tāsi‘* (Beirut, 1992), 4:3–5 (hereafter cited as *Al-Ḍaw'*).

[70]*Al-Manhal,* 6:366–68, no. 1220; *Al-Ḍaw',* 4:3–5.

the exception of religious appointments which took place in both regional poles of the Mamluk empire, there are no reports that deal specifically with Egypt. All three military appointments are to Syrian *niyābāt*[71] and most[72] of the political/military events that are reported by Zayn al-Dīn Ṭāhir take place in Syria.[73] He also recounted military operations in Syria,[74] details about the itinerary of the sultan from Egypt thereto,[75] his arrival and stay in Damascus at the end of Ramaḍān,[76] his trip to Aleppo and his stay there,[77] and his return to Cairo by way of Damascus at the end of the year.[78]

The Syrian ″dimension″ of much of the reports in *Dhayl Durrat al-Aslāk* is likely due to the position of Zayn al-Dīn Ṭāhir. It is probable that he received his Syrian data, limited as they may be,[79] from an extended network of acquaintances he maintained in his land of origin,[80] an endeavor made easier by the position he occupied in the chancellery, the department of the Mamluk bureaucracy responsible,

---

[71]See ″Dhayl Durrat al-Aslāk,″ MS Bodleian Marsh 319, fols. 263a–b, 266a–b, and 266b–267a. Interestingly, these appointments and those of religious figures occur haphazardly in the main body of the text and their appearance does not seem to obey any chronological consideration.

[72]Only a handful of events, such as the few details about the preparations for the sultan′s departure to Syria, took place in Egypt; see ibid., 267a–b.

[73]Many of these reports were noted by Syrian sources only, and by Ibn Khaldūn; more on this below.

[74]These would include, among others, the skirmishes between the forces of Syrian *nuwwāb* and those of Minṭāsh (″Dhayl Durrat al-Aslāk,″ MS Bodleian Marsh 319, 263a–b); the arrival of Minṭāsh to Damascus at the very beginning of Rajab and the beginning of warfare around the city (264a); the encounter between the loyalists and the rebels at al-Kiswah, a village located south of Damascus, at the end of Sha'bān, following the lifting of the siege of Damascus by Minṭāsh earlier in the middle of the month (268a); the raids ordered by the sultan against the Turcomans following his arrival to Aleppo at the end of Shawwāl (269a–b), etc.

[75]Ibid., 268a.

[76]Ibid., 268a–b.

[77]Ibid., 269a–270a.

[78]Ibid., 270a–271a. The two *akhbār* of the sultan′s arrival to Ḥamāh and Homs (270a) on his way back to Damascus are unique to *Dhayl Durrat al-Aslāk*.

[79]His reports are limited in terms of both their quantity and depth when compared to the rich and dense narratives in Ibn Ṣaṣrá′s and Ibn Ḥijjī′s works. There is nothing, for example, in his *Dhayl Durrat al-Aslāk* about the siege of Damascus, save for the report about Minṭāsh′s arrival to the city and the mention of the raid his lieutenant Shukr Aḥmad launched inside the city; see above, n. 74.

[80]Such a network could have been established by members of his own family, namely his father and his uncle Sharaf al-Dīn Ḥusayn, whose biographies mention their travels between Syria and Egypt during their lifetime; see *Al-Durar,* 2:29, no. 1534, and 4:104, no. 284, and ″Dhayl Durrat al-Aslāk,″ MS Bodleian Marsh 319, fol. 132b.

among other things, for the correspondence of the sultan.[81] It is also possible that he himself was part of Barqūq's expedition to Syria. Even though he made no mention of himself, he did note in his work that most men of the sword and of the pen accompanied the sultan at the end of Sha'bān 793 on his expedition to Syria, and that only a very few functionaries and amirs remained behind in Egypt in the service of Kumushbughā al-Ḥamawī, the *nā'ib al-ghaybah*.[82] That he might have been part of the movement of the court to Syria[83] is a possibility since he was probably still in the employ of the state in 793.[84]

It is unlikely that Zayn al-Dīn Ṭāhir used for his Syrian reports any of the sources that are available to us. His writing style is unique, and a collation of reports which have a common theme, found in the *Dhayl Durrat al-Aslāk* and in contemporary works, shows no convincing evidence of similarity amongst them.[85] Thus, he either had access, as was argued above, to special sources of information about Syria,[86] or he disguised, whether willfully or not, data that he borrowed from contemporary works.

In light of what was said above, what is the historiographical significance of *Dhayl Durrat al-Aslāk?* The annal of 793 in this chronicle does give us a certain picture of this year's events, but it is far from complete. The overall paucity of data in Zayn al-Dīn Ṭāhir's work has two consequences: first, even though he might have relied on written sources, it is less than likely that his work would have preserved important data from an otherwise no-longer-extant history; and second, there are no indications that his non-biographical reports have found

---

[81]On those attributes of the *dīwān al-inshā',* where Zayn al-Dīn Ṭāhir is reported to have worked, which are relevant here, see Petry, *Civilian Elite,* 204–5, and Bernadette Martel-Thoumian, *Les civils et l'administration dans l'État militaire mamluk (IXe/XVe siècle)* (Damascus, 1992), 40–1.

[82]"Dhayl Durrat al-Aslāk," MS Bodleian Marsh 319, fols. 267a–b.

[83]This would not have been the first visit he made to his homeland after his installation in Egypt at an unknown date: as late as 791, he recorded in his work that he was in the company of Yūnus al-Nawrūzī, Barqūq's *dawādār,* when the latter, on his way to Egypt after his defeat at the hands of Yalbughā al-Nāṣirī, was killed in Syria in Rabī' II 791 by the Arab tribal leader 'Anqā' Ibn Shaṭī; see ibid., fol. 239a, and the obituary of Yūnus in *Al-Nujūm,* 11:320.

[84]Even though it is impossible to ascertain Zayn al-Dīn Ṭāhir's presence in the chancellery in the year 793, it is probable that he was working in this office, because as late as 795 he is placed there by one of the sources: Ibn al-Furāt cited a written *khabar* from Ibn Duqmāq (an echo of which can be found in *Al-Nafḥah,* 269–70) where the latter reported hearing the information from Zayn al-Dīn Ṭāhir, who is presented as one of the secretaries of the *dast* and the scribe of an Amir Qulumṭāy al-'Uthmānī (*Tārīkh al-Duwal,* 9:2:247–48).

[85]With the exception of one report whose wording is close to one found in Ibn al-Furāt's *Tārīkh al-Duwal;* on this see below, and also n. 110.

[86]These might have included written sources not available today; on this see below.

their way into the works of other historians.[87] He did however have an impact on other historians as he is one of the most often-quoted sources in the obituaries section of contemporary and later chronicles.[88] Ultimately, the originality of *Dhayl Durrat al-Aslāk* lies in the person of Zayn al-Dīn Ṭāhir, a man with a foot in both his homeland of Aleppo and his Cairene place of residence, a situation which greatly influenced him and his work. The whole purpose of *Dhayl Durrat al-Aslāk* appears to have been to inform the reader in a peculiar literary style, from a Syro-Egyptian perspective, about the civilian *a'yān* of the Mamluk Sultanate, while providing information about the military elite, without however dwelling upon the vicissitudes of political history.

Another émigré, but from the Maghrib this time, was to succeed better than Zayn al-Dīn Ṭāhir in linking together in an uninterrupted narrative the events taking place in Egypt and Syria. So much has been said about Ibn Khaldūn and his important contributions to many fields of knowledge that it is unnecessary within the framework of this article to embark upon the exploration of ground better covered elsewhere.[89] Suffice it to note that by the year 793, nine years after his arrival to Egypt,[90] he had integrated well into Cairene society: he had befriended a number of important personalities such as Alṭunbughā al-Jūbānī[91] (d. 792/1389)

[87]There is however the possibility that some small sections, words really, from some of his reports might have found their way into the works of others. For example, the expression "*'alá ḥīn ghaflah*" used by Zayn al-Dīn Ṭāhir ("Dhayl Durrat al-Aslāk," MS Bodleian Marsh 319, fol. 263b) to describe the arrival of Minṭāsh to the province of Aleppo before he headed for Damascus and laid siege to the city, is to be found in Ibn Taghrībirdī's *Al-Nujūm* to explain the speed with which al-Nāṣirī left Damascus to confront Minṭāsh when news of his arrival reached him (11:21); see also below, n. 110.

[88]See below. Attested borrowings from *Dhayl Durrat al-Aslāk* are too numerous to be mentioned. Suffice it here to say that for the year 778, Ibn Duqmāq quotes Zayn al-Dīn Ṭāhir numerous times in his obituaries section where he sometimes confuses him with his father, Ibn Ḥabīb al-Ḥalabī; see for example for the year 778, Ibn Duqmāq's "Nuzhah," MS Gotha Orient. A 1572, fols. 122a–b, and for the year 793, Ibn al-Furāt's *Tārīkh al-Duwal,* 9:2:286–87 (unless the confusion is the copyist's mistake).

[89]There are four hundred seventy-eight entries under Ibn Khaldūn's name in the Chicago Online Bibliography of Mamluk Studies and one hundred ten under al-Maqrīzī's versus seven under al-'Aynī.

[90]He arrived in Cairo during Shawwāl 784/December 1382; Walter J. Fischel, *Ibn Khaldūn in Egypt: His Public Functions and his Historical Research (1382–1406): A Study in Islamic Historiography* (Berkeley and Los Angeles, 1967), 15.

[91]Ibid., 20, 36, 38–39, 76, 164. On Alṭunbughā al-Jūbānī, see *Al-Manhal,* 3:57–61, no. 536.

and Barqūq himself,[92] had been appointed chief Maliki qadi in 786–87/1384–85,[93] but had lost favor with al-Ẓāhir after he had signed, in Rajab 791, a Minṭāsh-inspired *fatwá* requiring the execution of the sultan then in exile at al-Karak.[94]

Any mention of Ibn Khaldūn′s contribution to the field of historiography invites the inevitable comparison of the introduction of *Al-ʻIbar,* the seminal *Muqaddimah,* to the rest of the work. With regard to the relationship between these two parts, opinions among scholars are divided: some see in the latter the continuation of the original thinking found in the former,[95] while others have argued that those parts of *Al-ʻIbar* that cover earlier periods have little originality.[96] An analysis of the passages of *Al-ʻIbar* which deal with the year 793 reveals nothing of the powerful thinking behind the writing of the *Muqaddimah:* here as elsewhere,[97] Ibn Khaldūn presented an uninterrupted narrative of political events unencumbered by religious appointments and similar reports.[98]

The reporting of the events of 793 starts with a long passage about the tribulations of the career of Kumushbughā al-Ḥamawī (d. 801/1399), an amir of Yalbughā al-ʻUmarī,[99] and his arrival to Cairo during the month of Ṣafar.[100] This is then followed by a very similar report dealing this time with the summoning from Syria of yet another leading amir, Aytamish al-Bajāsī (d. 802/1399).[101] And whereas in other chronicles the news of the arrival of the emissary of the ruler of Tunis is covered in two to three lines,[102] in *Al-ʻIbar* it occupies half a page and

---

[92]Fischel, *Ibn Khaldūn in Egypt,* 20–22, 71–81.

[93]Kamal Salibi, *Listes chronologiques des Grands Cadis de l′Égypte sous les Mamlouks* (Paris, 1957), 112–13.

[94]Fischel, *Ibn Khaldūn in Egypt,* 34–36; see also *Tārīkh al-Duwal,* 9:1:112.

[95]See for example Muḥammad Muṣṭafá Ziyādah, who claimed that Ibn Khaldūn was the founder of a school of historical writing that blossomed in Egypt and attracted many thinkers such as al-Maqrīzī: *Al-Mu'arrikhūn fī Miṣr fī al-Qarn al-Khāmis ʻAshar al-Mīlādī/al-Qarn al-Tāsiʻ al-Hijrī* (Cairo, 1954), 6.

[96]Little, in his *An Introduction,* has shown that those parts of *Al-ʻIbar* that deal with the reign of Nāṣir al-Dīn Muḥammad had simply been culled from other histories (75–76); see also his ″Historiography,″ 435.

[97]This is certainly the case with the sections of *Al-ʻIbar* dealing with the year 778.

[98]*Al-ʻIbar,* 5:499–503.

[99]See ″Al-Manhal,″ fols. 112b–114a. On Yalbughā al-ʻUmarī, see above, n. 6.

[100]*Al-ʻIbar,* 5:499–500.

[101]Ibid., 500. On Aytamish al-Bajāsī, see *Al-Manhal,* 3:143–151, no. 588. The arrival of Aytamish and Kumushbughā, noted Ibn Khaldūn, reflected Barqūq′s renewed confidence and came as the result of the strengthening of his rule: *Al-ʻIbar,* 5:499, 500.

[102]*Al-ʻIbar,* 5:501; *Tārīkh al-Duwal,* 9:2:248–49; *Al-Sulūk*, 3:2:735; *Nayl al-Amal,* 2:300.

details the long links between the two rulers.[103] The rest of the reports of the year deal with *the* political story of 793, Minṭāsh′s on-going rebellion against the sultan, and contain, with the exception of details about the siege of Damascus, all its key events: the arrival of Minṭāsh to Damascus; the departure of the sultan for Syria; news about the major battles outside of Damascus between Yalbughā and his foes; the sultan′s arrival to Damascus and later to Aleppo;[104] the events taking place in and around Aleppo leading to the arrest and execution of Yalbughā al-Nāṣirī; then the sultan′s return to Egypt.[105] For these, Ibn Khaldūn relied both on *Tārīkh al-Duwal* and on a source or sources depicting in some detail political and military events in Syria. Even though Ibn Khaldūn sometimes summarized and/or reworded Ibn al-Furāt, the influence of the latter on the former[106] can clearly be seen in the following passage:

> Ibn al-Furāt: ″. . . wa-nazala [Minṭāsh] bi-al-Qaṣr al-Ablaq wa-nazala al-umarā' alladhīna ma'ahu fī buyūt alladhī ḥawl al-Qaṣr wa-anzala jamā'ah min aṣḥābihi fī Jāmi' Tankiz wa-jamā'ah fī Jāmi' Yalbughā.″ (*Tārīkh al-Duwal,* 9:2:255)
> Ibn Khaldūn: ″. . . fa-nazala [Minṭāsh] bi-al-Qaṣr al-Ablaq wa-anzala al-umarā' alladhīna ma'ahu fi al-buyūt ḥawālī al-Qaṣr wa-fī Jāmi' Shakan *[sic]* wa-Jāmi' Baybuqā *[sic]*.″ (*Al-'Ibar,* 5:501)

In other passages,[107] it is less blatant but still discernible in terms of the choice of items and their order of appearance. For example, contrary to Ibn al-Furāt, Ibn Khaldūn did not describe the present sent to the sultan on his way to Aleppo by the Turcoman chief Sūlī Dūlghādir,[108] but he did note, like the author of *Tārīkh*

---

[103]Here Ibn Khaldūn showed his interest in things diplomatic and in matters pertaining to his region of origin, the Maghrib.

[104]*Al-'Ibar,* 5:501–2.

[105]Ibid., 502–3.

[106]I am not ruling out the possibility that both used a common source. As I noticed in the case of the year 778, Ibn Khaldūn′s accounts are so close to Ibn al-Furāt's, and the latter's to Ibn Duqmāq′s, that it is difficult to establish with great certainty the indebtedness of *Al-'Ibar* to either *Nuzhah* or *Tārīkh al-Duwal.* In the absence of the *Nuzhah* annal for the year 793, it will be impossible to completely rule out a common source for Ibn Khaldūn and Ibn al-Furāt.

[107]*Al-'Ibar,* 5:500/*Tārīkh al-Duwal,* 9:2:250–51; 5:501/ 9:2:255; 5:502/9:2:266–67, etc.

[108]Along with Sālim al-Dūkārī, Dūlghādir is frequently mentioned in the events of the year 793. On Sūlī and his family, see J. H. Mordtmann and V. L. Ménage, *Encyclopédie de l′Islam*, 2nd ed., 2:246–47, and *Al-Manhal,* 6:183–86, no. 1164. As to Sālim al-Dūkārī, apart from the obituary of a person, Dimashq Khujā ibn Sālim al-Dūkārī, who appears to be his son (*Al-Manhal,* 5:324–25, no. 1028) and the scattered references throughout contemporary and later histories, I have not as of yet

al-Duwal, the arrival of a delegation from the tribe of ʿĪsá and Muhannā[109] pledging loyalty to Barqūq. The wording is somewhat different, but the contents are the same.

Things become more problematic, however, when dealing with the reports of Syrian origin and/or dealing with Syria. The problem lies in the fact that despite a number of similarities between them and those of other historians, namely Zayn al-Dīn Ṭāhir, it is nearly impossible to determine their genealogy. For example, contemporary reports about al-Nāṣirī's meeting with the sultan when the latter entered southern Syria on his way to Damascus in the middle of Ramaḍān have a word or words in common, particularly those used to describe Barqūq's behavior towards al-Nāṣirī,[110] but Ibn Khaldūn said that the meeting took place at the fortress of Qāqūn,[111] Zayn al-Dīn Ṭāhir[112] at al-Lujūn,[113] and Ibn Ṣaṣrá at al-Ghawr![114] Finally, adding to the confusion, there is the problem of chronological inconsistency in a report mentioned only by Ibn Khaldūn, Ibn Ṣaṣrá, and Ibn Ḥijjī. According to what can be gleaned from the Syrian sources, on the sixteenth of Shaʿbān Tumāntamur, a pillar of the Minṭāshī camp, deserted and joined al-Nāṣirī. This desertion and the fear that more would take place led Minṭāsh to

---

located detailed information about him. On the general topic of the Turcomans during the Mamluk period, see Barabara Kellner-Heinkele, "The Turkomans and *Bilād al-Shām* in the Mamluk Period," in *Land Tenure and Social Transformation in The Middle East,* ed. Tarif Khalidi (Beirut, 1984), 169–80.

[109]The tribal formation of renegade Arab amir Nuʿayr Ibn Ḥayyār; on him see "Al-Manhal," fols. 812a–813a. On the Arab tribes during this period see M. A. Hiyari, "The Origins and Development of the Amīrate of the Arabs During the Seventh/Thirteenth and Eighth/Fourteenth Centuries," *Bulletin of the School of Oriental and African Studies* 38, no. 3 (1975): 508–24; A. S. Tritton, "The Tribes of Syria in the Fourteenth and Fifteenth Centuries," ibid. 11 (1943–46): 567–73.

[110]For example, the verb *tarajjala* used by Zayn al-Dīn Ṭāhir and Ibn Khaldūn.

[111]Qāqūn was located off the coast half way between Gaza and northern Palestine; see *A Chronicle of Damascus,* 245, n. 1481. In *Al-ʿIbar,* the name of this locality is given as Qānūn.

[112]Al-ʿAynī, al-Maqrīzī, and Ibn Taghrībirdī also placed the meeting at the same location as Zayn al-Dīn Ṭāhir; see, respectively, "ʿIqd," MS Ahmet III 2911/B2, fol. 97b; "ʿIqd," Dār al-Kutub MS 1584 *Tārīkh,* fols. 431–32; *Al-Sulūk*, 3:2:748; *Al-Nujūm,* 11:26. More importantly, Ibn Qāḍī Shuhbah in his *TIQS* also referred to al-Lujūn; it might very well be that this report was taken from Ibn Ḥijjī, even though, in the light of what will be argued below, it is impossible to confirm.

[113]Al-Lujūn is located about twenty miles north of Qāqūn; see William Popper, *Egypt and Syria under the Circassian Sultans, 1382–1468 A.D.: Systematic Notes to Ibn Taghrîbirdî's Chronicles of Egypt* (Berkeley and Los Angeles, 1955–57), 1:48 and map no. 13.

[114]A region of the Jordan valley located south of Lake Tiberias; see *A Chronicle of Damascus,* 87, n. 511. All the locales mentioned here are part of one of the routes from Gaza to Damascus; see Popper, *Egypt and Syria Under the Circassian Sultans,* 1:48 and map. no. 13. This route includes a stop at Irbid, a city where, according to Ibn Duqmāq, the sultan stopped on his way to Damascus; see above, n. 56.

lift his siege of the Syrian capital; on the following day, al-Nāṣirī´s forces would experience a crushing defeat at the hands of Nuʿayr at Ḍumayr.[115] Curiously, Ibn Khaldūn placed the desertion of Tumāntamur[116] *after* the battle of Ḍumayr, contrary to what the Syrian sources maintain. What is to be made of all this? With regards to the report concerning the arrival of Barqūq to Syria, because of the variety of locales, we might posit the following: either all the authors used a common source[117] but played around with historical truth and thus made al-Nāṣirī welcome the sultan to Syria in three different places[!], or we are in the presence of three different strains of *akhbār,* namely Ibn Khaldūn´s unknown source (Qāqūn), Ibn Ṣaṣrá´s own eyewitness and/or first-hand account (al-Ghawr), and Zayn al-Dīn Ṭāhir´s (al-Lajjūn).[118] This of course is pure conjecture: beyond establishing the existence of a Furātian and Syrian strain of *akhbār* in *Al-ʿIbar,* there is no way of ascertaining the identity of the latter group of reports.[119]

Ibn al-Furāt´s *Tārīkh al-Duwal* is the most copious and comprehensive of all the surviving historical works produced during this period. For the year 793, it contains the overwhelming majority of all those reports concerning Egypt and the general political/administrative/religious appointments mentioned by all histories. All the historians who wrote about this period[120] are either directly indebted to him or, knowingly or unknowingly, incorporated his *akhbār* by means of a third party:[121] as was noted earlier, al-Maqrīzī´s *Al-Sulūk,* for example, which is nothing but a ″slimmer″ rewritten version of *Tārīkh al-Duwal,* was to become the foundation for the works of historians such as Ibn Taghrībirdī, Ibn Iyās, and others.

However, *Tārīkh al-Duwal* contains none of the wealth of information found in the works of the Syrian authors about the nearly two months[122] of fighting in and around Damascus between the Minṭāshīs and Yalbughā al-Nāṣirī. This aspect of the war in Syria was very well ″covered″ by Ibn Ṣaṣrá and Ibn Ḥijjī, and one has to wait until Barqūq´s departure from Cairo[123] before the appearance in *Tārīkh*

---

[115]See below.

[116]In *Al-ʿIbar,* it is Yamāztamur (5:502).

[117]Maybe unknown Syrian source(s) or Ibn Duqmāq´s *Nuzhah?* See below.

[118]We could be dealing with four strains of *akhbār* if we include al-ʿAynī, who alone provided details not found elsewhere, namely the description of the horse on which Barqūq made Yalbughā ride; see n. 110.

[119]See below the discussion about the possible nature and identity of this or these Syrian source(s).

[120]Save for Ibn Ṣaṣrá and possibly Ibn Ḥijjī; see below.

[121]See above.

[122]Rajab and Shaʿbān; see above and below.

[123]*Tārīkh al-Duwal*, 9:2:259ff.

al-Duwal of *akhbār* from or about Bilād al-Shām, sometimes paralleling those of the two Syrian authors, especially his stay in Aleppo and the events surrounding it.[124] Before Barqūq′s arrival in Syria, Ibn al-Furāt′s reports about this region lacked detail and were of a second-hand nature since they were brought to Cairo by post-riders or by representatives of both Syrian and Egyptian military office-holders shuttling between the two regions. The analysis of these reports in *Tārīkh al-Duwal* might help clarify the reasons behind certain inconsistencies between this chronicle on the one hand, and mainly Syrian sources on the other. There is a systematic difference between the way Ibn al-Furāt′s reports from Syria via post-riders and messengers described what was going on in Syria, and the evidence presented by Ibn Ḥijjī and Ibn Ṣaṣrá.

The first report about events in Damascus was that brought on 5 Rajab by Kumushbughā al-Ṣaraytamurī, the *dawādār* of Qarādamurdāsh al-Aḥmadī[125] (d. 794/1392), then viceroy of Aleppo, who informed people in Cairo about the arrival of Minṭāsh to the Syrian capital.[126] The second report[127] arrived on 27 Rajab by means of a post-rider with news that Minṭāsh had been defeated and was besieged at Qaṣr al-Ablaq[128] after the arrival of loyalist soldiers from Gaza and of Arghūn Shāh al-Ibrāhīmī,[129] the amir whom Barqūq had recently nominated *ḥājib al-ḥujjāb* of Damascus.[130] The Syrian sources do not agree with this turn of events. First, if one considers that it takes about four days for a post-rider to ride the Damascus–Cairo route,[131] the only victory the messenger could have been referring to was the retaking on the twenty-third of this month of an important landmark, the building of Bahādur,[132] by al-Nāṣirī and his forces; but no mention is made of a defeat of the rebels significant enough to lead to their flight from the city, which is one of the claims of the messenger.[133] Even more surprising is that

---

[124]Ibid., 266–71.

[129]On him see *Al-Manhal,* 2:323–34, no. 376, and *Al-Ḍaw'*, 2:367, no. 825.

[130]*Tārīkh al-Duwal,* 9:2:254.

[131]Popper, *Egypt and Syria Under the Circassian Sultans,* 1:45.

[132]This building was probably located just west of the city′s walls in an area which included Yalbughā′s mosque, al-Maydān, and Qaṣr al-Ablaq, where the Minṭāshīs were conducting their siege of the city.

[133]A similar inconsistency can be found in another report dated 5 Sha'bān brought to Cairo by a mamluk of the viceroy of Ṣafad with news, yet again, of Minṭāsh′s escape from Damascus and his pursuit by Yalbughā. Not only do the Syrian sources *not* mention any flight on the part of Minṭāsh

no mention is made of the defeat[134] at ʿAqabat al-Tīnah[135] on 6 Rajab, at the hands of Minṭāshīs and Yamanī tribesmen,[136] of a Barqūq party from the Biqāʿ comprising Ibn al-Ḥanash,[137] Tankizbughā (the Barqūqī viceroy of Baalbek), and Qaysī tribesmen and others, on its way to help al-Nāṣirī.[138]

Even more at odds with events on the ground in Syria are two reports dated at the beginning of Ramaḍān. On the first of that month, a letter was brought to Cairo by a messenger from the sultan who was on his way to Syria but had not yet reached Qaṭyā, at the gates of the Sinai peninsula, the contents of which were that Minṭāsh had been defeated and had escaped from Damascus.[139] A few days later, on the fourth, an Amir Sūdūn al-Ṭayyār al-Ẓāhirī arrived in Cairo with briefs from the sultan confirming to those in Cairo the veracity of this news, and informing them that Minṭāsh was under siege[140] at the citadel of al-Zurʿah.[141] The most striking aspect of these last two reports is that while it was true that Minṭāsh had finally fled Damascus[142] on 16 Shaʿbān[143] and that Yalbughā al-Nāṣirī had managed to beat a party of Minṭāshīs at al-Kiswah[144] eleven days later on the twenty-seventh,[145] the sultan and the Cairenes had not yet been informed about the crushing defeat suffered by Yalbughā al-Nāṣirī at the hands of Nuʿayr near the village of Ḍumayr on the seventeenth of that month.[146] News concerning this

battle, in which one of the sons of Manjak al-Yūsufī[147] was killed,[148] reached Cairo, according to Ibn al-Furāt, only during the first third of Ramaḍān,[149] at a time when Barqūq was in Palestine on his way to Syria.

It is tempting to impute the inconsistencies pointed out above to the vicissitudes of historical writing or to mere coincidence. In other words, Ibn al-Furāt simply included in his work the material that was available to him,[150] and that material brought to Cairo by messengers simply did not mention the defeat at Ḍumayr. But equally plausible is the view that the contents of the messages arriving to Cairo, at least until Barqūq reached Syria, were consciously altered by their senders, either to downplay defeats and to camouflage them as victories for fear of incurring the wrath of the sultan, or as a delaying tactic. Even though Barqūq had strengthened his hand in the cut-throat environment of Mamluk politics, there were still people who resented his return to power, and a number of those were in Syria. In Damascus itself, there were many parties who actually supported Minṭāsh during the disturbances of 791–92, and one ought to keep in mind that back then the city did not fall to the besiegers led by Barqūq because of the steadfastness of its defenders.[151] In 793, yet again, the Syrian sources talk about the sympathy felt by certain sections of the population for Minṭāsh: the *ʿāmmah,* the inhabitants of the neighborhoods of al-Shuwaykah and al-Shāghūr,[152] and most importantly, the members of the household of Baydamur al-Khawārizmī (d. 789/1386). Baydamur had assumed the viceroyalty of Damascus a total of six

---

[147]A former viceroy of Syria and a ″mentor″ of Barqūq during his youth; see Fischel, ″*Ascensus Barcoch* (I),″ 65–66. According to Mignanelli, three sons of his, Ibrāhīm, ʿUmar, and Faraj, had supported Barqūq′s bid to return to power in 791 after he came out of al-Karak; ibid., 155.

[148]The sources are not too clear about the casualties of this battle. Ibn Ṣaṣrá claimed that one thousand two hundred sixty people were killed on both sides while Ibn Khaldūn mentioned the figure of fifteen Syrian amirs (*Al-Durrah al-Muḍīʾah,* 93; *Al-ʿIbar,* 5:502). The same confusion exists as to which one of Manjak′s sons died at Ḍumayr: Ibn al-Furāt and Ibn Khaldūn noted that it was Ibrāhīm, while Ibn Ṣaṣrá stated that it was ʿUmar (ibid., and *Tārīkh al-Duwal,* 9:2:263). The only reference in the sources to Faraj is that of Ibn Ḥijjī, who noted that on 12 Shaʿbān his house was looted by the populace during the battle of the Qanawāt, a neighborhood west of the city center (″Tārīkh Ibn Ḥijjī,″ fols. 98b–99a).

[149]*Tārīkh al-Duwal,* 9:2:263.

[150]Even if these reports were originally authored by somebody else, say Ibn Duqmāq, the inconsistencies pointed out above would still hold, unless it can be shown that Ibn al-Furāt falsely claimed that post-riders and the like brought these *akhbār* to Cairo when in reality they had a different history.

[151]The defenders were mostly members of the populace, but they included amongst them prominent citizens such as Ibn al-Qurashī, who was going to be executed on the orders of Barqūq; see *Tārīkh al-Duwal,* 9:2:256, and his obituary, 284–85.

[152]Two neighborhoods located just outside the city′s southern walls.

times[153] and had died in custody after Barqūq had ordered him removed from office in 788.[154] Contrary to the sons of Manjak al-Yūsufī, that other viceroy of Damascus, who sided with Barqūq during 791–93, Muḥammad Shāh ibn Baydamur (d. 793/1391) and the supporters of his household fought alongside Minṭāsh even when the latter moved against Yalbughā al-Nāṣirī in Sha'bān 791.[155] He was nominated *atābak* of Damascus by Minṭāsh in Ramaḍān 791[156] and participated in numerous confrontations with the forces loyal to Barqūq, until his capture in 792[157] and his execution in Cairo by Kumushbughā al-Ḥamawī in 793.[158] It was also Shukr Aḥmad, a former Baydamurī amir, who led the raid into Damascus the day of his arrival with Minṭāsh on 1 Rajab 793, and rode to his *ustādh*'s home where he was joined by another one of Baydamur's sons, Aḥmad, whose execution by Barqūq on 21 Dhū al-Ḥijjah was movingly described by Ibn Ṣaṣrá.[159] Last but not least, the viceroy of Damascus Yalbughā al-Nāṣirī stands out as the official with the most reasons and with the capability to mislead the sultan and his court back in Egypt. He had often been at odds with Barqūq when the latter was an "'Umarī" mamluk,[160] then *atābak,*[161] and when he became sultan.[162] It would not be surprising then that Yalbughā al-Nāṣirī would have used his powers as the head of the Syrian political apparatus to propagate false news in Egypt. In the sources rumors about his treachery abound.[163] Eventually, when he reached Aleppo, Barqūq became assured about his suspicions when Sālim al-Dūkārī, who allegedly had captured Minṭāsh and had promised to release him into the custody of the sultan,

sent him a letter detailing the extent of the relations between al-Nāṣirī and Minṭāsh.[164] This led to the execution of Yalbughā al-Nāṣirī on 27 Dhū al-Ḥijjah.[165] The best summary of the situation described here can be found in the words of Mignanelli, who, we are told by Fischel, knew Barqūq personally. Of the events in Syria, he remarked that

> [The sultan] was told that Nāṣirī was concealing much and so he was inwardly worried. Nāṣirī was said to be doing this to avoid being himself slain by Barqūq or becoming of little value when once Minṭāsh was destroyed or slain. Of this Nāṣirī was very much afraid. Barqūq sent many letters to Nāṣirī, but they availed little. Nāṣirī excused himself for his weakness against Minṭāsh and Nuʿayr. Wherefore, the sultan girded himself for a journey to Syria. [Upon Barqūq's arrival there] Nāṣirī excused himself, claiming he could not do more. Barqūq accepted his excuses [but inside] he thought that Nāṣirī was in collusion with Minṭāsh so that they might be able together to usurp control of Syria.[166]

Here, as elsewhere, in light of the available sources, we are dealing with sheer conjecture. As a matter of fact, one of the reports brought to Cairo on 5 Shaʿbān by the mamluk of the viceroy of Ṣafad, announcing the escape of Minṭāsh from Damascus,[167] might very well weaken the hypothesis advanced above. The viceroy of Ṣafad, Iyās al-Jirjāwī (d. 799/1396),[168] was a supporter of Barqūq throughout the period of 791–93,[169] and it would be curious that he would have "fed" the court in Cairo information that did not correspond to the reality on the ground. Of course, there are ways with which one can circumscribe this issue: maybe al-Jirjāwī, who entered Damascus on 8 Rajab and participated in the fighting alongside al-Nāṣirī,[170] felt he could not afford to inform Barqūq about the inability of his forces to break the stalemate; maybe he considered the loss of the building of Bahādur on the part the Minṭāshīs as a major setback for the rebels, and a troop movement on their part as a retreat; maybe he was in on the conspiracy;

[168]See *Al-Manhal,* 3:124–25.

[169]See for example *A Chronicle of Damascus,* 13, 20, 62, etc.

[170]*Al-Durrah al-Muḍīʾah,* 81; "Tārīkh Ibn Ḥijjī," fol. 96b.

or maybe, even at the risk of pushing the conspiracy theory to its limits, the mamluk who brought the news to Cairo was ″briefed″ by Yalbughā′s men, etc. However, the fact remains that many of the *akhbār* reported in *Tārīkh al-Duwal* as having arrived between 27 Rajab and the first ten days of Ramaḍān, some through the sultan, who, while on his way to Damascus, was probably still getting his information from post-riders from Syria, simply do not correspond to what was going on according to sources ″on the ground.″ Generally, the nature of the reports used by historians depends on such factors as the format of their work, their own intellectual aptitudes and interests, their geographical location, their sources, etc. In light of the discussion above, attention ought also to be paid to the channels through which information transited before it reached the historian, and more importantly to the agenda of those military figures, bureaucrats, and others who controlled its flow and content: a tall order indeed in view of the paucity of data that would allow for such an investigation.

Apart from the issue raised above, structurally and from the point of view of the nature of their contents, Ibn al-Furāt stuck to an annalistic format with reports following one another in a strict chronological order and the obituaries placed at the very end. But as for the potential sources of *Tārīkh al-Duwal*, the absence of Ibn Duqmāq′s *Nuzhah* will not permit us to ascertain the genealogy of Ibn al-Furāt′s reports. This problem is somewhat alleviated by the fact that *Tārīkh al-Duwal* does contain references to other authors. Ibn Duqmāq is quoted five times by Ibn al-Furāt, twice in the main text of *Tārīkh al-Duwal,*[171] and three times in the obituaries.[172] Although, unfortunately, neither of the first two reports are mentioned in *Al-Nafḥah,* there is still the possibility of comparing those ″meaty″ passages[173] in the latter work with the corresponding ones in *Tārīkh al-Duwal*. The following report describes Minṭāsh′s descent from the north towards Damascus:[174]

---

[171]*Tārīkh al-Duwal,* 9:2:254–55, 261.

[172]Ibid., 275, 282, 285.

[173]These were probably reduced in size by Ibn Duqmāq to fit *Al-Nafḥah,* which is a summary of *Nuzhah.*

[174]Words and sentences that are not italicized indicate similarities between the two texts. Punctuation mine.

Ibn Duqmāq: ″Minṭāsh *haḍara* min Mar'ash 'alá al-'Imq 'alá Sarmīn ilá qarīb Ḥamāh; *fa-haraba* nāyib Ḥamāh, fa-dakhala *Minṭāsh* fa-lam yushawwish 'alayhim;	Ibn al-Fūrāt: ″*Tawajjaha al-amīr* Minṭāsh min Mar'ash 'alá al-'Imq *'alá A'zāz* 'alá Sarmīn ilá qarīb Ḥamāh; *fa-sami'a* nāyib Ḥamāh *bi-ḥuḍūrihi, fa-akhadha harīmahu wa-tawajjaha ilá Tarāblus, fa-lammā waṣala Minṭāsh ilá Ḥamāh, lam yajid bi-hā aḥadan yudāfi'ahu* fa-dakhalahā *bi-al-amān wa-al-iṭmān fa-tazaghratū lahu al-nisā' fa-nādá la-hum bi-al-amān* wa-lam yushawwish 'alayhim;
thumma kharaja minhā ilá Ḥimṣ fa-dakhalahā wa-lam yushawwish 'alayhim;	thumma kharaja minhā *wa tawajjaha* ilá Ḥimṣ *fa-lam yajid bi-hā man yudāfi'ahu, wa-kāna nāyibuhā qad sami'a bi-qudūmihi, fa-tawajjaha ilá Dimashq* fa-dakhala *Minṭāsh ilayhā* wa-lam yushawwish 'alá aḥad min ahlihā;
thumma tawajjaha ilá Ba'albak wa-kāna nāyibuhā qad sami'a bi-qudūmihi ayḍan, fa-tawajjaha ilá Dimashq;	thumma tawajjaha *minhā* ilá Ba'albak wa-kāna nāyibuhā qad sami'a bi-qudūmihi ayḍan, fa-tawajjaha ilá Dimashq*, fa-dakhala Minṭāsh ilá Ba'albak, thumma kharaja minhā wa-qaṣada Dimashq;*
fa-lammā sami'a al-Nāṣirī huḍūrahu kharaja ilayhi min al-Zabadānī.″ (*Al-Nafḥah*, 263)	fa-lammā sami'a al-Nāṣirī bi-ḥuḍūrihi kharaja ilayhi min *ṭarīq* al-Zabadānī.″ (*Tārīkh al-Duwal*, 9:2:255)

The similarities between the two texts is self-evident, and one might safely assume that it was Ibn al-Furāt who borrowed from Ibn Duqmāq rather than the other way around,[175] since *Nuzhah* would have probably provided a larger account than that of *Al-Nafḥah*.

Another possible source for *Tārīkh al-Duwal* is Zayn al-Dīn Ṭāhir and his *Dhayl Durrat al-Aslāk,* which is frequently quoted by Ibn al-Furāt. Zayn al-Dīn noted in his narrative of the events leading to the siege of Damascus that as Yalbughā al-Nāṣirī left the city to confront the rebels who were reported in Baalbek, Minṭāsh headed to the Syrian capital so that they unknowingly crossed each other′s path.[176] The words he used for that last bit of information, *fa-takhālafū fī al-ṭarīq wa-sabaqahu Minṭāsh,* are almost identical to those of Ibn al-Furāt, *fa-khālafahu fī al-ṭarīq wa-atá ilá Dimashq.*[177] Even though the narratives of Ibn al-Furāt and Zayn al-Dīn Ṭāhir are clearly not identical, they do appear at more or less the same point in the narration in both *Tārīkh al-Duwal* and *Dhayl Durrat al-Aslāk.* If one discounts the randomness of the appearance of this cluster of words, the issue of the direction of the borrowing, small as it may be, still has to be addressed, but it is more likely than not that it was Ibn al-Furāt who borrowed from Zayn al-Dīn Ṭāhir. Up until the arrival of the sultan in Damascus, the reports concerning Syria reported in *Tārīkh al-Duwal* arrived, as we noted above, with post-riders or with representatives of military office-holders. A notable exception is the *khabar* which appears under the heading ″News about Minṭāsh′s

---

[175]In his obituary of the qadi al-Qurashī, where Ibn al-Furāt quotes Ibn Duqmāq directly (9:2:275), the contents of the citation appear, edited, in two different reports in the main body of *Tārīkh al-Duwal* (253, 254). In another obituary (281–82), Ibn al-Furāt quotes Ibn Duqmāq jointly with Walī al-Dīn Abū Zar‘ah ibn al-‘Irāqī (762–826/1360–1422), but since the latter is not known to have written a history that extended that late in the century, we are probably dealing here with material culled from a work of a biographical nature. Ibn al-‘Irāqī′s *Al-Dhayl ‘alá al-‘Ibar fī Khabar Man ‘Abar* was edited by Ṣāliḥ Mahdī ‘Abbās in three volumes (Beirut, 1989). On Ibn al-‘Irāqī′s life and works, see this edition, 1:7–32; *Al-Ḍaw'*, 1:336–44; Moḥammad ben Cheneb and J. de Somogyi, ″Al-Dhahabī,″ *The Encyclopaedia of Islam*, 2nd ed., 2:214–16; and Caesar E. Farah, *The* Dhayl *in Medieval Arabic Historiography* (New Haven, 1967), 20–21.

[176]″Dhayl Durrat al-Aslāk,″ MS Bodleian Marsh 319, fol. 264a.

[177]*Tārīkh al-Duwal,* 9:2:255. Similar wordings can be found in the works of other historians such as Ibn Khaldūn (″*fa-khālafahu Minṭāsh ilá Dimashq*,″ *Al-‘Ibar,* 5:501), Ibn Ḥajar (″*fa-khālafahu Minṭāsh ilá Dimashq,*″ *Inbā'*, 3:55), and Ibn Qāḍī Shuhbah (″*fa-tafāwatū fī al-ṭarīq wa-jā'a Minṭāsh bi-‘askarihi*,″ *TIQS,* 1:373). The reliance of these three authors on Ibn al-Furāt has already been established above; see also Reisman, ″A Holograph MS.″ As to the sense of the verb *khālafa* in this particular context, which can be read as ″preceded,″ the meaning that was imparted to it here, namely the crossing of paths, is probably the right one since Ibn Qāḍī Shuhbah used a synonym, the verb *fāwata*.

heading toward Bilād al-Shām,"[178] in which Ibn al-Furāt took a break from presenting dated reports one after the other, and offered the reader a long, unencumbered narrative dealing with the itinerary of Minṭāsh from northern Syria until his arrival in Damascus on 1 Rajab. Perhaps he used parts of Zayn al-Dīn Ṭāhir's account along with that of Ibn Duqmāq to construct this particular paragraph. After all, as I have noticed in the case of the year 778, Ibn al-Furāt copied almost word for word a great deal of the reports in *Nuzhah* and used them as the foundation of his annal without ever citing Ibn Duqmāq. It is thus not impossible that he placed Zayn al-Dīn Ṭāhir's sentence construction and other information in his text and added to it the data he gleaned from *Nuzhah*. Last but not least, no mention is made of Ibn al-Furāt in *Dhayl Durrat al-Aslāk,* whereas between 791 and 796 Zayn al-Dīn Ṭāhir is mentioned in the edited text of *Tārīkh al-Duwal* eleven times, including nine direct quotations in the obituaries section.[179]

Tārīkh al-Duwal remains indispensable reading for those interested in the events of the year 793, but one cannot get a sense of all that happened in the Mamluk realm, and certainly of the events of the siege of Damascus, by relying solely on it. The Syrian sources are therefore essential to any attempt at reconstructing the events of the year.

Very little if anything is known about Ibn Ṣaṣrá, one of two Syrian historians who were contemporaries to the events of the year 793, since there is no mention of him or of his works in the available primary sources. All that can be ascertained about him is that he was part of a scholarly Damascene family with long academic and religious credentials, that he lived at the end of the eighth/fourteenth century and at the beginning of ninth/fifteenth century, and that he finished his *Al-Durrah al-Muḍī'ah fī al-Dawlah al-Ẓāhirīyah* sometime between Sha'bān 799 and Shawwāl 801.[180] It is thus not the details of his biography that make him and, more precisely, his work so important: their significance lies elsewhere.

Even though Ibn Ṣaṣrá claimed in the opening pages of his work that he had abridged the biography of Barqūq in order to produce *Al-Durrah al-Muḍī'ah,* this work nonetheless provides detailed first-hand eyewitness descriptions of years (791–99/1389–97)[181] pivotal in the life and career of the sultan, notably the period running from 791 through 793, and it does so from a purely Syrian, and particularly Damascene, perspective. This Damascene perspective is reflected at a very basic

---

[178]*Tārīkh al-Duwal,* 9:2:255.

[179]See references in the index prepared by Zurayq and 'Izz al-Dīn, 9:2:527.

[180]All of the data contained in this and the following paragraphs was taken from Brinner's comments in his Preface to *A Chronicle of Damascus,* mainly x–xix.

[181]According to Brinner, *Al-Durrah al-Muḍī'ah* might have actually begun earlier with the accession of Barqūq, but the only extant manuscript deals with the years mentioned here; ibid., xv.

level in the myriad references to the topography of Damascus, whether buildings, mosques, neighborhoods, etc., a mass of information about landmarks, some gone, others still extant, that does not appear to have been subjected to any analysis beyond the rich commentaries and information provided by Brinner in the footnotes of the English translation. This, when combined with the highly unconventional style and format of this work, makes it all the more important for our purposes here.

Even though its basic division is the year and its narrative is arranged according to the chronological unfolding of days and months, *Al-Durrah al-Muḍīʾah* owes little else to the annalistic format used by most major historians. In Brinner's words, the author's "major concern was not, obviously, the bare recounting of the events of a year, but the dramatization and highlighting of some of these events, using them as the points of departure for moralizing sermons comparing this transient world with the Hereafter, on the duties of rulers and their subjects, and on the evil of the times."[182] This moralizing dimension of the text of *Al-Durrah al-Muḍīʾah* can be seen in a large number of its passages where Ibn Ṣaṣrá reflects upon the ephemeral nature of worldly events in the overall scheme of things;[183] more than one third of the work is made up of non-historical material, stories, anecdotes, etc. Moreover, *Al-Durrah al-Muḍīʾah* contains no biographical and appointment reports of any type,[184] save for information about people and leaders

[182]Ibid.

[183]The following passage in which Ibn Ṣaṣrá decries the regime set up by Minṭāsh upon his arrival to Damascus on 1 Rajab, is typical: "Aḥmad Shukr [the leader of the Minṭāshī raid into Damascus] summoned Iyās, the mamluk of Ibn al-Ghāwī, and made him governor of the city. Ibn al-Zuʿayfirīnī rode with them, desiring to become chief cadi of Damascus; for Minṭāsh had promised that to him and that Aḥmad Shukr would be viceroy of Damascus. Aḥmad Shukr made a circuit of the city and left Bāb al-Farādīs for the Maydān. The Minṭāshīs followed and had a great feast [celebrating] their entry into the city. God the Exalted erased their hearts, and they did not remember the consequences of deeds, because all of this [happened] so that he might execute [His] judgment and decree. In the *Ḥadīth* it is [written] that when God the Exalted desires to execute His judgment and decree, he deprives wise men of their intelligence. Praise be to Him, there no god but He. Their rule over the city lasted less than a day, for affairs came into the hands of people not suited to them, and for this reason their term was brief. . . . [Those appointed by Minṭāsh] wrote out many paper-patents for amirs and chief officials, for people are covetous, and the love of this world destroys them." (*A Chronicle of Damascus,* 107–8).

[184]Very little of the religious life of Damascus is reflected in *Al-Durrah al-Muḍīʾah,* as opposed to "Tārīkh Ibn Ḥijjī," which contains a fair number of biographies and reports about the learned class of the city; see below. Reference to religious figures or religious life was made by Ibn Ṣaṣrá only when it was part of his general narrative on political events (see below, the references to the role played by men of religion during the struggle for Damascus) or when it allowed him to sermonize; see, for example, ibid., 87–88. The only exception to this rule is when he reported a few appointments made by Barqūq upon his return to Damascus, notably that of al-Bāʿūnī (d. 816/1413) as chief

presented *in* and as an *integral* part of a basically uninterrupted narrative. In many ways, this work reads like a historical novel whose reports have a ″hot off the press″ feel to them.[185] But it is the details about the military engagements between Minṭāsh and Yalbughā al-Nāṣirī, their locale and what they tell us about Syrian society at the end of the eighth/fourteenth century, that make *Al-Durrah al-Muḍī'ah* essential reading. Here one ought to mention the dramatic descriptions[186] Ibn Ṣaṣrá gives of the battles which took place in and around Damascus and their consequences: trench[187] and siege[188] warfare, artillery exchanges,[189] the strategic placing of artillery pieces,[190] street fighting,[191] the state of mind of the fighters and its impact on the prosecution of the war,[192] etc.

Al-Durrah al-Muḍī'ah also contains more specific information about the configuration of the groups involved in the unrest and in fighting one another, details that are conspicuously absent from most of the Egyptian sources. For example, in depicting Minṭāsh′s flight from the city after the defection of Tumāntamur,[193] Ibn Ṣaṣrá mentions in detail the names of the different groups

---

Shafiʻi qadi, a man obviously liked by Ibn Ṣaṣrá despite (or because of!) what he said about him concerning his mistreatment of his fellow jurists; ibid., 103.

[185]This can be seen in the recounting of the events concerning Minṭāsh′s dash from the Anatolian marches southward. Ibn Ṣaṣrá provides glimpses of his descent from the northern districts to Damascus interspersed with commentaries: the fleeing viceroy of Ḥamāh is mentioned by name; Yalbughā al-Nāṣirī is made to swear when news about Minṭāsh′s arrival there reached him, and his alleged verbal recommendation to the *nā'ib al-qalʻah* to fortify the citadel was noted, and so was his request that lantern-men call upon the soldiers to prepare for war; as the viceroy left the city, people reacted with fear and moved *intra-muros,* while news about Minṭāsh and his allies, whose names and whereabouts are dutifully noted, located him nearer and nearer to the provincial capital; and with the arrival of the bulk of the rebel troops to al-Mizzah in the evening of the last day of Jumādá II, the fear and sense of insecurity of the population increased, worked as it was by rumors and memories of the siege at the hands of Barqūq; *Al-Durrah al-Muḍī'ah,* 75–76.

[186]See Ayalon′s comment that these were ″perhaps the most vivid picture of artillery in action throughout Mamluk history,″ in *Gunpowder and Firearms in the Mamluk Kingdom: A Challenge to a Mediaeval Society* (London, 1956), 27. Also quoted in *A Chronicle of Damascus,* xix.

[188]Ibid., 81.

[189]Ibid., 79.

[190]Ibid., 79–80.

[191]Ibid., 78, 84, 86.

[192]In his long account of the battle of Ḍumayr alluded to on a number of occasions above, one can clearly see the attention to detail shown by Ibn Ṣaṣrá as he attributed the crushing defeat of al-Nāṣirī to the utter state of fatigue of his troops of which Nuʻayr, his foe and victor, was well aware; ibid., 91–92.

[193]See above.

(the populace, Turcomans from Tripoli, tribesmen from Jubbat ʻAsāl,[194] Turks and soldiers from Ṣafad, and others) who were involved in the looting that took place in al-Maydān and al-Ṣāliḥīyah. More important still are the data concerning the various military forces on the ground during this period. Ibn Ṣaṣrá talks, for example, about the defeat of ʻAlāʼ al-Dīn Ibn al-Ḥanash,[195] the leader of the Qaysīs, at the hands of Shukr Aḥmad and a party of Yamanī tribesmen,[196] on 6 Rajab, at ʻAqabat al-Tīnah;[197] he notes that one thousand of the *fallāḥūn* who accompanied ʻAlāʼ al-Dīn Ibn al-Ḥanash were killed, two hundred Qaysīs and eight soldiers (ostensibly Mamluks from the garrison of Baalbek)[198] were captured, while the Yamanī *ʻushrān* prevailed upon the Qaysī *ʻushrān.*[199] Are we dealing here with four (peasants, Qaysīs, Mamluks, and Qaysī *ʻushrān*), three (peasants, Qaysīs=Qaysī *ʻushrān,* and Mamluks) or two (Qaysīs=Qaysī *ʻushrān*=peasants and Mamluks) categories of fighters in the loyalist camp? Any one of the three classifications can be read into the text. Any attempt at clearing the confusion would require pondering the term *ʻushrān,* which has been rendered in English in a variety of ways: tribesmen, by Brinner;[200] Druze tribesmen and/or clansmen living in the highlands of southern Lebanon and northern Palestine who sometimes divided along Qays and Yaman lines, by Popper; great agricultural tribes of Syria, by Poliak;[201] etc. Generally, argues Irwin, the term ″seem[s] to have been used to describe semi-nomadic or sedentarized tribal groups, in contradistinction

to more purely nomadic tribes, such as the Banū Faḍl."[202] With this in mind, and with the help of Ibn Ḥijjī's *Tārīkh*[203] and Ṣāliḥ Ibn Yaḥyá's[204] *Tārīkh Bayrūt,* we can argue the following: one group consisted of Ibn al-Ḥanash and his Qaysī followers who were either mounted or on foot,[205] a distinction which would *probably* correspond to a division between, respectively, more sedentarized (peasants) and less sedentarized nomadic (tribal chieftains) components within this group;[206] according to Ṣāliḥ Ibn Yaḥyá's history, the Druze feudal chiefs of the Lebanese mountains, his ancestors at least, were also involved in battles around Damascus including that of Ḍumayr[207] and presumably that of ʻAqabat al-Tīnah, and they could correspond to the Qaysīs mentioned by Ibn Ṣaṣrá in the text;[208] finally, one finds the mamluks of the viceroy of Baalbek. Evidently, to echo Irwin's comments, much still needs to be done before a clearer picture of what constituted the Syrian army at the end of the eighth/fourteenth century can

[202]Ibid., 256.

[203]"Tārīkh Ibn Ḥijjī," fols. 96a–b. On Ibn Ḥijjī, more below.

[204]An early fifteenth-century historian from the mountains of Lebanon, his work is *Akhbār al-Salaf min Dhurrīyat Buḥtur ibn ʻAlī Amīr al-Gharb bi-Bayrūt,* a.k.a. *Tārīkh Bayrūt,* ed. Kamal Salibi et al. (Beirut, 1969) (hereafter cited as *Tārīkh Bayrūt*), a history of his Druze feudal family based in the vicinity of Beirut.

[205]This distinction was made by Ibn Ḥijjī; "Tārīkh Ibn Ḥijjī," fol. 96a.

[206]This *could* correspond to the *fallāḥūn* and to the Qaysī *ʻushrān* of the first classification of fighters. Hours and Salibi note, with reference, it is true, to Muḥammad, an early tenth/sixteenth-century member of the Ibn al-Ḥanash family, that his leadership smacked more of that of a bedouin chief than that of a Lebanese mountain feudal (read sedentary) lord, because of the little concern he showed for building enduring symbols of attachment to the land, such as roads, bridges, and the like ("Muḥammad Ibn al-Ḥanash, muqaddam de la Biqāʻ," 23). It is probable that in addition to his immediate mounted entourage of retainers, ʻAlā' al-Dīn Ibn al-Ḥanash had armed peasant clients.

[207]*Tārīkh Bayrūt,* 209–12, 215–16. A member of his family died during this encounter; see 209–10.

[208]The Qaysī Druze chieftains of Lebanon and ʻAlā' al-Dīn Ibn al-Ḥanash might have commandeered the same pool of armed peasants of the southern Lebanese highlands, even though I have not come across any evidence for that.

be seen; *Al-Durrah al-Muḍī'ah* would be a strong starting point for such an endeavor.[209]

Reading *Al-Durrah al-Muḍī'ah* is not however without its problems. From a historical perspective, the dating of its events is dismal in many parts of the text at hand. Whether it is Ibn Ṣaṣrá's fault or that of the copier of the manuscript, it is impossible to tell, but one still has to rely on both *Tārīkh Ibn Qāḍī Shuhbah* and *Tārīkh Ibn Ḥijjī* in order to set straight the chronological unfolding of events.[210]

---

[209]Ibn Ṣaṣrá also provides historians with detailed insight into an interesting aspect of warfare in a densely populated urban environment, namely the way various groups fared under extraordinary circumstances. Beyond the description of the fear and suffering experienced by the civilian population (see, for example, *Al-Durrah al-Muḍī'ah,* 78–79) and the sometimes forced mobilization of popular groups in the battles that were fought (ibid., 79, 81–82, 83, 88), Ibn Ṣaṣrá's chronicle deals as well with the everyday details of life in a city at war. For example, there is a story from the beginning of the siege (ibid., 78–79) which relates that in the Minṭāshī-held areas, located mostly outside the western walls of the city, it was, literally, business as usual as trade in foodstuffs went on unhindered, so much so that, in a figure of speech, "anyone could eat as much meat as he desired" (*A Chronicle of Damascus,* 110). In the same vein, he describes how the necessity of some inhabitants to go back and forth between the areas held by the "other side" and their place of residence had repercussions on the very psychology of the fighters in terms of their fear of spies and fifth columns heading into the areas they controlled, and consequently, on the problems the people who shuttled faced in terms of abuses, unwarranted suspicions, mistaken identities, and tragedies. All of these elements can be seen in a story (*Al-Durrah al-Muḍī'ah,* 86–87) about a boy placed by al-Nāṣirī on guard duty at Bāb al-Naṣr, a gate located near the citadel in the western wall, in order for him to squeal on those he could identify as pro-Minṭāshīs from amongst the people who went back and forth between the areas held by Minṭāsh and those held by the loyalists. The words of Ibn Ṣaṣrá are worth quoting: "When he said of anyone, 'seize him!' they [the Barqūqī police] would seize him immediately and take everything on him and with him. If they had any concern for him, they imprisoned him, otherwise they killed him. Fear overcame the people because of the lad, [both] the one who had gone out and the one who had not, [the latter] fearing that he would identify him as someone else, be burned immediately and perish in the fire. . . . He aroused dread in the hearts of the people who feared him more than they did the viceroy of Syria." (*A Chronicle of Damascus,* 119–20).

[210]For example, the last complete date that appears in the narrative before dating becomes erratic for a few pages is 12 Rajab (*Al-Durrah al-Muḍī'ah,* 80). The following date to appear in the narrative is the Monday that follows Friday 12 Rajab, which would be the fifteenth of the month (ibid., 81). The report that comes after, the one about the great fires that ravaged numerous neighborhoods and buildings west of the city, is simply introduced with the mention "*wa-rakiba* thānī yawm *Iyās wa-al-Nāṣirī* . . .," which would have to correspond to 16 Rajab (ibid.). After the mention of an event taking place on "*thālith yawm*" (ibid., 81–82), the next two dated reports are from Thursday 15 Rajab (ibid., 83), yet another impossibility, and from the eighteenth of the same month (ibid.); only then did Ibn Ṣaṣrá date a *khabar* on Saturday 20 Rajab (ibid.), which does correspond to the actual calendar of the year 793. An even more blatant dating error is the story relating the alleged departure of Barqūq from Cairo to Syria in Rajab, while in fact he did not leave Cairo until 22 Sha'bān (ibid., 84).

This shortcoming of *Al-Durrah al-Muḍī'ah*, as well as those associated with the very style of the text,[211] does not temper in any way its undeniable value for modern historians interested in the history of Damascus during this troubled period. But did his fundamental concern with his home-town influence the way Ibn Ṣaṣrá recounted some important events? The question is relevant on at least two levels. The first has to do with historical consistency. In a *khabar*[212] dated from the first third of Rabī' II, Ibn Ṣaṣrá described the departure to Cairo of a party of amirs and other personalities who had been imprisoned in Damascus as a result of their involvement in anti-Barqūq politics in Damascus during the siege of the city in 792. The leader of this party was one Alābughā al-'Uthmānī[213] (d. 793/1391) who, according to *Al-Durrah al-Muḍī'ah,* accompanied the group to Gaza. Other contemporary historians claim, contrary to Ibn Ṣaṣrá, that Alābughā al-'Uthmānī went all the way to Cairo with his prisoners; they also made much of the arrival, along with this group, of Aytamish al-Bajāsī, whose return to Cairo and more-than-warm reception on the part of Barqūq was dutifully highlighted.[214] Does this mean that the ″coverage″ available to Ibn Ṣaṣrá in terms of his sources did not extend beyond Gaza? It is highly unlikely, since his work does contain reports, though few in number, of things Egyptian,[215] but even then, one still cannot account for the absence of Aytamish from his report.[216] The second level has to do with the sources Ibn Ṣaṣrá used for extra-Damascene events. Following the departure of the sultan from Damascus to northern Syria around 8 Shawwāl, only five *akhbār* dealing with Aleppo are reported: the news about the sultan′s arrival there, which reached Damascus via one of al-Nāṣirī′s mamluks;[217] another about a military expedition to al-Bīrah[218] which Barqūq had

[214]Ibid., 250–51; *Al-'Ibar,* 5:500.

[215]See, for example, the news about the execution in Cairo of a number of amirs: *Al-Durrah al-Muḍī'ah,* 74.

[216]The same overall ignorance of events which occurred far from Damascus was noted by Popper with regards to other Syrian locales (*A Chronicle of Damascus,* xv). Maybe most revealing of Ibn Ṣaṣrá′s ″world view″ is a report in which he relates the appointments made by Barqūq while in Aleppo: of all the detailed information concerning the appointments made by the sultan to Syrian viceroyalties (Damascus, Aleppo, Ḥamāh, Tripoli, and Ṣafad) after the execution of Yalbughā al-Nāṣirī, only the appointee to that of Damascus, Buṭā al-Ṭūlūtamurī, is mentioned by name; on Buṭā (d. 794/1391) see *Al-Manhal,* 3:375–80, no. 671.

[217]*Al-Durrah al-Muḍī'ah,* 99.

[218]A town located slightly northeast of Aleppo; see *A Chronicle of Damascus,* 135, n. 797.

ordered early on in his stay;[219] a report about the execution of Yalbughā al-Nāṣirī as it was communicated to him by "one of the prominent people;"[220] and another about his arrest, brought to Damascus by a post messenger.[221] All of these reports can be accounted for, save for the one relating the expedition to al-Bīrah which is of unknown origin, but which can be found, written differently, in Zayn al-Dīn Ṭāhir's *Dhayl Durrat al-Aslāk*. Did the two historians use a common source or two different sources concerning the same event? So far, it is impossible to ascertain.[222]

The other Syrian contemporary source for the year 793 is Ibn Ḥijjī, the author of an annalistic chronicle identified throughout this research as *Tārīkh Ibn Ḥijjī.* In the introduction[223] to his *Tārīkh,* Ibn Qāḍī Shuhbah states that his teacher Ibn Ḥijjī wrote a history which covered the years 741–47 and 769–815 minus the year 775. Ibn Ḥijjī, before his death, asked him ["*awṣānī*"] to fill in the chronological gap from 748 to 768, but when he embarked upon this endeavor, he noticed that his master had failed to include in his work a large number of obituaries and events mostly from outside of Syria. This led Ibn Qāḍī Shuhbah to write a long *dhayl* in which he expanded his master's text while following his methodology, namely the monthly presentation of the events and obituaries. The end result was a *dhayl* to Ibn Ḥijjī's history identified in this research as *Al-Dhayl al-Muṭawwal,*[224] which came into existence as a result of a two-stage process. Ibn Qāḍī Shuhbah started with an initial recension of his teacher's history by copying it and often[225] annotating it with marginalia, and then later incorporated these annotations as

---

[219]*Al-Durrah al-Muḍī'ah,* 99–100. Ibn Ṣaṣrá notes that the amirs sent to al-Bīrah were Yalbughā al-Nāṣirī, Aytamish al-Bajāsī, one Kumushbughā, and Buṭā al-Ṭūlūtamurī. In n. 795 of his *Chronicle of Damascus,* Brinner refers the reader to another footnote, n. 220, which indicates that the Kumushbughā in question here is none other than Kumushbughā al-Ḥamawī. The problem is that, according to all other sources, al-Ḥamawī was in Egypt as *nā'ib al-ghaybah.* Ibn Ṣaṣrá might have been referring to Kumushbughā al-Ṣaghīr, whom sources say had been part of the expeditionary force which accompanied the sultan to Syria; see *Tārīkh al-Duwal,* 9:2:260.

[220]*A Chronicle of Damascus,* 136; *Al-Durrah al-Muḍī'ah,* 101.

[221]*Al-Durrah al-Muḍī'ah,* 100.

[222]See below.

[223]All the information in this paragraph is based on Ibn Qāḍī Shuhbah's introduction to his work, 2:111–12, and on Darwīsh's French translation of it on pages 29–30 of the French introduction.

[224]In doing this, I only follow Adnān Darwīsh's characterization of this work; see *TIQS,* 2:27.

[225]These annotations are sometimes absent from large numbers of folios. In the case of the annal of the year 804 which I have examined, out of a total of sixteen and a half folios, about a third are more or less systematically annotated; see Chester Beatty 4125, fols. 252b–261a. In the annal of the year 793, six folios out of fifteen are for all intents and purposes devoid of marginalia; "Tārīkh Ibn Ḥijjī," fols. 93b–100b.

well as passages taken from *Al-Muntaqá min Tārīkh Ibn al-Furāt*[226] and other sources[227] into a second recension, i.e., *Al-Dhayl al-Muṭawwal*.[228] This latter work was then summarized into a smaller one; it is this shorter work, about one third of the original, which was edited in four volumes by ʻAdnān Darwīsh as *Tārīkh Ibn Qāḍī Shuhbah*.[229]

Since the sections of *Tārīkh Ibn Ḥijjī* that are still extant in MS Berlin Ahlwardt 9458 do not include the year 793,[230] one has no choice but to turn to the two recensions of Ibn Ḥijjī's work made by Ibn Qāḍī Shuhbah. The problem in this endeavor has to do with the existence of a plethora of texts, all written in Ibn Qāḍī Shuhbah's distinctive and highly unreadable handwriting, scattered in a var-

---

[226]This can be ascertained from the results of Reisman's article and my own research on the year 778; see "A Holograph MS," 32–37. "Al-Muntaqá min Tārīkh Ibn al-Furāt" (MS Chester Beatty 4125, fols. 2b–178b) is ostensibly composed of selections from *Tārīkh al-Duwal* made by Ibn Qāḍī Shuhbah covering the years 773–93/1371–90. However, at least for the year 793 (ibid., 166a–178b), we are dealing here with much more than mere selections: all save a few of the reports of the edited version of Ibn al-Furāt's chronicle can be found in Chester Beatty MS 4125. The main difference between the two is that Ibn Qāḍī Shuhbah did "manipulate" Ibn al-Furāt's text by placing the obituaries at the end of the events of each month, very much like his mentor Ibn al-Ḥijjī had done in his "Tārīkh." One still needs to determine how much of Ibn al-Furāt's obituaries Ibn Qāḍī Shuhbah kept in "Al-Muntaqá min Tārīkh Ibn al-Furāt."

[227]See Reisman, "A Holograph MS," 39–42.

[228]Ibid., 32; 47, fig. no. 2. For example, the annal of the year 804 in MS Chester Beatty 5527 (fols. 235a–253b) is based on the recension made by Ibn Qāḍī Shuhbah (MS Chester Beatty 4125, fols. 252b–261a) of "Tārīkh Ibn Ḥijjī" (MS Berlin Ahlwardt 9458, fols. 129a–140a), to which were added passages from "Al-Muntaqá min Tārīkh Ibn Duqmāq" (MS Chester Beatty 4125, fols. 197a–203a). This pattern for the elaboration of Ibn Qāḍī Shuhbah's second recension has already been established by Reisman; see above, the many references to his "A Holograph MS."

[229]However, as Reisman noted in his review of Darwīsh's edition, since *TIQS* is actually an abridgement of *Al-Dhayl al-Muṭawwal,* it could more aptly be titled *Al-Mukhtaṣar*. See Reisman, *Mamlūk Studies Review* 5 (2001): 175; idem, "A Holograph MS," 29.

[230]MS Berlin Ahlwardt 9458 covers the years 796 to 815, minus 805 and 808.

iety of manuscripts, notably Chester Beatty 4125 and 5527, and Köprülü 1027.[231] Reisman′s research and my own cursory examination of the MS Chester Beatty 5527 indicate that it does contain a certain number of years from the second recension, but not the annal of 793. Köprülü 1027 on the other hand does contain an annal of the year 793.[232]

This annal[233] is peculiar in a number of respects. First, it does not cover the whole year, as there is a hiatus, with no change in the numbering of the folios, from the final third of Sha'bān[234] to the last of the obituaries of Dhū al-Ḥijjah.[235] Second, there is no heading for the months of Ṣafar, Rabī' II, and Jumādá I, and no reports are to be found under the months of Muḥarram and Rabī' I, except for obituaries.[236] Third, the text is marred not only by the difficult handwriting of Ibn Qāḍī Shuhbah, but also by the very bad state of the manuscript itself which often makes it impossible to decipher, especially, but not exclusively, the marginal annotations. Despite these difficulties, there are many factors which indicate that we are most probably dealing with a text originally authored by Ibn Ḥijjī. First, there is the available textual evidence. Compared to that of *Tārīkh Ibn Qāḍī Shuhbah*, the annal of 793 in Köprülü 1027 includes none of the passages easily

---

[231]MSS Chester Beatty 4125, Chester Beatty 5527, and Köprülü 1027 were kindly lent to me by David C. Reisman.

[232]Based on my own *cursory* exploration of this manuscript and on Reisman′s research, Köprülü 1027 appears to contain the following, in this order: 787–88 (fols. 2a–22b); notes on 789–91 (fols. 47b–51a); 791–97 (fols. 50b–187a); notes on 797–99, 801, 803–11, 799–801, 803, 808, 811 (fols. 187b–193a); 791 (fols. 193b–230b; these correspond to the text of ″Al-Muntaqá min Tārīkh Ibn al-Furāt″ until the month Ramaḍān). I have been able to determine that at least annals 792 and 793 are *not* part of the second recension. The emphasis on the uncertainty concerning the contents of this manuscript is warranted because it includes numerous pages of text and notes whose identity cannot be ascertained; this and other manuscripts from the hand of Ibn Qāḍī Shuhbah await thorough investigation.

[233]″Tārīkh Ibn Ḥijjī,″ fols. 93b–100b.

[234]The last report is dated 22 Sha'bān and is to be found at the bottom of fol. 99b.

[235]Ibid., fols. 100a–b.

[236]With regard to the last characteristic, one might assume one of two things: that Ibn Ḥijjī saw nothing in the first three months of 793 that needed to be recounted, or that Ibn Qāḍī Shuhbah purposely decided, when doing his recension of this year, to bypass some of the data in ″Tārīkh Ibn Ḥijjī.″ Either one of these possibilities might then explain the fact that for the months of Muḥarram, Ṣafar, and Rabī' I *all* the reports in *TIQS* were culled from Ibn al-Furāt′s *Tārīkh al-Duwal* (*TIQS,* 1:368–69). There is also the possibility that Ibn Qāḍī Shuhbah in the admittedly smaller *TIQS* wanted to emphasize the reports dealing with or originating in Egypt by relying on Ibn al-Furāt, but the presence of a very large number of Syrian reports in the rest of the annal goes against such a view.

traceable to Ibn al-Furāt′s *Tārīkh al-Duwal,*[237] but contains either longer versions of Syrian reports found in *Tārīkh Ibn Qāḍī Shuhbah*[238] or, again, Syrian *akhbār* totally absent from the latter.[239] This, plus the presence of a number of *ḥawāshī*[240] in the margins, lead me to conclude that the folios at hand are part of the first recension made by Ibn Qāḍī Shuhbah of his teacher′s history, and thus a fairly exact, although incomplete,[241] reproduction of Ibn Ḥijjī′s work.[242]

---

[237]In both its edited and ″Al-Muntaqá min Tārīkh Ibn al-Furāt″ forms.

[238]See, for example, the longer description made by Ibn Ḥijjī of the aftermath of the battle of Ḍumayr; ″Tārīkh Ibn Ḥijjī,″ fols. 99a–b; *TIQS,* 1:377.

[239]See, for example, the story of the capture by the Qaysīs of a Yamanī grandee inside the city of Damascus during the struggle for the city; ″Tārīkh Ibn Ḥijjī,″ fol. 96b. On this report, see below.

[240]The question of the nature and origin of the marginal annotations, most of them unreadable, is of great importance. To follow Reisman′s reasoning (″A Holograph MS,″ 31–32), we might assume that those that end with *ḥ* for *ḥāshiyah* and are embedded in *TIQS* were those reports added by Ibn Qāḍī Shuhbah to the text of ″Tārīkh Ibn Ḥijjī″ in order to produce the second recension. In the case of the annotations which end with *ṣ* for *ṣaḥḥ,* two hypotheses can be advanced: either Ibn Qāḍī Shuhbah was correcting Ibn Ḥijjī′s reports or he was adding to the text information he simply omitted by mistake from the latter′s work. In the absence of the original ″Tārīkh Ibn Ḥijjī″ annal for 793 and of Ibn Qāḍī Shuhbah′s second recension for that same year, and in view of the sorry state of the folios being studied, it is not possible to establish with certainty the nature of these annotations. For the purposes of this study, only those marginal annotations that are readable, are long enough to constitute full-fledged *akhbār,* are clearly identified with a *ṣ* for *ṣaḥḥ,* and do *not* appear in an obituaries section of the text will be taken into account in the analysis that follows. This amounts to only one report found in the margin of fol. 96b, which deals with the battle that allowed the loyalists to remove the Minṭāshīs from the house of Bahādur; on the battle(s) for the house of Bahādur, see above.

[241]It is more than probable that most of the non-Furātian material in *TIQS* from the end of Sha‘bān to the obituaries of Dhū al-Ḥijjah originated in ″Tārīkh Ibn Ḥijjī,″ so well established is Ibn Qāḍī Shuhbah′s indebtedness to his teacher, but to be on the safe side, they will not be used since there is uncertainty regarding them. Moreover, even though fols. 93b–100b in MS Köprülü 1027 do contain marginalia whose genealogy one cannot ascertain, these are not overwhelming in number and many of them are located in the obituaries sections of the annals. The extant folios for the year 793 in MS Köprülü 1027 will suffice for our purposes here since they cover most of the important events of the siege of Damascus.

[242]It is thus likely that the text at hand is from the first recension. However, in light of its peculiarities noted above and as a result of the collation I have undertaken of the text of the first recension and that of the original ″Tārīkh Ibn Ḥijjī″ for the year 804, it is more than possible that we are dealing with yet a different stage of the process of Ibn Qāḍī Shuhbah′s writing of his *Al-Dhayl al-Muṭawwal.*

Even though its first ″real″[243] reports deal with the execution of a number of amirs in Egypt,[244] *Tārīkh Ibn Ḥijjī* is a chronicle whose entire focus is on Syria, more precisely Damascus, very much like Ibn Ṣaṣrá′s *Al-Durrah al-Muḍī'ah* with which it shares many characteristics. The concern for things Syrian can be seen at many levels. All the appointments, religious and political, mentioned in it deal specifically with Syria, and more particularly with Damascus. Ibn Ḥijjī for example notes in four different reports the whereabouts of Arghūn Shāh al-Ibrāhīmī (d. 801/1398),[245] an amir whose claim to fame, during the early parts of the year 793, was his appointment to the *ḥujūbīyah* of Damascus at the end of Jumādá II.[246] In the same vein, the only two religious appointments noted in this work are those of Syrian qadis, one to Tripoli and the other to Damascus.[247] Interestingly, the attention paid to things religious by Ibn Ḥijjī, a member of the learned class of Damascus, intersects with the very large body of reports that deal with the battles that took place in his city throughout Rajab and Sha'bān. On numerous occasions, he noted the role played by the qadis in the fighting,[248] their role as moral authorities in the city,[249] the use of *zakāt* money in the war effort,[250] etc. But the war for Damascus was not only an occasion for Ibn Ḥijjī to talk about his peers: it occupies in its own right a pivotal position in his work.

In this respect, *Tārīkh Ibn Ḥijjī* provides very rich data, some of it unique, concerning, for example, the positions of the Minṭāshīs at the very beginning of

---

[243]This is if one disregards the first report, which is basically a list of military, administrative and religious officials in Egypt and Syria; ″Tārīkh Ibn Ḥijjī,″ fol. 93b.

[244]Ibid., fol. 94a. Many of the Egyptian *akhbār* are of a political nature and deal with the execution of amirs and personalities who were identified with or worked for the Minṭāshī regime in both Syria and Egypt; see ibid., fols. 96b, 97a.

[245]On him, see *Al-Manhal,* 2:223–24.

[246]See ″Tārīkh Ibn Ḥijjī,″ fols. 94b, 96a, 96b–97a, 99a. The only other nomination of a member of the military class in this annal is that of a Qarābughā al-'Alā'ī as *shādd al-awqāf* (ibid., fol. 94b).

[247]Ibid., fols. 94a–b.

[248]For example, as guardians of those gates located in the western wall of the city which were exposed to Minṭāshī attacks (ibid., fol. 95b; see also fol. 98b).

[249]On two occasions during the siege of the city, the qadis listened to letters sent to them from Cairo, one from the caliph and the other from the sultan, respectively urging the people to fight on in favor of Barqūq and thanking them for their steadfastness (ibid., fols. 96b, 97b). In two other *akhbār,* Ibn Ḥijjī reports the involvement of two religious figures in anti-Barqūq activities, one as purveyor of fodder to the Minṭāshīs, and the other for having corresponded with the sultan′s enemies (ibid., fols. 97b–98a).

[250]This, notes Ibn Ḥijjī, weakened the four *madhāhib* financially, especially since they had incurred many losses as a result of the destruction of *awqāf* which occurred as a result of the fighting; see ibid., fols. 97a–b.

the siege,[251] troop movements[252] and actual encounters between the protagonists,[253] etc. However, in most of its reports concerning the war, this chronicle provides data that either complements or parallels that found in *Al-Durrah al-Muḍī'ah,* even though generally the latter is richer in details:[254] all the important military engagements[255] are recorded in both works and some even elicited similar responses on the part of the two authors. The crushing defeat of the loyalists at Ḍumayr[256] prompted both Ibn Ṣaṣrá and Ibn Ḥijjī to muse, in admittedly different styles,[257] about the humiliation, disarray, and physical destruction of Barqūq's troops following this battle. Last but not least, *Tārīkh Ibn Ḥijjī,* here again like *Al-Durrah al-Muḍī'ah,* also presents glimpses of a social environment in the grips of a brutal war. Among other things, it sheds light on the crystallization of the population's loyalties around one of the two warring camps,[258] and especially on the deep-rooted antagonisms between Qays and Yaman displayed during the conflict.[259] The description of the degree of violence, often wholesale slaughter, that accompanied the encounter between the two camps is certainly not peculiar to Ibn Ḥijjī. Ibn Ṣaṣrá gives a much more vivid and dramatic description than Ibn

---

[251]Ibid., fol. 96a.

[252]For example, ibid., fol. 97a.

[253]For example, ibid., fols. 98a, 98b, 99a.

[254]For example, as was noted above, Ibn Ṣaṣrá gives a detailed description of the various groups involved in the looting of al-Maydān, following Minṭāsh's precipitous departure from his encampment, whereas Ibn Ḥijjī simply says it was the populace who were responsible for this deed (ibid., fol. 99a; *Al-Durrah al-Muḍī'ah,* 90–91).

[255]See "Tārīkh Ibn Ḥijjī," fols. 95b, 96a–b, 98b–99b; *Al-Durrah al-Muḍī'ah,* 78, 79, 80–81, 83, 89–93.

[256]"Tārīkh Ibn Ḥijjī," fols. 99a–b; *Al-Durrah al-Muḍī'ah,* 91–92. In this particular report, Ibn Ḥijjī includes a small, albeit interesting piece of information concerning warfare: the fact that the bedouins initiated combat by literally encircling the forces of Yalbughā al-Nāṣirī ("*fa-dāra ʻalayhim al-ʻarab ḥalqah*").

[257]Ibn Ṣaṣrá uses a measure of derision ("the troops returned and entered the city after having recovered somewhat from their condition, each two riding one donkey . . ." [*A Chronicle of Damascus,* 125]) but lets ʻAlā' al-Dīn Aybak (d. 803/1400) speak through his verse; on this poet see references in ibid., 34, n. 207 and "Al-Manhal," fols. 496a–497a. Ibn Ḥijjī, on the other hand, devotes half a folio to describing the sorry state of the troops as they returned to the city in groups, through mountains, streams, and valleys, some "wounded or missing some limb . . .," etc.; "Tārīkh Ibn Ḥijjī," fols. 99a–b.

[258]Ibn Ḥijjī refers specifically to the *ʻaṣabīyah* that overtook the population of Damascus: the populace (the people of al-Shuwaykah and al-Shāghūr, and a few of the inhabitants of Maydān al-Ḥaṣā) supported Minṭāsh ["*fa-ṣāra fī al-ʻawām ʻaṣabīyah maʻa Minṭāsh*"], while the elite ["*jumhūruhum*"] supported al-Nāṣirī ("Tārīkh Ibn Ḥijjī," fol. 95b).

[259]See Irwin, "Tribal Feuding."

Ḥijjī of the killing of Qaysīs from the Biqā' valley at the hands of Ibn Hilāl al-Dawlah and his Yamanīs at al-Maydān following the encounter at 'Aqabat al-Tīnah,[260] but Ibn Ḥijjī provides for the same incident a more tragic dimension: two of the Qaysīs who had managed to flee and sought refuge in a mosque were caught and killed inside the religious edifice. In another report,[261] Ibn Ḥijjī reports that when Qaysīs arrested a well-respected Yamanī dignitary at Sūq al-Muṭarrizīn,[262] the population, presumably of that neighborhood, released him from custody. Ibn Ḥijjī not only mentions this man's name, Ibn 'Abd al-Dā'im, but also notes that he lived within the city and that he was one of the grandees of Jubbat 'Asāl, a rural area west of Damascus.[263] What is of interest in this last account is that even though the distribution of groups, sects, and communities in the urban setting of Damascus is broadly known,[264] this "living" geo-topographical detail and others found in this chronicle and *Al-Durrah al-Muḍī'ah* might provide us with further sociological data on the interaction of Damascus and its hinterland in terms of population movement and urban settlement. In the same vein, this report echoes, if only obliquely, a story by Ibn Ṣaṣrá[265] that tribesmen from Jubbat 'Asāl participated in the sack of al-Ṣāliḥīyah and al-Maydān following Minṭāsh's hasty withdrawal therefrom.[266]

What is one to make of the presence, in both *Tārīkh Ibn Ḥijjī* and *Al-Durrah al-Muḍī'ah,* of such a large body of common reports? In other words, what is the likelihood of mutual borrowings or interdependence? Beyond the existence of certain minute common elements found in the narration of a number of these reports, we cannot establish a pattern of borrowing between the two. One might then postulate the existence of a common source, either oral or written, which possibly recounted events that neither of them had witnessed and whose *akhbār* they then reported differently. The similarity might ultimately be no more than circumstantial, and thus the end product of the sheer "Syrianness" of the events of the year and that of the two authors themselves: Ibn Ḥijjī and Ibn Ṣaṣrá lived

[261]See "Tārīkh Ibn Ḥijjī," fol. 96b.

[262]There is one reference to this market in H. Sauvaire, "Description de Damas: La conclusion," *Journal Asiatique* (November-December 1895): 433. Its location is probably somewhere in the northeastern quarter of the city; see Émilie E. Ouéchek, *Index Général de la "Description de Damas" de Sauvaire* (Damascus, 1954), 97.

[263]See above, n. 194.

[264]See, for example, Ira M. Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, MA, 1967), 85–88, 90–91, 93–94.

[265]"Tārīkh Ibn Ḥijjī," fol. 99a; *Al-Durrah al-Muḍī'ah,* 90–91.

[266]In this case, we are probably dealing with Qaysīs hailing from the same region.

through difficult times and wrote, as eyewitnesses, about the ordeal of their city, each in his own style and according to his personal concerns.

To be sure, the two works are dissimilar in many respects. As was noted by Brinner,[267] *Al-Durrah al-Muḍī'ah* appears to owe nothing to other sources in terms of overall format and style, and it is perhaps this ″insularity″ of Ibn Ṣaṣrá′s work that most distinguishes it from Ibn Ḥijjī′s. *Tārīkh Ibn Ḥijjī*, despite its basic Syrianness, is a typical example of Mamluk historiography, an annalistic chronicle which includes socio-political and religious reports, along with obituaries. Ibn Ḥijjī himself, unlike Ibn Ṣaṣrá, whose conspicuous absence in the sources of the period amounts to sheer ″invisibility,″ was very much part of the Mamluk Syro-Egyptian socio-intellectual scene. According to al-Sakhāwī, he visited Cairo on numerous occasions and apparently interacted with people such as Ibn Ḥajar and al-Maqrīzī.[268] Maybe this exposure to Egyptian scholarly circles can account for the possibility that he might have relied on Egyptian sources directly for some of his few Egyptian reports. Thus, we can observe similarities between both Ibn Ḥijjī′s and Ibn al-Furāt′s accounts of the nomination of a new chief Hanafi qadi in Cairo:

> Ibn al-Furāt: ″. . . wa-nazala qarīb al-maghrib wa-kāna yawman mashhūdan. . . .″ (*Tārīkh al-Duwal*, 9:2:258–59)
> Ibn Ḥijjī: ″. . . wa-nazala qarīb al-maghrib fī haybah ʻaẓīmah.″ (″Tārīkh Ibn Ḥijjī,″ MS Köprülü 1027, fol. 99a)

Undoubtedly, the most important characteristic of the year 793 is the Syrianness of most of its events and the way these impinged on historiographical production. All the contemporary authors included in varying degrees reports dealing with Syria and/or originating there. But as was demonstrated above, despite the fact that some of these common reports contain similar elements, one cannot establish definite patterns of filiation amongst the sources: the historians either had access to each other′s works, say for example, Ibn Khaldūn using either Ibn Ḥijjī′s or Zayn al-Dīn Ṭāhir′s chronicle, and then reworded whatever they took; or they drew upon another source or sources which are no longer extant.

With regard to this or these ″other″ Syrian source(s) assumed to be lurking in the background, even though we lack the evidence to make a decisive identification, there are some clues as to what the environment in which they were produced might have been. In his introduction to the English translation of *Al-Durrah*

[267]See *A Chronicle of Damascus,* xv–xvi.
[268]*Al-Ḍaw'*, 1:270–71.

al-Muḍī'ah, Brinner notes that the list of the *nuwwāb* of Damascus presented by Ibn Ṣaṣrá within the framework of the annal of 799[269] is similar to that of Ibn Ṭūlūn (d. 953/1546) in his *I'lām al-Wará bi-man Wuliya Nā'iban min al-Atrāk bi-Dimashq al-Shām al-Kubrá.*[270] The section of the *I'lām* which dealt with the period between 658–863/1260–1458 is basically the recension of a work on the same topic, namely the viceroys of Damascus, written by a Shams al-Dīn al-Zamalkānī,[271] to which Ibn Ṭūlūn added comments and corrections.[272] Brinner hypothesizes that al-Zamalkānī's "work, which has not otherwise been preserved, seems to have been based on the same source as that used by Ibn Ṣaṣrá considerably earlier."[273] The point here is that there appears to have been in Syria a number of authors who were not particularly famous but whose historical works or oral reports were nevertheless used either by their contemporaries or by later historians.

One last question needs to be tackled. Beyond a Syrianness born out of circumstance, to what extent, if any, do the works of Ibn Ḥijjī and Ibn Ṣaṣrá belong to such a thing as a Syrian school?[274] For the sake of clarification, I shall quote David Reisman, who has managed to effectively and concisely summarize the whole question of the dichotomy between "Egyptian" and "Syrian" schools of historical writing:

---

[269]*A Chronicle of Damascus,* 235–52.

[270]See above, n. 153; see also *Les Gouverneurs de Damas sous les Mamlouks et les premiers Ottomans,* ed. and trans. Henri Laoust (Damascus, 1952) (hereafter cited as *Gouverneurs*).

[271]The only thing known about al-Zamalkānī is that he died in or after 863/1458.

[272]*I'lām,* 30.

[273]*A Chronicle of Damascus,* xviii. Another historian is mentioned by Ibn Ṭūlūn in the first pages of *I'lām,* one 'Alī al-Yaldānī (d. 814/1412), yet another Damascene who also wrote about the same topic. Ibn Ṭūlūn notes that he had not used that source even though the historian Taqī al-Dīn al-Asadī [Ibn Qāḍī Shuhbah?] notes its existence in his *Tārīkh;* see *I'lām,* 29–30; *Gouverneurs,* xvii. This al-Asadī was quoted four times in *I'lām:* in one instance it was his *Dhayl* (*I'lām,* 66, year 836), and in the rest his *Tārīkh* (ibid., 29, year 814; 60, lines 1 and 14, year 817). Is the historian Taqī al-Dīn no other than Ibn Qāḍī Shuhbah, one of whose *nisab* is al-Asadī? In light of what we know about him (see Darwīsh's French introduction, 2:19–27), we might assume so, since Ibn Qāḍī Shuhbah did write histories covering the years noted above. One comment concerning the introduction to the French translation of the *I'lām:* Laoust was wrong in assuming that the Sayyid al-Ḥusaynī whose *Dhayl 'alá 'Ibar al-Dhahabī* Ibn Ṭūlūn used to complement the data presented by al-Zamalkānī, was Ḥamzah Ibn Aḥmad al-Dimashqī al-Ḥusaynī (d. 874/1469) (see *Al-Ḍaw'*, 3:163–64), since the Shams al-Dīn Muḥammad Ibn Ḥamzah al-Ḥusaynī who actually wrote the *Dhayl 'alá 'Ibar al-Dhahabī* died in 765/1364; see Duhmān's introduction to the *I'lām,* 13, and Darwīsh, 2:36.

[274]See above, n. 7.

> Broadly speaking, [Egyptian histories] are chiefly political histories while [Syrian histories] are intellectual histories. Such intellectual histories are by no mean concerned with the history of ideas (which is a distinctly modern concept); rather the primary intention of intellectual histories of the Mamluk period is to produce a record of events and people connected to the institutions and fields of religion, law and education. Moreover, the ″Syrian school″ of historians, as distinct from its Egyptian counterpart, produced works which, in terms of their structure, devote much more attention to biographies and specifically to biographies of people from the intellectual class. While the division of historical writing into *ḥawādith* (report of events) and *tarājim* (biographies) is common to both genres, the differences that allow us to speak of the ″Egyptian school″ and the ″Syrian school″ are really those of emphasis.[275]

Notwithstanding its fundamental Syrianness, the factors noted in the above quotation lead one to safely disregard *Al-Durrah al-Muḍī'ah* as belonging to the ″Syrian histories″ category. Things are more problematic with regard to *Tārīkh Ibn Ḥijjī.* The nagging uncertainty that obscures the true nature of this work[276] prevents one from making too many sweeping statements regarding the respective importance in it of *ḥawādith* and *tarājim*. However, if the contents of the existing text are any indication, out of its thirteen folios, only a little more than three consist of obituaries,[277] compared to the thirty-one pages devoted by Ibn Qāḍī Shuhbah in his *Tārīkh* to obituaries out of a total of fifty-three. In terms of the parameters set out by modern-day scholars, the relatively smaller space Ibn Ḥijjī devotes to obituaries places his work outside of the so-called ″Syrian school.″

Perhaps the whole distinction between the two schools no longer holds with regard to the period at hand. After all, it was formulated with regard to histories written during more or less the first half of the fourteenth century by two important groups of scholars, one Egyptian and the other Syrian, with different career paths, ethnic, ideological, intellectual backgrounds, and working relationships.[278] While it is true that Ibn Qāḍī Shuhbah′s *Tārīkh,* and, consequently, *Al-Dhayl al-Muṭawwal,* belong, from the point of view of Reisman′s citation, to the Syrian school, the categorization of the works of Ibn Ḥijjī, Ibn Ṣaṣrá, and even Zayn

al-Dīn Ṭāhir will probably have to follow different considerations which will take into account the entirety of Ibn Ḥijjī´s œuvre, notably the original extant annals of his *Tārīkh,* sources not yet published such as Ibn Khaṭīb al-Nāṣirīyah´s (d. 843/1440) *Durr al-Muntakhab fī Takmilat Tārīkh Ḥalab,*[279] and, most importantly, the clear decline of Syrian historical writing in later parts of the Burji period.

The al-Nashw Episode: A Case Study of "Moral Economy"

Contemporary Mamluk sources contain reports of the Mamluk sultans being forced to dismiss office-holders from their posts in order to placate the rioting masses. Such protests against *muḥtasib*s (market inspectors) were quickly ended by their removal from office. In the event of a protest against a vizier, which is the subject of the present article, the sources depict him as the person inciting the sultan to injustice and thus his mere removal from office would not satisfy the public. Rather, the public demanded he be punished. Later, public festivities marked the meting out of punishment and the return of justice. The case of the protest against Shams al-Dīn Ibn Faḍl Allāh, known as al-Nashw, the *nāẓir al-khāṣṣ* (inspector of the sultan's private treasury) of Sultan al-Nāṣir Muḥammad between 733/1333 and 740/1339, is fully described in the sources.[1] Al-Nashw's image as villain is executed carefully and in great detail: he is accused of using *muṣādarah* (confiscation) against office-holders to extract money from them, forcing compulsory purchases *(ṭarḥ, rimāyah)* on merchants in a way that harmed the entire public, and plotting against amirs and extorting money from charities, thereby inflicting harm on the weaker sectors of the population. Therefore, his eventual removal from office and execution by torture was publicly celebrated with music and song for a whole week. Lollipops bearing the likenesses of al-Nashw and his family in humiliating scenes were sold in the markets in vast quantities.[2]

The characteristics of hate ritual that contemporary historians accorded the al-Nashw episode show that beyond depicting the actual event they also sought to convey a didactic message on a proper and binding sociopolitical order that must not be infringed. Indeed, the social historians Louise Tilly[3] and Edward P. Thompson,[4] who studied the food riots in eighteenth-century France and England,

[1]For this case see: Amalia Levanoni, *A Turning Point in Mamluk History* (Leiden, 1995), 73–78, 149–55.

Muṣṭafá Ziyādah and Saʻīd ʻAbd al-Fattāḥ ʻĀshūr (Cairo, 1942), 2:479; Boaz Shoshan, *Popular Culture in Medieval Cairo* (Cambridge, 1993), 57.

[3]Louise Tilly, "The Food Riots as a Form of Political Conflict in France," *Journal of Interdisciplinary History* 2 (1971): 23–57.

[4]Edward P. Thompson, "The Moral Economy of the English Crowd in the Eighteenth Century,"

followed by Boaz Shoshan,[5] who studied the food riots in Muslim society under Mamluk rule, have drawn our attention to the fact that food riots are not an impulsive act by a mob motivated only by an actual shortage of food, but rather ″coherent political actions″ expressing criticism of the government for its failure to fulfill social norms and traditional economic functions. These norms were perceived as the mob′s inherent collective right and infringing that right justified violent protest in order to motivate the government to restore order. Political sociologists and anthropologists who investigate the need to uphold sociopolitical frameworks and their *modus operandi* have termed these inherent rights ″moral economy″ and ascribed an important pseudo-constitutional role to them in creating equilibrium among interest groups working together within the same sociopolitical system.[6] Winslow W. Clifford identifies moral economy as the basis for regulating relations within the Mamluk elite, which by its very nature is ″conflict-oriented.″ Upholding the inherent rights *(ḥuqūq)* of the Mamluks to universal and equal access to rank and economic resources ensured a ″positive-sum exchange relationship″ between the ruler and the amirs. This exchange policy obviated the fissionist tendencies inherent in unbridled competition among the Mamluks and set the rules for a dynamic reshuffle in government without damaging the state′s sociopolitical macrostructure and coherence.[7]

The story of al-Nashw′s rise and fall is a rather unique case of a conflict in which there was a coordinated demand from almost every sector of the Mamluk state, if not all of them, for the ruler to cancel his reform plan and restore the traditional and normative economic order. The fact that the public protest happened during the reign of a charismatic and authoritarian ruler like al-Nāṣir Muḥammad, who could have imposed his authority by military power, but rather chose to give up his reform plan, and the tactics the protest groups used to solve the conflict without the actual use of violence, proves that the sociopolitical macrostructure of moral economy preserved the Mamluk state from disintegration by unregulated violent conflict. Therefore, the al-Nashw incident can serve as an effective case

study to show the moral economy, the sociopolitical macrostructure of the Mamluk state, in action.

Despite the growth in the Egyptian economy during al-Nāṣir Muḥammad's reign, signs of a deep crisis were felt as early as 729/1328 when expenditure greatly exceeded revenues and threatened to spin out of control. This economic crisis was not accidental; it resulted from al-Nāṣir's ambitious construction policy and his prodigal generosity towards his amirs, mamluks, and other important figures inside and outside his state.[8] As a result of low revenues *(min qillat al-wāṣil)* that year, al-Nāṣir Muḥammad was forced to personally oversee government expenditure on a day-to-day basis.[9] Under his personal supervision, the state's financial situation was ameliorated to the extent that all revenues derived from the sultan's private *iqṭā'* of the Jīzah province (a province on the west bank of the Nile) were saved that year. Sources tell us that office-holders became stressed. Indeed, a few months later, al-Nāṣir reviewed the clerks who administered tax collection in the amirs' *iqṭā'*s, probably for the purpose of selecting new officials to replace those he intended to dismiss from his own administration. The two inspectors of the sultanic *dīwān*s, al-Majd Ibn Lafītah and Ibn Qarwīnah, were dismissed and fined; al-Makīn Ibn Qarwīnah, the *mustawfī al-ṣuḥbah,* who controlled the accounts of the sultanic financial revenues, and Amīn al-Dīn Qarmūṭ, the *mustawfī al-khizānah* (in charge of the sultan's treasury accountancy), Uldamur, the *wālī* (prefect) of Jīzah, Ibn Saqrūr, the *mustawfī* of Jīzah, who controlled the district's revenue account, and the *mushidd*s (concerned with the collection of revenues), were all dismissed from their posts and imprisoned, and were only released after paying the fines imposed on them. Al-Nāṣir's mistrust of office-holders went as far as his carrying out new registration of the Jīzah lands, relying on local chiefs rather than his own officials. These details leave no doubt that the mistrust between the sultan and the state office-holders reached a point far beyond the normal. Al-Maqrīzī, the fifteenth-century historian, mentions that this practice "had never been heard of in the past" *(wa-lam yusma' bi-hādhā fīmā salafa),*[10] emphasizing al-Nāṣir's innovative approach of giving the peasants *(fallāḥūn)* a stand in tax administration through a direct connection between himself, as sultan, and their chiefs *(mashāyikh).* Al-Maqrīzī's comment reveals, in fact, that al-Nāṣir changed the rules of the game in relations between the sultan and the state officials. It was well known that office-holders informally augmented their incomes from state resources, taking a calculated risk that their embezzlement might be discovered

[10]Al-Maqrīzī, *Sulūk,* 2:312–13.

and their fortunes confiscated. Furthermore, most cases of confiscation involved huge sums of money, which meant that officials accumulated fortunes during their service.[11] It should be noted that rivalries among the clerks over positions and their non-Muslim origin (many of them were Copts or converted Copts) facilitated the regulation of the confiscation policy.[12] The clerks′ traditional professional status had never before been challenged as it was in al-Nāṣir Muḥammad′s purges of that year.

While al-Nashw was still in the service of Ānūk, one of the sultan′s sons, he had already raised the issue of the fiscal situation with the sultan and suggested various ways of increasing revenues, calling attention to those known habitually to disappear into office-holders′ pockets. When al-Nāṣir Muḥammad appointed al-Nashw as his *nāẓir al-khāṣṣ* in 732/1331, it was with the express aim that ″he would obtain much money for him″ *(annahu yuḥaṣṣilu lahu māl kathīr).*[13] Upon assuming office, al-Nashw implemented a full-scale confiscation policy on such an intensive and non-selective basis that both senior administrative office-holders in Cairo and all district officials responsible for tax collection in Upper and Lower Egypt suffered equally. After al-Nashw′s brother, al-Mukhliṣ, returned from his inspection tour of the sultanic irrigation wheels and sown fields in Upper Egypt, al-Nashw incited al-Nāṣir against his officials for neglecting their duty and wasting part of his wealth. Consequently, all office-holders from the highest to the lowest—the prefects *(wulāt),* inspectors *(shāddūn*, sing. *shādd),* keepers of revenue accounts *('ummāl*, sing. *'āmil),* keepers of daily revenue lists *(shuhūd*, sing. *shāhid),* and others—were interrogated and fined or lost all their property.[14] The huge sums of money that flowed into the sultan′s treasury from confiscations attest that some of them were very wealthy while others were simply well off.[15]

These arrests, interrogations, fines, dismissals, and the large-scale confiscations of officials in the tax collection system, which stretched continuously and in descending order from the highest-ranking officials in the center, through senior district office-holders, to the low-ranking office-holders who actually implemented registration of land and yields in the villages and who were, as we have seen, in direct contact with the village headmen, the *mashāyikh,*[16] reveal a ramified system

[16]On the bribe relationships between officials and villagers *(nās min al-aryāf),* most probably religious scholars, see: Shams al-Dīn al-Shujā'ī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi,* ed. Barbara Schäfer (Wiesbaden, 1977), 59.

of patronage that encompassed both urban and rural sectors, far beyond the urban social system that researchers of Mamluk history have exposed thus far. Hierarchical patronage is recognizable in the practice of interrogation and punishment; when a senior Cairo office-holder was imprisoned, interrogated, and underwent confiscation, all those who had connections with him suffered a similar fate. Thus, for example, when Ibn Hilāl al-Dawlah, who was al-Nashw's predecessor and rival, was imprisoned, all his clients *(alzāmuh)* were incarcerated with him.[17] Purges of this kind did not bring officials' careers to an end; rather they were given new positions in the system when the patronage connections changed in their favor. While this practice symbolizes the individual vulnerability of officials in the fiscal system vis-à-vis the government, at the same time it displays the durability of the patron-client structure that survived the reshuffle. The stability of the patronage system in the administration derived from the fact that it was part of a wider system of patronage that was the backbone of the Mamluk state's sociopolitical structure. It was connected to the dominant Mamluk amirs in several ways: many of the senior officials in the Mamluk administration had previously served in the Mamluk amirs' *dīwān*s. These officials attained their senior posts through the amirs' mediation, and so long as the latter's patronage was in place, they continued in these posts.[18] In return for patronage, the officials safeguarded the amirs' economic interests, which put another big slice of the state's resources into their pockets, above and beyond the part to which they were legally entitled. The rules of the game entailed, therefore, informal and covert patron-client exchange relationships between the officials and the amirs, which drew their stability from the assurance of mutual material benefits, and their being a long-term and widespread practice.

In a complaint he brought before the sultan (734/1334) about the amirs' evasion of taxes on trade and land, al-Nashw claimed that "they [the amirs Qawṣūn and Bashtāk] and their like had become accustomed to bribes from the sultan's officials amounting to half of the treasury's income. . . . If he [al-Nashw] was free [of their pressure] he would fill the sultan's treasury and grain stores, but he feared that they would change the sultan's attitude towards him."[19] The contemporary historian Mūsá ibn Muḥammad Ibn al-Yūsufī (d. 759/1358) includes in al-Nashw's complaint details that show that al-Nāṣir Muḥammad was well aware of the situation in the administration of the fiscal system but chose to ignore it, for it would not function otherwise. In the past, the amirs had exerted pressure on the sultan to dismiss any

official who intended to lay hands on their property or meddle in their business interests. Karīm al-Dīn, who had been appointed *nāẓir al-khāṣṣ* in 709/1310, was dismissed ″because of the jealousy of the amirs and others at his increased control over the sultan. . . .″ They simply informed al-Nāṣir that he had been using the sultan′s resources for his own interests.[20] Al-Akuz, *shādd al-dawāwīn,* was dismissed when he investigated Qawṣūn′s grain stores. Aydakīn, the prefect of Cairo, was dismissed when he tried to harm a merchant in Qawṣūn′s service. When Qawṣūn complained to al-Nāṣir about his open conflict with Aydakīn and how he had conspired with al-Nashw to entrap wine-drinking nighttime revelers among the amirs and mamluks and had then used the damning evidence to extort money for the treasury,[21] al-Nāṣir Muḥammad berated Qawṣūn in terms that revealed his weak position in his relationship with the amirs: ″Whenever I appoint someone useful to me, you want him removed. But if he had been on your side *[min jihatikum]* you would be singing his praises to me.″[22] Several months later (Jumādá I 735/April 1335), Aydakīn was dismissed from his post and sent to Syria ″because of Amir Qawṣūn′s changed attitude toward him″ *(li-taghayyur al-amīr Qawṣūn ʻalayh).*[23]

The amirs tried not to challenge al-Nāṣir′s authority directly when al-Nashw submitted his plans to levy land and trade taxes, but tried old and accepted tactics to ameliorate al-Nashw′s damage to their interests. Tankiz, the governor of Syria, for instance, advised the sultan to nominate Badr al-Dīn Muḥammad Ibn al-Turkmānī, a trusted clerk in Tripoli, as inspector of the flow of income to the treasury alongside al-Nashw.[24] Tankiz′s purpose was to install his own trusted man in al-Nāṣir′s administration in much the same way as al-Nāṣir installed his trusted persons in the amirs′ *dawāwīn.* But when Ibn al-Turkmānī arrived in Cairo, he did not receive the post due to al-Nashw′s opposition.[25] On the other hand, al-Nashw introduced his two brothers, Mukhliṣ and Rizq Allāh, into Alnaq′s and Maliktamur al-Ḥijāzī′s *dīwān*s.[26] When al-Nashw levied taxes on all raw sugar produced in 732/1332, despite the tax exemption al-Nāṣir had granted the amirs on sugar production, Qawṣūn, one of the biggest sugar producers in Egypt, protested. Al-Nāṣir did not relent and resorted to solving the conflict on an individual

basis by compensating Qawṣūn personally.[27] This solution increased al-Nāṣir′s authority in his relations with the amirs; sources reveal that henceforth they stopped appealing to the sultan on tax issues and al-Nashw′s prestige rose.[28]

Relations between the sultan and the amirs reflected by this stage of the al-Nashw episode expose details on how clientage relationships worked and their problematic nature. Luigi Graziano has addressed the problematic nature of such relations, indicating that this is a structure whose very nature undermines the foundations of true authority.[29] Therefore, both parties need to generate power from a relationship of this kind, not through their formal positioning but through indirect means, such as manipulation and intimidation. In the patron-client balance between al-Nāṣir Muḥammad and his amirs, these elements can be identified in the pendulum movement that changes the advantage that each of the parties achieves through the informal means of waiving rights, individual compensation, and indirect and mutual supervision by the parties. On the other hand, the abrogation of the sultanic decree releasing the amirs from payment of taxes on agricultural produce and income from trade, together with real tax collection, constitutes a significant change in the patron-client relationship between the sultan and the amirs, for these actions destabilize the balance that existed in their relations by reducing the conjunctive elements and expanding the institutional basis that reinforces the sultan′s authority.

The relationship between the sultan and the amirs was further aggravated when al-Nashw started applying different rules by collecting damning evidence against the amirs themselves rather than their followers among the merchants and state clerks. The amirs′ objections subsequently swelled into a direct protest against al-Nāṣir Muḥammad, to the extent that they set aside their internal rivalries and confronted him as a united body. Aqbughā ʻAbd al-Wāḥid was accused of forging a seal bearing his and the sultan′s names in order to increase his profits from glass production, over and above the quota allowed by the sultanic decree. He feared for his life for ″he could not present a reasonable defense″ against the charge of administrative misdemeanors in his *iqṭāʻ*.[30] The *khāṣṣakīyah* (the sultan′s elite bodyguard), angered by the sultan′s attitude towards their colleague, sided with Aqbughā, and it was Bashtāk, one of al-Nāṣir′s most prominent amirs, who pleaded Aqbughā′s case and even paid the sum Aqbughā owed the treasury. One of Aqbughā′s officials responsible for public buildings admitted under interrogation that his

master had constructed all his private buildings using the sultan′s money—he could not deny acts committed in the public eye.[31] Moreover, al-Nashw drew the sultan′s attention to five thousand head of sheep belonging to Aqbughā that had been brought from Upper Egypt to graze on sown lands. The sultan reprimanded him, and but for Bashtāk′s intervention would have had him punished.[32] Bashtāk himself was accused of letting a merchant use his name each year to avoid paying taxes on merchandise. The merchant was punished by having his goods confiscated by al-Nashw, despite Bashtāk′s defence.[33] In 737/1336, one of Qawṣūn′s officials was arrested and charged with stealing sugar and honey valued at 100,000 dirhams. Qawṣūn came to his aid and would not yield until he was released, arguing vigorously with the sultan that he would not give up to the treasury a property that was his own but had by chance been found in the possession of one of his officials. Al-Nāṣir relented and gave Qawṣūn the stolen property. Clearly, Qawṣūn intended to sound a warning that the amirs would not tolerate interference in their personal affairs, which the sultan seems to have heeded. When al-Nashw tried to incite him against another of Qawṣūn′s office-holders, al-Ṣafī, al-Nāṣir accepted the fact that al-Ṣafī owed the treasury taxes but allowed Qawṣūn to levy and keep them.[34] The sultan′s inspection of the *dīwān* of Qawṣūn, in spite of the fact that he did not confiscate the embezzled money, meant that these inspections were no longer confined to his *dīwān*s alone, but in principle to all hierarchies of the administration (see below on his attempt to interfere in the administration of a*wqāf,* pious endowments). It signaled a further one-sided change in the balance of the relationship between the sultan and the amirs.[35]

An attempt was made on al-Nashw′s life in Ramaḍān 737/April 1337. Although the assailant, ʻAbd al-Munʻim ibn ʻAbd al-Wahhāb al-Sulāmī, was not a mamluk, the sultan linked the amirs to the attempt and his fury abated only when he was assured that the injury had not put al-Nashw′s life in danger. To prevent further attempts on his life al-Nāṣir assigned him an around-the-clock bodyguard. The assassination attempt was an open challenge to al-Nāṣir′s authority and signaled an acceleration in the amirs′ tactics from private complaints and mediation to the use of violence, but not against the sultan.

In 738/1337–38, Egypt was stricken by a series of natural disasters. A severe hailstorm that hit the Gharbīyah district caused extensive damage to crops. In Manfalūṭ, a plague of mice destroyed both field crops and produce in storage. In

Upper Egypt, in the Qūṣ, Aswān, and Uqṣur (Luxor) areas, storms caused the destruction of homes and severe damage to date plantations. That year the Nile flood was late, but when it finally came, it was sudden and intense, and inundated grain stores.[36] These disasters were additional blows to the population at large, especially to the commercial sector and those effected by al-Nāṣir′s fiscal policy and its tactics of confiscation and compulsory purchase. The merchants were the primary victims of this policy simply because their goods were easily accessible to the authorities in the customs stations along the roads and through the supervision of functionaries over market brokers. A more significant reason for the merchants′ vulnerability was that they did not form a united front with similar interests, but rather acted on an individual basis under the patronage of strong local leaders, like Mamluk amirs, as noted above. Thus, in 733/1332, al-Nashw forced wealthy merchants to purchase quantities of cloth from the government at a price three times higher than its actual value.[37] In 737/1336, bean brokers were forced to sell only to the sultan, which caused financial losses to waterwheel owners on the Nile, who fed their animals beans.[38] By 739/1338 al-Nashw had refined the compulsory purchase system further. First he levied a real tax on a large shipment of cloth from Ba'albek, then obliged the merchants to sell the cloth to the government at a price of his own choosing, and coerced Cairene cloth merchants to re-purchase the cloth at a price three times higher than its true value.[39] In other instances, al-Nashw forced merchants, often by violent means, to purchase wood, iron, beans, clover, and even obsolete military uniforms and second-hand shoes from the government.[40] The rank-and-file mamluks suffered from delays in payment of their salaries and distribution of clothes, soap, and fodder.[41] Al-Nāṣir could disregard complaints brought to him from the public by single mediators and even collective protests of market merchants and rank-and-file mamluks as long as they were not backed by the united action of a powerful group such as the amirs. Indeed, al-Nāṣir Muḥammad used the resources accumulated by al-Nashw to buy his amirs′ loyalty by showering special grants and presents on them and granting them huge *iqṭā'āt*. Al-Maqrīzī summarized this policy in retrospect as follows: ″Al-Nāṣir Muḥammad reached new heights with his munificence, generosity, benevolence, and open-handedness that exceeded all bounds″ *(ghāya takhruju 'an*

al-ḥadd).[42] This exchange policy could not satisfy the amirs, however, because it was unpredictable, relying on the patron′s monopoly on authority.

When al-Nashw submitted a plan[43] to the sultan in 740/1339 that would channel a million dinars to the treasury by means that threatened the sociopolitical structure of the state, the amirs organized an open and all-encompassing rebellion coordinated with the ulama. The first part of al-Nashw′s plan dealt with abrogation of the practice of government distribution of seed allotments *(taqāwī)* among the *fallāḥūn* in the *iqṭa‘* for the next year′s cultivation, prevalent in Egypt since the Ayyubid period. The collection of the seed allotments, permanently held *(mukhalladah)* in the *iqṭā‘āt* since the days of Baybars and Qalāwūn, was to bring to the sultan′s granaries one hundred and sixty thousand *irdabb*s[44] of grain in addition to that coming from the sultan′s lands.[45] Had this part of al-Nashw′s plan been implemented, in addition to al-Nashw′s activist tax-collecting policy, it would have created in one fell swoop the sultan′s uncontested monopoly over the grain supply in the country and destroyed the great grain brokers, the amirs among them.

It is worthy of note that in the *rawk* (land survey) conducted in Egypt by al-Nāṣir Muḥammad in 715/1315, he increased the sultan′s portion from tax revenue from four twenty-fourths to ten twenty-fourths of the Egyptian lands. He also revoked the *iqṭā‘āt* granted in the past to four hundred mamluks on the grain stores at al-Maqs port in Būlāq, and transferred the taxation rights on it to the sultan. This was an extremely large source of revenue. Al-Nāṣir Muḥammad also converted the emerald mines *(al-zumurrud)* into a state monopoly.[46] Such monopolies might, in turn, create an unbalanced exchange relationship not only between the sultan and the amirs, but also between all sectors of the population.

In the second part of the plan, al-Nashw proposed a new distribution of the *al-rizaq al-aḥbasīyah* (revenues from pious endowments, *awqāf*). He claimed that part of the *awqāf* lands that had amounted to 130,000 feddans (a land measure of approximately one acre) was a fraud because the pious institutions for which they had been established (such as mosques, Sufi orders, and others) had ceased to exist, and their revenues were actually used for bribing amirs, governors (or

judges), and rural clerics. Hence, *awqāf* lands of this kind should be transferred to the sultan's ownership. With regard to existing institutions, the revenues should be divided—half to the *waqf* and half to the sultan at a rate of 100 dirhams per feddan.

Al-Nashw's plan attests to the vast economic power that had accumulated in the hands of the ulama through the *waqf* in Egypt alone. There can be no doubt that, in addition to the significant increase in the sultan's ownership of land in the aftermath of the land survey of 715/1315, this plan was intended to make the sultan the largest landowner in the country by dispossessing the ulama of *awqāf* lands—the traditional source of their economic power by which they supported their clients and followers. In this context, it is worth noting that when the Coptic Church lost its economic assets to the government in 217/832 and again in 755/1354, it brought about mass conversion to Islam, because the Church also lost its status as a source of economic support for its faithful.[47] It is therefore no wonder that in the protest against al-Nāṣir Muḥammad, as we shall see, the two important sectors of the amirs and the religious scholars would join forces.

The third part of al-Nashw's plan touches upon the recipients of charity from the *waqf*s' money. Al-Nashw claimed that the majority of the lists of charity recipients were fabricated, and only a few people were entitled to be on them. He demanded scrutiny of the lists and their verification by the personal attendance of the recipient with his entitlement document in order to prevent office-holders from registering their wives, slaves, and servants as recipients. These bogus recipients clearly could not have been listed without the cooperation of the ulama who managed the *awqāf*.

The fourth part relates to the lands of the Nile island of Rawḍah. In the past, it had belonged to the sultans and had been divided between their sons. Over the years, the land was leased or sold to office-holders in Cairo for prices far below its real value. Now al-Nashw intended to restore the land to the sultan and collect a retroactive and appropriate rent for the years that had elapsed since it had passed into private hands.

Al-Nāṣir was adamant to implement the plan. When the plan went into force, "Upper and Lower Egypt erupted."[48] Acting in concert with the ulama, the amirs decided to exert pressure on al-Nāṣir and use all available tactics to bring about al-Nashw's dismissal and elimination. They united and sent the amirs Yalbughā al-Yaḥyawī and Maliktamur al-Ḥijāzī, who were al-Nāṣir's close associates, to

ask that al-Nashw stop harming the people and leave the amirs alone.[49] Anonymous letters warning al-Nāṣir of al-Nashw's extortion were found in the palace, implying that the sultan's security could be easily breached. Al-Nāṣir did not react immediately, but sent a message to Tankiz asking for his advice.[50] Prayers offered in the mosques included a curse on al-Nashw. It was no coincidence that office-holders, orphans, widows, and cripples—a cross-section of those who depended on charity stipends—gathered at the Citadel crying and demonstrating their misery on the very day Tankiz's reply arrived from Syria (26 Muḥarram 740/3 August 1339). Clearly, these protest actions were organized and coordinated by the amirs and the ulama. The amirs sent Yalbughā al-Yaḥyawī once again, not with an implicit threat but rather a warning of impending rebellion: "The best thing is to imprison al-Nashw, for if you do not imprison him an unbidden guest will come and visit you *[dakhala 'alayka al-dākhil],* for there is not a single mamluk who is not waiting for a moment's inattention on your part *[yataraqqabu ghaflah minka]*."[51] Because al-Nāṣir greatly trusted Yalbughā, he bowed to the amirs, and had al-Nashw imprisoned. But imprisonment was not enough to placate the amirs; they wanted his execution, for they feared that as long as he was still alive, the sultan would continue to avail himself of his advice. When the sultan refused to give in, the amirs began to alienate themselves from him and he from them.[52] The amirs organized the closure of the markets in Cairo and Fusṭāṭ, and demonstrations of the masses at the foot of the Citadel, carrying candles and Qurans and rejoicing at the imprisonment of al-Nashw and his relatives.[53] The turmoil surrounding al-Nashw was further kindled by an anonymous letter found in the sultan's bed accusing Bashtāk and Aqbughā 'Abd al-Wāḥid of wanting to murder him. When the person who had actually written the letter was found, one Ibn al-Azraq, he admitted that the accusation was a fabrication. That he was released unpunished indicates that he was sent by the amirs to unsettle the sultan. The pressure reached a point where "the sultan's fears increased and he became so agitated that he could not remain seated in one place."[54] In his extreme wariness of the amirs, al-Nāṣir ordered the closure of the professional archery equipment shops and had their target ranges dismantled. He forbade the amirs and their mamluks to carry weapons.[55]

Matters came to a head on 24 Rabīʿ I/19 September when at the council of the sultan and the amirs, *al-mashūrah,* al-Nāṣir accused the amirs of ingratitude towards him: ″O amirs! These are my mamluks whom I have nurtured and upon whom I have bestowed great gifts *[al-ʿaṭāʾ al-jazīl],* and yet I hear improper things about them.″[56] It is worthy of mention that al-Nāṣir′s reproach to his prominent amirs on this tense occasion reveals the model he perceived as the proper one for the relationship between a sultan and his amirs. Indeed, throughout his rule, he was generous with gifts as a means to gain support. The amirs could not build their status on such an unequally-balanced relationship. It is hardly surprising that they were not impressed by his reproach, and in a polite but nevertheless threatening way, the amirs expressed their unequivocal demand that al-Nashw be executed, even if it meant that the sultan would lose his throne: ″But our master the sultan knows that the caliphate was brought down by bureaucrats and that most of the sultans met their deaths because of the viziers″ *(wa-ghalib al-salāṭīn mā dakhala ʿalayhim al-dākhil illā min jihat al-wuzarāʾ).*[57] Here the amirs invoked the Mamluk tradition since its inception during Abbasid rule as a moral basis for their demands from the sultan.

Al-Nashw′s brother killed himself the same night while in detention and his mother died shortly afterwards under torture. That al-Nāṣir Muḥammad acted under pressure from the amirs is clear from the way Barsbughā, who was in charge of administering the torture, ensured that despite being tortured al-Nashw stayed alive. Al-Nāṣir secretly ordered Barsbughā to show al-Nashw mercy, ″for this situation was not of the sultan′s making but rather his desire to appease his mamluk amirs″ *(li-ajl khawāṭir mamālīkihi al-umarāʾ)*.[58] When this came to light, the amirs ″were agitated *[tashawwasha khawāṭiruhum]* and their relations with the sultan became greatly unsettled *[khabṭ kathīr]* because al-Nashw was kept alive.″ Only on 2 Rabīʿ II/27 September, when Bashtāk threatened Barsbughā and demanded that he change his methods, were al-Nashw and his relatives allowed to die. During al-Nashw′s interrogation and after his death, the amirs outdid themselves to show al-Nāṣir the vast property confiscated from al-Nashw and his relatives, in proof of their contention that he had been embezzling a fortune from the sultan′s treasury. Proving their point was a sort of a triumph over the sultan, implying that informal relationships and resources were part and parcel of the state sociopolitical structure.

The al-Nashw episode clearly illustrates what was previously known to us on the role of non-formal patronage relationships in organizing sociopolitical activities

[56] Al-Maqrīzī, *Sulūk,* 2:485; Ibn Taghrībirdī, *Nujūm*, 9:141.

[57] Al-Maqrīzī, *Sulūk,* 2:485; Ibn Taghrībirdī, *Nujūm*, 9:141–42; al-Shujāʿī, *Tārīkh,* 61.

[58] Al-Maqrīzī, *Sulūk,* 2:485–86; al-Shujāʿī, *Tārīkh,* 62–63.

in the urban community in the medieval Middle East. However, despite its failure, al-Nāṣir's ambitious attempt to employ the authority of formal institutions as a primary means for universally organizing sociopolitical relations clearly brings into relief the formal institutions of the Mamluk state, with the non-formal structures that existed within them and motivated their activities in practice. The scope of the reforms that al-Nāṣir Muḥammad intended to enforce in the state's economy raised to the surface details about all sectors of society and the mechanisms of interaction between them. We learn from these details that the non-formal patronage relationships that functioned under the auspices of formal institutions existed on a broad state-wide scale and not only in the urban centers of the Mamluk state, linking cities and villages into one sociopolitical system. This non-formal relationship crossed borders between sectors horizontally and vertically—between the ulama and the amirs and their subordinates—and created a covert cooperation to obtain state resources far beyond those allocated to them in the formal state distribution of resources.[59] Al-Nāṣir's plan of administrating his state "by the book" signified his wish to create a real and unlimited authority for the sultan and a monopoly over the sources of power in the state. Such a change in the macrostructure of the state could not have been inaugurated without an overt conflict with the functional groups in Egyptian society. However, the conflict surrounding al-Nashw, albeit critical, shows that all parties used mediation tactics,[60] such as personal intimidation and public protests, and avoided the use of violent force. Despite his large number of rank-and-file mamluks, al-Nāṣir did not mobilize his army, nor did he punish any of his prominent amirs for their embezzlements. The voice of the ulama was heard only indirectly through public prayers and celebration. The amirs were the most active in the mediation process; actually they were the coordinators of the event and when they used violence (against al-Nashw), it was not directed at changing the ruler but rather to resume the old order. The non-violent solution of such a large-scale crisis proves that in the Mamluk polity there were codes of crisis-management and a macrostructure of moral economy (based on both formal and informal principles) that guaranteed the state's survival against changes generated by social and political actions.

The Politics of the Mamluk Sultanate: A Review Essay

In the simplest terms, politics is the struggle for power, and in that sense the Mamluk Sultanate was a truly Hobbesian world, in which the price of defeat was a loss not merely of status, influence, and wealth, but very often of life itself. However, we can think of politics more broadly, as the competition for resources (symbolic as well as material) within a society. On the most general level, politics may be defined as the whole body of practices and institutions (whether these are formally constituted or merely implicit and unspoken) through which a society distributes costs and benefits among its members. From that perspective Mamluk politics may seem altogether more rational and serious if hardly less bloody-minded. It is still a matter of power, but power exercised for a purpose. All this is a distinctly old-school way of defining politics, one grounded in the grand theory and model-building which characterized the social sciences in the 1960s and 1970s. Even so, there is ample room here for more current ways of thinking about the problem: symbolic action, cultural representation, the encoding of ideology in myth and ritual, linguistic analysis, not to mention post-colonialist self-reflexivity. We need only remember that symbols, myths, and rituals are not autonomous entities operating inside some separate universe; they reflect or embody real acts which have grave material consequences for real people.

Both in Western and Islamic literary traditions, politics forms the oldest and most highly developed subject of the historian´s craft. Moreover, the resources available to us for the study of Mamluk political history are unmatched for any other period of Islamic history down to the heyday of the Ottoman Empire. It is thus frustrating to have to admit that our knowledge of this field is at best a patchwork. We possess several outstanding works of scholarship, to be sure, and the massive bibliography on Mamluk studies produced by the University of Chicago´s Middle East Documentation Center continues to grow faster than anyone can read it. But what we do *not* have is even more striking.

First of all, there is no modern full-length account in a Western language of the whole Mamluk period, which I would argue stretches from 1238 (the death of the Ayyubid sultan al-Kāmil Muḥammad) down to 1524 (the definitive consolidation of Ottoman rule in Syria and Egypt). The nineteenth-century syntheses of Gustav Weil and (on a distinctly lesser and more derivative level) William Muir hardly rival the achievements of Mommsen, Ranke, Macauley, or Bury, which, however

antiquated, still have much to teach us.[1] In Arabic, there are of course a number of general histories, pitched at various levels of readership. Almost all of these have been produced by Egyptian scholars, and consequently have a very Egyptian (one might say Cairo-centric) view of things.[2]

In general, the large volume of Egyptian scholarship on the Mamluks suggests that this period constitutes a persistent and fundamental problem for Egyptian thinkers. Are the Mamluks an integral part of Egypt's historical identity and sense of nationhood, or are they rather (to borrow a phrase from H. A. R. Gibb) a "kernel of derangement"? The Mamluks were foreigners in language and geographical origin, but also the last great independent regime in Egypt before the nineteenth century. They defended Egypt from foreign threats, but they were tyrannical rulers. They were lavish patrons of religion, literature, architecture, and the fine arts, but they were themselves often semi-literate barbarians. Moreover, it is a much-debated question whether all this activity represents cultural efflorescence or stagnation. In modern Egyptian thought, in short, the Mamluks symbolize both power and decline. In view of this profound ambivalence, I would argue that twentieth-century Egyptian historiography on the Mamluk Sultanate merits a study in its own right, in the manner of Werner Ende's *Arabische Nation und islamische Geschichte*.[3]

Hardly less grave than the lack of a general synthesis is a shortage of monographs on the reigns of individual sultans—the kinds of political biographies that are still produced in droves, even in our post-modernist age, for every European monarch and U.S. president. There are in fact some very good studies in this category, but they cover only a few sultans—seven out of the sixty-one men (and one woman) who held that office. Not all of these people were on the throne long enough to merit a separate study, to be sure, but the disparity in numbers is nonetheless remarkable. The first four decades of Mamluk domination have in fact been studied fairly well, at least by the feeble standards of Islamic historical studies,

---

[1]There are of course several solid and up-to-date chapters by various authors in *The Cambridge History of Egypt,* vol. 1, *Islamic Egypt, 640–1517,* ed. Carl Petry (Cambridge, 1998). We also have a good concise history of the first Mamluk century by Robert Irwin, *The Middle East in the Middle Ages: the Early Mamluk Sultanate, 1250–1382* (London, 1986). But the gap remains even so.

[2]Among many authors, the oeuvre of Sa'īd 'Abd al-Fattāḥ 'Āshūr might be the best place to start, both because of his own training under some of the best Egyptian scholars of the 1930s (e.g., Muṣṭafá Ziyādah and Aḥmad Amīn), and because he himself had many students at the University of Cairo who went on to become leading historians in their own right.

[3]Werner Ende, *Arabische Nation und islamische Geschichte: Die Umayyaden im Urteil arabischer Autoren des 20. Jahrhunderts* (Beirut and Wiesbaden, 1979).

with solid monographs on Shajar al-Durr, al-Ẓāhir Baybars, and al-Manṣūr Qalāwūn.[4] On the other hand, it is hard to explain to colleagues in other fields that we have only one political biography for a figure so formidable as Baybars. For the fourteenth century, Amalia Levanoni has given us an extended interpretive essay on al-Nāṣir Muḥammad.[5] Finally, three key figures of the Circassian period have drawn serious attention: Barsbāy, Qāytbāy, and Qanṣūh al-Ghūrī.[6] Everyone would have a favorite candidate for the next such study; mine would be two periods of intense crisis. First, the virtual interregnum—or more precisely, the puppet sultanate—from the death of al-Nāṣir Muḥammad (1341) to the seizure of power by Barqūq (1382), an era which comprises both a breakdown of the established political system and the onset of the Black Death. Second, the disastrous reign of al-Nāṣir Faraj (1399–1412), marked by pestilence, currency collapse, constant internecine conflict, and the invasion of Syria by Timur, calls out for sustained attention. Taken together, these two periods represent the hollowing out of the Mamluk monarchy under the later Qalāwūnids and then a bitter struggle (finally successful under al-Mu'ayyad Shaykh) to re-establish royal autocracy. Edward Gibbon famously remarked that history is largely a record of the crimes and follies of mankind; between 1341 and 1412 there is a lot of history.

A research agenda of this sort raises an important general question: does the reign of an individual sultan constitute a meaningful and useful unit of political analysis? Undoubtedly it is a decidedly old-fashioned way of approaching the subject, but that fact does not invalidate political biography. First, the Mamluk Sultanate was in principle, and often in fact, an autocracy; the whole political system was focused on the person of the sultan. If he was as often the captive of his amirs and mamluks as their master, so it is with all autocrats. The way in which a sultan could manipulate, or was manipulated by, the other players in the game tells us a great deal about the internal workings of the Mamluk political system. Second, every sultan had to struggle to secure his throne, whether or not he had a hereditary claim to it. For this reason, a sultan's reign does not represent

an arbitrary chunk of time cut out of a continuum of stable successions to the throne. On the contrary, a reign embodies a real political moment, in that it faithfully mirrors the stress lines and balance of forces at that moment. The exception might be a period already mentioned: the Qalāwūnids after al-Nāṣir Muḥammad, 1341–82, where only two sultans, al-Nāṣir Ḥasan (1347–51, 1354–61) and al-Ashraf Sha'bān (1363–77), clung to the throne for any length of time, and neither was able to assert control over the political system.

After a dreary account of opportunities missed and obvious subjects ignored, it is a relief to turn to the formal institutions which provided the enduring framework of Mamluk rule—the army, the *iqṭā',* the civil bureaucracy, and the religious establishment, along with the fiscal and charitable *(waqf)* resources which made the whole thing possible. In this arena we have a great deal. Here I need not refer to work published before 1990, some of it of genuinely classic stature, since I have reviewed it in *Islamic History: A Framework for Inquiry*.[7] But even with all that has been done there are major gaps, along with a curious lack of integration. We are pretty well off if we want to know the names of specific taxes, how they were assessed and allocated, the distribution of *iqṭā'*s in fourteenth-century Egypt, the general organization of the royal mamluk corps in the army, who the bureaucrats were in fifteenth-century Egypt and how they were recruited.[8] It is true that of the administrative structures and personnel of Syria we know far less, indeed almost nothing. (This will be an oft-repeated *Leitmotif* in this article.) In spite of this generally positive assessment, if we want to pick up a single book that will tell us how the Mamluk state worked and how it imposed its will on its subjects, then we will have a hard time of it. Even on the core institution of the regime, there is no single study entitled ″The Mamluk Army″ that brings together the whole thing—the several mamluk corps, the *ḥalqah,* auxiliary forces, the command structure, etc.—or tells how this complex military system changed over the 267 years of Mamluk history.[9]

Apart from a lack of integrated syntheses on the state, the army, and the fiscal

---

[7]R. Stephen Humphreys, *Islamic History: A Framework for Inquiry,* rev. ed. (Princeton, 1991), Ch. 7, ″The Fiscal Administration of the Mamluk Empire.″

[8]To the studies reviewed in *Islamic History,* Ch. 7, at least two major titles should be added: Sato Tsugitaka, *State and Rural Society in Medieval Islam: Sultans, Muqṭa's and Fallāḥūn* (Leiden, 1997); and Bernadette Martel-Thoumian, *Les civils et l′administration dans l′état militaire mamluk (IXe/XVe siècle)* (Damascus, 1991).

[9]The great student of the Mamluk army was of course the late David Ayalon, whose voluminous writings continue to demand close study. On the other hand, Ayalon was such a dominating figure that few other scholars ventured into this critically important field. For the current state of the field during the last decades of Mamluk rule, see Carl F. Petry, ″The Military Institution and Innovation in the Late Mamluk Period,″ in *Cambridge History of Egypt,* 1:462–89.

administration, there are vast gaps in the literature. Most critically, far more has been written about Egypt than about Syria, even though Syria was an integral and very distinctive part of the empire, and even though Mamluk Syria is exceptionally well documented by the standards of medieval Islamic history. (We will return to this point further on.) A second gap is, to put it baldly, the fourteenth century. The fifteenth century has received far more lavish attention, even though we might suppose that this latter period would make little sense without a real understanding of the earlier one. For Mamluk institutions, in short, we have a vast jigsaw puzzle, where a few scattered sections have been assembled and thousands of pieces (though many are missing) are strewn on the worktable. The sort of work needed to put all this together is far from what the current Zeitgeist regards as cutting-edge, but until it is done any effort to pursue more innovative ways of decoding the Mamluk state will only be word games with (at most) a certain heuristic value.

If the study of political actors and administrative institutions reflects a nineteenth-century frame of mind, then social history as now practiced has its roots in the social sciences of the 1950s to 1970s. Certainly that is true for the field of Mamluk studies, where Ira Lapidus′ *Muslim Cities in the Later Middle Ages* still provides the dominant paradigm.[10] By now Lapidus′ work has been subjected to a fair amount of criticism—not least of all by Lapidus himself—for its overly rigid adherence to the functionalist sociology of Talcott Parsons and Edward Shils. It must be said, however, that his work was an astonishingly effective synthesis for its time, and it continues to provide a useful point of departure for analyzing the interactions between local and imperial power.

Garcin′s great study of Qūṣ might point us in a different direction—viz., a narrowly focused study of a single locality that takes our eyes off Cairo, and allows us to ask just what made this place different from that one.[11] It perhaps reflects the realities of our field that Garcin′s *magnum opus* is now almost thirty years old and has had only one real successor, Anne-Marie Eddé, *La principauté ayyoubide d′Alep.*[12] The chronological scopes of the two works are very different, of course, since Garcin covers the whole medieval period down to the end of Mamluk rule, while Eddé′s equally monumental tome deals only with eight decades. Moreover, Eddé exploits a far richer fund of resources (including the city of Aleppo itself) than Garcin had at his disposal for the remote reaches of Upper Egypt. Finally, they reflect quite distinct concepts of historical method and presentation, with Garcin generating broad conceptual structures in order to make sense of his sparse materials, and Eddé sticking close to her carefully sifted and

[10]Ira M. Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, MA, 1967; reprinted without notes, Cambridge and New York, 1984).

[11]Jean-Claude Garcin, *Un centre musulman de la Haute-Égypte médiévale: Qūṣ* (Cairo, 1976).

[12]Anne-Marie Eddé, *La principauté ayyoubide d′Alep (579/1183–658/1260)* (Stuttgart, 1999).

meticulously presented evidence. Still, both suggest how much can be learned from a detailed regional study, where the grid is sufficiently fine to allow us to capture the detail and specificity of local realities. Obviously other places demand attention of this kind: certainly Damascus and the other major towns in the interior of Syria, but also Egypt's Mediterranean ports, Damietta and Alexandria, and perhaps, if the sources permit, Asyūṭ or Minya in Middle Egypt.

Certainly the most traditional area of historical study, yet even now one of the most revealing, is that of the relations between the Mamluk Sultanate and the outside world. The Mamluk Sultanate sought out and found many allies—the Golden Horde, the Kingdom of Aragon, even Byzantium; even so, it regarded itself—quite correctly—as perpetually threatened by the enemies that surrounded it. The Mamluks, with their powerful albeit unruly army, their famously durable and stable borders, and their self-consciously conservative ideology, became the very model of a fortress state.[13] As such they were also the antithesis of their expansion-minded Mongol and post-Mongol neighbors to the east and (after the consolidation of Ottoman power under Mehmet II) north.

Research on this subject area has benefited from the survival of a good deal of direct documentary evidence, for the most part in European archives (Barcelona, Florence, Venice, and even the Vatican), in Arabic as well as in European languages. Though there is a vast amount still to do, this material has attracted the attention of estimable scholars since the nineteenth century. Among recent publications, those of Peter M. Holt on Mamluk-Crusader relations stand out.[14] As things now stand, we have a number of solid studies on the late thirteenth century, as well as for the last decades of Mamluk rule—both periods of sustained conflict and crisis for the Mamluk regime.[15] Even for these two periods, of course, no one could say that all the key issues have been settled. But for the intervening two centuries the

---

[13]These points are more fully explored in my "Ayyubids, Mamluks, and the Latin East in the Thirteenth Century," *Mamlūk Studies Review* 2 (1998): 1–17.

[14]E.g., Peter M. Holt, *Early Mamluk Diplomacy (1260–1290): Treaties of Baybars and Qalawun with Christian Rulers* (Leiden, 1995).

[15]It is impossible to review the enormous literature on the late thirteenth-century Crusades here. On the struggle against the Mongols down to 1281, see Reuven Amitai-Preiss, *Mongols and Mamluks: The Mamluk-Ilkhanid War, 1260–1281* (Cambridge, 1995), and of course Thorau, *Lion of Egypt*. (The three decades down to the last Mongol incursion in 1309 still await detailed study.) On the late fifteenth century—a period in which three very different threats (Shah Ismā'īl and the Safavids, the Ottomans, and the Portuguese in the Red Sea) suddenly burst onto the scene—see Carl F. Petry, *Protectors or Praetorians? The Last Mamluk Sultans and Egypt's Waning as a Great Power* (Albany, NY, 1994). The later chapters of John E. Woods, *The Aqquyunlu: Clan, Confederation, Empire* (first ed., Minneapolis, 1976; revised ed., Salt Lake City, 1999) are highly important for this subject. On the first Ottoman-Mamluk confrontation, see Shai Har-El, *Struggle for Domination in the Middle East: The Ottoman-Mamluk War, 1485–1491* (Leiden, 1995).

publications are extremely spotty and tend to be oriented toward particular crises (e.g., the sacking of Alexandria in 1365, the Cyprus expeditions of al-Ashraf Barsbāy, and the invasion of Timur), with little effort to place these crises within a framework of long-term problems and policies. Perhaps Setton′s astonishingly old-fashioned and yet deeply impressive *Papacy and the Levant* gives us the nearest thing we have to a general interpretation—though of course Setton knew no Arabic and made no serious effort to include Mamluk views and understandings.[16]

With this brief review of existing categories of research on the Mamluk Empire, I would like to turn to some possible new directions. Here I have four particularly in mind.

First, I mention yet again an old enthusiasm of my own, Mamluk Syria. For this period, Syria is typically treated either as *une Égypte manquée* or as merely a turbulent frontier zone, important chiefly for the battles against invaders or revolts against the sultans which occurred there. But it is clear enough that Syria has its own social traditions and structures (a point made quite clearly by Lapidus in *Muslim Cities in Later Middle Ages,* where he posits Damascus and Aleppo as the normative cases of urban society, while Cairo is described as socially amorphous due to domination by the palace and military elite). It is likewise apparent, though no one has ever tried to explore the issue systematically, that the Mamluk armies in Syria were not mirror images of the Egyptian army. On the contrary, apart from a few royal Mamluk contingents sent out from Cairo for garrison duty in the major towns, Syrian forces seem to exhibit distinctive recruitment patterns and systems of pay, as well as an officer corps whose origins and career paths were not at all like those of their Egyptian counterparts. The Syrian fiscal system was unquestionably a world of its own—a point which should be intuitively obvious given the stark absence of the Nile. Finally, we can witness a continuing vitality of religious and intellectual life in Damascus down to the late fourteenth century. Though many Syrian scholars, as Carl Petry has demonstrated,[17] moved to Cairo to make their careers there, names like Ibn Taymīyah, al-Jazarī, al-Dhahabī, Ibn Qayyim al-Jawzīyah, al-Ṣafadī, and Ibn Kathīr are enough to demonstrate the international stature that Damascus retained throughout the first century of Mamluk rule.

As a second priority, I would argue that we need to develop studies that focus on specific and carefully delimited groups, locales, etc., rather than broad and often quite general categories. For example, everyone talks about the crucial role of the Mamluk household. True enough, but who has tried to reconstruct such a household? (Actually, Jane Hathaway has done precisely this for the Qazdaghli

---

[16]Kenneth M. Setton, *The Papacy and the Levant,* 5 vols. (Philadelphia, 1976–84). (Only vols. 1–2 are directly relevant to this article.)

[17]Carl. F. Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981).

faction in eighteenth-century Egypt. For the ″classic″ Mamluk period, however, there is nothing of the kind.)[18] For a few amirs, at least, we should be able to extract enough material from the biographical compilations of al-Ṣafadī, Ibn Taghrībirdī, Ibn Ḥajar al-ʻAsqalānī, al-Sakhāwī, and many others to develop at least a detailed sketch of the households and factions that they recruited and maintained. For the Mamluk period above all others, we should expect prosopography to be one of our most widely utilized approaches. It is not merely a matter of lending individuality and nuance to dry abstractions; well-designed microstudies of this sort commonly lead to new understandings even of broad social and political processes in very fundamental ways.

A third area of emphasis would aim at identifying the structures and long-term continuities that underlie the ebb and flow of events. In particular, far more needs to be done on what we might call the Mamluk-Ottoman continuum. The bulk of scholarship on the transition from Mamluk to Ottoman rule has tended to focus on the changes brought about by the Ottoman conquest. This frame of mind is nicely captured in Peter M. Holt′s pioneering synthesis on Ottoman rule in Arab lands, *Egypt and the Fertile Crescent, 1516–1922,* and it continues in more narrowly focused monographs like Doris Behrens-Abouseif′s *Egypt′s Adjustment to Ottoman Rule.*[19] It is undeniable that the violent shock of 1516–17 and the years immediately following brought massive and abrupt changes in many sectors of Egyptian and (so we suppose) Syrian life, and Egypt′s abrupt fall from imperial metropolis to subject province had a profound impact on that country on many levels. Even so, much could be gained by a simple exercise in reperiodization: instead of working within the traditional Cairo-centered parameters of 1382–1516, 1517–1700, and 1700–98, we might try defining two broader periods, the first beginning around 1450 and going down to roughly 1600, the second bracketing the two centuries from 1600 to 1800. At first glance, this revised periodization seems to privilege the Ottoman Empire, since it marks the ″classical″ era from the ascension of Mehmet II to the political and fiscal crisis after the death of Kanuni Suleyman,

[19]P. M. Holt, *Egypt and the Fertile Crescent, 1516–1922: A Political History* (Ithaca, NY, 1967). In Arabic, see Abdul Karim Rafeq, *Bilād al-Shām wa-Miṣr min al-Fatḥ al-ʻUthmānī ilá Ḥamlat Nābūliyūn Būnabart,* 2nd ed. (Damascus, 1968). Doris Behrens-Abouseif, *Egypt′s Adjustment to Ottoman Rule: Institutions, Waqf, and Architecture in Cairo, 16th and 17th Centuries* (Leiden, 1994). There is not a great deal on early Ottoman Egypt or Syria; the eighteenth century has attracted far more attention. For Syria, see Muhammad Adnan Bakhit, *The Ottoman Province of Damascus in the Sixteenth Century* (Beirut, 1982); and (very tightly focused) Amnon Cohen and Bernard Lewis, *Population and Revenue in the Towns of Palestine in the Sixteenth Century* (Princeton, 1978), and A. Cohen, *Economic Life in Ottoman Jerusalem* (Cambridge, 1989).

and then the era of ″decline″ down to the deposition of Selim III in 1807. But in fact it represents a far more inclusive and comparative approach. The first segment (1450–1600) covers several broad trends within the political order of the Mediterranean Basin and the Middle East: (1) the expansion and consolidation of the Ottoman state; (2) the last efflorescence and rapid dissolution both of the Mamluk Sultanate and of a post-Mongol political order in Iran and Mesopotamia that reached back to the mid-fourteenth century; (3) the transformation of the Safavids from a chiliastic movement based on the Turkoman tribes of eastern Anatolia and Azerbaijan to a relatively centralized Iranian empire; (4) in a remarkable synchrony with the Ottomans, the rise of a worldwide Spanish (one might better say Castilian) empire. This redefining of the historical process within which the later Mamluk Sultanate endured and then succumbed should encourage scholars to trace as precisely as possible the continuities and changes in every aspect of life in Egypt and Syria—military and administrative institutions, the recruitment of elites, the character and role of local leadership, agriculture and pastoralism, commerce and manufacturing, etc. The point, in a nutshell, is that Ottomanists must become Mamlukists. Any scholar who wants to take the sixteenth century seriously must also take the fifteenth century seriously. The earthquake of 1516–17 did not leave a *tabula rasa* for the new masters of the old Mamluk realm.

The second segment (1600–1800) takes us beyond the chronological limits of this paper. However, we ought to note that it too is a highly useful way of grouping together long-term trends across a broad area: (1) the ″restructuring″ (to choose a neutral term) of the Spanish and Ottoman Empires; (2) the apogee of Safavid power in Iran (down to 1666) and then that country′s descent into a time of troubles; (3) the emergence of the Dutch, French, and English as the major European actors in the Mediterranean and Indian Ocean. For Mamluk specialists, of course, these two centuries have a particular interest because they witnessed the emergence, and ultimately the political domination, of a neo-Mamluk order in Egypt. The neo-Mamluk system of Ottoman Egypt is certainly not a simple revival of the classical (though ever-changing) Mamluk order of 1250–1517, but it is quite unintelligible without it.

This leads us to the fourth area in which I hope to encourage research: the place of the Mamluk Sultanate within the whole *dār al-islām:* Africa, the western Mediterranean, the Indian Ocean basin, Iraq-Iran and the Turco-Mongol world generally (which in this period of course includes much of North India). As much as the Mamluk elite itself might have wished it, their empire was not walled off from the outside world, and indeed every aspect of Mamluk life and politics was inextricably tied to that world. At first glance, at least, the lack of studies aimed at situating the Mamluks within their broader environment is not only regrettable but rather puzzling. That is all the more so because we now have many of the elements

of a general framework for such comparative and trans-regional research. The Mediterranean world has of course been very widely studied for more than a century by a cohort of outstanding scholars, and though the Mamluks are ordinarily marginalized in this work (usually being portrayed merely as the conduit for the spices of Asia), we nevertheless know a great deal about their interactions with that region. There is also a good deal of work on the Indian Ocean, though most of this refers to the sixteenth and seventeenth centuries. However, a richly documented and remarkably detailed general synthesis is now available in the three volumes of André Wink, *Al-Hind: the Making of the Indo-Islamic World,* which take us to the end of the fifteenth century. (Two further volumes are projected, which will reach the mid-eighteenth century.)[20] It is true that the Mamluks never attempted to project power beyond the Red Sea, but of course their international commerce, which was a critical part of their revenues, was generated from within this world, and Mamluk merchants were an integral part of it.

When we turn to Africa, we find markedly less to work with. Even North Africa is mostly neglected by Mamluk specialists, in spite of the important commercial and religious connections stretching from al-Andalus to Cairo and beyond, and in spite of the considerable number of North African expatriates (Ibn Khaldūn was not alone) who took up residence in Egypt. Of Saharan and Sub-Saharan Africa—an important zone of Islamic commercial, religious, and cultural expansion—we know far less than we should; there has been good work on Nubia and the western Sahel, but apart from the exceptional case of Musa Mansa there has been little effort to connect it with Egypt. On the east, we still find a sort of Chinese wall between the Mamluk and Turco-Iranian worlds, running southward from the middle Euphrates through the Syrian Desert. The failure of Mamluk specialists to include Iraq and Iran within their purview is partly a matter of language, since that requires a thorough command not only of Mamluk Arabic with all its oddities, but also of the formidable rhetoric of Timurid Persian, and various sorts of Turkish. For the most part, however, it is a matter of *taqlīd,* of just sticking to the topics and approaches laid down by our academic ancestors.

I would be the first to admit that the areas I have suggested for research do not include some important current approaches to historical analysis—e.g., those that focus on issues like gender, discourse analysis, or the construction of communal identity. I certainly do not decry the value of such work or doubt the possibilities of doing it successfully. Women, to give an obvious example, are far more visible in Mamluk-period sources than in those from earlier periods, and gender historians should therefore find much with which to work. But lacking as we do a well-

---

[20]André Wink, *Al-Hind: The Making of the Indo-Islamic World,* 3 vols. (in progress) (Leiden, 1991–2004).

developed scholarly literature in so many traditional core subjects—those that constitute the who, what, where, when, and how of Mamluk history—the discussion of these innovative topics and approaches will inevitably rest on frail foundations. In any case, I hope that theory-driven investigation will add to our perspectives on Mamluk history, and not displace the sort of work-still-undone that I have discussed above. I say this knowing that historians are anarchists at heart and prefer not to work according to the agendas and dictates that anyone else may lay down.

I have so far spoken as if scholarship on the Mamluk Sultanate were a world unto itself, as if we could pursue it without reference to the larger structures of contemporary academic life within which we must work. But of course that is the opposite of reality. Like our colleagues in every other field of historical research, we face very serious constraints on our capacity to conduct research, and far more importantly, on our capacity to publish it in appropriate and accessible forms. In the United States, at least, the day of the specialist-audience research monograph is rapidly coming to an end. University presses have lost their subsidies, and university libraries, also facing sharply reduced acquisitions budgets and escalating prices, can no longer afford to purchase the books that the presses publish. No acquisitions editor can contemplate (if she means to keep her job) the prospects of a monograph, however brilliant, that will sell only 500 copies. Given the size of the Mamluk studies field (and even of Islamic history more generally), 500 copies might well seem quite an ambitious target.

Especially for our more intricate scholarly projects, therefore, we need to explore actively the possibilities presented by emerging technologies such as on-line publication. Technically this is perfectly possible, as it offers many advantages for revision and updating, and on-line materials can easily be converted into CD-ROMs or (my preference) the more stable and flexible printed volume. The real issues are the same as those that bedevil the presses: gatekeeping and quality control, editorial oversight, copyright, and distribution. Whatever research we conduct, however probing our analyses, it will all come to nothing until we have decided how to share what we have learned.

Book Reviews

Taqī al-Dīn al-Maqrīzī, *Rasā'il al-Maqrīzī*, edited by Ramaḍān al-Badrī and Aḥmad Muṣṭafá Qāsim (Cairo: Dār al-Ḥadīth, 1998). Pp. 365.

Reviewed by Li Guo, University of Notre Dame

This collection contains eleven of al-Maqrīzī's treatises that cover a wide range of subjects, reflecting the author's encyclopedic scope. The texts can be roughly categorized as follows:

1. History: Two famous polemical treatises, one on the Ummayads, the Hashimites, and the early Islamic caliphate ("Al-Tanāzu' wa-al-Takhāṣum fīmā bayna Banī Umayyah wa-Banī Hāshim"), and another on the legitimacy of the Fatimids ("Ma'rifat Mā Yajibu li-Āl al-Bayt al-Nabawī min al-Ḥaqq 'alá Man 'Adāhum");
2. Theology: Several treatises on the principle of the unity of God ("Tajrīd al-Tawḥīd al-Mufīd"), the *dhikr* ("Ḥirṣ al-Nufūs al-Fāḍilah 'alá Baqā' al-Dhikr"), and the *tafsīr* of the Quranic phrase *tawaffanī musliman* ("Ḥuṣūl al-In'ām wa-al-Mayr fī Su'āl Khātimat al-Khayr");
3. Numismatics: One treatise ("Al-Nuqūd al-Qadīmah al-Islāmīyah");
4. Geography and ethnography: Two treatises, on the bedouin tribes in Egypt ("Al-Bayān wa-al-I'rāb 'an Man fī Arḍ Miṣr min Qabā'il al-A'rāb"), and the Muslim dynasties in Abyssinia ("Al-Ilmām bi-Akhbār Man bi-Arḍ al-Ḥabashah min Mulūk al-Islām");

(5) Mineralogy: One treatise ("Al-Maqāṣid al-Sanīyah fī Ma'rifat al-Ajsām al-Ma'dinīyah");
(6) Miscellanies:These include a short treatise on the metaphorical use of references to water ("Al-Ishārah wa-al-Īmā' ilá Ḥall Lughz al-Mā'"), and a lengthy encyclopedic piece on the merits of bees from lexicographical, historical, and cultural perspectives ("Naḥl 'Ibar al-Naḥl").

The edition is based on a microfilm reproduction of the Paris manuscript, Bibliothèque Nationale, arabe 4657. In the introduction, the editors provide a short sketch of al-Maqrīzī's life and work and a brief description of the manuscript as well as the contents of the eleven treatises edited here. Indexes include the Quranic verses, hadith, personal and tribal names, place names, weights and measures, and names of coins.

For the reader of this journal, particularly interesting might be the introduction,

where one finds a confused, and confusing, assessment of al-Maqrīzī′s work by the editors. Factual errors aside (the collection, the editors claim, contains fourteen treatises, while eleven is the correct number), one is baffled by the apparent discrepancy in that al-Maqrīzī is criticized in one place, but receives raves in another. Al-Maqrīzī, according to the information given on page 5, ″knew very little″ *(qalīl al-ma'rifah)* about pre-Islamic history, and was equally ″incompetent″ *(ghayr māhir fī)* in dealing with the early Islamic era. He might know a thing or two *(la-hu ma'rifah qalīlah)* about jurisprudence *(al-fiqh),* hadith, and grammar, but nothing truly outstanding. Far worse, his handling of sources suffered from serious flaws ranging from ″distortion″ *(al-taḥrīf)* to ″deliberate omission″ *(al-saqṭ)*. Even with all the good qualities al-Maqrīzī might have as a person, such as being ″virtuous″ *(ḥasan al-khulq),* ″ambitious″ *('ālī al-himmah),* and, most importantly, ″fond of history″ *(mūla' bi-al-tārīkh),* this lukewarm praise, coming from the editors, is still quite curious since the editors are the ones who carry the burden of justifying the effort put into editing these works. If al-Maqrīzī was indeed so bad, why bother? As if having sensed this line of questioning, a 180-degree turn occurs on page 7, where al-Maqrīzī is spoken of in glowing terms: the lousy, amateurish ″history buff″ turns, at the end of the day, to be nothing less than a ″great scholar″ *('ālim jalīl),* a ″fine historian,″ and so forth. Now one is confused. Which image should one trust? The problem here, to be honest, is not whether al-Maqrīzī should be scrutinized critically (he should, just like anyone else), but rather whether this discourse should be taken seriously. The apparent illogical and odd dichotomy discussed above causes one to suspect that the editors may have simply quoted verbatim, on page 5, from one medieval author, who happened to be al-Maqrīzī′s rival (perhaps al-'Aynī or Ibn Taghrībirdī?), and, on page 7, from another, who was perhaps an admirer. Not a good way to go.

ISMĀ'ĪL MUḤAMMAD ḤUSĀM AL-DĪN, *Al-Uṣūl al-Mamlūkīyah lil-'Amā'ir al-'Uthmānīyah* (Alexandria: Dār al-Wafā' li-Dunyā al-Ṭibā'ah wa-al-Nashr, [2002]). Pp. 238.

REVIEWED BY HOWAYDA AL-HARITHY, American University of Beirut

This book is a collection of essays that have been published in different venues between 1987 and 1999. The author organized the eight articles in the following manner: ″Some Remarks on the Relationship between the Processions and the Location of Monumental Buildings on the Streets of Cairo,″ ″The Naming of Places during the Mamluk Period,″ ″The Administration of the *Awqāf* during the

Mamluk Period," "The Ottoman Use of Residential and Commercial Mamluk Buildings based on the *Waqf* Documents," "Four Mamluk Houses from Ottoman Documents," "The *Wakālah* of al-Sulṭān al-Mu'ayyad Known as the *Wakālah* of 'Awdah Pāshā," "The Buildings of Sulṭān Qāytbāy in Sūq al-Ghanam based on Ottoman Documents," and "The *Sabīl* of 'Abd al-Raḥmān Katkhūdā in the Nahhāsīn: A New Study Based on Some Mamluk Documents." The author states that the articles address two issues: the distribution of important edifices in the city of Cairo, and the origins of some Ottoman buildings traced through Mamluk documents.

While there is no single thread that runs through the articles presented, they share a methodological link. The link that ties the whole work together is the use of *waqf* documents, cross-referencing these with historical accounts, such as those of al-Maqrīzī, and illustrating urban transformation in the Fatimid city during the Mamluk and Ottoman periods. Accordingly, the articles can be divided into two groups. The first four articles address urban issues by extracting evidence from the *waqf* documents available from the Mamluk period. The second group of four articles publishes extracts from the *waqf* documents that pertain to a single building or a group of buildings.

The focus of the first group of four articles is as follows: the first article discusses the different processions that took place in the city of Cairo, identifies their routes, and concludes by demonstrating the close relationship between the processions and the location of major edifices along the processional routes during the Mamluk era.

The second article looks into the names assigned to various places in Cairo. It addresses first the terminology used by Mamluk historians, primarily al-Maqrīzī, and in the *waqf* documents, and makes the distinction between terms such as *khaṭṭ, ḥārah, 'aṭfah,* and *zuqāq*. The author then identifies and traces the names of eight *khaṭṭ*s in Mamluk Cairo.

The third article addresses two questions: the process of transferring property in Cairo into the hands of the Mamluks for the purposes of rebuilding or endowing, and the management of *waqf*s by Mamluk sultans and amirs. The study focuses its investigation on the area of Khān al-Khalīlī and demonstrates by examples extracted from *waqf* documents how the Mamluks confiscated *waqf* properties on the basis of alleged legal violations, which they then legalized as their own.

The fourth article traces through the *waqf* documents the appropriation of Mamluk buildings and the transformation of their use during the Ottoman period, with special attention to private and commercial residential buildings.

The second group of four articles relies less on analysis and more on quotation of excerpts from the *waqf* documents that pertain to a single building or a group of buildings. The first sheds light on four Mamluk residences in the area of

al-Ḍarb al-Aḥmar through excerpts from Ottoman *waqf* documents. The second focuses on a single building, the *wakālah* of al-Sulṭān al-Mu'ayyad, and traces its development through four Mamluk and Ottoman *waqf* documents. The third relies on one Ottoman *waqf* document to extract information pertaining to a group of buildings of Sultan Qāytbāy in the area of Sūq al-Ghanam. The last traces through Mamluk *waqf* documents the history of the *sabīl* of ʻAbd al-Raḥmān Katkhūdā to the Qaysarīyah of Sultan Qalāwūn from the seventh/thirteenth century, which was rebuilt by Sultan Barsbāy in the ninth/fifteenth century before its rebuilding in the twelfth/eighteenth century by ʻAbd al-Raḥman Katkhūdā.

Collectively the articles demonstrate the author′s knowledge of the historic city of Cairo, of the primary sources, and of the *waqf* documents, both Mamluk and Ottoman. With such extensive knowledge, he is able to trace buildings′ development and transformations through time from Fatimid origins to Mamluk and Ottoman times. There is no doubt that the material provided by the book is a valuable source for further work by researchers in the field.

NUʻMĀN MAḤMŪD JUBRĀN AND MUḤAMMAD ḤASAN AL-ʻIMĀDĪ, *Dirāsāt fī Tārīkh al-Ayyūbīyīn wa-al-Mamālīk* (Irbid, Jordan: Mu'assasat Ḥamādah lil-Khadamāt wa-al-Dirāsāt al-Jāmiʻīyah, 2000). Pp. 399.

REVIEWED BY LI GUO, University of Notre Dame

Despite its rather vague title, *Studies in the History of the Ayyubids and Mamluks,* the book under review weaves its narrative around one focal point: the Muslim holy war against the Crusades and the Mongols under the leadership of the Ayyubid and early Mamluk sultanates and its political, historical, and social impact on the Islamic Near East, especially Bilād al-Shām and Egypt, in the eleventh–thirteenth centuries. The authors′ thesis is a simple and elegant one: it is true that the ″foreign aggressions″ against the Islamic realm were motivated by religious, political, military, ideological, and economic factors, but they were also aggravated by internal conflicts within the Muslim front, as a result of the decay of the weakened and decentralized Abbasid caliphate and endless civil wars among various domestic factors. Still worse is what the authors call ″the dissolution of the Muslim front″ *(al-tashattut al-islāmī)* (p. 7), in that some of the Muslim rulers would, for their own gain, make peace, or even forge alliances, with the ″infidel″ enemies at the cost of Muslim lands and lives. The unity of the Muslim world *(al-waḥdah al-islāmīyah),* or the lack thereof, thus constitutes a pivotal test in passing historical

judgment on the political leaders of the Muslim communities at the time. The book thus sets out to explore the way in which some of these leaders succeeded in their efforts to mobilize the Muslim forces and unify the Muslim front through shrewd political strategizing and military maneuvering, while others, and there were many, failed. The result is a chronicle of the political and military events of the era, with special focus on the careers and reigns of three heroic figures, Ṣalāḥ al-Dīn al-Ayyūbī (Saladin), Sultan al-Ẓāhir Baybars, and Sultan al-Nāṣir Muḥammad ibn Qalāwūn.

The core of the book consists of four chapters that follow a straightforward chronological order: Chapter One, ″The Ayyubid State until the Death of Saladin″ (pp. 39–129); Chapter Two, ″The Ayyubid State after Saladin: 589–648 A.H./1193–1250 A.D.″ (pp. 131–245); Chapter Three, ″The Mamluk State until the End of the Reign of Sultan Baybars″ (pp. 247–306); and Chapter Four, ″The Reign of the Qalāwūn Family and the End of the Early Mamluk Period″ (pp. 307–63).

Overall, the book is neatly organized and adequately written. The major theme, of the success of the united Muslim front in fighting off the ″foreign aggressions,″ as well as the lessons learned from the Muslim defeats, runs recurrently throughout. The authors are perhaps reasonable in focusing on political and military events, while leaving economic, social, and intellectual aspects largely untouched, for the book′s focus is on the major heroic figures and their searching for, and achieving, Muslim unity. A noticeable feature of the book that distinguishes it from other studies on the same subject is perhaps its unmistakably political undertone. Its goal in dealing with issues of modern relevance from a historical perspective is clearly seen in a narrative that not only makes frequent references, and analogies, to modern events (e.g., on the changing status of Jerusalem from Saladin′s time up to this day, pp. 194–95), but also is studded with contemporary vocabulary such as the awareness, or lack thereof, of the ″unified Islamic front″ *(tawḥīd al-jabhah al-islāmīyah),* in fighting ″foreign occupation″ *(al-iḥtilāl al-ajnabī),* ″liberating″ *(al-taḥrīr)* the occupied territories, and so forth. But in due course, the authors manage to walk a fine line between the *sīrah*-like panegyric (of which Baybars was a legend in popular culture) and modern historical-political inquiry. In this regard, despite the authors′ polemical position in defending the ″heroes″ in question, especially Saladin and Baybars, it is evident (e.g., pp. 106–7, 138–39, 154–55, responding to modern historians′ criticism of Saladin′s perceived ″failures″; pp. 278 ff., on Baybars′ controversial legacy), that they, for the most part, allow the sources, including some documents, to take over and let the historical events speak for themselves. In this connection, one of the book′s strengths is, in my opinion, the authors′ control of the Arabic primary sources, published and unpublished, which are consulted with judiciousness and cited generously in the

narrative. Unfortunately, the same may not be said about the use of the Western sources, especially in dealing with the Crusades. Curiously lacking, too, are modern studies in non-Arabic languages. (This comes as a surprise since one of the coauthors, Dr. Nuʿmān Jubrān, who wrote his Freiburg dissertation on the chronicle of al-Jazarī under the late Professor Ulrich Haarmann, is surely not unfamiliar with Western scholarship.)

The reader of this journal might also be disappointed by the fact that this book is long on the Ayyubids (nearly two-thirds of the book is devoted to Saladin, which, given the overall goal of the book, is understandable), and short on the Mamluks. And with regard to its coverage of the Mamluks, if one has read Peter Thorau′s Baybars,[1] Linda Northrup′s Qalāwūn,[2] Amalia Levanoni′s al-Nāṣir,[3] and Reuven Amitai′s Mongols[4] (none of which are mentioned in the book), then nothing new can be learned here. The book, nevertheless, does manage to present well-researched accounts, in a relatively balanced manner, of an important historic era of the Islamic Near East, and offers some fresh insights, from the authors′ viewpoint, into the events it covers. It might therefore be used as a textbook for Arab high schools. Speaking of textbooks, the book in its current form could have benefited from more careful editing: typos aside, it contains some minor grammatical errors. The overall production of the book is otherwise quite serviceable.

Money, Land and Trade: An Economic History of the Muslim Mediterranean. Edited by Nelly Hanna. The Islamic Mediterranean Series (London: I. B. Taurus, 2002). Pp. 295.

REVIEWED BY WARREN C. SCHULTZ, DePaul University

This volume contains several informative and useful contributions concerned with different aspects of the economic history of the Islamic lands bordering the Mediterranean Sea. All were originally delivered in seminars at the American

University of Cairo over the course of 1997–98. Unfortunately, this collected studies volume is mistitled. It falls far short of delivering what one would expect from a work with the sweeping subtitle ″An Economic History of the Muslim Mediterranean,″ as the following list of contents reveals.

After a brief introduction by Nelly Hanna, the book is divided into three sections: ″Land″ (contributions 1–5); ″Crafts and Trades″ (6–9); and Money″ (10–13). The contributions are: 1. ″The Individual and the Collectivity in the Agricultural Economy of Pre-Colonial Morocco″ by Nicolas Michel; 2. ″Why Study Ownership? An Approach to the Study of the Social History of Egypt″ by Ra'uf 'Abbas Hamid; 3. ″A Multiplicity of Rights: Rural-Urban Contradictions in Early Nineteenth-century Egyptian Land Ownership″ by Muhammad Hakim; 4. ″The Worst of Times: Crisis Management and *Al-Shidda Al-'Uzma*″ by Amina Elbendary; 5. ″′Passive Revolution′ as a Possible Model for Nineteenth-century Egyptian History″ by Peter Gran; 6. ″Making a Living or Making a Fortune in Ottoman Syria″ by Abdul-Karim Rafeq; 7. ″Manufacturing Myths: Al-Khurunfish, A Case Study″ by Pascale Ghazaleh; 8. ″The Private Papers of an Armenian Merchant Family in the Ottoman Empire, 1912–1914″ by Armin Kredian; 9. ″The *Rasa'il Ikhwan al-Safa'* and the Controversy about the Origin of Craft Guilds in Early Medieval Islam″ by Abbas Hamdani; 10. ″Interaction Between the Monetary Regimes of Istanbul, Cairo, and Tunis, 1799–1875″ by Şevket Pamuk; 11. ″Monetary Causes of the Financial Crisis and Bankruptcy of Egypt, 1875–8″ by Ghislaine Alleaume; 12. ″The Financial Resources of Coptic Priests in Nineteenth-century Egypt″ by Magdi Girgis; and 13. ″Perceptions of the Greek Money-lender in Egyptian Collective Memory at the Turn of the Twentieth Century″ by Sayyid 'Ashmawi.

In terms of geographical location, then, the reader is presented with eight studies concentrated exclusively on Egypt (2–5, 7, 11–13), with one about Morocco (1), one for Syria (6), one on Anatolia (8), and one without geographic focus (9). Only the study by Pamuk (10) addresses more than one location in the Mediterranean basin. In terms of chronology, eight contributions are focused on the nineteenth and/or early twentieth century (1, 3, 5, 7–8, 11–13), with one on the ninth–tenth centuries (9), one on the eleventh century (4), one that addresses the sixteenth–eighteenth centuries (6), another concerned with the seventeenth–nineteenth centuries (10), and one general theoretical survey (2) with no specific chronological focus. Given these contents, a more accurate subtitle would be ″Collected Studies Concerned with the Economic History of Primarily Egypt and Its Neighbors in the Eastern Mediterranean, and for the Most Part Addressing the Nineteenth Century with Scattered Coverage of Earlier Periods.″ This subtitle, however, would clash with the claim found on the dust jacket that

the book is ″the first major study of the economic history of the Islamic Mediterranean.″

Qāsim ʻAbduh Qāsim, *Fī Tārīkh al-Ayyūbīyīn wa-al-Mamālīk* (Al-Haram [Giza]: ʻAyn lil-Dirāsāt wa-al-Buḥūth al-Insānīyah wa-al-Ijtimāʻīyah, 2001). Pp. 296.

Reviewed by Konrad Hirschler, School of Oriental and African Studies (London)

Qāsim ʻAbduh Qāsim, professor of medieval history at Zaqaziq University (Egypt), has published widely in his fields of specialization, namely the Crusades, the Ayyubids, and the Mamluks. Works of his have previously been reviewed in this journal (*ʻAṣr Salāṭīn al-Mamālīk* by Thomas Herzog and *Al-Sulṭān al-Muẓaffar Sayf al-Dīn Quṭuz* by Amalia Levanoni, both in volume 6). The monograph reviewed here focuses primarily on the role of the Crusades, despite the title′s wider implications. The ten chapters narrate in chronological order the grand political and military events in the Ayyubid and Mamluk periods, starting with the rise of Ṣalāḥ al-Dīn and ending with the Ottoman conquest of the Arab lands. However, due to the author′s focus on the Crusades, most of the Mamluk dynasty is dealt with rather briefly: a mere 32 of the total 282 pages cover the more than two centuries after the fall of the last considerable Crusader town in the Middle East (Acre) in 690/1291.

Qāsim′s main thesis is that the Ayyubids and Mamluks were both ″military dynasties headed by a warring ruler″ who responded to the external threats to which the Islamic world was exposed, mainly the Crusades (for example, pp. 77–79). It was these dynasties′ ″historical role . . . to realize the grand Islamic project, i.e., to expel the Crusaders from the lands of the Muslims″ (p. 222). For Qāsim, the rise of the Ayyubids constituted a crucial change, as the ″military dynasties″ started to replace the more shariʻah-based Abbasid and Fatimid Caliphates who had failed to confront the newly-arisen dangers. The disappearance of these external threats after the conquest of Acre ″took away the basic historical function of the Mamluk sultans″ (p. 259), which was one of the crucial factors leading to the subsequent decline of this military dynasty. Consequently, the Mamluks handed over their ″historical role″ some two centuries later to the Ottoman Empire, the new military dynasty, which ″protected the Arab lands against Western colonialism for a long period stretching until the late nineteenth century″ (p. 282).

In keeping with modern-day perceptions of the Crusades in the Middle East, Qāsim bases his narrative on two assumptions. First, the Crusades are represented

as the most important factor, dominating the course of Middle Eastern history during the sixth/twelfth and the seventh/thirteenth centuries. Even ″the Mongol threat to the Islamic world did not equal the scale of the Crusader threat to it″ (p. 193) since the latter was still in the mid-seventh/thirteenth century the ″greatest danger for the Arabic Islamic world″ (p. 228). In this vein the Crusades were also responsible for the long-term decline of the Arab lands as the available resources were drained during the fight against them (p. 6).

This importance attributed to the Crusades is crucial for the text′s second main assumption. The period of the Crusades is continuously represented as a confrontation of two monolithic blocks, where the ″Islamic front″ or the ″Islamic-Arab front″ was juxtaposed to the ″European West.″ The Crusades appear here as a conflict between ″the Arab Islamic civilization—owner of the soil and the truth—and the Catholic European civilization″ (193). This image evidently sidelines the scholarship of the last decades, in which it has been shown that cooperation and coexistence were as much a characteristic of the Crusader period as conflict.[1]

However, a serious consideration of secondary literature is not an issue at stake in the reviewed book. The confrontational image and the importance ascribed to the Crusades aims not at scholarly discourse, but at a wider audience. The subtext underlying the book is the argument that the Crusades were a precursor of the current situation in the Middle East. This perception is already expressed by the book′s cover: the modern-day statue of Ṣalāḥ al-Dīn in Damascus is placed in front of al-Aqsa Mosque with the Dome of the Rock—currently one of the most potent symbols in the Middle East—looming from behind. In combination with the book′s dedication to the martyrs of the al-Aqsa intifada the framework for the following narrative is clearly set. Here, the Crusades appear as an ″expansionist settler project,″ which set the precedence for ″European colonialism″ and ″imperialist Zionism″ (p. 5). While such explicit comments are rare, the subtext emerges repeatedly, for instance in the continuous use of the term *istīṭān* when referring to the Crusading movement or the exceptional stress on the term ″Palestine″ in contrast to the more contemporary *Bilād al-Shām.* Such an ahistorical tendency towards the sources is also visible when the medieval authors′ disinterest in the Muslim reconquest of Jerusalem in 637/1240 is encountered with incomprehension (p. 126). Qāsim does not try to understand their different perspectives on this event, but prefers his own image of the Crusades as an early expression of a millennial conflict between two blocs.

In the course of this general picture, the text also restates on a smaller scale arguments which would have merited a more subtle analysis. Ṣalāḥ al-Dīn′s career

---

[1]See for example Michael Köhler, *Allianzen und Verträge zwischen fränkischen und islamischen Herrschern im Vorderen Orient* (Berlin/New York, 1991).

is seen as a teleological development, where every step led to the inevitable battle at Hattin (pp. 33–34, 60); the Mamluks remained throughout their rule foreigners to Egyptian society (p. 267); and—as referred to above—their dynasty declined over a period of some two hundred years. At the same time, central rule is generally seen as the positive norm, implying stability and strength, while regionalized rule is equated with chaos and failure. Consequently, the author criticizes the Ayyubid successors of Ṣalāḥ al-Dīn who did not stand united and, due to this neglect of their ″historic role,″ had to step back for the benefit of the Mamluks (pp. 137–38).

The sources employed in the course of the text are somewhat problematic. The main medieval author referred to throughout the text is, similar to the source-basis in Qāsim′s earlier works, al-Maqrīzī (d. 845/1442), who is described as a ″contemporary historian″ (e.g., p. 150). Authors who were closer to the respective events described, such as Ibn Shaddād (d. 632/1234) and Ibn al-Athīr (d. 630/1232) for the early Ayyubid period, are used only as additional material. The issue of primary sources is further complicated by the difficulty in pursuing the author′s references. Often it is not clear which edition has been used. Some notes are incomplete and the bibliography omits the work in question altogether.[2] For other works different editions are given in the bibliography and in a footnote, so that it remains unclear for the following passages which edition is referred to.[3]

Secondary literature is merely discussed in order to disprove the arguments of ″historians of the West″ who have either tried to belittle the military genius of Ṣalāḥ al-Dīn (p. 58) or have delighted in speculations concerning possible courses of mutual Mongol-Christian affections (p. 192–93). The secondary literature referred to, both Arabic and English, is largely limited to monographs to the exclusion of journal articles. The English literature stops in the early 1970s, the Arabic literature, with the exception of the author′s own works, was largely published in the 1980s and earlier.

In sum, it is regrettable that this work by one of the specialists in Ayyubid and Mamluk history does not offer a more original outlook on this period′s events. As it stands, it is a rather interesting source for the study of modern-day perceptions of the Crusades.

[2]For example Ibn al-Athīr, *Al-Tārīkh al-Bāhir fī al-Dawlah al-Atābakīyah,* which is mentioned p. 55, n. 36. The note cannot refer to the work′s standard edition by ʻAbd al-Qādir Aḥmad Ṭulaymat (Cairo, 1963).

[3]For example Ibn Shaddād, *Al-Nawādir al-Sulṭānīyah wa-al-Maḥāsin al-Yūsufīyah.* The bibliography cites the edition by Jamāl al-Dīn al-Shayyāl (Cairo, 1964), while note 10, page 19 cites an anonymous edition (Cairo, 1317).

SHAMS AL-DĪN MUḤAMMAD IBN AḤMAD AL-DHAHABĪ, *Al-Mu'īn fī Ṭabaqāt al-Muḥaddithīn*. Edited by Muḥammad al-Sa'īd ibn Basyūnī Zaghlūl (Beirut: Dār al-Kutub al-'Ilmīyah, 1998). Pp. 430.

REVIEWED BY LI GUO, University of Notre Dame

This volume contains an edition of al-Dhahabī's biographical dictionary of the hadith transmitters, from the early *ṣaḥābah,* or the Prophet's "companions," to those who were active in the twenties of the seventh/fourteenth century. During his extraordinarily prolific career, al-Dhahabī wrote, besides his major works such as *Tārīkh al-Islām,* an amazing number of short manuals and pamphlets of the *rijāl*/*ṭabaqāt* genre, in which he registered the names, and sometimes biographical sketches, of the hadith transmitters and other categories of Muslim learned men. A few of these manuals have recently been made public, and they all read like a check list that contains not much more than mere names. The volume under review is one of these. It contains 2,443 names of hadith transmitters. Each is described in footnotes by the editor with some bibliographical references as well as a short indication the person's "degree" of qualification regarding his/her authenticity, or reliability, or perhaps liability, in the hadith material transmitted on his/her authority or through him/her. The various "degrees" range from *thiqah* (trustworthy), *ṣadūq* (reliable), *lā ba's bihi* (so-so), to *ḍa'īf* (weak). And each of these is further classified with more degrees of quality. The later the person's date, the more details are given.

The editor's labor is mainly seen in the extensive indexes (pp. 233–427). The reader can, for example, search according to proper names, or *kunyah*-nicknames, or *nisbah*-surnames. Women's names are listed in separate indexes. To the disappointment of the readers of this journal, the persons who lived in the Mamluk era, that is, the *ṭabaqah*s, in al-Dhahabī's classification, "from the fifties up to the seventies of six hundred" A.H. and onwards occupy only a slim ten pages (pp. 221–32). It is also disappointing that this is hardly a critical edition by any measure. One knows nothing about the basic information regarding the manuscript(s) and the method of editing. The editor did not even bother to provide a bibliography; so all the cryptic signs and abbreviations one finds in the footnotes are nothing but puzzles and riddles. One cannot help but wonder, besides perhaps some commercial gain, what else there is to explain why the volume should have been put together in the first place. Have we not already seen enough of the scissors-and-paste method of mass producing, or abusing, medieval Arabic texts?

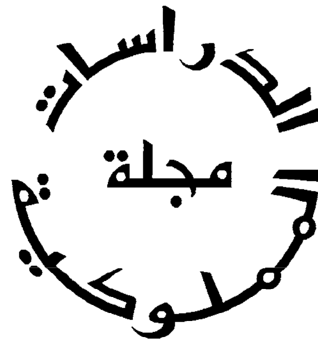
Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	’	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	‘				
		ة	h, t (in construct)			ال	al-		



ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
اَ	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before ″sun″ letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, mi’ah, ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shi‘i, Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

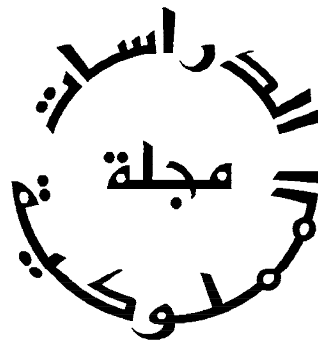
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk or online, together with a printed copy. The print copy should have full and proper diacritics, but the disk or online copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of primary and secondary sources, created and maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review.*

ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig
Prize for Mamluk Studies

The Prize Committee is pleased to announce that Tamar el-Leithy (Ph.D., Princeton University) has been named the inaugural recipient of the Bruce D. Craig Prize for Mamluk Studies for his dissertation:

"Coptic Culture and Conversion in Medieval Cairo: 1293–1524"

The Committee based its decision on el-Leithy's insightful and original interpretations of the topic, based upon his close and careful use of previously neglected sources from the medieval Coptic community of Egypt. His critical approach to previous scholars' work on conversion results in important questions regarding their conclusions. The Committee commends el-Leithy for his valuable contribution to the field of Mamluk Studies. An abstract of the dissertation is appended to this announcement.

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2005 Prize, dissertations must be defended by December 31, 2005, and submitted to the Prize Committee by January 31, 2006. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

The Prize Committee for 2005 consisted of Donald P. Little (McGill University); Marlis Saleh (University of Chicago); and Warren C. Schultz (DePaul University).

Abstract: "Coptic Culture and Conversion in Medieval Cairo, 1293–1524"

When Islam was half as old as it is today, Egypt was swept by mass conversions that irrevocably altered its religious history and demographic composition. In the early 8th/14th century, various pressures on the Coptic Christian community triggered a pivotal wave of conversion to Islam. While conversion protected lives and jobs, it did not guarantee immunity: converts often fell prey to the suspicions of their new co-religionists, provoking further regulation and Muslim anxieties of influence. Conversion rendered Copts socially marginal, but concomitantly culturally central.

Supplementing traditional Muslim accounts with unpublished legal documents and Coptic sources, this dissertation investigates how conversion was experienced, negotiated, and represented. The first section discusses hitherto unknown responses to the conversion wave, including the legal ruse of single-generation conversion, by which converts maintained their progeny as non-Muslims; a wave of Coptic martyrs in the late 8th/14th century; and a Coptic rite of quasi-rebaptism through which converts reverted to Christianity. The second part examines representations of converts in Muslim biographical dictionaries, including the epithets applied to converts and the tropes of religious suspicion. The third section investigates everyday social practices of converts like residence and patronage patterns and compares these to the suspicious charges of Muslim authors. The final section uses an unpublished collection of the correspondence of Patriarch Yuhanna XIII (1484–1524 A.D.) as a prism onto the long-term effects of the conversion wave on Coptic Christianity and culture.

The Study of Islam within Mamluk Domains

Religion was ubiquitous in the ancient and medieval worlds. It touched nearly everything; some things it saturated. Religion was powerful in China and India, Africa and South America, and certainly in Europe and the Middle East, where people consciously defined themselves in terms of the domains of faith: Christendom and the Abode of Islam. In such a context, nearly everything could have a religious dimension. As a result, scholarship on the Mamluk period (648–923/1250–1517) often touches on religion, and the University of Chicago's *Chicago On-Line Bibliography of Mamluk Studies* lists nearly five hundred entries under religion alone. That number easily doubles when we add articles on just two important religious figures of the period, Ibn al-ʻArabī and Ibn Taymīyah; relevant articles on art and architecture, economics, literature, and scholarship could double the number of entries yet again. What is required at the outset, then, is a definition of religion to serve as a guiding and limiting principle for this review:

> Religion is "an institution consisting of culturally patterned interaction with culturally postulated superhuman beings."[1]

As with other human institutions, religion consists of systems of belief, action, and values, where beliefs are generally normative, rituals collective, and values prescriptive. However, religion differs from other cultural systems in that it makes direct reference to interactions with superhuman beings, or "counter-intuitive agents."[2] In the following review, then, I will focus primarily on recent studies of religion in the Mamluk age that I believe represent some of the prevalent trends, topics, and problems in this area. Further, it should be noted that in Mamluk domains, religion had three major instantiations: Judaism, Christianity, and Islam. Since I am not a specialist in either Judaism or Christianity, I have narrowed my scope to the study of Islam, though some references will be made to other faiths when occasions warrant.

Strangely, while the *Cambridge History of Egypt* contains separate chapters on Christian and Jewish communities in medieval Egypt, it does not include a

[2]Ibid., and see Ilkka Pyysiainen, *How Religion Works* (Leiden, 2001), 9–23.

chapter on Islam in the same period.[3] Naturally, there are competent references to Islam throughout the *History's* various articles on the Mamluk period,[4] but there is no comparable study of Muslim communities in terms of their religious beliefs and practices. This is a telling statement about the field of Mamluk studies in general. For, as we shall see, there are a number of fine articles and books on particular facets of Islam in the Mamluk period, but I know of no book-length survey in any language on Islam there. Indeed, the source most often cited on this subject is an article written nearly forty years ago by Annemarie Schimmel.

The late Dr. Schimmel is justly renowned for her many erudite works on Islamic mysticism, but one of her early and enduring interests was the Mamluks. In 1943, Schimmel published "Kalif und Ḳāḍī im spätmittelarterlichen Ägypten"[5] and this would serve as an important source for her broad survey modestly entitled "Some Glimpses of the Religious Life in Egypt during the Later Mamluk Period."[6] Schimmel began by describing the largely ceremonial position of the caliphs and their subordination to the Mamluk sultans, who, nevertheless, viewed themselves as protectors of the faith. She then reviewed important religious events, including the Friday prayers at the Citadel, the fast of Ramaḍān and the ʻĪd al-Fiṭr, the annual Hajj and the ʻĪd al-Aḍḥá, and the celebration of the Prophet's birthday and lesser *mawlid*s of various saints. This leads to her account of Sufism in this period and to brief mention of several institutions, including the *khānqāh* and the *zāwiyah,* and the more prominent Sufi orders. Schimmel noted that Sufi doctrines and practices were at times controversial, as was the case in protracted disputes over the works of Ibn al-ʻArabī (d. 637/1240) and Ibn al-Fāriḍ (d. 632/1235). She then concluded with a few brief remarks on astrology, fortune-telling, unlawful taxes, and corrupt judges.

In many respects, Schimmel staked out the areas for later research, and several

For a later German version see her "Sufismus und Heiligenverehrung im spätmittelalternlichen Ägypten," *Festscrift für W. Caskel,* ed. Erich Graf (Leiden, 1968), 274–89. In 1995, Dr. Schimmel mentioned to me that she still hoped to write more on the Mamluks.

of her opinions were standard in Mamluk studies until recent years. This is particularly the case for her characterization of the religious life of the Mamluk military elite:

> The impression that we get from the later sources is that neither the Mamluk Sultans themselves nor the *amirs* who rose from among them had any interest in spiritual things. Only a comparatively small number of them had sufficient knowledge of literary, or at least grammatically correct, Arabic.[7]

However, Schimmel tempered this sweeping judgment, as she went on to relate accounts of pious behavior by Mamluks, their sincere defense of Islam, and their financial support of religious officials and saintly individuals.[8]

That many Mamluks were, in fact, believing Muslims was conclusively shown about twenty years later by Donald P. Little in his influential article ″Religion Under the Mamluks.″[9] Little draws attention to Ibn Khaldūn′s view of the Mamluks as sent by God to save Islam from the infidel Mongols, for, as Ibn Khaldūn noted, the Mamluks ″embrace Islam with the determination of true believers, while retaining their nomadic virtues.″[10] Little argues persuasively that a strong Muslim faith and identity underlie many Mamluk military actions against the Mongols, Crusaders, and Shiʻis, as well as the Mamluks′ lavish patronage of mosques, madrasahs, *khānqāh*s, and *zāwiyah*s, and the many religious personnel employed in them. Of special importance to the Mamluks were the holy cities of Mecca, Medina, and Jerusalem, which they funded generously. Of course, economic and political motives were involved in Mamluk support of Islam and its institutions; *waqf*s supported Mamluks and their families as well as men of religion, and the sultans were not about to cede power to their puppet caliphs. In the vital area of religious law, too, the sultans sought to adjust the system in ways always favorable to their policies and desires.[11] Still, the Mamluks supported the religious establishment as well as wandering mendicants and Sufi shaykhs, but they took care to suppress individuals or groups who posed a threat to civil authority. Such was the case of the Aḥmadīyah-Rifāʻīyah dervishes with their outlandish dress and strange behaviors, not to mention their close relationship with the Mongols, archenemies of the Mamluks. Similarly, the Mamluks sought to limit non-Muslim religious practices, especially Christian

festivals and celebrations that were accompanied by wine, prostitutes, and brawling, while Christian officials in the civil administration were forced to convert to Islam on occasion, though this was by no means a Mamluk policy.[12] By contrast, respected Muslim scholars might also find themselves opposed by the Mamluk ruling elite if their beliefs and/or interests clashed, as happened with Ibn Taymīyah (d. 728/1328), whose vociferous condemnation of other scholars and popular Muslim practices landed him in jail several times.[13] In his assessment of religion under the Mamluks, Little concludes:

> Out of religious conviction and personal piety in some instances but also with an acute sense of their own welfare, the Mamluks strove to keep diverse religious forces in Egypt and Syria in a state of equilibrium. In such circumstances, Islam undeniably flourished.[14]

Whatever their personal proclivities toward Islam, it has long been asserted that politically the Mamluks relied on Islam for their legitimacy to rule. This crucial relationship has been most recently analyzed by Anne Broadbridge in her article ″Mamluk Legitimacy and the Mongols: The Reigns of Baybars and Qalāwūn.″[15] In relation to their subjects, the Mamluks swore to protect and promote Sunni Islam, particularly against their external political rivals, the Ilkhan Mongols. To counter the Chinggis Khanid dynasty and its prestige in terms of lineage and military success, the Mamluk slave dynasty laid claim to defending the faith, enforcing the shari‘ah and, especially, to their priority and, hence, superiority in embracing Islam.[16] The issue of legitimacy, however, is but one, albeit major,

strand in the web of relations binding the Mamluks within Islam. In a thoughtful essay, ″The Mamluks as Muslims,″ Jonathan Berkey suggests that we view the Mamluks ″as any social group . . . participating in the dynamic process of constructing and reconstructing Islam.″[17] Far from a static and monolithic tradition, Islam in the Mamluk domains was a complex and malleable faith, whose particular beliefs and rituals were often shaped by Mamluk influence. The Mamluks endowed religious institutions and patronized religious scholars, and they also participated in religious debates and in the transmission of religious knowledge. Though many Mamluks had little interest in religion, and often led lives criticized by the ulama, other Mamluks took an active interest in their adopted faith.

The range, diversity, and complexity of Islam in the early Mamluk period are admirably described and analyzed by Louis Pouzet in his study *Damas au VII^e/XIII^e siècle: vie et structures religieuses d′une métrople islamique.*[18] Pouzet begins his study of religious institutions by examining the four Sunni law schools and some of the scholars and scholarly families that controlled them in thirteenth-century Damascus. While the Shafiʻis were dominant under the Ayyubids, Hanafis gained influence under the early Mamluks, who began to appoint a chief judge for each of the four law schools. Despite their importance, the chief judges of Damascus were now subordinate to those of Cairo, and the Mamluk capital that would dominate their domains. Nevertheless, these and other judges were actively involved in both the religious and political life, and some of them served as official Friday preachers *(khaṭīb),* who swore allegiance first to Ayyubid, then to Mamluk sovereigns. In contrast to such religious officials were the more popular preachers *(wāʻiẓ)* who spread their religious teachings among the masses. Pouzet carefully surveys religious scholarship and teaching in Damascus, with a focus on the madrasah and *zāwiyah*. He describes various teachers and officials who worked in them, with some remarks on the *waqf*s, or religious endowments, that supported them, and he provides a detailed account of their curriculum, which included Quranic studies and recitation, the study of hadith, law, jurisprudence, and theology.[19]

Muslims in Damascus also cultivated the ascetic and mystical life, both individually and collectively. Pouzet refers to several families prominent in Sufism and its orders in the region, members of which held the prestigious office of *mashyakhat al-shuyūkh.* Despite occasional controversies, usually between supporters of Ibn al-ʻArabī and his detractors, such as Ibn Taymīyah, Sufism

remained an important element in spiritual lives of many Muslims of the period. Pouzet notes the presence of religious minorities in the area including various Shiʻi groups, Christians, and Jews, and he then turns to issues of religion and political power. For both the Ayyubids and Mamluks, unity and the defense of Islam against the Mongols in the east and Christians in the west was paramount. Invasions and threats of invasion were eminent features of politics, religion, and life in general, and these hostilities sometimes made life hard for Christians and Jews living as protected people among the Muslims of Damascus.[20]

In his final chapter, Pouzet broadens his perspective of religious institutions to include religion's roles in the everyday life of Muslims. He reviews the importance of liturgy and prayer, the hajj pilgrimage to Mecca, and pilgrimage to shrines, celebrating the Prophet's birthday, and participating in war and jihad. Also essential to daily life were rules and laws regulating personal and public conduct, which were meant to keep Muslims on the straight and narrow and away from temptations to drink and carouse. The interpretations of premonitions and dreams were another essential feature of the faith, as were death and burial, and the collective religious rites and prayers to ameliorate or ward off disasters. In all, Muslim religious life in the thirteenth century continued largely unaffected by the political change that marked the end of the Ayyubids and the rise of the Mamluks. Islam continued to mark the times of day and the seasons, and set the moral and ethical standards of slave and sultan alike.[21]

Pouzet's *Damas au VII^e/XIII^e siècle* is ground-breaking in many respects, as other scholars over the last fifteen years have picked up and developed various subjects and concerns referred to in this insightful work. Among them is Islam's importance to the Mamluk sultans. In his book and elsewhere, Pouzet noted the dealings between Baybars I (d. 676/1277) and the controversial Sufi shaykh Khaḍir al-Mihrānī (d. 676/1277), and this relationship was studied further by P. M. Holt and Peter Thorau.[22] Several studies of other individual sultans and their reigns have also drawn attention to religion in their personal and public lives. Linda Northrup assessed Qalāwūn's (d. 689/1290) building projects, religious opposition to some of them, and the sultan's attempt to influence men of religion via appointments and patronage.[23] In addition, Carl Petry has contrasted Qāytbāy's (d.

901/1496) concern for Sunni propriety with al-Ghawrī's (d. 922/1516) less successful attempts to "portray himself as the 'Guardian of Sunna.'"[24] One notable way that al-Ghawrī and other Mamluks could publicly proclaimed their piety was in their generous financial support of the annual hajj caravan, particularly those carrying royal wives, though this appears to have backfired for al-Ghawrī's wife who was as cheap as her husband.[25]

Such royal patronage of religion exerted great influence on the shape and practice of Islam in the Mamluk period, especially in the form of *waqf,* an endowment for ostensibly pious goals. There are numerous studies of the *waqf* documents of this period and of their economic, social, and political importance, including Muḥammad Amīn's groundbreaking book *Al-Awqāf wa-al-Ḥayāh al-Ijtimāʿīyah fī Miṣr: 648–923/1250–1517.*[26] Amīn dedicated an entire chapter to the religious dimensions of these endowments, especially in their capacity to support religious infrastructure. The *waqf* was essential for financing the construction and maintenance of mosques, madrasahs, *khānqāh*s, and other institutions, for promoting the hajj and jihad, and for supporting the various types of religious personnel necessary for the spread and practice of Sunni Islam.[27] More recently, Adam Sabra has considered the religious importance of *waqf* in the context of his study *Poverty and Charity in Medieval Islam.*[28]

Sabra begins with a discussion of the ideals and realities of poverty in Mamluk domains, an important issue to jurists particularly regarding who should give alms and who should receive them. In this light, he reviews various social classes among the elite and the common people, who were not always poor. Certain groups, including the chivalrous *futūwah* orders, pledged to aid the poor, while others, such as the morally suspect *ḥarāfīsh,* were actively involved in begging for such aid.[29] Sabra next outlines the religious ideals of asceticism and poverty with a few references to Sufis of the Mamluk period, but relying largely on the work of Abū Ḥāmid al-Ghazzālī (d. 505/1111) and earlier authorities, who distinguish between material and spiritual poverty, and their effects. For most of these Sufi authors, wealth was a distraction, which could be dispelled by giving alms. By

contrast, Ibn al-Jawzī (d. 597/1200), Ibn Taymīyah, and other jurists would not equate poverty with piety, claiming that the accumulation of wealth for lawful and pious purposes was a legitimate undertaking. Similarly, the noted Sufi Abū Ḥafṣ al-Suhrawardī (d. 632/1234) held that while spiritual and, at times, material poverty were essential to the mystic path, a Sufi need not be a pauper, and a number of Sufis accepted the support of Mamluk amirs and sultans.[30]

Throughout his study, Sabra seeks to maintain ″the essential distinction between poverty as a form of piety and poverty as a social disability.″[31] It was persons in the latter category who were qualified to receive charity. As for those who gave alms and blessings to the poor, they legitimized their roles as benefactors, who were to receive, in turn, the blessings *(du‘ā’)* of the recipient and, presumably, heavenly reward. Sabra reviews the opinions of the early Sufis, and al-Ghazzālī in particular, on the etiquette of giving and receiving *zakāh* which, like other forms of charity in the Mamluk period, remained a private affair with little state control.[32] While anyone could give alms, it was the Mamluks who were most often remembered for their substantial almsgiving. They fed the poor during Ramaḍān and on special holidays, and gave charity, freed prisoners, and relieved debtors in hopes of securing God′s favor against personal misfortunes, as well as against plague, war, famine, and other disasters.[33]

Of course, the Mamluks′ most extensive and enduring form of charity was the *waqf,* which the Shafi‘i scholar al-Nawawī (d. 676/1277) defined in economic and religious terms as ″the alienation of revenue-generating property with the principal remaining inalienable, while its revenues are disbursed for a pious purpose, in order to seek God′s favor.″[34] These endowments served the larger Muslim community by providing a range of essential services, including hospitals and medical care, education, some housing for students, employees, and destitute women, food and water for the poor, and the burial of their dead. Further, at funerals, the Mamluks and other Muslims distributed *kaffārah,* alms for the expiation of sins committed by the deceased.[35] This connection to the dead is essential for understanding the religious significance of the *waqf* and other forms of almsgiving in the Mamluk period. For, while most of these endowments provided revenues to their founders and their direct descendents, they were also believed to yield a spiritual profit. As Sabra notes, many endowment deeds refer to securing reward for the afterlife

based on the exchange between the benefactor and the poor, of alms for prayers. Moreover, Mamluk building complexes supported by *waqf*s often contained the graves of the founder and some of his immediate relatives. There, they were to benefit from prayers said on their behalf at the site, which was frequently located near a saint's tomb or similarly sacred ground.[36]

This spiritual return on alms has been detailed further in my article "Saving Muslim Souls: the *Khānqāh* and the Sufi Duty in Mamluk Lands."[37] Based on a study of *waqf* deeds, religious tracts on death and afterlife, and other sources, I discovered that the Mamluk *khānqāh* served primarily as a chantry, where Sufis prayed for their founder's earthly and heavenly benefit. *Khānqāh* endowment deeds explicitly mandate that the Sufis employed there were to perform a daily communal ritual called *ḥuḍūr*. This ritual included reciting specific prayers and Quranic passages, considered by al-Qurṭubī (d. 681/1273), al-Suyūṭī (d. 911/1505), and other scholars of the period to be the most efficacious for attaining divine favor in this world and the next, and especially helpful for reducing the severity and length of the deceased's purgatorial punishment in the grave.[38]

This religious dimension of almsgiving underscores the centrality of death within medieval Islam, which has been described by Jane I. Smith and Yvonne Haddad in *The Islamic Understanding of Death and Resurrection*.[39] Their very useful study, however, is confined largely to matters of theology and doctrine, and so they did not consider the more personal matters of grief and mourning, and religious responses to them. The work of mourning is generally a difficult process through which the living confront the death of a loved one and gradually resolve their grief. The bereaved come to accept their loss as they find consoling substitutes in the memories and idealized images of the dead. Crucial to this process are funerary and mourning rituals, and religious beliefs that assert the continued life of the deceased, albeit in another form and/or realm.[40] The death of a child often

evokes strong emotions, and this is the subject of ″Child Mortality and Adult Reactions,″ the final section of Avner Gil′adi′s book *Children of Islam*.[41] Based largely on sources from the Mamluk period, Gil′adi observes that Muslim parents regarded their children as a divine gift due, in part, to high rates of child mortality. Not surprisingly, there was a great need for consolation for the many children who died. Juridical and theological works provided hope to bereaved kin by affirming that these children died in innocence, and so dwell in Paradise where they will one day be reunited with their believing parents. Parental grief was also addressed by consolation treatises composed of Quranic citations, hadith, anecdotes, and stories designed to assure the bereaved that they were not alone in their sorrow. As important, the consolation treatises attempt to channel the tumultuous emotions provoked by the death of a loved one into theologically and socially appropriate modes of behavior. Hence, they counsel patience and trust in God, and discourage excessive outbursts of emotion, which might be construed as ingratitude, if not skepticism, regarding the divine promise of immortal life in heaven.[42]

Similarly, elegies from the Mamluk period reveal some of the Muslim doctrines and beliefs invoked to account for the death of loved ones, while affording us the opportunity to witness individual and communal responses to death. This has been my focus in ″A Bird Ascends the Night: Elegy and Immortality in Islam,″ and several other articles written on the elegies composed by the Cairene scholar Abū Ḥayyān al-Gharnāṭī (d. 745/1344) for his daughter Nuḍār (d. 730/1329), who died at the age of twenty-seven.[43] Throughout his elegies, Abū Ḥayyān lauds his daughter′s erudition and scholarly accomplishments, her impeccable reputation and saintly life. Making allusions to the Quran and hadith, Abū Ḥayyān envisioned his lost Nuḍār as a martyr to illness who must surely have earned a place in Paradise. In this way Abū Ḥayyān sought consolation in a creative and religious response to his personal tragedy.[44] Such was also the case for the outstanding Mamluk poet Ibn Nubātah (d. 768/1366), who wrote a series of elegies after the death of his young son(s). Thomas Bauer has examined this verse in an insightful article, ″Communication and Emotion: The Case of Ibn Nubātah′s *Kindertotenlieder,*″ where he probes the complex interrelationship between poetic speech and

overwhelming emotions.[45] Through a close reading of one of Ibn Nubātah′s elegies, Bauer reveals how such poems assist the work of mourning for both the poet and his audience. Specifically, while his son is in heaven above, the poet claims to be in hell below, where he must strive for a dignified patience until they are united again in Paradise. Building on a number of timeless metaphors, including ″life and death are a journey,″ and ″people are plants that must wither and die,″ Ibn Nubātah attempted to make sense of his personal sorrow by viewing death as part of a larger fated cycle. In this way, the poem may offer solace and produce a catharsis, which allow the bereaved to return to public life while reasserting social stability in the face of inevitable death.[46]

Though the problems raised by death are central to all religious traditions, they are by no means religions′ only focus. Regulating life, individually and socially, is also a major task, and within Islam, this was normally undertaken by the ulama. In his foundational study, *The Civilian Elite of Cairo in the Later Middle Ages,* Carl Petry concluded that status among the ulama was determined largely by an individual′s competence in Islamic law and literary skills. A qualified scholar might then serve in the Mamluk bureaucracy, the legal system, or in a number of other religious occupations. In terms of religion, the jurists and legal scholars claimed to be guardians of the shariʿah and *sunnah,* and so came to hold moral authority and influence.[47] Beyond the legal system, members of the ulama might work as readers of religious texts, prayer leaders, preachers, spiritual advisors, and professors and teachers of various religious subjects ranging from the Quran and hadith to law and ritual, theology and mysticism.[48] Generally viewed by medieval Muslim society as the custodians of religious knowledge, the exemplars of normative behavior, and, at times, repositories of spiritual power *(barakah),* the ulama were in a position both to guide the life of the community as well as legitimize the Mamluk dynasty.[49]

Though they were dependent on the Mamluk regime for financial aid and political support, the ulama nevertheless retained considerable independence through their religious and academic networks, and especially through their control of higher education, as noted in separate studies by Michael Chamberlain and

Jonathan Berkey. In *Knowledge and Social Practice in Medieval Damascus, 1190–1350,* Chamberlain examines the interactions of the learned elite with the Mamluks. He asserts that the transmission of religious knowledge followed distinctive lines of transmission between teachers and students bound by loyalty and service. Further, in Damascus, the madrasahs, *khānqāh*s, and similar foundations sponsored by the ruling class were not institutions of higher education so much as forms of patronage. "They were useful to the ruling elite in providing a means of supporting the civilian elites upon whom they depended as a channel of influence into the city, as agents of social control and legitimation, and as religious specialists."[50]

In *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education,* Jonathan Berkey provides a detailed description of religious education involving Islamic jurisprudence, normally the preserve of the scholarly elite and their students. Like Chamberlain, Berkey notes that a close personal relationship between master and student was at the heart of this system of normative education. Berkey claims that the flexibility within the education system "resulted from the complete absence of any overarching state or ecclesiastical authority responsible for shaping Islamic education, or indeed any aspect of Islamic religious culture. Norms might be established, in practice as in belief, by consensus within the Muslim community."[51] Berkey underscores this diversity by noting the difficulties in even defining the term madrasah, the most common historical marker for a school of Islamic jurisprudence. In fact, some madrasahs were not educational institutions at all, while mosques and *khānqāh*s could also sponsor educational endeavors, including the study of law. Moreover, the ulama were generally not bound exclusively to a single institution for their support; some scholars held multiple posts at once and moved from institution to institution. Likewise, scholars participated in teaching circles held outside of their respective institutions, and these gatherings served to extend religious education beyond the realm of jurisprudence and higher education, to a larger body of interested non-academics, including women and Mamluk amirs.[52] As important, most classes and nearly all education, for that matter, took place in a religious setting. Many of the most important educational institutions were part of a madrasah-mosque complex with

classes and study periods organized around the times for formal daily prayers, and surrounded by other pious and devotional activities such as the public recitation of the Quran or hadith. As Berkey insightfully observes, the transmission of religious texts ″took place alongside, and sometimes as part of Sufi activities, public sermonizing, and popular religious celebration, and those who devoted themselves to education did not necessarily see their efforts as something fundamentally distinct from public worship.″[53]

In his recent book, *Popular Preaching and Religious Authority in the Medieval Islamic Near East,* Berkey again addresses the transmission of religious knowledge, but by those who were generally outside the small circle of religious professionals. In particular, he studies the many popular preachers and storytellers, and how their activities raised issues of the interrelationship between high and popular cultures, on one hand, and questions of religious authority, on the other.[54] Berkey begins with a discussion of some of the key players involved: the *khaṭīb* was generally a state-appointed religious scholar who delivered the official Friday sermon, while the *wāʿiẓ* (″preacher,″ ″admonisher″) and the *qāṣṣ* (″storyteller″) were often independent and less educated though they, too, called the common people to lead a pious life. As such, this latter group, like the ulama, actively transmitted religious knowledge, but this became a major source of tension. For as Berkey notes, ″the controversy that their activities engendered was in the final analysis about how the common people were to understand Islam.″[55] That much was at stake is clear from the many critiques of the popular preachers written throughout the medieval period by members of the religious establishment, including Ibn al-Jawzī, Ibn al-Ḥajj (d. 737/1336), Zayn al-Dīn al-ʿIrāqī (d. 806/1404), and ʿAlī ibn Maymūn al-Idrīsī (d. 917/1511). Though these and other members of the ulama held a variety of theological and legal views, they were united in their stand against unlawful innovation in religion, which they sought to define and articulate in a system of proper Sunni belief and ritual.

Yet this was a daunting task, for the popular preachers and religious storytellers were pervasive in medieval Muslim society, and the common people often adored

them as sources of religious edification and entertainment. Their critics, however, warned of charlatans and fools, who might cheat the people out of their money, while leading them astray. Such imposters and ignoramuses lacked proper education and certification, and so they spread lies, weak hadith, and heresies, while their preaching sessions were thought to encourage the mixing of the sexes and other illicit activities. This was a crucial issue, for popular preaching and storytelling were acceptable, even honorable, activities provided that their practitioners were trained and regulated by the ulama. Indeed, many critics of the popular preachers and storytellers were, themselves, preachers as well as religious scholars. Their sermons were punctuated by Quranic quotations and allusions, traditions of the prophet Muḥammad, and stories of the earlier prophets. Further, two themes central to all preaching were the renunciation of worldly goods and preparation for the Day of Judgment. Berkey reviews these and other themes found in the sermons of popular preachers, and their emotional impact on their audiences. He observes that underlying much of this preaching was Sufism, which was a prominent feature of Islam in the Mamluk period. Poverty and death were major topics of medieval mysticism, which sought to foster the love between God and His servants. But some critics feared that public expressions of pious love would be misconstrued by common folk as blatant eroticism, while the public presentation of mystical teachings could be even more dangerous. In response to such criticism, others defended popular preachers and storytellers as serving a religious service essential to the Muslim community.[56]

Berkey concludes that this debate over popular preachers and storytellers underscores the fact that while the ulama had emerged as the religious authorities of medieval Islam, precisely who qualified for membership in this elite group and on what basis remained somewhat ambiguous.[57] Here, Berkey touches on one of the most vexing problems in the study of Islam in the Mamluk period, namely what constitutes correct religious belief and practice. In a thoughtful article, "'Orthodoxy' and 'Heresy' in Medieval Islam: An Essay in Reassessment," Alexander Knysh reviews the use and general misuse of these terms in scholarship on Islam. He pointedly concludes that:

> Eurocentric interpretive categories, when uncritically superimposed on Islamic realities, may produce serious distortions. Thus such distinctly Christian concepts as "orthodoxy" and "heresy" foster a tendency to disregard the intrinsic pluralism and complexity characteristic of the religious life of the Muslim community, leaving

[56]Ibid., 36–52.
[57]Ibid., 88–96.

> aside significant and sometimes critical ″nuances.″ In order to escape these shortcomings, one should try to let Islamic tradition speak on its own terms, to let it communicate its own concerns, its own ways of articulation and interpretation of religious phenomena.[58]

This observation is particularly relevant for the Mamluk period when, as Chamberlain notes, arguments over correct religious belief were ″one of the premier forms of social combat.″[59] Chamberlain′s evaluation of the situation in Mamluk Damascus is apt for the entire Mamluk period:

> In Damascus, as in many pre-Ottoman Islamic societies, heresy and orthodoxy were problematic categories: there were no state or corporate bodies that promulgated correct doctrine. In Damascus there were partisans of several systems of belief, including shīʿīs, philosophers, ṣūfīs of various kinds, Ḥanbalīs, practitioners of kalām, and even at least one partisan of Ibn al-Rawandī.[60]

Members of the ulama, then, inevitably clashed on matters of doctrine and practice as they sought the right to assert and enforce their truth, with violence, if necessary.[61] Such was the unfortunate case of a Shiʿi legal scholar in Damascus. As Stefan Winter explains in his article ″Shams al-Dīn Muḥammad ibn Makkī ′al-Shahīd al-Awwal′ (d. 1384) and the Shiʿah of Syria,″ Ibn Makkī was declared an extremist and executed in Damascus in 786/1384.[62] Based on this and other cases, Winter determines that while accused heretics could be brought before religious authorities, there were no formal inquisitions organized to root out heresy. In fact, the Mamluk regime did not have a universal policy on the Shiʿah or Muslim heterodoxy, in general. As Winter notes:

> The Mamluk Sultanate, the Damascene *qāḍī*s, or simply an agitated crowd, *al-ʿāmmah,* were liable to declare certain Shiʿis to be intolerable heretics (*rāfiḍī*s). Yet none of them truly followed a consistent policy with regards to Shiʿism. The Sultanate′s campaigns

> and edicts were directed against certain Shi‘i communities of the province of Tripoli only, not against the Shi‘i faith *per se*.[63]

In addition to the sectarian differences of Sunni and Shi‘i, the ulama were also divided on issues of theology and, especially, law, with the four Sunni *madhhab*s serving as key markers of scholarly identity and organization. Indeed, it was conflicts among these law schools that led the sultan Baybars (d. 676/1277) to establish a chief judgeship for each of them.[64] This range and diversity of Muslim religious belief in the Mamluk period is readily apparent in Alexander Knysh's recent book *Ibn ‘Arabi in the Later Islamic Tradition*.[65] Knysh maps controversies involving Ibn al-‘Arabī and his thought throughout the medieval Islamic world, and several chapters focus on events in Mamluk domains. He notes at the outset that while the ulama have been studied extensively in terms of their social power and status, there has been less attention to "their intellectual concerns, doctrinal disagreements and factional differences."[66] Following a survey of Ibn al-‘Arabī's life and thought, and early biographical accounts of him, Knysh proceeds to analyze carefully the polemical tradition that formed against him.

Particularly authoritative for later generations have been numerous writings by the Hanbali jurist and theologian Ibn Taymīyah, who stressed the primacy of the shari‘ah over any sort of metaphysical speculation. Ibn Taymīyah zealously opposed anything that he perceived as religious innovation, and he preached jihad against Christians, Shi‘is, and Mongols. But Ibn Taymīyah also felt that Muslim society was under attack from within, especially by beliefs in divine incarnation, mystical union with the divine, and monism. Ibn Taymīyah asserted that such beliefs and doctrines undermine the essential distinction between God and His creation upon which true monotheistic religion was based. Thus he stridently condemned any mystical writings and their authors, whom he believed to be infected by the unity of being, as their teachings blatantly encouraged deviation from God's truth, which could only be found in the Quran, the *sunnah* of Muḥammad, and codified in the divine law.[67]

[66]Ibid., 3.

[67]Ibid., 87–111.

In his attacks, Ibn Taymīyah often reduced abstract and sophisticated mystical doctrines to the grossest pantheism for polemical and rhetorical purposes, yet he made careful distinctions among the monists, revealing a good understanding of their ideas. For instance, Ibn Taymīyah ruled that Ibn al-ʻArabī was not as insistent as some regarding absolute monism, perhaps out of respect for the law and careful attention to the Sufi path. Nevertheless, Ibn Taymīyah denounced Ibn al-ʻArabī's teachings, especially those found in the latter's *Fuṣuṣ al-Ḥikam,* which appeared to pervert God's literal message. Such allegorical exegesis by Ibn al-ʻArabī and others posed a grave danger to religion and society.[68] Further, their malignant doctrines had been spread in elegant forms such as Ibn al-Fāriḍ's verse, and so their debilitating effects upon the Muslim community were devastating.[69] Any claims to sainthood on behalf of such heretics, Ibn Taymīyah condemned as an absurd mockery of the religious law that was so necessary for proper communal life. As a result, compromise or accommodation was impossible, and Ibn Taymīyah declared that refutation of the monists was comparable to holy war against the Mongols.[70]

Ibn Taymīyah's refutations became the foundation for later polemics and public controversies that periodically arose in Mamluk domains. However, Ibn al-ʻArabī had many supporters among the ulama and the ruling class. As Knysh observes, acceptance or rejection of Ibn al-ʻArabī's ideas was often decided by temporal, not religious authorities. Moreover moderate scholars, including al-Suyūṭī, argued that statements made by Ibn al-ʻArabī and other saints of God could be reconciled with the Quran and shariʻah via allegorical interpretations. Therefore, Muslims should venerate them, not declare them infidels, though their difficult and obscure writings should be restricted to qualified scholars of religion.[71] What emerges from a study of the Ibn al-ʻArabī controversy is the fact that people on both sides of the dispute cut across the various classes and divisions of the ulama. Therefore, the debates and participants involved should not be reduced to static polarities like orthodoxy vs. heterodoxy or legists vs. mystics, which mask the ambiguity and ambivalence at the heart of the matter. Further, such controversies conclusively

[70]Knysh, *Ibn ʻArabi,* 50, 62, 96–99. Also see Th. Emil Homerin, "Sufis & Their Detractors in Mamluk Egypt: A Survey of Protagonists and Institutional Settings," in *Islamic Mysticism Contested,* ed. F. De Jong and B. Radtke (Leiden, 1999), 225–47, esp. 231–35.

[71]Knysh, *Ibn ʻArabi,* 113–40; 201–23.

show that for Islam in the Mamluk domains, beliefs and doctrine mattered. As Knysh concludes:

> Like other contested theological issues, Ibn al-ʻArabī′s legacy served as a convenient rallying point for various religio-political factions vying for power and supremacy. While no universal *ijmāʻ* has ever been reached on the problem of Ibn al-ʻArabī′s belief/unbelief, local campaigns to either vindicate or condemn him show that a relatively effective machinery was created by the ʻ*ulamāʻ* for defining and formulating an authoritative position on a given doctrinal issue.[72]

Finally, it should be stressed that nearly all of the antagonists and protagonists in the Ibn al-ʻArabī debate accepted and practiced Sufism in various degrees and forms. In ″Sufis & Their Detractors in Mamluk Egypt: A Survey of Protagonists and Institutional Settings,″ I attempt to gauge the place of mystical beliefs and practice in the Mamluk period. As was the case with Ibn al-ʻArabī, particular Sufis and their beliefs might be the target of censure, but many other aspects of Sufism were acceptable to most Muslims. The ulama were not polarized between mystics and non-mystics so much as they exhibited a range of opinion regarding mystical experiences and practice, their content and value, relative to other types of authoritative sources. Even Ibn Taymīyah accepted Sufism provided it was grounded in the literal message of the Quran and the prophetic *sunnah*.[73] Perhaps more telling was the fact that the conservative Maliki scholar Ibn Khaldūn (d. 808/1406) enumerated Sufism as one of ″the legitimate sciences that originated in Islam″ *(min al-ʻulūm al-sharʻīyah al-ḥadīthah fī al-millah)*. Elites and commoners alike sought the blessings of saintly shaykhs, and Sufi ceremonies were regularly attended by Muslims of all social classes. In fact, *ṣūfī* was a legitimate occupational category in *waqf* deeds. Not surprisingly, jurists and others criticized those who used the Sufi profession as a means to accrue large sums of money. Yet such behavior was inappropriate to any religious office, and this was not a critique of Sufis in particular, but of the ″ulama″ class, in general.[74]

Clearly, mysticism was a vital part of Islam in the Mamluk age, and this has been the focus of fruitful study for several decades. French scholars, including

Paul Nwyia,[75] Jean-Claude Garcin,[76] and Denis Gril,[77] have been quite active in the field, producing a number of fine articles and monographs, while Victor Danner[78] and Elmer Douglas[79] have contributed translations and studies of important Sufi texts from the period. Many of these and other specialized studies inform the best current introduction to the topic, *Le Soufisme en Égypte et en Syrie* by Éric Geoffroy. Though Geoffroy's ostensible focus is the later Mamluk and early Ottoman periods, this encyclopedic work covers much of the Mamluk centuries. He begins by situating Sufism within its larger social, political, and religious contexts, and he pays particular attention to the importance of the prophetic model and notions of saintliness in shaping Sufi traditions.[80] Geoffroy examines the important roles played by scholar-Sufis, charlatan Sufis, and the shaykhs and Sufis of the *zāwiyah*s and *khānqāh*s. He finds the *zāwiyah* to have been especially important for the teaching and training of Sufis, while he regards the *khānqāh* as a more impersonal semi-political institution.[81] I have touched on the *khānqāh*'s particular religious function above, and as Geoffroy notes, these institutions have received considerable scholarly attention. Leonor Fernandes and Doris Behrens-Abouseif have published a number of insightful studies on these institutions in terms of their architecture and social, economic, and religious roles, and to their work should be added more recent publications by Donald Little and ʻĀṣim Muḥammad Rizq.[82]

Geoffroy next reviews forms of affiliation among various Sufi paths and their major representatives in Syria and Egypt, with a comparison to those of other regions, and their mutual influences.[83] This is followed by an analysis of several prominent Sufi types including the ascetic, the practicing scholar, the inspired

illiterate shaykh, the accomplished master, the mad mystic, and finally, the *malāmatī* or blame-seeker.[84] Unfortunately, on this latter topic, Geoffroy did not have access to the fine study by Ahmet T. Karamustafa, *God's Unruly Friends: Dervish Groups in the Islamic Later Middle Period, 1200–1500*.[85] Karamustafa argues that the radical renunciation and social deviance that characterize these individuals resulted largely from their belief that Muslim society was an obstacle to salvation in the world to come. These antinomian mendicants similarly rebelled against the more established Sufi orders and institutions, which they regarded as unacceptable compromises with worldly life.[86]

Geoffroy goes on to survey some of the doctrinal debates of the period, including those on permissible forms of *dhikr* and *samāʻ,* the belief/disbelief issues regarding Ibn al-Fāriḍ, Ibn al-ʻArabī and monism, and the value of mystical inspiration.[87] As Geoffroy makes clear, in the face of such controversies, the various lines of Sufi initiation among the ulama were crucial to harmonizing mystical inspiration and practice with social propriety and law. Further, due to the support of Qāytbāy and, subsequently, the Ottoman sultan Selim I, Ibn al-ʻArabī and his doctrine gained wider acceptance. Geoffroy argues convincingly that during the Mamluk period, Sufism's success stemmed, in part, from its flexibility in adapting to a plurality of conditions and needs, from those of the religious elite to those of illiterate peasants. As such, Sufism proved to be a fundamental and dynamic part of medieval Muslim life, socially, culturally, and, above all, religiously.[88]

In his concluding remarks, Geoffroy draws attention to the work of Boaz Shoshan regarding the place and popularity of Sufism in medieval Egypt. Shoshan takes up this and other themes in his book *Popular Culture in Medieval Cairo*.[89] He highlights the importance of the Sufi orders to congregational life and calls attention to the sermons of popular Sufi shaykhs. Shoshan examines in some detail the sermons of Ibn ʻAṭāʼ Allāh (d. 709/1309), the celebrated Shādhilī Sufi master, who preached that faith and repentance were the foundation of religious life. Ibn ʻAṭāʼ Allāh warned his audiences against Satan and sins, and urged them to perform regularly their prayers and other required religious duties, and to visit the tombs of the saints. Shoshan then draws attention to the close relationship

between religion and magic, and he cites several cases of con-men and charlatans, followed by Ibn Taymīyah's condemnation of these frauds and their supporters.[90]

The popularity of magic at this time is further suggested by the work of Ibn Taymīyah's student, Ibn Qayyim al-Jawzīyah (d. 751/1349). Ibn Qayyim wrote an extensive refutation of beliefs in astrology, augury, and alchemy, which John W. Livingston has reviewed in his article "Science and the Occult in the Thinking of Ibn Qayyim al-Jawziyya." Livingston suggests that the occult was a refuge for many Muslims in the Mamluk period as they faced war, plague, famine, earthquakes, and other disasters that appeared to harbinger the Judgment Day. However, Ibn Qayyim and other members of the ulama denounced occult practices as sinful for they reduced God's undivided omnipotence to the flight of birds and moving stars. Significantly, Ibn Qayyim marshaled evidence that such practices were not only morally wrong, but scientifically implausible, and so they should be avoided.[91]

If the occult might relieve stress regarding the future, religious festivals could temporarily ease the burdens of the present, as Shoshan notes in his study of the Nawrūz celebration in Cairo. A popular spring festival, Nawrūz originated in pre-Islamic Iran, but it became associated with the prophet Abraham and spread to Egypt, where it was celebrated for centuries, including in the Mamluk period. Analyzing this holiday in terms of medieval European carnival, Shoshan notes that Nawrūz encouraged uninhibited, even wanton celebration, along with the reversal of social status. In this way Nawrūz may have eased social tensions among the populace, particularly among Cairo's lower classes.[92] More popular still than Nawrūz was the *Mawlid al-Nabī,* the birthday of the prophet Muḥammad, which has been studied by N. J. G. Kaptein in *Muḥammad's Birthday Festival*. While the main focus of this book is the *Mawlid al-Nabī* in North Africa, Kaptein provides a translation of a *fatwá* by al-Suyūṭī regarding the permissibility of celebrating the event. In his legal opinion, al-Suyūṭī examined the celebration in the context of religious innovation in general, and while conceding that the celebration was an innovation, he declared it to be a praiseworthy one, which brings heavenly reward to its participants. Significantly, Kaptein notes that al-Suyūṭī attributed the origins of the celebration to the thirteenth-century Ayyubid ruler Muẓaffar al-Dīn Kökbürü, thereby ignoring earlier Fatimid celebrations of the Prophet's birthday, perhaps in an attempt to provide Sunni respectability to the *Mawlid.*[93]

[93]N. J. G. Kaptein, *Muḥammad's Birthday Festival: Early History in the Central Muslim Lands*

Although al-Suyūṭī gave few details about actual celebrations, he did note that it was common for stories of the Prophet's life and miracles to be recited on this occasion. This aspect of the Mamluk *Mawlid* has been discussed recently by Fāris Aḥmad al-ʻAlāwī in his book *ʻĀ'ishah al-Bāʻūnīyah al-Dimashqīyah*. ʻĀ'ishah al-Bāʻūnīyah (d. 922/1516) was a noted scholar and poet who composed a number of works praising Muḥammad, including her *Al-Mawrid al-Ahná fī al-Mawlid al-Asná*, and her *badīʻīyah* poem, popularly known as *Al-Fatḥ al-Mubīn fī Madḥ al-Amīn.* As an introduction to his new editions of both poems, al-ʻAlāwī provides a useful survey of the history of celebrating the Prophet's birthday, and an overview of the *mawlid al-nabī* genre of prose and poetry.[94] Among this poetry, Muḥammad al-Būṣīrī's (d. ca. 694/1294) *Burdah,* recently studied and translated by Stefan Sperl,[95] has a special place as the most celebrated poem ever composed in Arabic. Al-Būṣīrī's *Burdah* and other poems praising the Prophet draw attention to the devotional spirit that was pronounced in the Mamluk period, and here, again, poetry helps to gauge Muslim religious concerns. Arabic religious poetry from the Mamluk period ranges from the refined verse of professional poets to the vernacular prayers of pilgrims. At times this verse reveals an ascetic spirit reflecting life's vicissitudes and the human condition, as noted earlier in elegiac poetry. In such circumstances, some poems counsel pious circumspection and an acute awareness of one's shortcomings, while others are urgent prayers seeking God's intercession in troubled times, such as during an outbreak of plague, which evoked these verses from the Cairene judge Ibn al-Tansī (d. 853/1449):

O God of creation, how great are my sins.
Have mercy, for You alone can forgive.
O my Lord, help a wretched servant
who kneels before the door of Your high home.[96]

Further, much of this religious verse has a homiletic character and often revolves around the mystical themes of love and union with God and, of course, devotion to the prophet Muḥammad.

As God's final prophet, Muḥammad is universally regarded by Muslims as

″the best of creation,″ and his tomb in Medina attained a sanctity at times rivaling that of Mecca, as Shaun Marmon describes in her study *Eunuchs and Sacred Boundaries in Islamic Society*. Baybars, the first Mamluk sultan, rebuilt the sanctuary surrounding the tomb after it had been destroyed in a fire, and thereby set a precedent for later sultans, who would continue to support the holy site. Guarding this sacred space were ″the eunuchs of the Prophet″ praised for their piety and their ability to control the powerful forces present there. These liminal figures protected the sanctity of the shrine, guarding its boundaries from violations by visitors.[97] Akin to the holy Prophet were his spiritual heirs, the pious saints, and pilgrimage to their shrines was another marked feature of religion in the Mamluk period.

Over the last twenty years, the study of saints and sainthood in Islam has been an area of active interest, reflecting a prominent trend in the study of religion in general. Two works on Christian saints have been particularly influential in the field. In *Saints and Society,* Donald Weinstein and Rudolph Bell examined saints′ lives for what they may reveal about notions of individual growth and change, the importance of the family to the practice of religion, and the changing configurations of piety and sanctity in the late Middle Ages.[98] Peter Brown, in his *Cult of the Saints,* demonstrated that far from a ″superstition,″ Christian saint veneration was practiced by all social classes for it:

> . . . enabled the Christian communities, by projecting a structure of clearly defined relationships onto the unseen world, to ask questions about the quality of relationships in their own society . . . It was a form of piety exquisitely adapted to enable late-antique men to articulate and render manageable urgent, muffled debates on the nature and power of their own world, and to examine in the searching light of ideal relationships with ideal figures, the relation between power, mercy, and justice as practiced around them.[99]

In addition, several works in the 1980s undertook the comparative study of sainthood with contributions on Muslim saints, as scholars of Islam approached the subject with new interest.[100]

As for saints in the Mamluk period, groundbreaking work was done by Jean-Claude Garcin, who studied relations between popular saints and Mamluk amirs, as well as the various types of Sufi saints and their miracles, particularly in the context of the needs of the rural masses.[101] Also of importance has been the pioneering work on saints, shrines, and pilgrimage by Ernest Bannerth, Su'ād Māhir, and Yūsuf Rāghib.[102] Their efforts have served as foundations for more recent contributions to the study of saints and sainthood in Mamluk domains. For instance, *Saints orientaux,* edited by Denise Aigle, features articles by Éric Geoffroy on the hagiography *(adab al-manāqib)* and typology of saints from the Mamluk period, by Catherine Mayeur-Jaouen on a group of rural Sufi saints associated with al-Sayyid al-Badawī (d. 675/1276), and by Denis Gril on the importance of miracles *(karāmāt)* as evidence for Sufism's prophetic heritage.[103] Miracles are the subject of a second volume edited by Aigle, *Miracle et karāma,* which contains further engaging articles, which occasionally touch on the Mamluk period. Geoffroy reviews the ambiguous position of some Sufis regarding evident and hidden miracles. While a saint might reveal a miracle to help others or defend against her/his detractors, s/he should take care to conceal them on other occasions so as not to become an object of excessive veneration by others.[104] Mayeur-Jaouen also provides a lively discussion of the relationships between animals, miracles, and Muslim

saints with several examples from the Mamluk period.[105]

Concern with hagiography, miracles, and intercession is also apparent in *Le Saint et son milieu,* edited by Rachida Chih and Denis Gril. This volume contains important articles by Éric Geoffroy and Richard McGregor on sainthood among the Shādhilī Sufis.[106] As McGregor notes, some Shādhilīs believed in multiple levels of sainthood *(walāyah),* ranging from that found in every believer to the higher levels of accomplished Sufi saints whose mystical inspiration continued Muḥammad′s prophetic legacy.[107] Denis Gril compares the lives of two saints, ʻAbd Allāh al-Minūfī (d. 749/1348), a scholar in Cairo, and Muḥammad ibn Aḥmad al-Farghal (ninth/fifteenth c.), an illiterate peasant from a village in Upper Egypt. Gril notes that both are portrayed as possessing the same interior gnosis, proven by their ability to perform miracles, though al-Minūfī, unlike al-Farghal, attempted to hide his miracles. Again, like the prophet Muḥammad, both saints served their fellow human beings. Moreover, the two saints, and the different accounts written on them, present two prominent and contrasting models of sainthood in medieval Egypt: the saintly scholar and the illiterate saint. The latter was particularly important for those in the rural areas in need of a patron saint and a place for pilgrimage in order to share in the prophetic legacy embodied in all saints.[108] Finally, Catherine Mayeur-Jaouen examines saintly ideals in light of practical realities, in her study of shaykhs in the lineage of Ibrāhīm al-Matbūlī (d. 880/1475) at the end of the Mamluk and beginning of the Ottoman eras. She finds that there was always a need to strike a balance between the concrete realities involved with supporting a *zāwiyah,* and the requirements of maintaining religious comportment *(wara‘)*. This need was especially acute when shaykhs interacted with their Mamluk and Ottoman benefactors, whether at banquets and similar occasions, when receiving their gifts, or when seeking favors on behalf of the

peasants, who depended on the shaykhs for intercession with both God and the ruling elite.[109]

Mayeur-Jaouen has also carried out extensive research on Egypt's greatest saint, Aḥmad al-Badawī. In her book *Al-Sayyid al-Badawī, un grand saint de l'islam égyptien,* Mayeur-Jaouen describes the saint's fortunes over the centuries until today. Of relevance to the Mamluk period is her study of al-Badawī's life and miracles, and the evolving construction of his saintly reputation and shrine in Ṭanṭā. Significantly, she finds that much of the saint's life and legend has been patterned on Muḥammad's life story, demonstrating, once again, the centrality of the prophetic paradigm in Muslim thought and culture. Mayeur-Jaouen offers further proof that the miracles associated with al-Badawī, including defending the oppressed and helping the poor, reflect the concerns and tensions of Egyptian rural society in the Mamluk period. Similar miracles are attributed to al-Badawī's successors whose village origins are underscored by the fact that many of them were not religious scholars or, in some cases, even literate. Mayeur-Jaouen also surveys some of the major doctrines and practices of the Aḥmadīyah order representing al-Badawī's saintly lineage.[110]

Another famous rural saint of Egypt, Ibrāhīm al-Dasūqī (d. 696/1296), has been studied by Helena Hallenberg. She contrasts al-Dasūqī with his contemporary al-Badawī, suggesting that al-Dasūqī's cult was less developed. She goes on to discuss possible economic motives for al-Dasūqī's cult, and examines the early shrine and its endowment by the sultan Qāytbāy.[111] Hallenberg presents an extensive examination of the cult and mystical teachings ascribed to al-Dasūqī, and speculates on possible pre-Islamic elements within al-Dasūqī's legend and cult. Hallenberg notes that the ancient Egyptian deity previously worshiped in the area was Horus, known as "He of the two eyes," and there is an obvious resonance here with al-Dasūqī's title "He of the two eyes." She also notes that the light imagery and notions of the god-man as an axis mundi involved with al-Dasūqī also had earlier manifestations in ancient Egypt, as did al-Dasūqī's miracle involving a crocodile, and too, the date for al-Dasūqī's *mawlid.*[112]

In contrast to these rural traditions is my study of an important saint of medieval Cairo. In *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse, and His Shrine,* I offer a case study of saint and shrine formation, most of which occurred in the Mamluk period. This renowned Arab poet was regarded as a saint soon after his death, due in large part to what many believed to be the inspired nature of his religious verse. A reverential grandson then composed a hagiography on the poet, which became the basis for much of Ibn al-Fāriḍ's saintly reputation. However, as we have seen, Ibn al-Fāriḍ and his verse were part of the Ibn al-ʿArabī/monism controversies that divided the ulama on several occasions, underscoring the fact that Ibn al-Fāriḍ and his verse were enmeshed in a complex web of competing modes of authority and interpretation. Yet due in large part to the beauty of his verse, and to Mamluk patronage, Ibn al-Fāriḍ and his poetry remained an accepted part of Muslim religion and society in the Mamluk era.[113]

While such studies chart a single saint's fortunes in the Mamluk period, several recent works take a broader view of the subject. Richard J. A. McGregor, in his *Sanctity and Mysticism in Medieval Egypt,* focuses on Sufi conceptions of sanctity within Islamic mystical theology, primarily through a careful study of the writings of Muḥammad Wafāʾ (d. 765/1363) and his son ʿAlī (d. 807/1405), founders of Cairo's Wafāʾīyah Sufi order. In general, many Muslims of the Mamluk period believed that Muslim ascetics and mystics had attained sanctity. These saints had been annihilated mystically into God yet, due to His grace, they were allowed to abide in this world below as guides to others. These holy men and women, then, form a bridge *(barzakh)* between humanity and God. As spiritual heirs to the prophet Muḥammad, each saint shares in the Muḥammadan Reality, reflecting a portion of Muḥammad's primordial light. Further, Muḥammad al-Wafāʾ and ʿAlī al-Wafāʾ, following al-Tirmidhī and Ibn al-ʿArabī, formulated a doctrine of a seal of the saints who would culminate the cycles of sainthood and presage the end of time and the coming of the Judgment Day.[114]

McGregor's study gives us a fascinating view of some of the religious beliefs and doctrines circulating during the Mamluk period, particularly regarding the seal of the saints and the apocalypse. By contrast Christopher Taylor's book *In the Vicinity of the Righteous* maps the sacred geography of Cairo, arguably the center of the Islamic world at that time. He demonstrates a firm grasp of the archeological and textual evidence, and pays particular attention to the often neglected pilgrimage

guides. Using these guides and their hagiographic content, Taylor discusses the sacred geography of Cairo, the divine blessings emanating from the tombs of holy persons, and the etiquette of pilgrimage *(ziyārah)* to their shrines.[115] Taylor then probes models of exemplary religious life, which include controlling one′s desire, poverty and the absence of material need, generosity, honesty, and similar exemplary traits that might help others lead better lives and attain heavenly reward.[116] He also reviews several types of miracles and other forms of saintly mediation, and their dynamic functions.[117] Taylor then examines the long-standing debate between Muslims, including Ibn Taymīyah and Ibn Qayyim al-Jawzīyah, who have held saint cults to be a pernicious form of idolatry, and the larger Muslim majority who have believed that the saints are God′s special friends whose prayers are answered on behalf of believers.[118] Taylor concludes that the saints and their cults played vital roles within medieval Islam in general, and in Mamluk Cairo in particular, as they combined ″unifying elements of universal significance with considerable diversity in local expression.″[119]

In many respects, Taylor′s study is complemented by Josef Meri′s recent book, *The Cult of the Saints Among Muslims and Jews in Medieval Syria*. Meri has drawn on many of the sources mentioned above for this fine book, which can serve as both an introduction to medieval Muslim (and Jewish) veneration of holy persons, appropriate to a general audience, and a scholarly study of the subject in Mamluk Syria. Meri begins by describing the spiritual topography of the region and the importance of scripture and religious writings for identifying sacred sites. Unlike Cairo, Syria was the burial place for a number of biblical prophets, as well as saints, while Damascus has often been associated with eschatological events. Meri stresses that devotees did not invent sacred space so much as they ″re-discovered″ it by association with these and other traditions.[120] He then proceeds to definitions of saints and their definitive traits, which include miracles, asceticism, and fasting. Meri, too, identifies various types of venerated people, from prophets, their families, and companions, to mystics, theologians, judges, and other men and women of exemplary learning and piety, to antinomian individuals and the

insane.[121] Of particular importance was *barakah,* the sacred blessing or charisma possessed by holy people, places, and relics, which Meri observes ″was spiritual, perceptual, and emotive, rather than conceptual.″[122]

Meri next turns to the practice of *ziyārah,* which he defines broadly as ″not only pilgrimage, but also the culture of devotion of which pilgrimage and saint veneration were an integral part.″[123] He reviews both Sunni and Shiʻi *ziyārah* practices and the debates on their legality. Like Taylor, Meri pays close attention to pilgrimage guides and related literature for probing pilgrimage rituals and etiquette, and as a source for a number of insightful sections on women devotees, individual saints, types of talismans, and such practices as seeking cures, rain, and repentance. He suggests that pilgrimage to local shrines had social and economic, as well as religious, motives, and that it may have offered the poor and elderly a way to participate vicariously in the more expensive and difficult hajj.[124] Following a chapter on Jewish pilgrimage, Meri considers various types of shrines and other sacred sites, and their proliferation in the twelfth and thirteenth centuries. Meri ascribes this growth, in part, to the decline of Abbasid central authority and the need by their various successors for religious legitimation as protectors and patrons of Islam and its holy places. The spread of Sufism and its orders also nurtured the growth of shrines and the cult of the saints, while sacred sites were steadily incorporated into larger mosque-madrasah complexes.[125] Meri concludes that the veneration of holy persons was a central part of popular religious life among Muslims, Christians, and Jews of the medieval Near East. But by popular he does not mean ″low″ or ″heterodox″ but normative as ″devotees from all walks of life… sought to reaffirm their faith, chart their sacred pasts, and derive relief from illness and adversity.″[126]

Meri′s recent study reaffirms a general conclusion reached by many of the scholars considered in this essay. Namely, a two-tier model of religion with a high faith of a literate elite above the vulgar superstitions of the masses is an inaccurate and misleading description of religion in the Mamluk period. We should recall that while the Quran and *sunnah* provide the foundation for Islamic belief and practice, they still allow for a wide array of regional and cultural interpretation and expression. Further, as Sunni Islam lacks an official earthly religious authority after the Prophet Muḥammad, local custom may not oppose normative Islam so

much as determine it. The consensus of a community, its tradition, certifies correct belief and practice to a great extent, and this appears to have been the case in Mamluk domains. I would venture to say that this is the growing consensus of Mamluk scholars today.

Finally, I would like to offer a few concluding observations. First, recent study of religion in the Mamluk period has not been Egyptocentric. Works by scholars, including Little, Knysh, and Geoffroy, cover all Mamluk domains, including Palestine and the Hijaz, while important studies on the ulama, saints, and Sufis in Cairo have their able Damascene counterparts. A similar effect is found if we view this research, at least that on saints and Sufis, in terms of urban-rural relations, with studies of religion in Cairo, Damascus, and Jerusalem finding their village complements. Another positive trend in recent research is a familiarity among Mamluk scholars with related scholarship involving other regions and religions, especially Christianity and Judaism, which allows for a comparative perspective in terms of both subject matter and methodology. I am also encouraged by the fact that a number of scholars have used manuscripts for their research. There are hundreds, if not thousands, of unpublished manuscripts composed during the Mamluk period on religious topics, and careful study of them will, I believe, significantly enhance and, perhaps, dramatically change how we view medieval Islam. Concomitantly, there are still many published works from the period in need of further study involving theology, law, and mysticism, and covering a range of religious topics from death, purgatory, and the afterlife, to prayers and devotions, to the interpretation of the Quran, and dreams. Though we may lack a detailed and comprehensive introduction to religion in the Mamluk period, this should not be an obstacle to continued fruitful research in the future.

Mediators Between East and West: Christians Under Mamluk Rule

In this article, I do not intend to provide a comprehensive overview of the situation of Latin and Greek Orthodox Christians in Mamluk Egypt and Syria, be they pilgrims, clerics, monks or traders, natives or immigrants. Rather, the focus will be on describing the position of these Christians between Orient and Occident, between Islam and Christianity, from concrete case studies. This intermediate position shows the wide variety of connections and dependencies that existed between the different peoples, religious communities, and state organizations, but at the same time provides a key to understanding the unity of the eastern Mediterranean region. In this sense this article may be seen as a contribution to the writing of ″a human history of the Mediterranean Sea expressed through the commercial, cultural and religious interaction that took place across its surface″ that David Abulafia has called for to supplement the *longue durée,* ecological approach of Fernand Braudel and more recently of Peregrine Horden and Nicholas Purcell.[1]

Christians in Palestine within the Framework of International Relations

Latin and Greek Orthodox Christians in the Mamluk Empire did not form a coherent group by any means. While Greek, Georgian, Russian, or Serbian monks and priests, Franciscans, Melkites (i.e., Arabic-speaking Orthodox), or Latin merchants on the one hand lived permanently or at least for long periods in the region, on the other hand many Latin and Orthodox pilgrims and travellers visited

This article is based on a paper presented on May 14, 2004, at the Center for Middle Eastern Studies of the University of Chicago.

the Mamluk empire only temporarily. However, the relationships of the Christians in Syria and Egypt to the Mamluks cannot be seen in the isolation of a purely internal perspective. The Christian protecting powers such as Byzantium and the papacy, or various powers such as France, the kingdom of Aragon, the kingdom of Cyprus, or the Italian trading cities, looked after their own interests in the eastern Mediterranean.[2] Between all these different groups a complex network emerged, and these relationships have always to be kept in mind when one tries to determine the respective political environment and the motives of the protagonists involved.

Using the example of the Georgian community in Jerusalem it can be demonstrated how domestic and foreign policy are frequently interlinked so that it is sometimes hard to tell what formed the basis for Mamluk policy with respect to their Christian subjects. Did the Mamluks show consideration towards the Muslim religious establishment, which took generally a more anti-Christian position and from time to time stirred up the animosity of the Muslim population against the Christians,[3] or were foreign policy interests their primary concern? When and for what reason did the respective protecting powers intervene with the Mamluk court?

After Georgia had acknowledged the supreme rule of the Mongol Great Khan in 1243 it was directly involved in the continual conflicts of the Mamluks and the Ilkhanids, the Mongol rulers of Persia. In this conflict both parties were always on the lookout for allies and tried to create a second front in order to gain a tactical advantage over their opponent. Georgia also formed a part of this system of alliances.[4] In the beginning of 1268, after intensive diplomatic activities, the kings

[4]Christian Müller and Johannes Pahlitzsch, ″Sultan Baybars I and the Georgians—In the Light of New Documents Related to the Monastery of the Holy Cross in Jerusalem,″ *Arabica* 51 (2004): 276–80. For the early history of the Georgians in Jerusalem cf. Johannes Pahlitzsch, ″Die Bedeutung Jerusalems für Königtum und Kirche in Georgien zur Zeit der Kreuzzüge im Vergleich zu Armenien,″ in *L′idea di Gerusalemme nella spiritualità cristiana del medioevo: atti del Convegno internazionale in collaborazione con l′Istituto della Görres-Gesellschaft di Gerusalemme, Gerusalemme, Notre Dame of Jerusalem Center, 31 agosto–6 settembre 1999,* Pontificio Comitato di Scienze Storiche, Atti e Documenti, vol. 12 (Vatican City, 2003), 104–31.

of the then-divided Georgia sent letters to the Mamluk sultan Baybars in which they declared that they had seceded from the Mongols because of the Mamluk sultan.[5] Subsequently, however, Mamluk-Georgian relations underwent a drastic change, since very shortly afterwards, probably in the summer of 1268 or 1269, Baybars gave in to the pleading of the Shaykh Khaḍir ibn Abī Bakr al-Mihrānī, his spiritual guide, and handed the Georgian Monastery of the Holy Cross near Jerusalem over to him—who turned it into a *zāwiyah,* a Sufi convent.[6]

The Monastery of the Holy Cross could be regarded as a royal foundation and was one of the most prominent Georgian monasteries outside of Georgia. Thus, the relationship of the Mamluks to Georgia had certainly reached its low point by this time. The reasons for the sudden and somewhat unexpected expropriation of the Monastery of the Holy Cross are quite obscure. Evidently, it was very difficult for Baybars to refuse to grant the wishes of his increasingly influential adviser and spiritual guide, Shaykh Khaḍir, who had built up a network of Sufi settlements under his control by confiscating churches and synagogues. When, for a period of time, the tension in foreign affairs eased during 1268, it seems that Baybars thought he was no longer in need of the alliance with the Georgians and eventually yielded to his adviser′s pressure and allowed the Monastery of the Holy Cross to be taken over. So both domestic and foreign policy as well as personal reasons obviously influenced Baybars′ decision.[7]

The significance of the Monastery of the Holy Cross for Mamluk-Georgian relations is particularly evident in the fact that the monastery was returned to the Georgians when relations between the two sides were resumed at the start of the fourteenth century.[8] However, the purpose this time was not to forge a military alliance, since the Ilkhans of Persia had dropped their aggressive policy of expansion directed at Syria, at least for the time being. Rather, the issue at hand was that the Mamluks had begun to import more and more Circassian military slaves, causing

[6]Müller and Pahlitzsch, ″Sultan Baybars I and the Georgians,″ 271–75.

[7]However, Shaykh Khaḍir had some very powerful enemies among the Mamluk amirs, who regarded his influence on the sultan′s political affairs as being harmful. His anti-Christian attacks, with their damaging effect on foreign policy, most likely were a considerable factor in this. For this reason, it is perhaps no coincidence that the same amir who was later responsible for the overthrow and arrest of the shaykh had earlier supported the indigenous Christians; Müller and Pahlitzsch, ″Sultan Baybars I and the Georgians,″ 281.

[8]For a detailed analysis of the Mamluk chronicles that report these events cf. Ciggaar and Herman Teule, Orientalia Lovaniensia Analecta, vol. 125 (Leuven and Dudley, MA, 2003), 42–46.

increasing concern about the safety of the trading routes in the Caucasus.[9] The restitution of the Monastery of the Holy Cross was effected with the participation of the Byzantine Empire. Byzantium obviously wanted to use this opportunity to again assume the role of protector of the Orthodox Christians in Syria and Egypt which it had lost as a consequence of the Latin conquest of Constantinople in 1204.[10]

In the fifteenth century as well, the status of the Georgian community in Jerusalem played an important role in the relations between the Mamluks and Georgians, which still were influenced by trading interests. In 844/1440, the sultan Jaqmaq (842–54/1438–53) complained to the Georgian king that a levy of 1000 dinars had been imposed by the Georgian authorities on one of his traders charged with the purchase of military slaves. If the Georgian king would not reimburse the amount, the monks ″in charge of Georgian churches and the Golgotha in Jerusalem″ would have to raise the money and the sultan would ″issue instructions to use the sword of justice and equity to take vengeance upon the Christians and Georgians in the Muslim countries according to what they deserve.″[11] In his response, the Georgian king complained about the destruction of a church in Damascus and added that, in his country, the Muslims were treated well and could freely practice their religion.[12] Interpreting this as a hidden threat certainly does not seem farfetched. In the end, however, the two seem to have come to an amicable agreement. Because the Mamluks were aware that an undisrupted supply of military slaves from the Caucasus depended on their good behavior in their dealings with the Georgian residents of Palestine, the Georgians were even able to further expand their position in Jerusalem in the course of the fifteenth century.[13]

Looking at the development of Georgian-Mamluk relations from the thirteenth to the fifteenth century one comes to the conclusion that not only was the situation of the Georgians in Jerusalem influenced by mutual political and economic relations but that the way the Mamluks behaved vis-à-vis the Georgians in the Holy Land also had an influence on the relationship. Indeed, one could even say that the condition of the Georgian community was a kind of gauge for the state of these relations.

More or less the same holds true for the significance the Franciscan Custodia di Terra Santa had for the relationship of the Mamluks to the Latin West. Various diplomatic efforts of the kings of Aragon and Naples eventually led to the foundation of a Franciscan settlement in Jerusalem in 1335. Political and economic interests played a role here as well. Thus, one important aspect of the continuous rivalry between the kings of Aragon and Naples over domination in the Mediterranean region was the competition for the role of protector of the holy sites and of the Christians living in the Holy Land. Furthermore, the Angevins claimed the title of King of Jerusalem for themselves, while the Catalonians and the Mamluks pursued tangible trade interests.[14] The Venetians, who were conducting trade with Alexandria and the Levantine coast, were another party committed to championing the concerns of the Christians in the Orient. Providing the Western pilgrims with transportation was a very profitable business, thus they were natural partners for the Franciscans

in the Holy Land, who were responsible for the Western pilgrims during their stay in Palestine.[15] So here as well the Christians in Jerusalem, in this case the Latins, served as a point of reference for international relations.[16]

POLITICAL MEDIATION BY REGIONAL CHURCH INSTITUTIONS AND LAYMEN

The Greek Orthodox patriarchs of Alexandria, Jerusalem, and Antioch functioned as the primary links between the Mamluks and the Orthodox world. The career of the patriarch Lazaros of Jerusalem serves as an example for the intermediary position and the dependence of the patriarchs on the sultan and on the Byzantine emperor. Lazaros was elected to the office of patriarch sometime before 1341 in Palestine.[17] As had long been the custom, it was incumbent upon the sultan to express his approbation by issuing a document *(tawqīʻ)*. The fixed language of these documents of approbation obliged the new patriarch not only to conscientiously serve the believers entrusted to him, and to do so in accordance with their own laws, but also forbade him to establish contact with foreigners, and more specifically with foreign rulers, without the knowledge of the sultan. Every letter and all emissaries were to be promptly disclosed to the sultan.[18] Thus, in the eyes of the

[16]Donald P. Little, ″Christians in Mamluk Jerusalem,″ in *Christian-Muslim Encounters,* ed. Yvonne Yazbeck Haddad and Wadi Zaidan Haddad (Gainesville, 1995), 213, states that the Franciscans′ ″repeated petitions for concessions and favored treatment became factors in the Mamluks′ relations with foreign Christian powers.″ Nevertheless Little, ″Communal Strife in Late Mamluk Jerusalem,″ 87–94, does not refer to the state of Mamluk relations with the West in his dealing with the conflict of the local Muslim establishment with the Franciscans over the Tomb of David on Mt. Zion in 894–95/1489–90, during which both sides appealed to the sultan. Mamluk documents from the archive of the Custodia di Terra Santa are published in Norberto Risciani, *Documenti e firmani* (Jerusalem, 1930).

[17]Marius Canard, ″Une lettre du sultan Malik Nāṣir Ḥasan à Jean VI Cantacuzène (750/1349),″ *Annales de l′Institut d′Etudes Orientales* 3 (1947): 29; repr. in idem, *Byzance et les musulmans du Proche Orient,* Collected Studies Series, vol. 18 (London, 1973).

[18]Al-Qalqashandī (756–821/1355–1418), *Ṣubḥ al-Aʻshá fī Ṣināʻat al-Inshā*' (Cairo, 1917; repr. Cairo, ca. 1970), 11:392–95; Clifford Edmund Bosworth, ″Christian and Jewish Religious Dignitaries in Mamlûk Egypt and Syria: Qalqa͟shandî′s Information on their Hierarchy, Titulature, and Appointment,″ *International Journal of Middle East Studies* 3 (1972): 199–203. Al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 4:194, mentions the Melkite patriarchs as office bearers of the *niyābah* of Damascus. This probably refers only to the patriarchs of Antioch, who had resided in Damascus since the

Mamluks, the patriarch was fully dependent on the sultan, even in his contacts with the Church of Constantinople and the Byzantine emperor.

When a monk from Jerusalem by the name of Gerasimos objected to the election of Lazaros, it would thus have been the sultan's obligation to resolve the dispute. But since Lazaros was at that moment in Constantinople—be it as a Mamluk emissary or in order to be confirmed as patriarch by the Byzantine emperor[19]—Emperor Andronikos III Palaiologos (1328–41) was involved in this conflict. Having sent an embassy to Sultan al-Nāṣir Muḥammad (d. 741/1341) to obtain additional information, he died before the issue could be resolved. In the following civil war between the supporters of the underage heir to the throne Joannes V Palaiologos, and Joannes VI Kantakouzenos, the patriarch Lazaros—still being in Constantinople—had pledged his support to the latter early on. Consequently, the supporters of Joannes V Palaiologos declared Lazaros discharged from his office. Gerasimos was elected patriarch of Jerusalem and approved by the sultan, probably in 1342.[20] Joannes VI Kantakouzenos for his part overturned

---

election of Michael I Bishārah in about 1366: Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah fī al-Tārīkh* (Cairo, 1932), 14:319; cf. below, note 29. Thus the patriarch Mikhā'īl whose *tawqī'* is given in al-Qalqashandī, *Ṣubḥ al-A'shá,* 12:424–26, confirming him as Melkite patriarch *"bi-al-Shām wa-a'mālihi"* is either Michael I or Michael II (1395–1404), in contrast to Bosworth, "Christian and Jewish Religious Dignitaries," 203, n. 1, who identifies him with a Melkite archbishop of Damascus from the thirteenth century. Obviously, the *nā'ib al-salṭanah* of Syria was responsible for issuing the document of approbation for the leaders of the Syrian non-Muslim communities, although according to al-Qalqashandī, *Ṣubḥ al-A'shá,* 4:194, the sultan sometimes confirmed the designations by the *nā'ib* and sometimes even issued a *tawqī'* before the *nā'ib*. Maurice Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes: Description géographique, économique et administration gouvernementale,* Bibliothèque archéologique et historique, vol. 3 (Paris, 1923), 168–69, sees in this the attempt of the sultan to exert direct control over the *dhimmī*s. For the role of the Greek Orthodox patriarchate of Alexandria in the relations between Constantinople and Cairo, especially with regard to the translation of their diplomatic correspondence, cf. Dimitri A. Korobeinikov, "Diplomatic Correspondence between Byzantium and the Mamlūk Sultanate in the Fourteenth Century," *Al-Masāq* 16 (2004): 66–67; cf. also his work on the lists of the metropolitan sees, the *notitiae episcopatuum:* idem, "Orthodox Communities in Eastern Anatolia in the Thirteenth and Fourteenth Centuries: Part 1: The Two Patriarchates: Constantinople and Antioch," *Al-Masāq* 15 (2003): 199–200.

[19]Against the statement of Joannes Kantakouzenos, *Eximperatoris Historiarum Libri IV,* ed. Ludwig Schopen, Corpus scriptorum historiae Byzantinae, vol. 13 (Bonn, 1832), 3:91, Canard, "Une lettre du sultan Malik Nāṣir Ḥasan à Jean VI Cantacuzène (750/1349)," 40–41, holds the opinion that it is unlikely that a patriarch would have gotten the sultan's permission to travel to Constantinople only for his confirmation.

[20]In the letter of al-Nāṣir Ḥasan to Joannes VI from 750/1349 it is stated that a certain Malik Nāṣir (Μελὴκ Νάσαρ) has deposed Lazaros: Joannes Kantakouzenos, *Eximperatoris Historiarum Libri IV,* 3:97; French translation in Canard, "Une lettre du sultan Malik Nāṣir Ḥasan à Jean VI Cantacuzène (750/1349)," 50. This is obviously al-Nāṣir Aḥmad, who reigned for only about three

this decision and after having seized power in 1347 saw to it that Lazaros was confirmed by the patriarch of Constantinople.[21] It was, however, the sultan's decision who was to officiate as patriarch in Jerusalem. It took two more years before Joannes VI sent Lazaros, together with an emissary, to Cairo to ask for his reinstatement. The answer of the new sultan al-Nāṣir Ḥasan to this plea has come down to us in the chronicle written by Joannes Kantakouzenos himself. After Kantakouzenos' victory, the Mamluks showed little interest in supporting the candidate of the defeated party and the sultan consented to reinstate Lazaros in office. Al-Nāṣir Ḥasan also granted the request to rebuild a church in Cairo and promised that all pilgrims, priests, and monks at the holy sites in Jerusalem, as well as all Byzantine merchants in the Mamluk empire, would be under his protection.[22] The deposed Gerasimos decided to appeal to the sultan but died on his way to Cairo.[23] The course of events shows paradigmatically how, in the case of the Greek Orthodox churches in the Near East, Byzantine and Mamluk interests were intertwined. What was initially a regional and essentially internal Mamluk conflict over the patriarchate of Jerusalem became part of the Byzantine civil war.

Despite assurances of protection, Lazaros found himself exposed to Muslim assaults shortly afterwards in 1357. Assaults against Christians often occurred in the fourteenth century on the initiative of individual influential amirs or ulama, who were able incite the populace to violence. The rulers were thus forced to tolerate these assaults, against their will and in opposition to the interests of the state.[24] In this case, the anti-Christian excesses were immediately stopped after the

---

months in 742–43/1342 (Canard, ibid., 50, n. 3). It might be no coincidence that al-Nāṣir Aḥmad tried to govern the Mamluk empire from Kerak and ordered the caliph to be sent from Cairo to Jerusalem; Robert Irwin, *The Middle East in the Middle Ages* (London and Sidney, 1986), 129.

[21]For the date of this confirmation cf. Peter Wirth, "Der Patriarchat des Gerasimos und der zweite Patriarchat des Lazaros von Jerusalem," *Byzantinische Zeitschrift* 54 (1961): 319–20.

[22]Joannes Kantakouzenos, *Eximperatoris Historiarum Libri IV,* 3:95–98; Canard, "Une lettre du sultan Malik Nāṣir Ḥasan à Jean VI Cantacuzène (750/1349)," 49–51. The letter is dated Sha'bān 15, 750/October 30, 1349.

[23]The story of the conflict between Lazaros and Gerasimos is told by Joannes Kantakouzenos, *Eximperatoris Historiarum Libri IV,* 3:90–99. Canard, "Une lettre du sultan Malik Nāṣir Ḥasan à Jean VI Cantacuzène (750/1349)," 29–31, 39–42; Wirth, "Der Patriarchat des Gerasimos und der zweite Patriarchat des Lazaros von Jerusalem," 320–23; Krebs, *Innen- und Aussenpolitik Ägyptens im Spätmittelalter,* 260–62; Klaus-Peter Todt, *Kaiser Johannes VI. For Joannes VI cf. in general Donald M. Nicol, *The Reluctant Emperor: A Biography of John Cantacuzene, Byzantine Emperor and Monk, c. 1295–1383* (Cambridge, 1996).

[24]Already Etienne Quatremère, "Mémoire historique sur l'état du Christianisme sous les deux

death of the amir responsible, and Lazaros was sent to Constantinople as an emissary of the sultan only a few months later.[25] This sudden transition, from a persecuted individual to an emissary traveling on official governmental matters, is surprising and poses the question whether Lazaros would have been able to refuse this assignment. What this event clearly illustrates, however, is how patriarchs had to fill a double function. They were not only the representatives of the emperor and the Orthodox Church in the Orient, but also served as intermediaries of the Mamluks vis-à-vis Byzantium, whether they wanted to or not.

The further fate of Lazaros illustrates once again the extent to which the Christians in the Levant were integrated into supra-regional relations and their development. When Peter I, the king of Cyprus, conquered and destroyed Alexandria in 1365, the resulting war with the Mamluks, lasting until 1370, had devastating consequences for the Christians in the Mamluk Empire. Copts, Syrian Orthodox Christians, Franciscans, Venetians, and Genoese, as well as Greek Orthodox clerics, were arrested and maltreated, and some of them were even executed.[26] This time,

Miller, "A New Chronology of Patriarch Lazarus' Persecution by the Mamluks (1349–1367)," *Orientalia Christiana Periodica* 41 (1975): 474–78; Peter Schreiner, "Bemerkungen zu vier melkitischen Patriarchen des 14. Jahrhunderts," *Orientalia Christiana Periodica* 45 (1979): 392–95, who corrects Miller's chronology of Lazaros' persecution.

[26]Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah fī al-Tārīkh,* 14:320, speaks of "the disgrace, exemplary punishment and offense *(al-khazá wa-al-nakāl wa-al-jināyah)*" that befell the Melkites because of Peter's assault on Alexandria; for a Russian report of the persecution of the Christians cf. Schreiner, "Byzanz und die Mamluken in der 2. Hälfte des 14. Jahrhunderts," 296–304; for persecutions of Franciscans cf. Girolamo Golubovich, *Biblioteca bio-bibliografica della Terra Santa e dell'Oriente Francescano* (Florence, 1927), 5:113–16, 143–44; Lemmens, *Die Franziskaner im Heiligen Land I,* 61–63.

Lazaros was not prepared to tolerate the persecution and fled to Constantinople.[27]

This war disrupted the *modus vivendi* that Christians and Muslims, Orthodox and Latins, Arabs, Greeks, and western Europeans had found in the Levant, and various parties made attempts to end the war and thus put a stop to the persecution of the Christians. The Italian mercantile cities in particular, which saw their economic interests endangered, endeavored to pressure the Cypriot king, and the pope also called for an end to this war. The Mamluks, for their part, conducted direct negotiations with the Cypriot king, which, however, failed to yield results.[28] According to the historian Ibn Kathīr (d. 774/1373), the governor of Syria in 767/1366 appointed the Orthodox patriarch of Antioch, Michael I Bishārah, as mediator, he having been spared from persecution for this reason. In return he was obliged to write not only to Peter, but also to the Byzantine emperor *(malik Isṭanbūl),* in order to impress upon them the suffering that the attack on Alexandria had brought upon the Christians.[29]

Apparently the Mamluks hoped that the Byzantine emperor would be able to use his influence on the Greek population of Cyprus to influence its king to make peace, which is interesting because no political relationships are known to have

existed at this time between Cyprus and the rest of the Byzantine empire. Indeed, it would be mistaken to view Cyprus only in terms of its orientation to the West since diverse cultural, social, and economic connections linked the Cyprus of the Lusignans to the Levant. It was certainly no coincidence that the Mamluks availed themselves of the Orthodox patriarch of Antioch; close relationships between Cyprus and the Syrian mainland still existed in the fourteenth century. The *Surien*s, the Arabic-speaking Christians of Cyprus who belonged partially to the Greek Orthodox faith and partially to the Syrian Orthodox faith, comprised a large group on the island. In Famagusta, they may have even constituted the majority. After Greek, Arabic was the language spoken most on the island.[30] There was even an exchange going back and forth between Cyprus and the mainland of disputations between Christian and Muslim scholars published as pamphlets.[31]

Beside high ranking clerics, laymen served as intermediaries as well. Emmanuel Piloti (ca. 1371–after 1441), a Venetian merchant of Cretan origin, had lived at the beginning of the fifteenth century for 22 years in Egypt, in addition to visiting Damascus and ports in Syria and Asia Minor.[32] On the basis of this long experience he wrote a treatise on how to reconquer the Holy Land. Piloti argued, not very originally, that the Crusaders—under the leadership of Venice—should first occupy Alexandria and Cairo. Having achieved this the conquest of the Holy Land would follow without difficulty. But Piloti´s treatise is confused, and includes besides his

Johannes Pahlitzsch, *Graeci und Suriani im Palästina der Kreuzfahrerzeit: Beiträge und Quellen zur Geschichte des griechisch-orthodoxen Patriarchats von Jerusalem,* Berliner Historische Studien, vol. 33, Ordensstudien, vol. 15 (Berlin, 2001), 165, 229–30.

[31]Cf. Thomas F. Michel, *A Muslim Theologian´s Response to Christianity: Ibn Taimiyya´s Al-Jawāb al-Ṣaḥīḥ* (New York, 1984), and *Muslim-Christian Polemic during the Crusades: The Letter from the People of Cyprus and Ibn Abī Ṭālib al-Dimashqī´s Response,* ed. Rifaat Y. Ebied and David Thomas, The History of Christian-Muslim Relations, vol. 2 (Leiden and Boston, 2004). These two treatises are answers to an apology composed by the Melkite Paul of Antioch, bishop of Sidon, that was later circulated by Christians of Cyprus in an expanded version. For the possibility of dating Paul of Antioch to the early thirteenth century cf. Johannes Pahlitzsch and Dorothea Weltecke, ″Konflikte zwischen den nicht-lateinischen Kirchen im Königreich Jerusalem,″ in *Jerusalem im Hoch- und Spätmittelalter: Konflikte und Konfliktbewältigung—Vorstellungen und Vergegenwärtigungen,* ed. Dieter Bauer, Klaus Herbers, and Nikolas Jaspert, Campus Historische Studien, vol. 29 (Frankfurt and New York, 2001), 133–35.

[32]Emmanuel Piloti, *Traité d´Emmanuel Piloti sur le passage en Terre Sainte (1420),* ed. Pierre-Herman Dopp, Publications de l´Université Lovanium de Léopoldville, vol. 4 (Louvain, 1958), 63. For his life cf. the introduction of Pierre-Herman Dopp, ibid., XVIII–XXVI.

ideas for a new crusade *inter alia* information on commerce in Alexandria, extremely interesting episodes of his life under Mamluk rule, and a comparison between the sultan′s court in Cairo and the papal curia—to the disadvantage of the latter.[33]

During his long stay in Egypt Piloti had established very good relations with his Muslim neighbors and colleagues.[34] Thus, it is no surprise to see him on several occasions acting as a mediator between Western Latin Christians and Muslims. In 1403, at the news that a Genoese fleet threatened to attack Alexandria, he withdrew like many of the Muslim inhabitants to Cairo while most of the Latin merchants preferred to leave Alexandria by sea. In response to this threat by the Genoese the Mamluk sultan Faraj decided to send a Muslim spice merchant who was experienced in doing business with Christian merchants to offer them the enormous amount of 500,000 ducats for their peaceful retreat. Since this merchant was very fond of Emmanuel Piloti (*″ledit marchant me portoit grant armour″*) he asked him if would accompany him in this task, to which Piloti agreed. However, as the two friends arrived in Alexandria the Genoese fleet had already left the Egyptian coast due to the outbreak of the plague.[35] The journey of these two merchants from the court of the sultan to the camp of the Genoese could well be viewed as a paradigm for the life of merchants in the eastern Mediterranean.[36]

In 1408, Piloti again was chosen to mediate between the Latins and the Mamluks. A pirate had seized a Muslim ship and sold the crew of 150 men to the duke of Naxos, Jacopo Crispo I (1397–1418). Since the sultan considered Naxos to be subordinate to Venice he confiscated the cargoes of four Venetian galleys, consisting of spices, and demanded that the Venetian merchants in Alexandria ask Jacopo Crispo to free these Muslim captives. Thereupon, the council of the Venetians chose Piloti to negotiate with the duke of Naxos and the sultan, since he was on good terms with the Muslims and especially with the Greeks, being himself of Greek origin. Although the Crispo family was of Venetian origin, the council obviously considered it useful to send somebody who had good relations with the Greeks to Naxos. And indeed Piloti succeeded in his mission and returned with the captives to Alexandria, where the Muslim population celebrated the liberation of their brothers in faith. As a reward the sultan allowed Piloti to import each month five barrels of Malvasia wine from his native island of Crete.[37]

By writing a treatise on the recovery of the Holy Land Emmanuel Piloti tried in another way to mediate between West and East. All his detailed descriptions of life in Alexandria and Cairo aimed at giving Western rulers, and especially the pope, an idea of the Mamluk state,[38] and indeed Ulrich Haarmann has demonstrated the value of Piloti's texts as a source for the social structure and the ruling system of the Mamluk state.[39] However, in his attempt to influence the Latin rulers Piloti was unsuccessful. His work fell into oblivion and was rediscovered only in the nineteenth century.[40] But it belongs to a broad tradition of works written in the

Geo Pistarino, ed. Laura Balletto, Collana di Fonti e Studi, vol. 2 (Geneva, 1997), 1033, has described the situation for merchants and travellers in the Levant adequately: "The Mediterranean Sea was open to all with few restrictions. Beyond demands that taxes and customs duties be paid, states did not impose restrictions on the movement of their subjects. As a consequence, Byzantines, Muslims, and Latins moved freely upon the seas. This openness produced integrated relationships at both private and governmental levels. It is remarkable how frequently political or religious differences proved to be no obstacle at all to international or interfaith relationships." The major obstacles to movement were not political or religious but rather geographical and technical with the exception of times of war or political tensions.

[37]Piloti, *Traité,* 201–9. Piloti was not the only merchant with good relations with the Mamluks. For a Genoese slave-trader who even entered the service of the Mamluks cf. Benjamin Kedar, "Segurano-Sakrān Salvaygo: un mercante genovese al servizio dei sultani mamalucchi, c. 1302–1322," in *Fatti e idee di storia economica nei secoli XII–XX: Studi dedicati a Franco Borlandi* (Bologna, 1976), 75–97.

[38]So explicitly in Piloti, *Traité,* 118.

[39]Ulrich Haarmann, "The Mamluk System of Rule in the Eyes of Western Travelers," *Mamlūk Studies Review* 5 (2001): 11, states that Piloti "as an expert in long-distance trade, . . . was better informed than any of the other European reporters of the late middle ages."

[40]Dopp, Introduction to Piloti, *Traité,* V–XII, XLV–XLVIII.

fourteenth and early fifteenth centuries which dealt with the Orient. Treatises on the recovery of the Holy Land and pilgrim′s reports were often copied together and circulated round the courts of western Europe.[41] These works testify to continued European interest in the East in the later fourteenth century and beyond, even if the recovery of Jerusalem was little more than a dream of enthusiastic nobles who tried to live up to their knightly ideals.[42]

Individuals Crossing Boundaries

In this section how individuals moved between various political, social, and cultural groups will be illustrated. The previously mentioned patriarch Lazaros had always remained loyal to the emperor and his politics with respect to the Church—despite the Mamluks′ view that patriarchs were subject to the sultan′s authority. However, this was hardly a stance shared by all Orthodox dignitaries in the Orient. Because the Christians in the Levant were ruled by various authorities existing within a complex network of relationships, this also resulted in what could be called an ″open-space situation″ for them, in which several options for taking action existed. In the following, two examples of how the diversity of the eastern Mediterranean created niches, thus facilitating the pursuit of politically deviant or even entirely individual goals, will be presented.

The patriarchate of Antioch experienced a disagreement with the Church of Constantinople in the middle of the fourteenth century, on the subject of the

---

[41]Without a doubt, the Latin pilgrims to Syria and Egypt on their return decisively influenced the Western image of the Orient. Especially the later, more detailed, pilgrim′s reports like the one of Bernhard of Breidenbach contributed to the creation of the image of an exotic Orient; Michael Herkenhoff, *Die Darstellung aussereuropäischer Welten in Drucken deutscher Offizinen des 15. Jahrhunderts* (Berlin, 1996), 145–212. Since most of the pilgrims, in contrast to Emmanuel Piloti, stayed only for a short time in the Near East and did not speak Arabic their descriptions of the Muslims were quite often marked by old prejudices. At length, they dealt with the treachery of the Muslims and how they were maltreated by the Mamluk authorities. Thus they did not promote tolerance but kept the religious and cultural conflict alive. And they did so not only in their native countries but also in the Near East where they were viewed as representatives of Latin Christianity; Folker Reichert, ″Pilger und Muslime im Heiligen Land: Formen des Kulturkonflikts im späten Mittelalter,″ in *Kritik und Geschichte der Intoleranz,* ed. Rolf Kloepfer and Burckhard Dücker (Heidelberg, 2000), 3–21. Cf. also Andrew Jotischky, ″Mendicants as Missionaries and Travellers in the Near East in the Thirteenth and Fourteenth Centuries," in *Eastward Bound: Travel and Travellers in the Medieval Mediterranean, 1050–1500*, ed. Rosamund Allen (Manchester and New York, 2004), 88–106, who describes the view that Dominican and Fransciscan travellers to the East had of Oriental Christians. According to Jotischky (ibid., 100), it was a prominent feature of the travel reports of these friars to categorize peoples by their deviant religious practices.

[42]The manuscript of Piloti′s treatise was acquired by the Duke of Burgundy Philippe Le Bon (1419–67); Dopp, Introduction to Piloti, *Traité,* VIII–X; Leopold, *How to Recover the Holy Land,* 193–202.

mystical teachings of Gregorios Palamas. Despite the fact that these had been sanctioned officially at the synod of Blachernae in 1351 under the emperor Joannes VI Kantakouzenous, a good number of theologians continued to oppose them. One of the anti-Palamites was Arsenios, the metropolite of Tyre, which was the highest-ranking bishopric in the patriarchate of Antioch. After having agitated against the Palamites, he was forced to flee the city and came to Cyprus before Peter's Crusade. At the time, the Latin-ruled island was a stronghold for anti-Palamism and a place of refuge for dissidents.[43] Several times, letters from Constantinople addressed to the autonomous Orthodox Church of Cyprus warned the clergy of the doings of Arsenios and others. Furthermore, Arsenios may have contacted the papal legate resident there at the time. It was not least thanks to these political controversies within the church that when an election for the office of patriarch was held in Antioch around 1364, Arsenios was one of three candidates simultaneously elected. Arsenios left Cyprus after the election to resurface, at the end of the Cypriot-Mamluk war, in Turkish-controlled Asia Minor, using the powers of the office to which he laid claim to consecrate bishops, ordain priests, and collect funds from the parishes.[44]

Arsenios was something of a wanderer between worlds. He had no reservations about associating with Latins and Muslims, taking advantage of the religious and political diversity in the Levant in order to pursue his own ends in church policy. The Byzantine emperor's inability to maintain church discipline in the Mamluk Empire or the Turkish amirates gave him the opportunity to do so. Arsenios is not an isolated case. In fact, he himself consecrated one of the most colorful personalities of his time as bishop, a man who was to surpass him by far where flexibility and mobility were concerned. The bishop in question is the swindler and confidence man Paulos Tagaris, who presented his unusual path in life in a general confession to the patriarch and the synod of Constantinople in 1394.

After an unhappy marriage, Paulos had become a monk. As small-time swindles, in which he used an icon that supposedly worked wonders, were discovered, he had to leave Constantinople for Jerusalem, where he was safe from the grasp of the Byzantine authorities. There, the patriarch Lazaros took him under his wing and supported him until 1365, when persecution by the Mamluks forced Lazaros to flee to Constantinople. Without backing from Lazaros, Paulos could no longer

Polemis, "Arsenius of Tyrus and his Tome against the Palamites," *Jahrbuch der Österreichischen Byzantinistik* 43 (1993): 242–45; Hunger, "Die Generalbeichte eines byzantinischen Mönches," 215–17; Kresten, *Die Beziehungen zwischen den Patriarchaten von Konstantinopel und Antiocheia,* 75–82.

remain in Jerusalem. However, he was able to befriend Michael I of Antioch, who brought him to Damascus. He was ordained a priest and took on a decisive role in the administration of the patriarchate. In this position, he was able to give free rein to his greed, ensuring that only those candidates who paid him sufficiently became bishops. When he came upon the vestments of a metropolite who had recently died, however, he donned them and declared himself patriarch of Jerusalem. From that point on, he traveled throughout Asia Minor, performing consecrations of metropolites and bishops in exchange for payment. Whenever a bishop refused payment, Paulos denounced him to the local amir and thus forced him to pay. In his efforts to set Paulos on the right track, the above-mentioned Arsenios of Tyre sought him out and consecrated him bishop in order to, at least retroactively, legalize the consecrations he had performed in clear breach of canonical rules. Paulos resolved to give up his godless conduct—but not for long. Upon learning that the Church in Constantinople was intent on arresting him and Arsenios, he made a daring decision. He traveled to Rome via Hungary and converted to Catholicism. Pope Urban VI was so taken with this move that he honored Paulos by appointing him as the Latin patriarch of Constantinople, whose seat was in Negroponte.[45] But there too he exploited his congregation to such an extent that he soon became unpopular and had to flee to Cyprus, where he received 30,000 ducats for his services in crowning the Cypriot King Jacob I. Finally, he returned to Rome. Since, however, it had in the meantime become common knowledge in the curia that Paulos was a swindler, he was forced to defect to the rival pope in Avignon, who gladly took in the victim of his political adversary, later referring him to the court of the French king Charles VI. The king rewarded him richly for his promise to send relics of Saint Dionysios Areopagites from Greece to France. Paulos promptly left—and was never heard from again at the French court.[46] At the end of his life, however, he was overcome by the desire for salvation and asked the synod in Constantinople for absolution, making a comprehensive confession of his misdeeds. The synod′s decision, however, has not been preserved.[47]

With Paulos, we have left the Mamluk Empire and the eastern Mediterranean far behind us. Self-assuredly he transcended all political and cultural boundaries while traversing the entire Christian world, from Georgia to Paris. What Paulos

---

[45]Herewith ends the confession of Paulos Tagaris, who obviously told the synod only what concerned the Orthodox Church; Hunger, ″Die Generalbeichte eines byzantinischen Mönches,″ 193–99 (German translation, 199–204).

[46]Ibid., 211–14.

[47]Ibid., 197–99 (203–4). For the life of Paulos cf. also Donald M. Nicol, ″The Confessions of a Bogus Patriarch: Paul Tagaris Palaiologos, Orthodox Patriarch of Jerusalem and Catholic Patriarch of Constantinople in the Fourteenth Century,″ *Journal of Ecclesiastical History* 21 (1970): 289–99.

and Arsenios share is that they both demonstrate the possibilities for individual agency in the world of the eastern Mediterranean. They were moving between the cultures as though this were a matter of course and they could do so because of the multi-ethnic and multi-confessional character of the individual states in the eastern Mediterranean. The close interconnection between these numerous ethnic and confessional groups created a certain unity of space regardless of political boundaries.[48]

The case studies presented in this article demonstrate the complex network of relationships in which Christians operated in the Levant, showing how supra-regional external factors and developments determined their actions, while also demonstrating how their actions could in turn influence those supra-regional developments. In doing so, the focus has not been only on political relationships. It was rather the closer examination of the conditions within the Orthodox Church in Syria and Palestine in the middle of the fourteenth century that provided an opportunity to illustrate the complexity of the social reality in the Levant and the opportunities resulting for the individual. The model of reciprocal compartmentalization, of antagonism between cultures, be they Islam, Latin Christianity, or the Eastern Church, does not stand up to closer examination. Only a micro-historical, interdisciplinary approach makes it possible to show differences as well as connections.[49] The example of the Christians in the Levant is especially suited to show this kind of unity in diversity. Thus, a historical, and above all cultural and social historical, treatment of the *Oriens Christianus* should be an essential part of any research done on the eastern Mediterranean region in the Middle Ages.

---

[48]Norman Housley, ″Frontier Societies and Crusading in the Late Middle Ages,″ in *Intercultural Contacts,* ed. Arbel, 107–8, points out that because of these intensive cross-cultural contacts the Latin states of the eastern Mediterranean could not be called frontier societies in the strict sense of the term. Charles J. Halperin, ″The Ideology of Silence: Prejudice and Pragmatism on the Medieval Religious Frontier,″ *Comparative Studies in Society and History* 26 (1984): 465, however, demonstrates that in medieval frontier zones between Christianity and Islam a pragmatic attitude prevailed only as long ″neither side in the struggle had the ability to eliminate the other. The transience of the frontier derived from its intrinsic instability.″

[49]Cf. the similar results of Molly Greene, *A Shared World: Christians and Muslims in the Early Modern Mediterranean,* Modern Greek studies series (Princeton, 2000), 6, who states that ″a focus on Crete in the seventeenth century renders visible the common world that Latins, Eastern Christians, and Muslims shared for many centuries, despite wars and considerable cultural hostility.″

The Sale of Office and Its Economic Consequences during the Rule of the Last Circassians (872–922/1468–1516)

The story told by various chronicles of the last fifty years of the Mamluk state (872–922/1468–1516) confirms how the long-established sale of office served as a source of license for holders of military, religious, and administrative office.[1] The period under discussion was of course a difficult one for the Mamluk state, the last actually in which issues of foreign aggression and attendant, recurring economic crises were to be addressed.[2] Did the sale of office, always a valuable source of revenue for the state, expand during this period? If so, into what areas? Also, depending upon whether the required sums were indexed to the office, to the location, or to the date of appointment, they could have had an impact on economic life.

This article considers the following chronicles: *Inbāʼ al-Haṣr fī Abnāʼ al-ʻAṣr* of al-Ṣayrafī, *Wajīz al-Kalām fī Dhayl ʻalá Duwal al-Islām* of al-Sakhāwī, *Tārīkh* of al-Buṣrawī, *Taʻlīq* of Ibn Ṭawq, *Dhayl Nayl al-Amal fī Dhayl al-Duwal* of ʻAbd al-Bāsiṭ ibn Khalīl, *Badāʼiʻ al-Zuhūr fī Waqāʼiʻ al-Duhūr* of Ibn Iyās, *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān* of Ibn al-Ḥimṣī, and *Mufākahat al-Khillān fī Ḥawādith al-Zamān* of Ibn Ṭūlūn.[3] We have often noted that these works, which cover the period at some length, contain gaps—months, if not

years—though of course the most extensive writings are not always the most instructive on a given issue.[4] A perusal of the table below will confirm this. Take the example of the first two chronicles, the *Inbā'* and the *Wajīz*. Al-Ṣayrafī and al-Sakhāwī each record nine cases of venality but in the *Inbā'* the period under consideration is only four years while that in the *Wajīz* is twenty-six, a ratio six times greater. This leads us once more to question not only the sources of information of these authors but their perspective with regard to the given results. How objective or subjective could they be?

CHRONICLES STUDIED AND CASES OF VENALITY REPORTED

Author	**Chronicle (years covered)**	**Cases of Venality**
al-Ṣayrafī (d. 900/1495)	*Inbā'* (872–76/1468–72)	9
al-Sakhāwī (d. 902/1497)	*Wajīz* (872–98/1468–93)	9 (of which 1 is reported in *Dhayl,* 2 in *Badā'i',* 1 in *Ḥawādith,* and 1 in *Mufākahah*)
al-Buṣrawī (d. 905/1499–1500)	*Tārīkh* (871–904/1467–99)	11 (of which 3 are reported in *Mufākahah*)
Ibn Ṭawq (d. 915/1509)	*Ta'līq* (885–90/1480–85)	14 (of which 7 are reported in *Mufākahah*)
'Abd al-Bāsiṭ ibn Khalīl (d. 920/1514)	*Dhayl* (872–96/1468–91)	12 (of which 1 is reported in *Wajīz* and 7 in *Badā'i'*)
Ibn Iyās (d. 930/1524)	*Badā'i'* (872–922/1468–1516)	37 (of which 2 are reported in *Wajīz,* 7 in *Dhayl,* 2 in *Ḥawādith,* and 1 in *Mufākahah*)
Ibn al-Ḥimṣī (d. 934/1528)	*Ḥawādith* (872–922/1468–1516)	6 (of which 1 is reported in *Wajīz,* 1 in *Tārīkh,* 11 in *Badā'i',* and 12 in *Mufākahah*)
Ibn Ṭūlūn (d. 953/1546)	*Mufākahah* (884–922/1479–1516)	26 (of which 1 is reported in *Wajīz,* 3 in *Tārīkh,* 9 in *Ta'līq,* 1 in *Badā'i',* and 2 in *Ḥawādith*)

[4]Bernadette Martel-Thoumian, "Muḥibb ad-Dīn Salāma b. Yūsuf al-Aslamī, un secrétaire à Damas sous les derniers sultans Mamlouks," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras,* ed. U. Vermeulen and D. de Smet, vol. 3 (Leuven, 2001), 219–69.

This chart reveals yet another issue of no less importance. Many cases are mentioned by two or more authors. This is no accident but reflects for the most part the geographical origins of these historians. It is hardly surprising, then, that Ibn Iyās records a great number of things borrowed from his master, ʿAbd al-Bāsiṭ ibn Khalīl, who like him resided in Cairo. One can perceive an identical phenomenon among Damascene authors such as al-Buṣrawī, Ibn Ṭawq, and Ibn Ṭūlūn. Only Ibn al-Ḥimṣī seems to have broken this pattern since his informants are also represented by the works of Ibn Iyās and Ibn Ṭūlūn. This bipolarization around the two great cities of the Mamluk state forms another impediment to our understanding of the profusion of venality. But the scholar who ventures beyond the confines of these two great metropolises will gain access to equally useful though little-cited regional sources of information—from cities like Aleppo and Jerusalem, for example—untapped by the chroniclers for whom the reproduction, either in part or in whole, of the writings of their predecessors seems to have been the norm.

As mentioned earlier, all offices that were by their nature military, religious, or administrative could be made the object of gift *(badhl)* or bribe *(barṭalah/birṭīl)*,[5] something to which we will return later. Study of the table below will elucidate this.

DISTRIBUTION OF CASES OF VENALITY BY AUTHOR AND BY TYPE OF OFFICE[6]

Author	Source	Military Offices	Religious Offices	Administrative Offices
al-Ṣayrafī	*Inbāʾ*	2	3	4
al-Sakhāwī	*Wajīz*	3	7	2
al-Buṣrawī	*Tārīkh*	2	6	3
Ibn Ṭawq	*Taʿlīq*	1	13	1
ʿAbd al-Bāsiṭ ibn Khalīl	*Dhayl*	2	7	4
Ibn Iyās	*Badāʾiʿ*	7	23	8
Ibn al-Ḥimṣī	*Ḥawādith*	1	4	1
Ibn Ṭūlūn	*Mufākahah*	4	20	5

[5]According to Kazimirski, the term *barṭala/birṭīl* signifies a "gift for bribing a judge." *Dictionnaire Arabe-Français* (repr. Beirut, n.d.), 1:112.

[6]These figures take into account the plurality of offices held by an individual.

Religious posts were the object of great monetary activity. Three authors stand out clearly in this regard. The Damascenes Ibn Ṭawq and Ibn Ṭūlūn mention, respectively, thirteen cases in the *Taʻlīq* and twenty in the *Mufākahah*. The Cairene Ibn Iyās records twenty-three in his *Badā'iʻ*. However, these three figures require some comment. Actually, the duration taken into account in the *Taʻlīq* and in the *Mufākahah* is less than that in the *Badā'iʻ*, by several years for the *Mufākahah* and thirty for the *Taʻlīq*. If one were to create a prospective for the same number of years, one would be right in thinking that the number of cases of sale of office recounted in the *Badā'iʻ* would be surpassed.

It is equally interesting to note that the figures mentioned by Ibn Iyās for military and administrative office holders, seven and eight respectively, are half as many. This information is repeated more or less equally among the different authors, except al-Ṣayrafī. The supremacy of religious office is problematic. One must understand that when the sultan granted military and administrative posts in exchange for hard cash of full weight or accepted money offered by job hunters it was hardly surprising. Actually, title holders had to be of exemplary morality and probity; this at any rate is how they are extolled by the jurists in their works.[7]

To clarify and advance our thesis we append two lists. The first enumerates cases of venality chronologically; the second, which is subdivided into three small lists (I, II, III), follows a thematic classification with regard to which we have followed the order in the chancellery manuals (military, religious, and administrative office). We have, moreover, to bear in mind the plurality of offices held by a single person, which explains how the same individual could figure on both lists II and III. The chronological list allows us to establish that seventy-eight people paid to obtain the post or posts they desired to occupy during the period covered. Certain people paid for two renewals, some three or more. One must differentiate at this point between candidates and positions occupied, by virtue of the common practice in the Mamluk age of plurality of offices. If one were to make a general calculation of the number of positions, one would arrive at the number one hundred twenty-six. Again, this is not an accurate reflection since in two cases the offices obtained are followed by the vague expression ″and other offices″ (II/7, 16). If one divides by categories, one sees that nineteen military offices, seventy-five religious posts and thirty-two administrative positions were acquired in exchange for financial contributions.

These facts are of course not only relative with respect to the elements specified before but also because certain years appear altogether devoid of venality, or at least the authors are mute on the subject. But is this to say that no post was farmed

[7]Cf. Emile Tyan, *Histoire de l′Organisation Judiciaire en Pays d′Islam* (Paris, 1938), 1:425–31; Franz Rosenthal, ″Rashwa,″ *The Encyclopaedia of Islam,* 2nd ed., 8:466–67.

out in 877–78, 880, 882, 884, 899, 901, 903, 907, 909–10, or 913–14? It is difficult to establish this when one knows that for a given year, the authors do not record the same facts. One might equally suppose that they could not know about every transaction, or that the popularization of this phenomenon led them only to consider the cases which appear interesting to them, such as that of Muḥyī al-Dīn ibn al-Naqīb, *qāḍī al-quḍāh* of Cairo, who had six renewals (II/41, 43, 45, 47, 52, 56). He paid once to obtain this office, then renewed it five times.[8] One must not forget that in the great majority of cases it is the main posts that are mentioned, particularly in this sphere. This last point allows one to think that every gift or bribe connected to a minor post often avoided the scrutiny of the authors. It is also possible that they were not judged sufficiently useful to be recorded.

Consequently, the different parameters used do not allow us to establish an effective picture of those posts that were sold. We have mentioned above that the body of information which serves as the basis of this study does not reflect the whole of the reality, only part. The two following examples provide a good demonstration of this. In *Al-Ḍaw' al-Lāmi',* al-Sakhāwī mentions in the notice he dedicated to Raḍī al-Dīn Muḥammad ibn Manṣūr that he obtained in 890/1485 the posts of *nāẓir al-jaysh* and *kātib al-sirr* in Aleppo in exchange for 2,000 dinars.[9] In the *Wajīz* the same author noted in the obituary of Shihāb al-Dīn Aḥmad ibn 'Awwāḍ, who died in Jumādá II 892/May 1487, that he paid 3,000 dinars for the post of qadi of Alexandria.[10] Yet we have found no mention of these nominations. How many people escaped the attention of the chroniclers? Be that as it may, during a fifty-year period we have counted 126 cases, which is on average 2.5 cases a year. If we exclude those years for which no case of venality is seen, we obtain the figure of 3.4 cases per year. In the face of such results one many ask oneself if it is expedient to launch into a study of venality and its economic consequences if the numbers neither constitute nor reveal convincing indicators.

Clearly, to understand and judge venality in its entirety still seems an impossibility. Of course, the study of the thematic tables allows us to establish for the first time the phenomenon in its temporal and geographic dimensions. From these figures we will try to extrapolate the ultimate economic implications.

The table below allows us to maintain that venality was not just an economic phenomenon, but a political one as well. All sovereigns farmed out offices, even

---

[8]This concerns the conferment of the post of the grand Maliki qadi but also the granting of certain teaching positions; read the pages Ibn Khaldūn dedicated to this subject in *Le voyage d'Occident et d'Orient*, ed. and trans. Abdesselam Cheddadi (Paris, 1980), 148–204, 212–15, and 248–49. See also Morimoto Kosei, "What Ibn Khaldūn Saw: The Judiciary of Mamluk Egypt," *Mamlūk Studies Review* 7 (2002): 109–31.

[9]Al-Sakhāwī, *Al-Ḍaw' al-Lāmī' fī Ahl al-Qarn al-Tāsi'* (Cairo, 1934), 9:164–65, no. 413.

[10]Al-Sakhāwī, *Wajīz,* 3:1022–23, no. 2213.

those who enjoyed only brief reigns. In the latter case the record is laughable since altogether there were but six posts for four rulers. This is certainly far from the totals racked up by Qāytbāy and Qānṣūh al-Ghawrī, who elevated, respectively, sixty-eight and twenty-nine offices, little enough when one recalls how many years both exercised power. Be that as it may, Mamluk sultans employed this practice until the end, the last instance occurring in Rabīʻ II 922/May 1516 (II/63).

Distribution of Cases of Venality by Sultan and by Type of Office

Sultan	Military Offices	Religious Offices	Administrative Offices
Qāytbāy (872–901/1468–95)	13	39	16
Muḥammad ibn Qāytbāy (901–4/1495–98)	—	—	1
Qānṣūh (904–5/1498–1500)	—	1	1
Jānbalāṭ (905–6/1500–1)	—	1	—
Tūmānbāy (906/1501)	—	2	—
Qānṣūh al–Ghawrī (906–22/1501–16)	6	20	3

If one were to consider things from a geographic perspective, one would observe the clear predominance of Damascus with respect to offices of the pen. Actually, thirty-nine religious posts were farmed out there as against thirty-three for Cairo, two for Aleppo and two for Jerusalem. We find the same situation for administrative posts: eighteen for Damascus, ten for Cairo, three for Aleppo, and one for Jidda. Military offices constituted a case apart with regard to the fixed number of amirs eligible to be governors of provinces. We will return a little later to the significance that one may attribute to these different figures.

It would hardly be surprising to learn that the most elevated posts were frequently the object of financial transaction. But these were not the only ones, for the range of posts proves to be quite large. In the case of the military, gubernatorial posts—always a question of the locale of the city and its importance—were studied in eight cases. While the post of *nā'ib* of Damascus was leased only once (I/6), and again the information appears only in the obituary notice of its holder, the amir Qijmās, one will note that the governor of Ṣafad renewed three times (II/10, 15, and 17). Coming thereafter are various offices, among which we find those of

ḥājib al-ḥujjāb (I/18) and *dawādār* (I/5), which would not be but for their position in the palatine hierarchy.

Concerning religious offices, we will see that judicial posts occupied the first place and that among them were thirty renewals for the post of *qāḍī al-quḍāh*. Yet one big difference appears among the four judicial schools: the Shafiʻi *madhhab* comes first with eighteen leased offices (seven in Damascus and eleven in Cairo); this is followed by the Hanafi *madhhab* with ten posts (six in Damascus, one in Aleppo, and three in Cairo). The Hanbali and Maliki schools seem to have been little affected by venality since there exists but one case per school in Cairo.

When one reads Ibn Iyās′s reflections on venality it would seem that the practice was anchored in current morality. Ironically, the author expresses his own astonishment in Dhū al-Qaʻdah 919/December 1513 when Sultan Qānṣūh al-Ghawrī invested four grand qadis on the same day without any of the grantees having had to make the slightest payment.[11] This observation leads one to think that venality of office became so commonplace, indeed, insignificant a practice that it attracted only occasional attention from historians. There is a possible explanation for this small number of cases. One can of course measure the importance of venality in the testimony of the *Tārīkh* of al-Buṣrawī, who was opposed to this practice. In Muḥarram 902/September 1496 he produced a list of Shafiʻis paired with their privileges and showed that the majority took gifts overtly *(baʻḍuhum ya'khudhu al-rashwah jahran)*—in short, a bribe.[12] Damascus was not the only city affected by this scourge. The same author on 7 Jumādá II 902/February 1497 recalled this problem at the same time as a reunion with Shaykh Jalāl al-Dīn, brother of the *shaykh al-islām* Kamāl al-Dīn ibn Sharīf. The discussion turned on the issue of the corruption which reigned in Jerusalem and which was the work of the Shafiʻi qadi. This person ″plunged into debt and bribes *(al-rashwah)* in an indescribable manner.″ [13] In such a context one understands better that the chroniclers had at heart to bring to the attention of their readers honest men such as the Shafiʻi qadi ʻAlā' al-Dīn al-Akhmīmī, who never accepted a single bribe *(ʻafīfan ʻan al-rashwah)* during his tenure.[14] If the post of Shafiʻi grand qadi was the object of financial transaction, the same applied to his deputy *(nā'ib qāḍī al-quḍāh shāfiʻī)* of which we have uncovered nine cases for Damascus.

Venality did not strike the judiciary alone; teaching posts were affected identically: five *mudarrisūn* (three in Damascus and two in Cairo) obtained their

[14] Ibn Iyās, *Badā'iʻ,* 4:352–53.

offices through purchase.[15] We should note at this point that instructors were not obliged to disburse money to obtain a lecture post. According to ʿAbd al-Bāsiṭ this was a recent phenomenon. Shihāb al-Dīn ibn al-Ṣayrafī, who obtained the post of *mudarris* at the Shaykhūnīyah (Cairo) in Dhū al-Qaʿdah 895/September 1490, had been the first to be hired in a cashless deal (II/36). It is nevertheless difficult to say if the remark is applicable to all institutions or just the Shaykhūnīyah. In any case, in Damascus in Muḥarram 883/April 1478 ʿImād al-Dīn al-Nāṣirī obtained a teaching post, though the establishment concerned is not mentioned (II/7). Other religious posts underwent the same process: those of *muḥtasib* (two cases in Cairo),[16] *shaykh* (five cases, of which four were in Cairo and one in Jerusalem), and *wakīl al-sulṭān* (four cases, three of which were in Damascus and one in Cairo), as well as the different offices of controller *(nāẓir al-bīmāristān, nāẓir al-ashrāf* and *nāẓir al-asrāʾ)* (of eleven cases, six were in Damascus, two in Aleppo, and three in Cairo).

With regard to administrative office, the two most important posts in the civil administration of the ninth/fifteenth century to be farmed out were those of *kātib al-sirr* (seven cases) and *nāẓir al-jaysh* (six cases). Again, Damascus accounts for five cases for the post of *kātib al-sirr* and six for that of *nāẓir al-jaysh*. We must remember that these two posts were often conjoined but also that the post of *kātib al-sirr* was sometimes bundled with that of *qāḍī al-quḍāh shāfiʿī* (III/2, 9). That the vizier figures only in two renewals in our list is undoubtedly a reflection of the decline of the post in Cairo, which no longer existed in Damascus after 839/1435.[17] One notes also the frequency of the post of controller of the citadel *(nāẓir al-qalʿah)* (three cases in Damascus and one in Aleppo) but also the mention of the office of secretary of the mamluks *(kātib al-mamālīk)*, a less elevated post in the hierarchy, that had two renewals much later (in 912/1506).

Before going into greater detail on the question of disbursement, some remarks are in order. From the outset amounts were not mentioned systematically by the authors, who were no doubt informed about them, even though for the military and administrative offices we possess figures for more than three-quarters of them. Thus, for nineteen military posts the sum total was noted in twelve cases; for sixty-three religious posts there were thirty-nine cases, and for twenty-one administrative posts there were fourteen cases. In addition, if the Mamluks paid a sum of money to obtain or be reconfirmed in an office (I/2 and 5) they could only

retain one office. In religious and civil cases, the business was much more complex since one is faced with the plurality of offices (II/2 and III/4; II/4 and III/5; II/12 and III/6; II/3 and III/7; II/14 and III/8; II/30 and III/11; II/34 and III/16) or several posts of the same category (II/6, 7, 16, 39, 40, 46, 48, 49; III/15, 17, 20, 21). No information is ever given that reveals whether the sum demanded or paid was a lump sum; perhaps it was a forfeiture. We have only one detailed example. According to Ibn Ṭūlūn, in Sha'bān 916/November 1510, the *qāḍī al-quḍāh shāfi'ī* Walī al-Dīn ibn al-Farfūr granted to 'Alā' al-Dīn al-Ramlī the *niyābah shāfi'īyah* for one hundred *ashrafī*s and, according to rumor, on the same day also accorded to him the post of *mutakallim* for the affairs of the Ḥaramayn for 150 *ashrafī*s (II/49).

The offices that we have cited were conferred in exchange for financial contributions, although in certain cases the authors were reticent about them. Indeed, one encounters in their writing the expression *"wa-qīl"* signifying that they were only reporting rumor, perhaps without any foundation (I/16; II/11, 41, 62; III/21, 50, 60). It is in this vein that Ibn Ṭawq recorded in Sha'bān 886/September 1481 the nomination of 'Imād al-Dīn Ismā'īl al-Nāṣirī to the post of *qāḍī al-quḍāh ḥanafī:* "I have heard it said that he had obtained this post through an exchange of a sizeable cash gift, all to retain the offices that he already possessed" (II/16). The same author, speaking somewhat fatalistically of a similar case, that of Ibn al-Ghazzī, adds: "God alone knows the truth of it" (II/11). Paying to obtain a post had become an official act, at any rate a well-known practice, as when in Dhū al-Qa'dah 897/August 1492 'Abd al-Ḥaqq al-Sunbāṭī spent 1,000 dinars to land a teaching post in al-Manṣūrīyah; we have this from al-Sakhāwī (II/38). In the case of Ṣalāḥ al-Dīn al-'Adawī, one of his relatives, named 'Abd al-Qādir, told al-Buṣrawī that new amounts were required for the renewal of Ṣalāḥ al-Dīn in the office of *wakīl al-sulṭān* and for obtaining the office of *nāẓir al-dhakhīrah*. We are ignorant of the details of this operation, but the trip to Cairo, for the individual lived and worked in Damascus, cost him 28,000 dinars, which he had to borrow.

The language employed to invoke these monetary transactions is ambiguous to say the least. The question is one of *badhl* (gift) (I/7,8, 11; II/15, 17, 26).[18] The candidate proposed a sum to the ruler who had the right to accept it but also to refuse it in order to obtain more. It is perhaps better to speak not of a gift but a bribe. If sometimes the amount of this gift is noted, as in the case of Shāhīn al-Jamālī, who offered 20,000 dinars for the post of *shādd* in Jidda to Sultan Qāytbāy in Rajab 876/December 1471 (I/2), this information is not systematic. In the case of Shams al-Dīn ibn al-Muzalliq one learns only that he gave an important

---

[18]Franz Rosenthal, "Gifts and Bribes: The Muslim View," *Proceedings of the American Philosophical Society* 108 (1964): 135–44.

gift (to the same ruler) to obtain the office of *qāḍī al-quḍāh shāfiʿī* in Damascus in Shaʿbān 889/August 1484 (II/24). It is in no way easier to figure values described simply as ″much″ *(kathīr).* One might suppose that he paid the sum habitually demanded of the candidate for the highest judicial office, whatever his affiliation, namely 3,000 dinars (II/10, 35, 44, 45, 46, 52, 57, 59). That was at any rate the amount ordinarily required in Cairo, according to the authors. The situation seems slightly different for the provinces since Ibn al-Muzalliq paid in the previous month the tidy sum of 10,000 dinars for the same post (II/22). How much did he spend the second time? The sultan undoubtedly exploited his desire to be reinstated in the post of grand qadi. Our confusion is increased when Ibn al-Ḥimṣī says that Sharaf al-Dīn ibn ʿĪd confided to him that he was relieved of his obligation to satisfy Sultan Qāytbāy, who conferred the post of *qāḍī al-quḍāh ḥanafī* upon him (II/8).

One sees then the total ambiguity of the gift, indeed, its total ambivalence. Trapped between the voluntary and forced gift, candidates who ardently desired to obtain a post, which make up the majority of cases in this study, or extend their occupation (I/3), were ready to pay any amount to insure access.[19] The result was a veritable rush for office by whomever, whatever his abilities, was able to fulfill the object of his dreams, if only he could entice the ruler financially. Shocked, Ibn Iyās tells how in Ṣafar 887/March 1482 Sultan Qāytbāy conferred on Muḥammad ibn al-ʿAẓamah the office of controller of *waqf*s under the pretext that he had promised him an important monthly deduction on the revenues derived from properties in mortmain. While this individual, intent on lining his own pocket, did not possess the capacity required to administer this office properly, the ruler took it (II/19). We have already had occasion to refer to the fickleness of rulers who had little scruples in distributing religious and administrative offices to incompetents for money.[20] Military offices do not seem to have entirely escaped this fate. Ibn Iyās, for one, was shocked to discover that one of the *julbān* obtained the lucrative post of *nāʾib* of Ḥiṣn al-Akrād for the modest sum of 1,000 dinars (I/13). For the author, who cannot explain Qāytbāy′s action, this was very unusual *(wa-hādhā min al-nawādir).*

If the authors use the word *badhl,* whatever its meaning, they never use the word *barṭalah/birṭīl* and seem to prefer to it *rashwah* (gift), what one bestows on

---

[19]The following anecdote is evocative of the spirit that prevailed then. In Ṣafar 908/August 1502, when the pilgrimage amir Aṣṭamur arrived in Baṭn al-Marr, before the Mecca station, he was received by al-Jāzānī, who came to meet him. Aṣṭamur offered him a robe of honor saying: ″If you desire to be invested with the lordship of Mecca, you must pay the sultan 50,000 dinars.″ This was understood by al-Jāzānī: ″I will pay this sum.″ Ibn Iyās, *Badāʾiʿ,* 4:36–37.

[20]Bernadette Martel-Thoumian, *Les civils et l′administration dans l′etat militaire mamlouk: (IXe/XVe siècle)* (Damascus, 1992), 78–121.

a judge or an officer for gain. Is this a question of bashfulness or was the word simply not in current usage? Thus, we have already mentioned that the authors are not always in a position to furnish us with the sum total paid out by the candidates. Monetary transactions are referred to as *bi-mablagh* (for an amount) (II/40, 63, 60, 61; III/9) and *bi-māl* (for cash) (II/6, 56; III/16, 46); some could be accorded the epithet *kathīr* (much) (*bi-māl kathīr,* II/31) or *kabīr* (large, considerable) (*bi-mablagh kabīr,* III/51). One observes a linguistic variant that signifies when the candidate is successful—*wa-qad saʻá fī dhālika bi-mablagh lahu ṣūrah*—meaning that the person has been able to pay because of great wealth (I/14, 15, 17; II/31, 32, 42; III/13, 18).[21] These different expressions underscore that the sums paid were sizeable, but of what magnitude? It is difficult to give an estimate or determine the range of unspecified gifts. We are unable to say if these sums were really large or just perceived as such by the authors. Moreover, amounts were assessed every fifty years, which complicates our effective understanding of them because during the same period economic progress undoubtedly occurred. To conduct a precise study, it would be necessary to take into account the various price indices, such as monetary variations.

Fortunately, we possess figures for fifty-six posts, that is, slightly less than half. The totals are always quoted in dinars ranging from 100 (*nā'ib qāḍī al-quḍāh shāfiʻī,* II/49) to 100,000 (*nā'ib* of Damascus, I/6). We have noted above that the price takes into account the office and unquestionably the plurality. The sums paid by the amirs are always greater or at least equivalent to those paid by individuals who accumulated religious and administrative offices. This demonstrates conclusively that the military disposed of greater resources or were otherwise able to make stronger bids. Certain details here are worthy of attention. Certain authors such al-Ṣayrafī (I/1; III/1, 2, 3) but occasionally also Ibn Ṭawq and Ibn Ṭūlūn (I/5) and even Ibn al-Ḥimṣī (I/4) mention that the dinars furnished were weighed coins composed of good alloy.[22] In taking this precaution, Sultan Qāytbāy, to whom the sums ultimately reverted, was assured that the volume of money corresponded to the sums demanded. However, it is difficult to confirm that this practice was in fashion during the entire length of Qāytbāy′s reign or during the reigns of his successors; the last mention is in 886/1481. One can hope that Qāytbāy had confidence in the coins he ordered into circulation, as at the same time the chroniclers claimed a halt to counterfeiters. Ibn Ṭūlūn mentions two payments in *ashrafī* dinars (II/49, 51) and like Ibn Ṭawq uses the term *dhahab* (III/10, 11). Indeed, Ibn Iyās proved that in great detail in the case of Fakhr al-Dīn

---

[21]According to Kazimirski, the expression *māl lahu ṣūrah* signifies that an individual had considerable wealth (*Dictionnaire Arabe-Français,* 1:1384).

[22]The term *wazana* means to give money to someone after it has been weighed (ibid., 2:1530).

ibn al-ʻAfīf when he noted that he paid for the post of *kātib al-mamālīk* with 2,000 dinars and change (*wa-kusūr,* III/19).[23]

Of course certain candidates made payments both in specie and in kind, things such as grain and livestock. Thus, Sharaf al-Dīn al-Ṣughayr paid 8,000 dinars and 5,000 *ardabb*s of barley, about 45,000 liters (III/21).[24] Shihāb al-Dīn al-Ḥimṣī disbursed an unknown sum of cash to which he added livestock (II/27). Similarly, Badr al-Dīn ibn al-Muʻtamid paid in kind, offering forty sacks of barley (II/50) for the post of *qāḍī al-quḍāh shāfiʻī* in Damascus. According to Muḥibb al-Dīn ibn Yūsuf, he gave a thousand horses (III/17). Ibn Iyās noted that Badr al-Dīn ibn Muzhir paid a cash sum but also a portion of his inheritance to obtain the post of *kātib al-sirr* held previously by his father (III/14). Unfortunately, we do not possess any details about this transaction. How much was the sum paid and what was the nature of the portion of the inheritance (house, property, livestock) demanded from the applicant by Qāytbāy? In the ledger of this arrangement it is difficult to calculate the proportion of each kind of payment but it is interesting to note that the sultan accepted all forms.

Of course, not everyone could furnish the required sum all at once. The government, if it did not have a candidate likely to pay an equivalent sum, would accept graduated payments. The amir Aydakī and the cleric Raḍī al-Dīn al-Ghazzī, who undoubtedly lacked ready funds to take their offices, were permitted to pay half on the day of their installation and the balance on a date fixed by the authorities (I/12; II/11). Though the amir Ulmās had agreed to pay 41,000 dinars for the post of *walī al-shurṭah,* he offered 20,000 down and the rest in installments (I/19). Yet it happened that a candidate could not finally pay what he had offered to the sultan, or what the latter had charged. The sultan, pressed no doubt by necessity, took a sum less than that fixed at the outset. ʻImād al-Dīn Ismāʻīl al-Nāṣirī, who promised 8,000 dinars to Qāytbāy, could only pay 7,000 dinars in the end (II/7).

Nevertheless, the sultan was not always so accommodating. In Rabīʻ II 879/August 1474, on Wednesday the 15th, the new *nāẓir al-ashrāf* of Damascus, al-Sayyid al-Sharīf, did not receive his robe of investiture because he did not fulfill his promise to pay. According to al-Ṣayrafī, he was finally installed in his new office on Friday the 23rd after having paid 1,000 dinars (II/3). These compromises do not seem to have been systematically applied and the affair could always take another turn when the sultan's need for money proved urgent. The Shafiʻi grand qadi Muḥyī al-Dīn ibn al-Naqīb underwent such an experience in

---

[23]*Kusūr* signifies change, making up of a sum with fractional coinage; cf. R. Dozy, *Supplément aux dictionnaires arabes* (repr., Beirut, 1981), 2:474.

[24]According to Sato Tsugitaka, *State and Rural Society in Medieval Islam: Sultans, Muqta's and Fallahun* (Leiden, 1997), 241.

Jumādá I 916/August 1510 when Sultan Qānṣūh al-Ghawrī revoked his office after he had been in it for only two months and sixteen days. The qadi had not finished paying the agreed amount at the time of his nomination, on which he still owed 1,000 dinars. Though destitute he had to pay, and the sultan, to ensure payment, ordered him locked up in the home of the *nāẓir al-khāṣṣ*.

We have, to this point, noted transactions made face-to-face between the sultan and anyone seeking a post. But venality was not uniquely the purview of the sultan, for other high-ranking persons also took advantage of their positions for profit. This situation seems to have been so common in Damascus for religious offices that one cannot detect any exception. The following three cases refer to the same person, the Shafi'i grand qadi Shihāb al-Dīn ibn al-Farfūr. In Jumādá II 886/July 1481 he conferred the *niyābah shāfi'īyah* on Muḥyī al-Dīn Yaḥyá ibn Ghāzī for a cash amount that was less than what was rumored (II/15). In Rajab 889/August 1481 it was Shihāb al-Dīn al-'Azāzī to whom he gave the same post for eighty *ashrafī* dinars, according to Ibn Ṭūlūn, and for 400, according to Ibn Ṭawq (II/23). In Jumādá II 889/June 1484 Taqī al-Dīn ibn Qāḍī Zura' became *nā'ib al-ḥukm* after he paid a considerable amount of cash (II/21). A member of the Farfūr clan again figures years later. In Sha'bān 921/September 1515 *qāḍī al-quḍāh shāfi'ī* Walī al-Dīn ibn al-Farfūr requested of Shihāb al-Dīn Aḥmad al-Ramlī 1,000 dinars. The latter was then imam of the Umayyad mosque but was unable to pay more than half the balance. The post then went to Taqī al-Dīn al-Qarā for an enormous sum (II/58)! We have related four scenarios involving high Damascene religious dignitaries, though this practice was not limited to them. In Muḥarram 892/December 1486 the governor of Damascus named as *nā'ib* of Ṣafad the *ḥājib al-ḥujjāb* Īlbāy for 20,000 dinars (I/10). Then in Shawwāl 895/August 1490 Sultan Qāytbāy enjoined the *ḥājib kabīr* Yūnis al-Sharīfī to choose the Hanafi grand qadi; his choice was Muḥibb al-Dīn ibn al-Qusayf, who agreed to pay 3,000 dinars (II/35).

Often when money proved scarce it became necessary to solicit the support of influential people. It is unclear if such services were systematically compensated since we possess examples in which cash is not mentioned, only the names of intermediaries. A case in Ramaḍān 887/October 1482 is notable since Shihāb al-Dīn al-'Azāzī obtained the *niyābah shāfi'īyah* thanks to the intervention of Shaykh Sirāj al-Dīn ibn al-Ṣayrafī and for 200 dinars (II/20). In Ṣafar 898/November 1492 the amir Qānībāy Qarā al-Rammāḥ obtained the post of *nā'ib* of Ṣahyūn in exchange for a bribe and the intervention of the amir Azbak al-Khāzindār (I/14).

It would seem, moreover, that candidates were obligated financially to their intercessors. In Dhū al-Qa'dah 897/August 1492 'Abd al-Ḥaqq al-Sunbāṭī spent 1,000 dinars to obtain a teaching post in al-Manṣūrīyah. This amount consisted of a bribe but also gifts made to people who had supported him, including an anonymous

amir, who received one hundred dinars (II/38). The case of Muḥyī al-Dīn ʻAbd al-Qādir ibn al-Naqīb is particularly interesting. As we have already noted, this person occupied the post of Shafiʻi grand qadi in Cairo six times, paying each time with bribes. He also had recourse to the offices of certain individuals. Ibn Iyās mentioned that in Dhū al-Qaʻdah 911/March 1506 he obtained on three occasions the post of grand qadi for 5,000 dinars but also that he had distributed 2,000 more to those amirs who had supported his candidacy, to principal members of the sultan´s retinue *(khawāṣṣ),* notably the *dawādār* Azdamur. On the occasion of his sixth and last nomination, in Jumādá II 921/July 1515, he paid out the usual 3,000 dinars to which he added the amounts distributed to the *dawādār,* to his adjutant *(dawādār thānī)* and to the *kātib al-sirr*. One can easily imagine all the resources expended by this individual to obtain the office of his dreams and then to maintain himself in it. According to rumor, he spent a total of some 36,000 dinars. One can easily believe, too, Ibn Iyās´ claim that in acting in such a fashion, he ruined his fortune (II/41, 43, 45, 47, 52, 56).

Venality caused money to change hands at such a rate that if they were not systematically important at the start, these sums could become so if the candidate solicited the same office frequently enough and put himself in debt to his intermediaries. One must not forget that the case of Ibn al-Naqīb noted before, as it constitutes a case of affiliation, is not really an exception. Thus in Dhū al-Qaʻdah 918/January 1513 Kamāl al-Dīn al-Ṭawīl occupied for the third time the office of Shafiʻi grand qadi, achieving his ends by spending in excess of 10,000 dinars (II/48, 53, 57). Other individuals occupied the same posts two or three times by utilizing bribes rather than their abilities, which created discontent with their nominations. Such is the reminder of Ibn Iyās concerning the affection that Ḥusām al-Dīn Maḥmūd ibn al-Shiḥnah possessed for the post of Hanafi grand qadi in Ramaḍān 921/October 1515 (II/59): ″Sultan Qānṣūh al-Ghawrī interested himself in all things having to do with the procuring of money.″[25] The author deplored his youth, and consequently his lack of experience as judge, which paralleled his lack of learning, perhaps because he had not completed his education. The judgment of Ibn Iyās is severe: ″He was undoubtedly the most incompetent of the Hanafi qadis,″[26] while other candidates who had been omitted possessed the requisite qualifications to administer the office.

Even so, it would not be right to place all responsibility for the sale of office and its convolutions solely on the rulers. It was after all the candidates themselves who sought backers to support their applications by means of gifts of varying value. It was in essence a contractual relationship: both parties were free to accept

[25]Ibn Iyās, *Badāʼiʻ,* 4:477.
[26]Ibid.

or reject the proposed deal. Clearly, the sultans exploited the system to their advantage, but the candidates were certainly not inclined to invest, and invest substantially, to no purpose. They of course hoped their new position would allow them not only to recoup their investment but also exploit the system in turn.

Ibn Ṭūlūn relates that the *nāẓir al-jaysh* Shihāb al-Dīn ibn al-Farfūr and the *qāḍī al-quḍāh shāfi'ī* Ṣalāḥ al-Dīn al-'Adawī ″disgraced themselves″ in Damascus. In Ṣafar 886/April 1481 al-'Adawī lost the post of *qāḍī al-quḍāh shāfi'ī* while retaining those of *nāẓir al-qal'ah* and *wakīl al-sulṭān*. Desirous of managing them, Ibn al-Farfūr agreed to pay 32,000 dinars and had his prayers answered. Al-'Adawī, who had bid only 10,000 dinars to the *dawādār,* was dismissed, but only for a brief time because in the same month he regained two of his former offices *(nāẓir al-qal'ah* and *wakīl al-sulṭān)* in exchange for 26,000 dinars. He did not succeed in retaining them, though, as Ibn al-Farfūr offered in Rabī' I/May the sum of 30,000 dinars and obtained as well the post of *wakīl bayt al-māl* (II/12, 13, 14).[27] One wonders if any part of the money found its way into the sultan′s coffers. Regardless, the attitude of those two office holders gives us an idea of the amount of competition induced by the system. We note that the sum ″pocketed″ by the *dawādār* in the space of a month was close to 88,000 dinars! It is interesting to note, however, that the Ibn al-Farfūr reported here is the same Shihāb al-Dīn ibn al-Farfūr we have mentioned above in the three affairs of attribution of posts between 886 and 889. Shihāb al-Dīn did not wait long to swap the status of solicitor for that of purveyor of offices, this providing the means of reimbursing himself quickly. This attitude was by no means exceptional. Ibn Iyās, in the notice he dedicated to the amir Qānībāy Qarā al-Rammāḥ in Rabī' I 921/April 1513, recalled that he had obtained the post of *nā'ib* of Ṣahyūn through a bribe and the intervention of the amir Azbak al-Khāzindār, but also that his attitude towards his administrators leads one to believe that he was recouping his outlay by pressuring them (I/14). Undoubtedly, it was for the same purpose that the qadi Ṣalāḥ al-Dīn al-'Adawī came to Cairo in Dhū al-Qa'dah 891/October 1496. He knew in advance that, good year or bad, he would recoup the 28,000 dinars that he had borrowed for the trip (II/30).

Even so, it is not necessary to see in these practices the emergence of an entirely new phenomenon. When 'Abd al-Karīm ibn Kātib al-Manākh was nominated vizier in Shawwāl 826/September 1423 in exchange for 20,000 dinars, his father said to him: ″I have occupied the office of vizier and I have left there the 60,000 dinars that I would possess without ever being able to repair the breach in my fortune. How shall you manage it?″ 'Abd al-Karīm made this Sibylline comment:″I would fill this void by taking from the Muslims′ portion.″ With these

---

[27]Ibn Ṭūlūn, *Mufākahah,* 1:36, 37 et 39

profound observations the new vizier revealed to his father a pyramid scheme. One would be right in thinking that the top was not systematically composed of these ″Muslims″ but that, according to circumstance, other intermediaries would give money thinking that they would recoup in requisite time. Only the poor devil at the bottom of the pyramid would legitimately feel himself injured. In the chronicles it is only the apex of the edifice that is uncovered, while the rest remains hidden, appearing only rarely.

Though significant amounts were either paid or recouped by candidates, they pale in comparison with those disbursed during the first half of the ninth/fifteenth century. The three examples adduced here are, in this regard, significant. Of course, the question is the conferment of the post of *kātib al-sirr,* the most elevated position in the administrative hierarchy and the most coveted. As one can see from the figures that follow, one is far from the kind of sums paid during the period which presently interests us. Thus, in Rabīʻ I 808/August 1405, Saʻd al-Dīn Ibrāhīm ibn Ghurāb paid 60,000 dinars; in Shawwāl 826/October 1421 Kamāl al-Dīn Muḥammad ibn al-Bārizī gave 40,000 dinars; in Rajab 832/April 1429, Jalāl al-Dīn Muḥammad ibn Muzhir paid 100,000 dinars.[28] The rapacity and cupidity of the sultans in place—Faraj, al-Mu'ayyad Shaykh, and Barsbāy—had nothing on Qāytbāy and Qānṣūh al-Ghawrī. What is more, sums were paid entirely at the time of the purchase of office. If it is true that these three rulers exercised power during periods which were filled with political and economic crises, contrary to their successors, they were capable of sizing up issues, even bringing solutions to bear, though they proved to be temporary.

Be that as it may, these findings lead us to question the wealth of different office holders since even amirs seem to have had difficulty in paying. Are we faced with the onset of a general impoverishment, at least concerning certain notables? Is the situation the same in Cairo as in the provincial capitals? How does one explain this phenomenon? For the last fifty years of the Mamluk Sultanate′s existence, rulers confronting foreign dangers and diverse economic crises were focused less and less on devising a new fiscal regime to keep state coffers filled. Arbitrary exactions from notables, merchants, or non-Muslim communities, as well as new levies on various branches of commerce and the property of mortmain, allowed Qāytbāy to replenish his often empty treasury. His successor Qānṣūh al-Ghawrī used similar methods; he had recourse to simple extraordinary levies, to confiscation of the goods of office holders fallen into disgrace, and to seizing the inheritances of the wealthy deceased.

In these circumstances, one sees how the government agreed on a price for certain offices, as in the case of the grand qadi: all candidates hoping to occupy

---

[28]Cf. the lists in the appendices of ʻAbd al-Rāziq, *Al-Badhl wa-al-Barṭalah*.

the position had to furnish 3,000 dinars to the sultan. The practice became virtual law. The procedure, without any legal sanction, became so implicit, on the one hand, by princely fiat and, on the other, by the voluntary acquiescence of the candidates. The relatively low asking price is easily explained: administrators, already subject to so many different financial drains, were no doubt unable to extend themselves any further. Of course, there were always exceptions, but the sultan could leave these offices without title holders. Thus, to confer such an office for such a relatively small sum was insurance for always having on hand a potential applicant. Thus, in Rabīʻ I 919/May 1513 Sultan Qānṣūh al-Ghawrī spoke to ʻIzz al-Dīn al-Shīshīnī of his desire to award the post of *qāḍī al-quḍāh ḥanbalī:* ″Give me 1,000 dinars and I will confer on you the offices of your father″ (II/54). If the ruler wanted to obtain more, since all appointments and removals depended on his good will, he had only to dismiss summarily the office holder and replace him. This was his most used gambit! The case of Muḥyī al-Dīn ibn al-Naqīb is instructive: in Dhū al-Qaʻdah 918/January 1513 he had already been Shafiʻi grand qadi five times though the total length of his mandate had been less than a year, in fact, only nine months and eight days.

Did venality exacerbate the major political crises that crisscrossed the sultanate, particularly when it was time to mobilize against external enemies? During these critical periods demands for money but especially its collection proved vital for the raising and equipping of troops. In fact, only five years stand out distinctly: 886/1481 and 922/1516, with nine cases of venality each; 889/1484 and 921/1515, seven cases; and finally, 893/1488, six cases. The last two years of the Mamluk sultanate were marked by greater activity: sixteen offices were farmed out, bringing in some 60,000 dinars, although for three posts the amount is not precise. This sum seems modest ultimately and we may be right in thinking that it was only a balance, though not a negligible one, and nothing more. Moreover, the story in the chronicles is that when the sultan mobilized his forces he raised a new tax, justifying it by invoking the necessity of defending his territory.

Sultans preferred to bleed the population as a whole, with the help of the procedures enumerated above, rather than demand what appeared to be prohibitive fees from various grantees. They were being pragmatic since the sums collected in this way could not be compared with revenues induced through venality. If so, it is a question of yielding to a bad habit embedded in current mores, of assimilation into a quasi-levy, a tax on office. While we have been unable to illuminate fully this phenomenon in our study, it seems to us that during the last fifty years of the sultanate venality of office lost its financial importance. Revenues generated through venality are not attested in reports about other taxes. But did they contribute to the enrichment of all those who practiced it? It is difficult to answer affirmatively because a certain number of individuals undoubtedly had time to recoup their

losses. Still, we cannot be absolutely sure. For those who had the opportunity, the government soon confiscated money won from the ″Muslims′ portion.″ May morality be saved!

CHRONOLOGICAL TABLE

Date	**Name**	**Office/Location**	**Amounts/Methods of Payment**	**Source**
Jumādá I 874/ Nov. 1469	Tāj al-Dīn ibn al-Hayṣam	*mustawfī al-khāṣṣ,* Cairo	1,000 weighed dinars	*Inbā',* 152
Jumādá I 875/ Oct. 1470	Qāsim ibn al-Qarāfī	vizier, Cairo	20,000 weighed dinars	Ibid., 226
Jumādá II 876/ Nov. 1471	Taghrībirdī	*kāshif al-jusūr wa-al-damm,* al-Sharqīyah	1,000 weighed dinars	Ibid., 365
Rajab 876/ Dec. 1471	Shāhīn al-Jamālī	*shādd,* Jidda	20,000 dinars	Ibid., 383
Rajab 876/ Dec. 1471	Muḥammad ibn ʻAbd al-Raḥmān	*ṣayrafī,* Jidda	10,000 weighed dinars	Ibid., 383
Rajab 876/ Dec. 1471	Ibn al-ʻAjlūnī	*qāḍī al-quḍāh ḥanafī,* Damascus	10,000 dinars	Ibid., 390
Ramaḍān 876/ Feb. 1472	Quṭb al-Dīn al-Khayḍarī	*qāḍī al-quḍāh shāfiʻī, kātib al-sirr,* Damascus	about 30,000 dinars	Ibid., 406, 423
Rabīʻ II 879/ Aug. 1474	al-Sayyid al-Sharīf[29]	*nāẓir al-ashrāf,* Damascus	1,000 dinars	Ibid., 498, 504
Ṣafar 881/ May 1476	Quṭb al-Dīn al-Khayḍarī	*qāḍī al-quḍāh shāfiʻī, kātib al-sirr,* Damascus	not specified	*Dhayl,* fol. 271v; *Badā'iʻ,* 3:119
Rabīʻ I 881/ June 1476	Taqī al-Dīn ibn al-Naḥḥās	*muḥtasib,* Cairo	800 dinars	*Tārīkh,* 76
Rajab 881/ Oct. 1476	Taqī al-Dīn ibn Qāḍī ʻAjlūn	*nāẓir al-asrā', nāẓir waqf* al-Ruknīyah, Damascus	not specified	Ibid., 78
Rajab 881/ Oct. 1476	Jānibak	*ḥājib thānī,* Damascus	4,000 dinars	Ibid.
Muḥarram 883/ Apr. 1478	ʻImād al-Dīn Ismāʻīl al-Nāṣirī	*nāẓir, mudarris,* and other Hanafi functions, Damascus	asking price: 8,000; payment: 7,000 dinars	*Ḥawādith,* 1:221
Shawwāl 883/ Dec. 1478	Ibrāhīm ibn Shādī Bak al-Julubbānī	*kāshif,* al-Ḥawrān	10,000 weighed dinars	Ibid., 226

[29]This person is likewise designated by the expression Ibn al-Khawājā bi-khān al-nashshārīn.

Economic Intervention and the Political Economy of the Mamluk State under al-Ashraf Barsbāy

The economic interventions of the sultan al-Ashraf Barsbāy (r. 825–41/1422–38) have become emblematic of his reign, whether used as evidence for the impact of his character on his administration or as a means to contend with the deterioration of the Egyptian economy.[1] Barsbāy's involvement in the spice trade is often cited as the most destructive of his policies, instigating "the ruin of the upper stratum of the Levantine bourgeoisie."[2] Taking a different approach to this issue, Jean-Claude Garcin has argued that the sultan's spice trade policy enabled him to consolidate his political position.[3] This policy involved a two-pronged strategy of securing the Hijaz to control the passage of the trade through Jedda and of invading Cyprus to control European interference in eastern Mediterranean shipping.

Barsbāy's political consolidation, however, had a paradoxical quality. In the Mediterranean, within one year of its conquest by the Mamluks in 829/1426, Barsbāy came to rely on indirect rule in Cyprus through his reinstatement of the King of Cyprus.[4] In the Red Sea, less than two years after the installation of a Mamluk officer as co-ruler of Mecca in 827/1424, the sultan reinstated the deposed sharif as ruler of the Holy City.[5] In the latter case, the financial gains from restrictions imposed on spice merchants were offset by fiscal concessions—although

the precise figures are not known—to the Meccan sharifs, who had successfully resisted Mamluk domination. The Mamluks′ failure to overcome this opposition led to Barsbāy′s reliance on the sharif of Mecca as his political broker in the region, to whom he was eventually compelled to relinquish part of the fiscal benefits of the trade as it passed through Jedda.[6] The sultan′s relations with Cyprus and the Hijaz are paralleled by the situation in Upper Egypt, where the amirs of the Hawwārah Bedouin won considerable autonomy from Cairo.[7] So while Barsbāy attempted to consolidate his political position by dominating the commercial resources of the Mamluk economy, an action no doubt induced by the constrained economic circumstances described by Udovitch, the sultan ultimately had to lighten his grip on local powers. The inability of the Sultanate to impose direct control on these outlying areas and the means by which it incorporated the Meccan sharif, the Cypriot king, and the Hawwārah amir into the state apparatus are remarkable indications of both the weakness and the resilience of the Mamluk state.

In light of this paradoxical aspect of the Mamluk state′s ″foreign″ relations, it is also worth considering Barsbāy′s interventions in the domestic economy of Egypt. Just as the spice trade policy had a political dimension, in which the Sultanate′s spice monopoly had to comply with the exigencies of Hijazi politics, the regime′s attempts to control the domestic economy had an impact on the internal politics of the Mamluks. The contemporary chronicle sources for the reign of Barsbāy indicate that the state both imposed and attempted to impose a number of measures to control the sale and production of a variety of products. Although historians of this reign have obliquely acknowledged the tensions between Barsbāy and the political elite, the economic interventions of the sultan have generally been portrayed within a political vacuum. In general this view may be a consequence of the apparent robustness of Barsbāy′s rule: he pushed the boundaries of state power during a period of protracted economic decline. More often than not, however, accounts of Barsbāy′s actions fail to mention the resistance he encountered or their failure altogether. A particularly vivid example may be cited from an otherwise very illuminating article by Eliyahu Ashtor. In the case of the sugar interventions, while noting the opposition of the amirs, Ashtor concludes that Barsbāy ″had recourse to other methods of extortion,″ and the reader infers that the sultan was driven by his ″cruelty″ and ″greed,″ to use Ashtor′s words, to

dominate the sugar market.[8] To be fair, Ashtor was first of all interested in economic issues and thus did not pursue the political implications of resistance to the sultan. In addition, he quite naturally was building on the conclusions of other scholars. However, even if Barsbāy was indeed an extraordinarily unsavory character, such cursory assessments have perhaps inhibited the investigation of the political dimensions of his reign.

The most comprehensive treatment of Barsbāy′s reign is, of course, that of Ahmad Darrag, although in the wealth of detail he betrays some uncertainty in determining the basis of the sultan′s policy. Was it built on responses to prevailing economic problems or was it determined by his character? Both readings have been taken from Darrag′s work.[9] But when we consider these two factors, one may yet wonder where politics were in the determination of policy. Darrag′s and other historians′ treatment of the sultan′s character cannot be examined fully here; such a study would be lengthy since this characterization is rooted in those of earlier modern historians and of the Mamluk biographers. But regarding Darrag′s use of the internal monopolies in support of his view of Barsbāy′s character, it is important to note that a comparison of his discussion of these interventions with the entire set of information provided by the chronicles concerning the commodities of wheat and sugar, for which we have a relatively substantial amount of data, reveals the sultan to have been less of a threat to the domestic economy than members of the military and civilian elite were. From the perspective of these chronicle reports rather than biographical assessments, we can examine the Sultanate′s economic interventions in the context of competition in the political economy of Egypt.[10] Examination of the entire set of evidence clarifies the nature and extent of these interventions; moreover, the evidence shows that in 832/1429 there was a shift in the regime′s policy concerning these commodities, allowing an interpretation that places these actions within the broader context of the sultan′s political consolidation. The resulting view casts the relations between Barsbāy and the economic elite who had vested interests in these commodities in a more nuanced light, so that his interventions are a useful opportunity to examine the disposition of state power and wealth in fifteenth-century Egypt.

Before proceeding, however, there are two weaknesses of the sources that must be acknowledged. One is that most information on this topic comes from Taqī al-Dīn Aḥmad al-Maqrīzī′s chronicle *Kitāb al-Sulūk li-Ma'rifat Duwal al-Mulūk.* Badr al-Dīn Muḥammad al-'Aynī, in his chronicle *'Iqd al-Jumān fī Tārīkh Ahl al-Zamān,* has little or nothing to say about economic matters.[11] The reliability of al-Maqrīzī′s information is to some extent affirmed by another important chronicle of these years, Shihāb al-Dīn Aḥmad Ibn Ḥajar′s *Inbā' al-Ghumr bi-Abnā' al-'Umr,* which provides corroborating evidence for some of al-Maqrīzī′s reports.[12] The chronicle of 'Alī ibn Dāwūd al-Ṣayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān,* and those of Ibn Taghrībirdī, particularly *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* have little in the way of details to add to al-Maqrīzī and Ibn Ḥajar for the years in question; neither do later historians like al-Sakhāwī and Ibn Iyās.[13] While we should, of course, judge al-Maqrīzī′s conclusions and assessments with circumspection, particularly his pointed views on the sultan′s comportment and personality, his economic data may be considered as a useful starting point for a general understanding of particular aspects of the Mamluk political economy.

The second weakness concerns the range of commodities that we can examine. Along with spices, commodities as diverse as firewood, textiles, and foodstuffs, as well as ″strategic″ resources such as natron and alum, were all subject to the control of the sultan′s commercial bureau *(al-matjar al-sulṭānī).*[14] The state monopolies on the production of natron and alum are well established in administrative sources and go back to the Fatimid period. The extraction of these two minerals in particular was perhaps confined largely to certain localities such as the Wadi Natrun so that a state monopoly would have been sustained rather easily. As for restrictions on other, more widely available commodities during the Mamluk period, our information is unfortunately rather fleeting, so it is difficult to understand the nature of these interventions in a detailed way. However, we can reach some conclusions about a number of products that were significant enough to be mentioned fairly frequently. Of course, spices are mentioned often in the sources because of their value and, as has long been recognized, because

they constituted an important resource available to the Mamluk authorities. As for domestic commodities, the commodities of sugar and wheat, which have also received some attention by historians investigating other aspects of the Mamluk economy,[15] are sufficient to offer some idea of the nature of the regime′s interventions, the relationship between the sultan and Egypt′s military and civilian elite, many of whom were large stakeholders in the economy, and the consequences of these restrictions on Egypt′s political economy.[16]

WHEAT

Wheat was a major crop in the Nile Valley. The elite of Mamluk society, amirs and high-ranking officials in the administration, accumulated and stored their wealth in the form of grain.[17] Egypt ordinarily exported wheat to surrounding regions—the Hijaz is often cited as a destination since it imported a considerable quantity of its food, but also places more fertile and further afield in the eastern Mediterranean received Egyptian grain. In times of dearth, which could occur for a variety of reasons, such as an inadequate Nile inundation, Egypt imported grain. While Popper′s study shows that the failure of the Nile to reach plenitude was relatively rare during the Circassian period, that possibility nevertheless generated considerable anxiety every year.[18] Even in the short term, the price of wheat was very volatile, as one can see from Popper′s compilations of prices for the years

1394–96 and 1448–57.[19] Under these general circumstances, with the political elite holding large grain stocks, it comes as no surprise to find in the chronicles reports of speculation in the grain market.

Al-Maqrīzī made relatively numerous and substantive comments on the wheat market, reflecting his long-standing interest in economic issues and his *muḥtasib*-like preoccupation with the well being of the *ummah*. Of course, grain speculation could pose a serious problem that caused the populace extreme hardship at times, virtually eliminating wheat from the marketplace and interrupting the production of bread. To some extent, one might have been able to anticipate the occurrence of speculation since it often took place at particular times in the agricultural calendar, which of course hinged on the flooding of the Nile. The river usually started to rise from its annual low in June and peaked at Cairo in late August. In accordance with the natural cycle, wheat was sown from October to December and harvested from April to May, just before the onset of the inundation. In Upper Egypt the planting and harvesting seasons were a few weeks earlier.[20] To return to al-Maqrīzī, in Dhū al-Qaʿdah 836 (19 June–18 July 1433), just before the rise in the Nile's level, wheat prices climbed 30 percent (from 100 to 130 *dirham fulūs* per *irdabb*). Al-Maqrīzī observed that the reason for this rise in price was that a group of people of means *(al-nās)* had made it a practice to try to set off a rise in prices by spreading rumors during the season of the increase of the Nile that it would not reach plenitude. The disinformation would then prompt the grain producers to withhold sales and the merchants to buy up what they could in order to store it, waiting for the opportunity to make a substantial profit. The ensuing rise in prices would allow dealers to sell at an artificially high price to nervous buyers.[21] In this particular incident, other commodity prices rose as well.

A similar incident occurred in the summer of 831/1428. At the beginning of Dhū al-Qaʿdah (12 August–10 September 1428), prices, having been "low," started to rise to the extent that wheat surpassed the price of 300 *dirham fulūs* per *irdabb*. Prices of other commodities rose as well. Fodder became so scarce that the amirs sent their men to the villages surrounding the city to gather it, often by force. The situation caused the sultan to take the measure of controlling the supply of fodder, monopolizing its sale at a fixed price in the square below the Citadel. It is noteworthy that al-Maqrīzī does not remark that this was unjust in any way. The following month there was still a dearth of wheat on the market even though, according to

[20]Sato, *State and Rural Society,* 198, 254; W. Willcocks and J. I. Craig, *Egyptian Irrigation* (London, 1913), 163, Table 263.

[21]Al-Maqrīzī, *Kitāb al-Sulūk,* 4:893–94; al-Ṣayrafī, *Nuzhat al-Nufūs,* 3:261–62.

al-Maqrīzī, it was plentiful in traders′ silos and storehouses since they were interested in gaining maximum profit from their transactions. Consequently, the price rose above 400 *dirham fulūs,* when finally ″God looked gladly upon his faithful,″ and the price fell. Ibn Ḥajar′s take on this incident was that the price had reached 400 before it fell, after which the silos of the sultan and others were opened so that the market′s supply became sufficient.[22] The rise in prices may have stopped when the Nile reached plenitude so that the speculators would have been unable to continue playing on people′s fears about the viability of the crop of the following year.[23]

Ordinarily, during the growing season prices would remain relatively stable. However, a rise in prices could be triggered by shortages induced by hoarding, which is what happened in Rabīʻ I 832 (9 December 1428–7 January 1429). From the condition of low prices at the end of 831, noted above, the price of wheat rose to 450 *dirham fulūs* per *irdabb,* and then to 500, along with an equally alarming rise in prices of other commodities. Al-Maqrīzī and al-Ṣayrafī noted that speculation caused the price of wheat to rise to 280 *dirham fulūs* per *irdabb* in Jumādá II (8 March–5 April 1429),[24] until it began to decline to 220 in Rajab (6 April–5 May 1429).[25] The sources do not implicate the sultan in this episode of speculation. At this point, however, the sultan forced the sale of his stocks of grain on people of means *(al-nās),* raising the price from 220 to 300 *dirham fulūs* per *irdabb*.[26]

Not all incidents of speculation occurred in association with the flooding of the Nile. Prices took a sharp turn upwards in early 829 (started 13 November 1425). In the middle of Ṣafar (13 December 1425–10 January 1426) of that year, the price of wheat rose again until it eventually surpassed 300 dirhams per *irdabb.* Wheat flour and bread were scarce in the markets, and by the last day of the month the crisis had reached the point where people were fighting for wheat. Al-Maqrīzī attributed this rise in price to a number of factors. First, the supply of foodstuffs to Cairo was blocked by strong winds that prevented boats from sailing on the Nile so that the quays became empty of goods. News of severe inflation came from Bilād al-Shām, where the price of an *irdabb* of wheat had reached 1000 *dirham fulūs,* and in Upper Egypt also wheat was scarce, setting off a rise in prices in Cairo. To make matters worse, an outbreak of disease among livestock caused losses to farmers to the extent that a man who owned 150 water buffaloes

lost all but four of them.[27] The situation may have been exacerbated by poor administration: al-Maqrīzī stated that the *muḥtasib* of Cairo, Amir Īnāl al-Shishmānī, was especially severe in dealing with the grain traders so that many were inclined to abandon their occupations.[28]

Whatever the real causes, under these extreme circumstances of dearth, al-Maqrīzī commented that the notables became ″avaricious.″ When the price of wheat in Egypt reached 250 *dirham fulūs* per *irdabb,* a number of amirs of a thousand refused to sell their stocks of wheat, reputedly saying that they would only sell when the price reached 300 dirhams. The sultan himself made no attempt to sell from his stocks, fearing that his small supply would be unable to ameliorate the problem, which of course led people of means *(al-nās)* to suspect his complicity in the matter. The result was that it came to be said of the market inspector *(mutawallī al-ḥisbah),* even though all of this was beyond his capacity to rectify, that ″the calamities were heaped on one individual.″[29] A day later, the first day of Rabīʿ I (11 January–9 February), it would seem that the hoarders could hold out no longer since speculation stopped and bread was again available in the bakeries. In addition, the sultan began to distribute it to the poor on a daily basis, perhaps an indication of a stable market.[30]

Barsbāy′s administration undertook some effort to stop speculation in the wheat market. In Dhū al-Qaʿdah 830 (24 August–22 September 1427), the price of wheat rose to more than 200 *dirham fulūs* per *irdabb,* after it had reached a low of 80 dirhams in Rajab (28 April–27 May),[31] which accompanied an increase in the price of other commodities. Anticipating an opportunity to make a killing, traders began to buy quantities of the grain. In order to prevent speculation, the sultan forbade purchases of more than ten *irdabb*s of wheat at a price of 150 *dirham fulūs* per *irdabb*.[32] Al-Maqrīzī does not mention how the incident ended, but the Nile reached plenitude just weeks later and the market probably stabilized.[33]

The regime also tried to interdict hoarding in Dhū al-Ḥijjah 829 (4 October–1 November 1426) and again the following month in Muḥarram 830.[34] In these

decrees the sultan ordered the amirs and the notables to suspend the practice of protection *(al-ḥimāyah)* by removing their personal insignias *(runūk)* from their mills, shops, and presses. This order was probably designed to prevent hoarding and speculation through the practice of privatized protection, in which powerful members of the military and civilian elite *(al-ḥumāt)* would protect individuals from taxation and forced sales, for which the protectors would receive a payment.[35] This practice, which Ibn Taghrībirdī described as being "the greatest of the causes of the ruin of Egypt and its villages,"[36] in effect reduced not only the state's access to economic resources but also the state's ability to control the marketplace. The effect of these measures may have had an immediate effect, but it is unlikely that it had any long-term preventative value since speculation continued to occur unabated, as mentioned above, in the following years.

While the sultan's efforts to stop hoarding and speculation may have been for naught, starting in mid-832 (mid-1429) his interventions became very aggressive. He used his power to halt the conduct of commerce while forcing wholesalers to buy from his stocks—in effect cornering the market for a short period of time—and at the same time he tried to prohibit the use of privatized protection, which would otherwise diminish the resources available in the economy. In Rajab of that year (6 April–5 May 1429), in an incident cited above, the sultan's commercial bureau forced the sale of a number of commodities so that the price of grain rose from 220 *dirham fulūs* per *irdabb* to 300.[37] Since the preceding month, the price had fallen from a high of 500 *dirham fulūs,*[38] an unusually high price that al-Maqrīzī attributed to speculators.[39]

In Rabīʻ I 833 (28 November–27 December 1429), the sultan was able to force the sale of wheat at a price of 360 *dirham fulūs* because the *muḥtasib* of Cairo (Īnāl al-Shishmānī, mentioned above) prevented the grain ships from docking at the quays of Miṣr and Būlāq, in order that the bureau could empty its stocks at the expense of the millers. It is not known what the price was prior to this intervention, but in Shawwāl of the previous year (4 July–1 August 1429), the price had risen to 250 *dirham fulūs.*[40] Shoshan interprets this episode as a failed

attempt at monopolization. However, the evidence does not indicate the imposition of permanent restrictions on sales but rather that it was a successful attempt to corner the market.[41] While the sultan, of course, gained in the short term, it is noteworthy that Ibn Ḥajar and al-Maqrīzī did not express their disapproval of this action, noting instead the benefits that ensued since it ultimately resulted in the lowering of the price of grain; al-Maqrīzī commented: ″Praise to God, perhaps the body will recuperate after the malady.″[42]

In Shawwāl 835 (1–29 June 1432), the sultan′s bureau bought rather than sold grain. Wheat was cheap and the sultan ordered his agents to purchase while imposing a moratorium on all other transactions until the bureau′s stocks were full. No doubt this meant a loss for the grain dealers, but al-Maqrīzī noted that the effect was salutary since the market had been stagnant and this generated sales.[43] Another report indicates that the sultan′s participation could have unintended consequences. In Jumādá II 840 (11 December 1436–8 January 1437), the sultan ordered his *matjar* to purchase 30,000 *irdabb*s to store in the royal granaries. People feared a rise in prices and began to buy up wheat, barley, and broad beans.[44]

While the sultan′s *matjar* no doubt intended to make a profit, and from 832 clearly used the sultan′s coercive power to dominate the market, the prevailing impression one gets from these reports is that a major threat to the economy was the predatory behavior of the economic elite. The sultan was successful in cornering the market in wheat at particular moments but he was much less successful in curtailing the manipulation of the market by the amirs and notables who traded in wheat. In an incident involving broad beans rather than wheat, in Ṣafar 838 (6 September–4 October 1434), the sultan forced the sale of 10,000 *irdabb*s of it at the unit price of 175 *dirham fulūs*. Al-Maqrīzī observed that the sultan ordered that anyone who enjoyed high rank *(jāh)* would not be protected from this decree. He also remarked that this order was not realized since those who held high rank or benefited from the protection of those with high rank were nevertheless able to escape the decree while those who did not were subject to it. Consequently, he stated, people of means *(al-nās)* had to bear losses, not from the rise in price, but

Darrag (*Barsbay,* 152–53) also notes that the price rose from 100 to 140 *dirham fulūs* per *irdabb,* and that the sultan made the purchase with the intention to profit; when people panicked, the price rose. He cites here al-Maqrīzī, whose information is very brief, and Ibn Ḥajar, *Inbā' al-Ghumr,* whose report I have not been able to check.

rather from the fees *(kulaf),* referring to the protection fees that they had to pay to avoid the sultan′s interventions.[45]

The reports of these aggressive interventions are, however, relatively few, although Darrag cited them without fail in his discussion of the interior monopolies. In fact, Darrag′s concluding remarks are a bit ambiguous on the issue of a monopoly, but it is clear that he regarded the sultan′s actions as consistently predatory. The sum of the evidence on wheat, however, indicates that the interventions of the Mamluk elite in general were a serious or perhaps even greater problem for the populace than those of the sultan; certainly the elite were the greatest impediment to the state′s ability to regulate, much less monopolize, the market. Speculators were, as one would expect, individuals of means who were members of the upper echelons of the military, amirs of a thousand for example, or members of the civilian elite, denoted only as ″notables″ *(aʿyān).* The sultan, for his part, could ultimately do little to establish the administration′s fiscal control of the wheat market, except use his political power to enforce his priority in the trade, which he started to do after 832. Even in this regard, Barsbāy had to exert special efforts to prevent grain dealers from taking refuge within their own status or in the protection of their patrons. However, these efforts were apparently not successful. The evidence also suggests that his participation in the market was little more than occasional. After all, the profits from the wheat marker were not as lucrative as those from other commodities, like sugar.

SUGAR

Barsbāy′s administration undertook a series of interventions in the sugar market. The nature and extent of these interventions has remained ambiguous. These took the form of decrees prohibiting the sale and the cultivation of sugar and then immediately the abolition of those orders leaving, as both Darrag and Ashtor have noted, an uncertainty about the situation.[46] Nevertheless, Darrag concluded that Barsbāy continued the sugar monopoly throughout his reign. Ashtor maintained that the last attempt at monopolization occurred in 836/1433, and that forced purchases were conducted as late as 839/1435.[47] Lapidus also argued for 836/1433 as the last monopolization. Lapidus called Barsbāy′s interventions ″a system of forced purchases in the form of a *gabelle,*″ referring to a practice used in eighteenth-

---

[45]Note the typographical error in Darrag′s rendition of this incident—he states that it was 100,000 *irdabb*s (*Barsbay,* 152); al-Maqrīzī, *Kitāb al-Sulūk,* 4:933; Asadī used the expression *kulfah* (pl. *kulaf*) to refer to protection payments (*Al-Taysīr wa-al-Iʿtibār*, 136).

[47]Ashtor, ″Levantine Sugar Industry,″ 243.

century France where the General Farm would force a community to purchase its salt at a higher than market price.[48] While this assessment goes some way in helping us understand the sultan′s actions, it is important to acknowledge that the nobility, clergy, and other privileged members of *ancien régime* society were exempt from the *gabelle*. In the case of Barsbāy′s interventions, communities of commoners were not the only targets of his interventions. He eventually had to abandon intervention in the sugar market since it struck too close to the interests of the military and civilian elite who were his competitors in the market.

It is helpful to understand this series of decrees in the context of the agricultural calendar. Since sugar cane cultivation exhausted the soil, in Mamluk Egypt it was planted for two consecutive years before the land was left fallow.[49] There were minor differences in the growing seasons of the two crops (respectively, *al-ra's* and *al-khilfah*) but in general, the cane was planted in February and March and was harvested in November and December, possibly continuing into the first months of the following year.[50] Sato Tsugitaka has observed that the cultivation of cane required not only relatively new farming technology, such as a heavy plow, but also the equipment and labor used in turning sugar cane into sugar—processing plants, where the cane is prepared, pressing factories to produce the juice, and refineries where the juice is repeatedly boiled and filtered, finally producing different grades of sugar and molasses.[51] All of this involved capital investment that only the political and economic elite could provide.

The first decree, dating to Dhū al-Qa‘dah 826 (6 October–4 November 1423), ordered the closure of all sugar refineries *(maṭābikh),* just before the harvest would take place. In addition, the decree forbade the sale of all sugar and sugar products except from the sultan′s stocks, managed by an office *(dīwān),* presumably within the sultan′s commercial bureau.[52] According to Ibn Ḥajar al-‘Asqalānī, the sultan imposed this restriction on the advice of an influential merchant named Nūr al-Dīn al-Ṭanbadī, and they made a great deal of money. The embargo was lifted three months later, in Ṣafar 827 (4 January–1 February 1424), when the inspector of the army *(nāẓir al-jaysh),* who one would surmise had his own interests to

protect in the sugar refining industry, returned from the pilgrimage and thwarted al-Ṭanbadī's plans.[53]

During almost every year from 828 though 832, decrees similar to that of 826 were issued and revoked. The only one not issued during the cane harvesting season was that of Shaʿbān 828 (18 June–16 July 1425), when the sultan prohibited all but his own agents' transactions on sugar.[54] There is no mention of this embargo being lifted but it is likely that it was not effective since in Dhū al-Ḥijjah 829 (4 October–1 November 1426) and again in Ṣafar 830 (2–30 December 1426), in reports cited in the previous section, the sultan subsequently ordered members of the elite to remove their personal insignias from their sugar presses, among other facilities—again just prior to or at the start of the harvest.[55] This decree was probably not intended to appropriate sugar stocks, as I have interpreted it before, but rather intended to stop hoarding and speculation through the practice of *ḥimāyah*.[56]

Barsbāy took more drastic measures in Ṣafar 831 (21 November–19 December 1427), at about the time of the harvest and also just before the planting season. Not only did he prohibit the production of molasses and sugar, but he also prohibited the cultivation of sugar cane. Again, the same report states it was immediately abolished.[57] The following year, in Rabīʿ II 832 (8 January–5 February 1429), both al-Maqrīzī and Ibn Ḥajar reported another decree announcing an embargo on sugar transactions, but not stating anything about cultivation. Again, this decree was abolished.[58]

Concerning this report, Ibn Ḥajar supplies additional information, stating that Nūr al-Dīn al-Ṭanbadī took 60,000 dinars from the sultan to engage in commerce. Al-Ṭanbadī invested it in sugar and the sultan prohibited all others from trading in

it without his permission. Ibn Ḥajar further remarked that ″he engaged in disgraceful affairs so that the imprecations against him increased. Many officials *(ahl al-dawlah)* remonstrated against him about this state of affairs, which continued to the end of the year.″ Thus the restriction evidently continued through until the end of September. However, it is noteworthy that Ḥasan Ḥabashī, the editor of *Inbāʾ al-Ghumr,* states that his manuscript *hāʾ* negates the last verb: ″which did not continue.″[59] This alternative reading may support the brief statements of al-Maqrīzī and Ibn Ḥajar, the latter of whom makes a statement at the end of his account of the year′s events that a decree was issued and then rescinded. While the sultan may have been able to monopolize sugar through the remaining eight months of the year, the sultan′s restriction on the sugar market was not sustained the following year. It would seem that the opposition of the amirs and the *aʿyān* was not negligible.

While there is no detailed evidence for speculation in the sugar market on the part of the economic elite as there was with wheat, there is evidence for their intervention. A case occurred in Jumādá I 833 (26 January–24 February 1430), when the majordomo Āqbughā al-Jamālī attempted to force the purchase of sugar on merchants. This was well timed since a severe outbreak of the plague had occurred the previous month—what Ibn Taghrībirdī later called ″The Great Extinction.″[60] Since sugar was used for medicinal purposes, the price had just risen; indeed, the majordomo had only been appointed to the office a month before as well, and probably thought he could use the weight of his new position to take advantage of the market.[61] However, his attempt failed when merchants refused to open their shops.[62] By the end of the year, he was removed from his post and imprisoned for a few days until he handed over the funds he owed to the sultan *(al-kulaf al-sulṭānīyah),* after which he was released and appointed inspector of bridges.[63]

A decree in the Umayyad Mosque in Damascus dated Dhū al-Ḥijjah 836 (19 July–17 August 1433) announced the abolition of interventions in sugar.[64] Lapidus

interprets this decree as the end of the sultan's monopoly on sugar cultivation, refining, and sales.[65] It is more likely, I would suggest, that this was an ordinance directed against amirs and notables who tried to take advantage of their own power for temporary advantage in the market—similar to the decrees mentioned above requiring the effacement of insignia and names from storehouses (in Dhū al-Ḥijjah 829 and Muḥarram 830). The Damascus inscription was probably an attempt by the sultan to try to prohibit strong-arm tactics carried out by Mamluk officials like Āqbughā.

After Jumādá I 833/1430, there are no other reports of interventions in the sugar industry. However, Sobernheim cited an intervention that was supposed to have occurred later that year in Shaʻbān (25 April–23 May 1430), and which Ashtor observed is in fact not included in the account of that month in the manuscript Sobernheim used for his article on the sugar monopoly.[66] Ashtor noted that the information, while missing in al-Maqrīzī's chronicle, was contained in that of Ibn Ḥajar. However, it is still not certain that a decree occurred at this time. Ashtor seems to be referring to information given by Ibn Ḥajar that is presented in the context of a statement made by the Shafiʻi chief judge that the embargo on sugar cultivation, except on the lands of the sultan, was one of three injustices committed by the sultan that year. Although there are a couple of differences in details, this report in fact parallels one given by al-Maqrīzī at the beginning of his account of the year 832 and the prohibition of cultivation fits the decree of 831.[67]

In spite of his expressions of uncertainty, Aḥmad Darrag concluded in his study of Barsbāy's reign that the Mamluk state was able to sustain a monopoly on sugar. After a review of the more aggressive of the reports noted above, Darrag concluded that "It is probable that Barsbāy did not modify his plan [to restrict the industry], not easing his severe hold, since al-Maqrīzī relates that in Rabīʻ I 837/October–November 1433, the press of a mamluk was set on fire by royal order."[68] Darrag's interpretation of the episode seems unwarranted. There is no mention that this Mamluk had contravened a commercial restriction of the sultan. But more to the point, the conclusion that a monopoly was sustained seems improbable, given the string of rescinded decrees and the opposition of state officials and merchants to these interventions. In arguing his case, Darrag also cites the report that in Muḥarram 839 (27 July–25 August 1435) the sugar sellers in Damascus were moved into one area "to facilitate control."[69] Ashtor agrees with

this assessment and quotes the anonymous author of *Ḥawlīyat Dimashqīyah* about this report, explaining that it was carried out ″to make the ṭarḥ of sugar easier, as all of them would be in one place.″[70] The facilitation of forced purchases, however, need not be the only reason markets were consolidated. Lapidus offers a different explanation of this type of physical control: ″true markets were created in which a fair and competitive price could be determined.″[71] During the later years of Barsbāy′s reign, there is no evidence for his attempts to monopolize the sugar industry as he had tried to do earlier on. However, the sultan still resorted to forced sales. The re-organization of the Damascus sugar market indicates the state′s attempt at fiscal control, but not monopolistic control.

The consistent timing of Barsbāy′s interventions between 828 and 832, and possibly as late as 833, suggests that his intention was to establish his priority in sugar transactions; in other words, he repeatedly attempted to corner the sugar market. The wording of these reports is not clear enough, however, to indicate how soon after the decree was issued it was revoked, and thus whether or not he was successful. However, given the interests of individuals like Āqbughā and the anonymous *ahl al-dawlah* mentioned above, it is certain that Mamluk amirs and notables played a role in blocking the sultan′s interference, as the *nāẓir al-jaysh* did in 827/1424. It may well be that the sultan successfully decreed his priority in trade when cane was harvested, his bureau completed the necessary transactions, and then the market was opened up again. Whichever was the case, the role of the amirs and *a'yān* in the market is clear and it was their collective power that renders untenable the assumption that the sultan himself had no reason to change his approach to the sugar industry. The evidence of sugar interventions indicates that a change was affected when this information is placed in the context of the regime′s other interventions in wheat and spices. Eliyahu Ashtor insightfully noted that the ″resistance the spice traders could offer was much weaker,″ implying that the state then shifted its attention from this sector of the economy to the spice trade.[72] Indeed the state did abandon sugar for spice, but Barsbāy′s regime had directed itself toward spices from the beginning of his reign only to find that there were others besides spice merchants who had a stake in the trade.

Conclusions

Historians have often depicted Barsbāy as if he had an entirely free hand in intervening in the economy of Egypt. Notwithstanding the occasional nod to the

---

opposition of the amirs, historians have portrayed Barsbāy's interventions as monopolies established in spite of this opposition. Of course, it is impossible to discount the financial benefit of these actions to the sultan, whether or not they constituted true monopolies. But examination of these actions should be placed in the context of the predatory economic behavior of the elite, who were just as willing as the sultan to manipulate the market.

Boaz Shoshan argues that the economy of Egypt was fundamentally paternalistic—that is, based on a system in which one of the responsibilities of the ruler was "to protect consumers and prevent hoarding and speculation."[73] He also claims that there were occasional breakdowns in paternalism, one of which he argues occurred under Barsbāy.[74] Shoshan's verdict on Barsbāy, however, is stretched. He cites the incident of 833/1429 and claims that Barsbāy did so "*probably* not because of his concern about a just distribution but rather in an attempt to increase his profits." He asserts that "Barsbāy *had to discard* his plan shortly afterwards," which assumes that we know his plan was a permanent monopoly. He disregards Ibn Ḥajar's and al-Maqrīzī's approving comments on this event as well as on an incident that occurred in 835/1432, strong support of the sultan's paternalism.[75] The sultan's purchase of 30,000 *irdabb*s of grain in 840/1427 provoked the populace to fear inflation, but we simply do not know if his intention was to replenish the royal granaries for paternalistic purposes or for pure profit.

Shoshan's argument for the breakdown of paternalism is stronger when he refers, however only briefly, to the role of other "interest groups."[76] As E. P. Thompson noted, paternalism, as an ideal, was quite separate from its "fragmentary real existence," when the regime employed it for "symbolic effect."[77] Thus a more effective test for the occurrence of paternalism is in the expectations of the masses and the compliance of other economic actors in society. This is not the place to examine the motivations of the Cairene crowd; however, concerning the latter, the evidence on wheat and sugar presented above shows that dealers in these commodities successfully competed against Barsbāy. In particular, the incident of 838/1434 mentioned earlier, in which the sultan forced the sale of beans and attempted to impose this measure on all ranks of society, indicates the ease with

which influential individuals could escape the control of the state, defying the paternalistic order. Any breakdown in paternalism was thus more likely due to the sultan's failure to suppress competing patrons, rather than the sultan's own transgressions. When viewed in terms of this more complex political dynamic, the interventions of Barsbāy take on a political rather than simply material significance. Actions interpreted as the sultan′s attempts to fill his treasury are more likely efforts taken to establish the fiscal control of the economy that any state would want to achieve.

When Barsbāy determined that he could not achieve control of the domestic economy, he concentrated on other assets that fell within the state′s territory. By 832, sanctions against speculation in the wheat market were abandoned and the state adopted a more aggressive role in controlling the wheat market. The evidence, however, indicates that the sultan intended not to monopolize it but rather to ensure that the amirs and notables did not control it. In contrast to the situation with wheat, the regime did want to monopolize the production of sugar to varying degrees and attempted to do so up until 832. After this time, the state gave up. Why? The evidence points most clearly to the successful opposition of influential officers and notables.

Since these sectors of the domestic economy were in effect out of the sultan′s reach, Barsbāy was compelled to concentrate on the commodity that the amirs and notables of Egypt did not have a secure grip on—the spice trade. Barsbāy′s intervention in the spice trade was based on two modes of control in the Red Sea.[78] The first mode of control was on merchants in the spice trade with the east. The regime imposed measures in a series of four phases, which became progressively more severe and more focused on the merchants of Yemen. First, in Dhū al-Ḥijjah 828 (14 October–12 November 1425), protectionist actions were implemented that favored merchants from Cairo over those of other lands in that all merchants passing northward along the Red Sea route had to first go to Cairo where their goods would be taxed. Second, in Muḥarram 830 (2 November–1 December 1426), the sultan decreed his priority in conducting spice transactions, an order that was issued again in Muḥarram 832 (11 October–9 November 1428). The effectiveness of the sultan′s engagement in the spice commerce was enhanced when, in Jumādá I 833 (26 January–24 February 1430), the sultan established a group to deal in spices on behalf of the *matjar*. This was the administration′s attempt to compete more effectively against independent spice merchants.[79] Third, in Rajab 835 (4 March–2 April 1432), the sultan prohibited all transactions in spices except those undertaken on his behalf; this measure was not clearly

[78]The following is discussed in detail in Meloy, ″Imperial Strategy.″

[79]Al-Maqrīzī, *Kitāb al-Sulūk,* 4:823–24.

sustainable, another instance of the sultan′s inability to maintain control of the economy.[80] Finally, in Ṣafar 838 (September–October 1434), the sultan implemented a direct economic assault on Yemen, declaring that the goods of Yemeni merchants coming from Yemen would be seized.

These measures were imposed in concert with the second means of control: the extension the state′s direct control in the Hijaz. However, this attempt by the state to control the political affairs of Mecca ended in failure and, in 832, after three years of political turmoil in the Hijaz, the Mamluk sultan conceded one-third of the revenues collected on the transit trade to the Meccan sharif. Almost immediately, the turmoil subsided. In short, the sultan recognized that he had to concede power to local authorities in Mecca in order to achieve stability in the region. Further concessions were made to the Sharifate in 840 (at the end of 1436).[81] Mamluk actions in the Hijaz should be seen in the context of the regime′s attempt to control its economy.

In the first half of Barsbāy′s administration the state attempted to extend control through direct measures—domestically as well as abroad—by displacing amirs and notables who were local producers of sugar or Meccan authorities who controlled the flow of the eastern trade. These measures were political as much as they were economic. While the Mamluk state′s freedom of action was more generally hampered by a stagnant economy that prevailed across the broader region, competing political forces blocked Barsbāy′s attempts to exploit economic resources. The state abandoned its strategy of direct control in about 832. In both commodities of sugar and spice, the state had to compromise with ″local″ authorities, conceding to them the wealth that they previously had access to. Consequently, to some extent, the merchants became the sole victims of the state. After all, the traders did not hold power critical to the support of the state—the amirs could threaten coups and the sharifs were instrumental in the state′s secure hold on Mecca and the pilgrimage. The regime under Barsbāy transformed its state-building strategy from one of direct control of these valuable resources, whether in the Egyptian countryside or the Hijaz, to one founded on an empire of exotic commodities.

Mamluk Literature: Misunderstandings and New Approaches

We live in hard times for pioneers and discoverers. There are no more blank spots on the map of our globe, there are no undiscovered continents, no unexplored jungles, and no unknown tribes to be found. But still there is Mamluk literature. Despite several remarkable efforts in recent years—especially volume 7 [no. 1] of *Mamlūk Studies Review,* which was devoted entirely to Mamluk literature—the state of the art of Mamluk literature is, in a word, deplorable. There is no comprehensive and reliable overview of the literature as a whole, many crucial texts still remain unedited, and monographs on Mamluk poets or the most important genres of Mamluk literature are lacking almost altogether, and so it is not easy even today to determine who were the most important literati or even which books were the most characteristic, influential, and important. What we see is an enormous contrast between a flourishing literary culture on the one hand and a remarkable dearth of scholarly enterprises dealing with that culture on the other. In fact, it seems as if no other field in the realm of Arabic studies has been neglected as much as that of Arabic literature of the Mamluk and Ottoman periods. Not even the increasing interest in the Mamluk period witnessed in the last decades has been enough to ensure a lasting effect on the study of Mamluk literature so far. This state of affairs requires an explanation, since thinking today about the reasons for the actual plight of the study of Mamluk literature will be helpful, I hope, in determining what has to be done in the future. I want to start with a couple of rather general and theoretical considerations before I then examine recent achievements in the various fields of literature.

Searching for the reasons for this sorry state of affairs, we inevitably end up in the second half of the nineteenth century, a period in which perceptions of Arabic culture and literature were shaped that to a certain degree prevail up to the present day. Many of the prejudices and misconceptions that for a long time prevented scholars in the Arab and Western world alike from appropriately assessing Mamluk and Ottoman literature can easily be discerned as originating in Western ideologies of this era. Therefore, I dare to say that the study of Mamluk literature should start with an enquiry into Western prejudices that originated in the colonial climate of the nineteenth century.[1]

[1]Elsewhere I have examined contemporary and earlier Western attitudes towards the work of Nāṣīf al-Yāzijī, one of the most prominent representatives of late Ottoman Arabic literature, and

In several European countries, the middle of the nineteenth century signalled a turning point in the perception of non-Western literatures. In previous decades, the attitudes mainly displayed towards ″oriental″ poetry were those of curiosity and fascination. Several decades later, a colonial point of view began to dominate. Western intellectuals and scholars began to look at what they called ″the Orient″ with the conviction of unquestionable superiority, which included the notion of the superiority of Western culture and literature. From that point on, differences between Arabic literature and contemporary Western literature were no longer seen primarily as interesting, stimulating, and inspiring, but rather as a deficiency on the side of Arabic literature. These negative perceptions of the differences between Arabic and Western literature, and the subsequent disdain for post-Saljuq Arabic literature, were crucial for the colonial enterprise, given that this enterprise was justified by the mission to bring civilization to the rest of the globe. However, nobody could deny that the Islamic world had once been one of the most impressive civilizations of the world. The trick now was to impute a notion of decadence and stagnation to the history of the Islamic world, which allowed at one and the same time acknowledgment of its former greatness, as well as the need to restore its former glory through colonialism and Westernization. This perception was fostered by contemporary philosophic ideas about history, such as those of Hegel and of Darwinism. According to these ideas, each culture was destined to fulfill a certain historical mission to contribute to the overall progress of the human race. Having fulfilled its mission, a culture becomes obsolete and a new form of culture emerges which in turn serves as a basis for further progress. In our case, this new culture was, of course, contemporary Western culture. From this perspective, it was deemed that the mission of Islamic culture was to bridge the ″dark ages″ of the European Middle Ages and to stimulate Western development by conveying the knowledge and philosophy of antiquity to the West.[2] After having accomplished this mission, there seemed to be no further justification for continuing with a distinct Arabo-Islamic culture, because now an allegedly superior culture had come into existence. Therefore, any pure continuation of Islamic culture was seen as an embarrassment, and any differences in relation to Western culture were a deficit that needed to be nullified, even for the Arabs′ own sake.

---

one of the first Arabic poets who was directly confronted with Western writers and intellectuals (Lamartine, Elie Smith); see Thomas Bauer, ″Die *badīʿiyya* Nāṣīf al-Yāziǧīs und das Problem der spätosmanischen arabischen Literatur″ (to appear in *Festschrift Renate Jacobi* [forthcoming]). Despite a rapidly growing literature on ″orientalism,″ the phenomenon of the colonialization of Arabic literature (still mainly described in outright positive terms such as ″liberation″ or ″modernization″) remains largely unstudied.

[2]This is one of several reasons why I oppose the application of the notion of ″Middle Ages″ to the Islamic world; see also my note in *MSR* 7, [no. 1] (2003): 74–75.

This colonial perception is mirrored, both then and now, by the state of research on Arabic literature.[3] The whole of the post-Saljuq period was neglected and stigmatized as being imitative, worthless, and irrelevant. But whereas Western and Arab scholars alike merely neglected Mamluk literature, the period of late Ottoman Arabic literature often aroused contempt and even deep repugnance. On closer examination we find, however, that there is no case in which these attitudes were engendered by any single specific text. Whenever texts from this period were analyzed (rarely enough), scholars found them interesting, to say the least. Rather, it was the singular existence instead of any form of traditional non-Western literature which displayed aesthetic norms and ideological content different from modern Western literature that provoked the discomfiture of adherents to ″modernization,″ which inevitably means Westernization.[4] We must therefore conclude that the perception of post-Saljuq literature has been shaped thus far by ideology rather than by accepted scholarly standards of cultural, aesthetic, and literary history.

In our own day, only a few still subscribe to these ideas, but prejudices often prove to be lasting. To recognize this history and to question well-established perceptions is therefore the first and foremost task in approaching Mamluk literature. A better understanding of post-Saljuq Arabic literature is best achieved via a dialectic process. One part of this process is to appreciate the relativity of our own values, standards, and prejudices, and to locate them in their respective historical and social contexts. The other part is to examine the social, aesthetic, and ideological circumstances of any period of Arabic literature and thus to establish the values and standards that the members of the specific literary communities themselves applied to their own literature. This can only be done through a close reading of literary, theoretical, biographical, and historical texts, against which we constantly have to check and correct our assumptions about the literary system of any given period. Therefore, dealing with pre-modern Arabic literature must mean primarily the execution of an ongoing process of learning, in which the object of study is not only an object, but also an agent that helps to establish and formulate the objects and methods of study themselves.

This cultural studies background now brings me to the first of five issues which I consider to be the five major obstacles in the way of a proper understanding of Mamluk literature and society.

---

[3]This is also true for many other fields of Islamic culture. So, e.g., scholars only very recently started to take into account the development of Islamic law after al-Shāfiʿī.

[4]Bauer, ″Die *badīʿiyya* Nāṣīf al-Yāziǧīs;″ idem, ″Vom Sinn der Zeit: Aus der Geschichte des arabischen Chronogramms,″ *Arabica* 50 (2003): 501–31.

(1) Importance

We should always be aware of the fact that in modern Western societies, literature is by and large a marginalized field, and that poetry above all has comparatively little social relevance today beyond advertising jingoism. This attitude towards the relative unimportance of poetry is tacitly transferred to other societies and thus may account for the backward state of the art in the field of Arabic literature in general. Many periods of Arabic literature—not only the Mamluk period—are still by and large unstudied; students avoid courses dealing with poetry (which is considered both extremely difficult and unimportant), and the number of Western scholars dealing with classical Arabic literature is steadily decreasing; projects involving literature have worse chances for support than those dealing with other fields; and, of course, scholars dealing with historical and religious texts may feel free to skip poetry that occurs in these texts on the grounds that nothing important will be missed. Instead, and by contrast to our own attitudes, poetry especially was a foremost means of communication in Arabic societies throughout the ages, used on both trivial occasions as well as in those of major social and political importance. The role literature played in these societies was in general more important than in modern Western societies, but it also differed in various periods and regions in Arabic history. Therefore, my next point addresses:

(2) The Social Role of Literature and of the Poet

During the Abbasid era, literary culture was mainly shaped by the values and attitudes of the *kuttāb* whereas religious scholars took part in belles-lettres only marginally. During the Saljuq period, however, we can see the gradual merger between the *adab*-oriented culture of the *kuttāb* and the *sunnah*-oriented culture of the ulama. From then on, the *kuttāb* gradually ceased to form a distinct social group with its own cultural values. Instead, the duties of the *kātib* came to be fulfilled by people who had received the training of a religious scholar. The result was a rather homogeneous group of ulama who became the bearers of Islamic religious as well as of secular culture. Remarkably, this development did not prove detrimental to literary culture. Instead, the process of "ulamaization of *adab*" was counterbalanced by a process of "*adab*ization of the ulama," who in the meantime had made the *adab* discourse of the *kuttāb* their own.[5] Poetry became a pre-eminent medium of communication between ulama, and this medium also included panegyric poetry, which now was addressed by one alim to another,

[5]Examples of ulama composing poetry in the beginning of this period are given in Th. Emil Homerin, "Preaching Poetry," *Arabica* 38 (1991): 87–101; Thomas Bauer, "Raffinement und Frömmigkeit: Säkulare Poesie islamischer Religionsgelehrter der späten Abbasidenzeit," *Asiatische Studien* 5 (1996): 275–95.

rather than to rulers and military leaders. For the ulama, it would become more and more important to be able to take part in this form of poetic communication. Some of the main consequences of this development are the following:

(a) A general *increase in the number of ulama taking part in literary communication*. In al-Ṣafadī's *A'yān al-'Aṣr,* which is not a work of literature but a collection of the biographies of two thousand of al-Ṣafadī's most eminent contemporaries, about a quarter of the entries contain or mention poetry composed by the person portrayed. If we consider the high number of Mamluks who hardly ever composed poetry in Arabic and the fact that al-Ṣafadī quoted only poetry of quality, it would not be an exaggeration to say that virtually every member of the ulama took part in poetic communication in one form or another.

(b) The *rise of genres serving the immediate communication among ulama*. Mamluk ulama communicated in the form of poetry. They addressed panegyric poetry to each other, congratulated each other for the *a'yād,* the safe return from the hajj, or the birth of a child, or offered their condolences on the death of a teacher or relative in the form of often-lengthy poems. They accompanied presents with epigrams and sent each other poetic enigmas for entertainment, and they always expected an answer, of course also in the form of poetry. *Dīwān*s, anthologies, and biographical works are full of this sort of poetry, but none of these genres has been studied so far. This leads us to the next point:

(c) The *blurring of the boundaries between everyday and literary communication*. The post-enlightenment Western conception of the poet as a genius who reveals eternal truths has led to a general disapproval of all forms of occasional poetry which came to be considered as trivial and of no literary value. This conception does not do justice to Mamluk literature. Here we find poems of purely literary value side by side with poems or documents that primarily fulfill practical purposes but were nevertheless considered of literary value. Consequently, modern concepts about what is literature and what is not have to be adapted to this situation.

(d) An *increase in poetic production of any quality*. All this led to an enormous increase in poetic and other forms of literary production which inevitably results in countless poems that are well-made but at best of only minor literary interest. This observation ought not to be used to depreciate Mamluk literature. Instead, it should help to heighten the admiration of a culture that achieved a great deal of poetization of everyday life and made the reaffirmation of cultural values and the training of linguistic consciousness a permanent trait of daily routine.

(e) A *growing interest in matters of private life*. Most Abbasid poetry mirrored asymmetrical social relations (poet/patron; poet/beloved) and poets were not supposed to talk about their private lives. The ulama-poets of the Mamluk period instead communicated on more or less equal terms, had a similar personal history

and a similar life style. Now they could talk about their personal circumstances and take it for granted that their fellow ulama would be interested in this on the basis of shared experiences.[6] Consequently, we find love poems addressed to one′s own wife (Ibn Ḥajar), and a more intimate tone in poems on the death of one′s own son, daughter, or mother (Ibn Nubātah; Abū Ḥayyān al-Gharnāṭī; Ibn Sūdūn).

(f) Poetry as a means of distinction. Despite a common outlook on life and similar habits and experiences, the group of the ulama was far from uniform and their members had a strong appreciation and feeling for prestige and hierarchy. The large number of madrasahs and the high prestige attributed to learning contributed to the rise of a broadened layer of people with a more or less superficial scholarly training.[7] These people may have memorized a textbook on grammar and another one on law and may have heard a reasonable amount of hadith, but they could not be accepted by the professional ulama as equals. But since there were no guild rules, no entrance examinations, and no membership cards for the group of the ulama, there had to be other means of delimitation. Instead of such formal criteria for membership, the group of the ulama defined itself as consisting of those who participated in their leading discourses in a qualified way. Poetry was one of these discourses, and linguistic proficiency, especially a flawless mastering of Arabic grammar, became one of the main criteria that the high-brow ulama used to distinguish themselves from lesser-educated aspirants. This is the reason why scholars like al-Ṣafadī and Ibn Ḥajar used to express their reserve whenever they quoted texts displaying interference of the spoken language. They never denied that they enjoyed these texts, but were simply afraid of violating professional ulama standards by quoting (or even composing) them, without making clear that they knew better. Just the opposite. As far as popular literature is concerned, we can even speak of

(g) The *blurring of the boundaries between popular and educated literature,* a fact that has already been noted repeatedly.[8] This is again a consequence of the

[8]Leder, ″Postklassisch und vormodern,″ 290–304; Robert Irwin, ″Mamluk Literature,″ *MSR* 7, [no. 1] (2003): 1–29, here 18. For the shadow-play see Amila Buturovic, ″The Shadow Play in Mamluk Egypt: The Genre and Its Cultural Implications,″ *MSR* 7, [no. 1] (2003): 149–76, here

″bourgeois″ tendency of Mamluk literature and society. The ulama were as much at home in the *sūq*s as the craftsmen were in a madrasah. And as long as no concerns about scholarly prestige were involved, little prevented the ulama from displaying their interest in everyday affairs and in popular literature. Though the popular epics seem to have remained rather outside their horizon, popular poetry in dialect as well as in standard language (sometimes deficient) by poets like Ibrāhīm al-Miʿmār and Ibn Sūdūn were held in great esteem by the leading ulama as well as by the ″people of the street.″ ʿIzz al-Dīn al-Mawṣilī [27][9] even bothered to adorn the *dīwān* of al-Miʿmār with a colorful example of his *inshā'*.[10] The poems and *maqāmah*s of these popular poets, as well as other texts like the shadow plays of Ibn Dānyāl, provide insight into the life of the crafts and the lower classes incomparable to what we know from earlier periods. Even in the *dīwān*s of ulama-poets, scenes of everyday life turn up from time to time.

(3) THE ROLE OF RHETORICAL DEVICES

In considering the social functions of poetry mentioned above, we must not forget the immediate function of poetry for the individual, that is, to provide for her/his emotional needs, to bring about entertainment and fun, and to provoke amazement and surprise. The use of rhetorical devices should be seen in this context. The Mamluk poet was not supposed to express his very individual feelings, but to help his audience to cope with their own. Linguistic foregrounding, such as the use of figures of speech and rhetorical devices, arouses emotions in the recipient and thereby stimulates a process of recontextualization of his/her own previous emotions. In this respect, the usage of rhetorical devices cannot be considered a sign of lack of veracity, but as a means to initiate a process of catharsis in the hearer/reader of the text.[11] In addition to this emotional aspect, there is an intellectual side of rhetoric. Similar to the conceit in European literature, rhetorical devices may serve ″to surprise and delight by wit and ingenuity. The pleasure we get from many conceits is intellectual rather than sensuous.″[12] This is certainly also true for many of the *tawriyah*-pointed epigrams that were so popular in all levels of Mamluk society. And this is small wonder, since there has hardly been a culture with a comparable linguistic consciousness as the culture of Islam, a religion that

[12]J. A. Cuddon, *A Dictionary of Literary Terms* (London, 1979), 144.

is entirely based on texts and their interpretation and linguistic exegesis.

(4) ORIGINALITY

One of the main points of criticism directed against Mamluk literature is its alleged conservatism, or, as it is often put in a more deprecatory way, its lack of originality, its stagnation. Some of these statements even give the impression that the poets were positively prohibited from treating new themes in their poetry.[13] This, of course, is nonsense, since no person or institution ever existed that could force poets to adhere to established conventions. Therefore, the reason for the perception of Mamluk literature as stagnant and unoriginal must lie somewhere else, and since I do not believe that it lies in the literature itself, we have to examine again the background of our own expectations. This expectation is doubtlessly shaped by European literary history, with its rapid succession of consecutive literary epochs, each of which seems to have lasted but a single century. And since Western literary historians are accustomed to think in clearly separated epochs, they are trained to figure out discontinuities rather than stressing the phenomena of continuity.

This is not the place to try to explain the rapid pace of modern European literature, but it should be observed here that, taken in a global context, it is a singular case. Other great literary traditions—especially China and other East Asian literature, but also classical literatures of antiquity—display a pattern of development very similar to that of Arabic literature (and other Islamic literatures). Consequently, this form of change can be called ″organic″ in contrast to the ″catastrophic″ form found in several post-medieval European literatures. In any case, neither type of development necessarily implies superiority to the other. The notion of backwardness and lack of innovative power can only be applied to single poets in relation to their contemporary literary system, but not to literatures as a whole.

In any case, no literary period springs up from out of nowhere, but inevitably has points of reference in the past. Therefore, a much more promising approach is to look for the points of reference for Mamluk authors and the specific relationship between poets and culture, instead of complaining about the supposed conservatism of this era. But what were these points of reference for Mamluk authors, what constituted their literary horizon? The few studies that pay attention to this question

---

[13]See, for example, Shmuel Moreh, ″Traditionelle und neue Formen der Dichtung in der Gegenwart,″ in *Grundriß der arabischen Philologie,* vol. 2, *Literaturwissenschaft,* ed. Helmut Gätje (Wiesbaden, 1987): 89–95, here 89: ″Diese Arten von Poesie waren in ihre eigenen strengen Konventionen von Motiv und Stil gebunden und ließen somit dem Dichter keinen Spielraum, seine Gefühle oder Lebensumstände auszudrücken.″

suggest that the situation was complex and further studies are needed to develop a clearer picture. Inevitably, then, the following remarks must be seen as quite preliminary.

My first observation is that Mamluk readers were unusually keen on reading contemporary literature. As is evidenced by many anthologies (most explicitly by Ibn Nubātah's *Maṭla‘ al-Fawā'id*),[14] pre-Abbasid poetry was considered primarily a part of the cultural heritage of mainly philological interest. For the Mamluk public, the first to compose palatable poetry were the *muḥdath* poets from Abbasid times, especially their late representative Ibn al-Mu‘tazz (d. 296/908), the only pre-Mutanabbian poet whose verses are encountered often and regularly in Mamluk anthologies. But still these forms of Abbasid literature must have had a strongly antiquarian flavor for the Mamluk public. Nevertheless, there are several cases of referring back to Abbasid literature, but their relevance has been perhaps somewhat overestimated by Robert Irwin.[15] And, after all, it was not lack of originality that led Mamluk authors to refer back to such early traditions. Rather, the authors had something new to say about the matters treated by their predecessors. To mention some of the most prominent cases: in his preface to his anthology entitled *Al-Ghayth al-Musajjam fī Sharḥ Lāmīyat al-‘Ajam,* al-Ṣafadī refers to al-Jāḥiẓ's ideal of *adab* in deliberately mixing different topics in order to prevent boredom. This Jāḥiẓian ideal, however, is not revived in any antiquarian or restorative way, but put in the form of a definitively Mamluk invention, i.e., the anthology in form of a commentary. Al-Ṣafadī's book has the outward form of a commentary on a famous poem by the Saljuq poet al-Ṭughrā'ī (d. 514/1120-1) known as *Lāmīyat al-‘Ajam.* But the form of commentary is mainly a pretext for compiling an anthology of texts of both old and recent origin, both earnest and humorous, in order to give a colorful picture of subjects relevant to any educated person of "modern" (i.e., Mamluk) times. Therefore, this book is an experiment in how to embody the Jāḥiẓian ideal of *adab,* and it is definitely not a case of falling back on tradition out of cultural impotence. The same holds true for al-Ṣafadī's and Ibn Nubātah's commentaries (or rather: anthologies in the form of commentaries) on two *risālah*s by Ibn Zaydūn,[16] and for Ibn Ḥijjah al-Ḥamawī's early-Abbasid-style anthology *Thamarāt al-Awrāq.*[17] Obviously it is the purpose of these texts to reinterpret and

[15]"Mamluk Literature," 9 ("antiquarian feel"), 29.

[16]See Everett Rowson, "An Alexandrian Age in Fourteenth-Century Damascus: Twin Commentaries on Two Celebrated Arabic Epistles," *MSR* 7, [no. 1] (2003): 97–110; for al-Ṣafadī's *Ghayth* see also Nabīl Muḥammad Rashād, *Al-Ṣafadī wa-Sharḥuhu ‘alá Lāmīyat al-‘Ajam* (Cairo, 1423/2002) and its review by Everett Rowson in *MSR* 8, no. 1 (2004): 315–23.

[17]It is one of the few anthologies that deliberately imitates the pattern of the unstructured *adab*

remodel Abbasid ideals and to put them into a contemporary context. By remodelling works of the past, Mamluk authors did not try to create pieces of literature that resembled their models as closely as possible or that could be taken for Abbasid creations, nor did they aspire to revive a ″golden age.″ Classical attitudes seem to have played no noteworthy role. Instead, these and other forms of intertextual references, such as allusion, *muʻāraḍah*, *takhmīs*, *tashṭīr,* etc., may fulfill a range of different purposes. They may serve as a means to determine one′s relation with the past, to enter into a dialogue with its central texts, to introduce their message into contemporary discourse and to adapt it to the then-prevailing tastes. In other cases, it may be mainly a demonstration of virtuosity in reshaping an older text, but this procedure also inevitably contributes to the forming of the cultural memory of the times. It may well be the case that different sorts of texts were approached by different forms of intertextuality. So it may turn out that texts from the more ancient periods were rather made the object of a creative play such as the *takhmīs* and *tashṭīr,*[18] whereas texts reflecting a more recent aesthetic, such as those from the late Buyid, Saljuq, and Ayyubid periods, may have been reshaped in more individual ways, such as a *muʻāraḍah,* but this is only one of several possibilities considering the present state of knowledge. Further studies of Mamluk manifestations of intertextuality and a comparison with forms of intertextuality in other periods of Arabic literature will certainly yield interesting results. After all, it should not be forgotten that a heightened degree of synchronic as well as diachronic intertextuality is characteristic for all periods of Arabic poetry, from the *jāhilīyah* right up to the present day.[19] The Mamluk period is in no way out of the ordinary in this respect.

What is true for single texts, is also true for whole genres. Even the most conservative genres did not owe their conservatism to a lack of creativity or to nostalgic yearning. Instead, they retained many inherited features because it turned out that in this way they could most effectively serve the emotional and communicative requirements of society. A good example is furnished by the genre of *ghazal,* which was perhaps the most widespread genre in the Mamluk period and which more than others is characterized by a thematic and formal

---

anthology of the Abbasid period, and indeed it also consists largely of Abbasid material, mixed up, however, with specimens of Mamluk *inshā*ʼ. I suspect that the proper *raison d′être* of this book has not yet been established.

[18]See P. F. Kennedy, ″*Takhmīs*,″ *The Encyclopaedia of Islam*, 2nd ed., 10:123–25.

[19]For the *jāhilīyah* see Thomas Bauer, ″Formel und Zitat: Zwei Spielarten von Intertextualität in der altarabischen Dichtung,″ *Journal of Arabic Literature* 24 (1993): 117–38; for the modern period see Birgit Embaló, ″Intertextuelle Bezüge zeitgenössischer arabischer Poesie zur arabischen Dichtungstradition,″ in *Understanding Near Eastern Literatures,* ed. Verena Klemm and Beatrice Gruendler (Wiesbaden, 2000), 37–57.

continuity (which lasted well into the nineteenth century). But this continuity can easily be explained by the fact that *ghazal* poetry was the primary medium by which a collective knowledge about love was preserved and thereby through which the feelings and experiences of the people were influenced, whereas these feelings and experiences in turn influenced the shape of the *ghazal*. Therefore we come to understand that on one hand the Mamluk *ghazal* follows models that were created by and large during the early and middle Abbasid period. On the other hand, many Mamluk *ghazal* poems display a distinct Mamluk flavor and are clearly recognizable as pertaining to the Mamluk, and not to the Abbasid, period—for example Ibn Ḥajar's "Red Sea *ghazal*," in which the author interweaves a number of different strains of Arabic love poetry in order to transform them into a definitely contemporary expression of his experiences.[20] Therefore, elements that at first sight appear as purely conventional and traditional may well also have had the function of adding an additional dimension of complexity to the poem by virtue of introducing a reference to the collective experience preserved in literary tradition. This function of poetry as contributing to the preservation of the collective memory of society and of adapting it to contemporary needs has been given little attention in Arabic studies so far, probably because poetry does not play such a great role in these same contexts today in modern societies. For the Arabo-Islamic world, however, I can hardly see how studies in the history of social knowledge, culture, attitudes, and mentalities can be carried out without resorting to the study of literature and especially poetry.

These remarks on phenomena of intertextuality should not detract from the fact that the Mamluk period was indeed a particularly innovative and creative period. Whenever Mamluk works of literature have been studied without prejudice and in greater detail, they have been found to be interesting and original (as in the contributions to *MSR* 7 [no. 1]), and there is no lack of genre origination during the Mamluk period or of definitive stages of development during that time. As examples I could mention the *badīʿīyah,* the shadow-plays of Ibn Dānyāl, the nonsense-poetry by Ibn Sūdūn, popular poetry dealing with the crafts, the popular festivals, and with hashish. I could also mention the erotic *maqāmah,*[21] travelogues in the form of *inshāʾ,* or, in the fields of stylistics, the practical and theoretical

[21]Everett K. Rowson, "Two Homoerotic Narratives from Mamlūk Literature: al-Ṣafadī's *Lawʿat al-shākī* and Ibn Dānyāl's *al-Mutayyam*," in *Homoeroticism in Classical Arabic Literature,* ed. J. W. Wright, Jr., and Everett K. Rowson (New York, 1997): 158–91. A collection of heteroerotic *maqāmāt* based on the stylistic device of the *tawjīh* is Jalāl al-Dīn al-Suyūṭī, *Rashf al-Zulāl min al-Siḥr al-Ḥalāl* (Beirut, 1997).

preoccupation with the *tawriyah.* Whether these genres are appreciated or not, we can hardly deny that they were innovative.

Therefore, we may conclude, that Mamluk Arabic literature is not characterized by stagnation and a lack of innovation, but rather by a steady and gradual development, which, however, did not evolve towards the same endpoint as Western literature of the nineteenth and twentieth centuries. According to a colonial point of view, the modern West is the only legitimately-existing culture, and every other development that went in a different direction must be seen as an historical error. What is described as ″stagnation″ is therefore not the lack of development per se, but the lack of developments that mimicked and confirmed Western models. Such divergences should, of course, serve as a paradigm for a critical scholarly analysis—but only for recognizing and appreciating differences and not for a rejection of those differences.

(5) Morality

Still today, we repeatedly come across complaints about the moral decadence of the Mamluk period. Since the notion of ″decadence″ is linked so inseparably to that of the erotic, it seems not out of place to make some remarks on this subject here. Two genres in particular touch on the subject of morality, namely *ghazal* (love poetry), and *mujūn* (satire). The *ghazal* was one of the most popular genres of Mamluk poetry, and it was widely cultivated because of its overall emotive potential.[22] The majority of *ghazal* poetry is homoerotic, i.e., the beloved is of male gender. The first Arabic poet to popularize the homoerotic *ghazal* was Abū Nuwās (d. ca. 198/813), and for the next thousand years to come Arabic love poetry remained primarily homoerotic (yet not to the same degree as the Persian and Turkish *ghazal*). The situation changed only in the middle of the nineteenth century, when the massive and deep-reaching influence of colonialism brought about the enforcement of Western conceptions of gender and sexuality. Western influence deeply modified, at least officially, previous indigenous concepts. From then on, Arab poets stopped composing homoerotic poems and began to deal with their own poetic traditions in imitation of Western scholars, i.e., by suppressing parts of it and by denying the homoerotic character of the rest. Victorian moral standards inherited in colonial times are still deeply rooted in the Islamic world today and have started to enter into an alliance with modern Islamist ideologies. Meanwhile Western attitudes about homosexuality have changed, and there is an equally great danger now of Western scholars falling into another trap, which is to

---

[22]A convincing study of the Mamluk *ghazal* is still lacking; the book by Majd al-Afandī, *Al-Ghazal fī al-ʻAṣr al-Mamlūkī al-Awwal* (Damascus, 1994), displays all the prejudices and misconceptions discussed above; see the review in *MSR* 3 (1999): 214–19.

presume the existence of a coherent and identifiable ″gay community″ in the pre-modern Arab world as well. This would be a grave anachronism. In reality, neither approach to the phenomenon does justice to the real background of homoerotic Arabic poetry. As a matter of fact, not only are nineteenth-century moral standards inapplicable to the pre-modern Islamic world, but the whole concept of love and sexuality turns out to have been so different that even our notions of hetero- and homosexuality prove not to be universal. But if it is now difficult to free oneself from deeply-rooted conceptions of aesthetics, how difficult it must be to realize the relativity of one′s feelings in so personal a realm as love and sexuality!

Despite this difficulty, a couple of recent studies have been able to show with sufficient evidence that love and sexuality in the pre-modern Arabic world were not regulated according to parameters of sex, but according to parameters of gender. All forms of love in which persons of a male gender fell in love with persons of non-male gender identity were socially acceptable. Here, persons of male gender means those of the male sex who have reached adulthood. And persons of non-male gender identity can be females; or males who have not yet grown a dense beard; eunuchs; or ″effeminates″—*mukhannathūn*. Religious norms prohibited certain sexual practices and encouraged marriage,[23] but in general religious institutions were indifferent towards men falling in love with beautiful youths.[24] Therefore it is not too surprising to find homoerotic poems composed by pious religious scholars such as Ibn Ḥajar (who at the same time erected a memorial to marital love in two of his *ghazal* poems).

The genre of *mujūn* was less important and less respected than the *ghazal*. It was cultivated widely but not very intensively. Nevertheless, not only popular poets like al-Miʻmār, Ibn Dānyāl, and Ibn Sūdūn were given to composing *mujūn,* but also representatives of the established ulama culture, such as Ibn Nubātah, participated in this genre as well.[25] Ṣafī al-Dīn al-Ḥillī [18] dedicated a whole

[23]A number of publications have appeared on this subject during the last decade. Here it may suffice to mention *Homoeroticism in Classical Arabic Literature*, ed. J. W. Wright, Jr., and Everett K. Rowson (New York, 1997); Thomas Bauer, *Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts: Eine literatur- und mentalitätsgeschichtliche Studie des arabischen Ġazal* (Wiesbaden, 1998), 150–84; idem and Angelika Neuwirth, ″Introduction,″ in *Ghazal as World Literature,* 9–31; Arno Schmitt, ″*Liwāṭ* im *Fiqh*: Männliche Homosexualität?″ *Journal of Arabic and Islamic Studies* 4 (2001–2): 49–110.

[24]Discussions about the permissibility of getting religiously stimulated by gazing at beardless youths are centered either around theological conceptions of the nature of man′s relation to the divine or the fear that this practice might instigate unlawful acts (a problem also discussed in the context of love poetry).

[25]Ibn Nubātah also brought together a selection of the *Dīwān* of Ibn al-Ḥajjāj (d. 391/1000), the

chapter of his *Dīwān* to the subject of *mujūn,* which was included in the Damascus edition of the years 1297–1300 (1879–83). This edition appeared at a time in which Victorian morals obviously had not yet been as strongly internalized in the Arab world as today. In the recent edition of al-Ḥillī′s *Dīwān* the *mujūn* chapter is purposely omitted.[26] Similarly, the *mujūn* chapter has also been removed from the edition of al-Ḥillī′s anthology of his own two-line epigrams.[27] Equally unfortunate is the fact that the only existing edition of the poetry of Ibn Dānyāl [9] is heavily bowdlerized.[28] The *Dīwān* of Ibrāhīm al-Mi‘mār [19] was so popular in the Mamluk period that Ibn Taghrībirdī did not dare to quote very much of it, since it was known to everybody anyway.[29] This *Dīwān* is preserved in a number of manuscripts but remains unedited, even though it is one of the most original *dīwān*s of that period. The reason for this neglect is, I am convinced, the fact that many of al-Mi‘mār′s poems are frivolous, and some of them might even be considered obscene. This shows very clearly the damage that is done to a proper appreciation of Mamluk literature and cultural history by the adoption of false Western conceptions which, in this case, proved to be quite short-lived. While modern Western technology nowadays floods the whole world with pornography, in the Arab world Western moral standards of yesterday still fight a monstrous battle against six-hundred-year-old penis-epigrams. Those who fight staunchly against ″pornography″ do not realize that there is good reason to be proud of a culture that managed to integrate a conversation about ″the sexual″ into an established, sophisticated literary discourse, thus showing that there is a way to cultivate the obscene without having to take recourse either to psychopathic suppression nor to pornographic consumption. Again it seems to me that none of the solutions offered by modern culture (both Western and Islamic) are conspicuously superior to those of pre-modern Islamic culture and that modern solutions can in no way provide the yardstick by which other cultures can or should be measured.

These five points certainly do not exhaust the list of possible misunderstandings about Mamluk literature or their origins, but it may suffice to show the principal

---

most famous *mujūn* poet of the Abbasid period. The collection has been edited now in Tunisia: *Talṭīf al-Mizāj min Shi‘r Ibn al-Ḥajjāj: Ikhtiyār Jamāl al-Dīn Muḥammad Ibn Nubātah,* ed. Najm ‘Abd Allāh Muṣṭafá (Sūsah, 2001): see the review by S. Moreh in *Journal of Semitic Studies* 48 (2003): 212–14.

direction of reorientation that is necessary in the study of the literature and culture of the Mamluk era.

I would now like to present a short overview of the most important achievements and the most pressing desiderata in the field of Mamluk literature.[30] Looking for a Mamluk text that would help us to follow indigenous concepts of literature, one may resort to Ibn Nubātah's anthology *Maṭla' al-Fawā'id,* a prescriptive text in which the author tries to define the social role of the *adīb.*[31] According to him, the task of the *adīb* is threefold. First, he has to be a linguistic exegete of the principal texts of Islamo-Arabic culture (such as the Quran, hadith, and pre- and early Islamic poetry). Second, he must be a poet as well as an expert and connoisseur in the field of poetry, and third, he has to fulfill the same role in the field of *inshā',* thus inheriting the tasks of the *kātib* of the Abbasid era. Ibn Nubātah does not explicitly mention the *maqāmah,* but it goes without saying that the composition of *maqāmāt* was a major activity of Mamluk literati. As far as poetry is concerned, we have to take into account *dīwān*s as well as anthologies, as is already shown in Ibn Nubātah's own production (not least in his *Maṭla',* which is an anthology itself). In sum, it becomes quite clear that the major fields of activity of the Mamluk *adīb* must be seen in the following five realms: (1) poetry, (2) anthologies, (3) *maqāmah*s, (4) *inshā',* and (5) theory (literary theory and rhetoric).

(1) To start with *Poetry*: Recent years have granted us editions of the *dīwān*s of al-Talla'farī, Ibn Ghānim al-Maqdisī, al-Jazzār, Ibn Tamīm, al-Maḥḥār, al-Ḥillī, and Ibn Ḥajar. The early Mamluk poet and compulsive gambler al-Talla'farī [2] is known to all readers of Rosenthal's *Gambling in Islam*. Unfortunately, Rosenthal did not live to see the long-awaited appearance of an edition of al-Talla'farī's complete *Dīwān*.[32] Ibn Ghānim al-Maqdisī [3] is a major Sufi author of the period

---

[30]This overview is to be understood as a continuation of the "state of the art" articles that appeared previously in this journal: Th. Emil Homerin, "Reflections on Poetry in the Mamluk Age," *MSR* 1 (1997): 63–85, and Robert Irwin, "Mamluk Literature," *MSR* 7, [no. 1] (2003): 1–29. In general, I will concentrate on texts and studies not yet treated in these contributions. I will not consider the popular epics, the Arabian Nights, nor Mamluk literature in Turkish. These groups of texts have been dealt with amply by Irwin, to whose knowledgeable explanations I have little to add. Recent contributions are Stefan Leder, "Postklassisch und vormodern," 290–93, and Thomas Herzog, "Legitimität durch Erzählung: Ayyūbidische und kalifale Legitimation mamlūkischer Herrschaft in der populären *Sīrat Baybars*" in *Die Mamluken,* ed. Conermann and Pistor-Hatam, 251–68. Ten contributions on *Sīrat Baybars* are assembled in *Arabica* 51 (2004): 1–221. Recent contributions on Mamluk literature in Turkish are reviewed by Robert Dankoff in *MSR* 8, no. 1 (2004): 303-7.

whose *Dīwān* is an important supplement to his more famous *maqāmah*-style *Kashf al-Asrār fī / ʻan Ḥikam al-Ṭuyūr wa-al-Azhār,* one of most interesting Sufi texts of the period, edited and translated several times.[33] Yaḥyá al-Jazzār [4] is one of the first of the many craftsmen poets of the period. Growing up in his parents′ butcher shop in al-Fusṭāṭ, he discovered his literary talent and joined the companionship of the leading poets of his time who held him in great esteem. This encouraged him to try to earn his livelihood by composing panegyric poetry, only to realize the difficulty of making a living as a professional poet in this time. Thus he returned to his original job, saying that as a butcher, the dogs would run after him, whereas as a poet, he had to run after the dogs. A selection of his poetry has been preserved and edited in an unsatisfying way.[34] Ibn Tamīm′s [5] small *Dīwān*[35] furnishes us with formidable specimens of the Ayyubid and Mamluk art of the epigram, a form that was extremely popular in the Mamluk period. The Syrian poet al-Maḥḥār [10] is important for the history of *muwashshaḥ* and *zajal* in the East.[36] In the field of the *zajal,* al-Maḥḥār styled himself as a new Ibn Quzmān and purposely imitated the Andalusian style and dialect. But the Syrian and Egyptian public came to prefer *azjāl* in their local dialects. This may have been a reason why his *zajal* seems to have been less popular than the *zajal* of other authors.[37] In any case, a study of the Eastern *zajal,* its language, style, and content, is a major desideratum. An important event was the publication of Muḥammad Ḥawwar′s critical edition of the *Dīwān* of Ṣafī al-Dīn al-Ḥillī [18], which is clearly superior to several older uncritical editions, but which does not contain the chapter on *mujūn*. For that, the Damascus edition still remains the only source.[38] Finally, Ibn Ḥajar al-ʻAsqalānī [35] met with interest because he was the most ingenious hadith scholar of his time. In a way not atypical for the Mamluk period, he started as a poet by eulogizing princes from the Rasulid dynasty, before he turned to hadith studies. The published recension of his *Dīwān*—one of three recensions compiled by the author himself—is in fact an

[37]In his collection of *muwashshaḥāt* and *azjāl* entitled *ʻUqūd al-La'āl fī al-Muwashshaḥāt wa-al-Azjāl* by al-Nawājī, ed. ʻAbd al-Laṭīf al-Shihābī (Baghdad, 1982), the author included two *muwashshaḥs* by al-Maḥḥār, but none of his *zajal*s.

[38]*Dīwān Ṣafī al-Dīn al-Ḥillī*, ed. Muḥammad Ḥawwar (Beirut, 2000). For earlier editions see Wolfhart Heinrichs, ″Ṣafī al-Dīn al-Ḥillī,″ *EI*^{2}, 8:801b–805b.

anthology comprising those poems that were considered best by Ibn Ḥajar himself.[39]

The number of major poets whose *dīwān*s are still unedited is, however, larger. I will mention here only eight examples: (1) Ibn Qurnāṣ [1], whose epigrams of nature poetry are often quoted; (2) Ibn Dānyāl [9], whose poetry is preserved in a selection by al-Ṣafadī edited only in bowdlerized form; Li Guo's studies on two of his poems have demonstrated sufficiently that not only his shadow plays but also his *Dīwān* contains precious gems;[40] (3) Abū Ḥayyān al-Gharnāṭī [16], the famous grammarian, was also a prolific poet and attracted the attention of Th. Emil Homerin, who dedicated several studies to him;[41] (4) Ibrāhīm al-Mi'mār [19], a popular poet who was in several ways a forerunner of Ibn Sūdūn and whose satirical portrayal of middle-class life in Cairo is of enormous importance for literary and cultural history alike;[42] (5) and (6) al-Qīrāṭī [26] and Ibn Makānis [28] belong to the most often-quoted poets of their time: their *dīwān*s have been preserved in several manuscripts and their edition will be a considerable help to gain a more precise idea about Mamluk poetry in the second half of the eighth century.[43] The same holds true for (7) al-Shihāb al-Manṣūrī [39], one of the "seven shooting stars" of the ninth century. And finally (8) the poetess 'Ā'ishah al-Bā'ūnīyah [43] must not be forgotten, author of exquisite Sufi poetry and of a remarkable *badī'īyah,* the last protagonist of Mamluk poetry, who died even as the Ottoman army was approaching Cairo. She has become the object of several studies, but promises to edit her *Dīwān* have not yet been fulfilled, as far as I know.[44]

(2) *Anthologies:* With the *Dīwān*s of al-Jazzār and Ibn Ḥajar we have already entered the domain of anthologies, a vast and largely unexplored field which, however, is of crucial importance to the understanding of the whole of Mamluk culture.[45] Undoubtedly the Mamluk period was the golden age of the anthology. In no other period did the literati compose as many anthologies and so wide a range of different types of anthologies. This again is no sign of lack of originality,[46] but the result of the dynamic literary culture of the period. Anthologies functioned more and more as the visiting cards of the *adīb*. By composing an anthology, an *adīb* could prove his literary taste, as well as his knowledge and mastery of texts and traditions, and could prove himself worthy of joining the ranks of its masters. Thus anthologies functioned somewhat like offprints today in modern academic life. This is corroborated by the significant amount of intertextuality between anthologies in this period. Furthermore, in a society in which everybody tried to take part in poetic communication, anthologies provided their readers with material to learn from or to be quoted in conversations. Popular anthologies such as the *Kanz al-Madfūn* by Yūnus al-Mālikī served to entertain and instruct less-educated layers of society. In anthologies, the material could be trimmed to match special occasions, purposes, and circumstances, and this flexibility was certainly among the reasons that this form of text was able to flourish in the Mamluk period. It is also one of the reasons why most anthologies focus on ″new″ (i.e., Ayyubid and Mamluk) material, because the readers wanted to be ″up to date.″ More often than not, even poets themselves did not strive to leave a sum of their work in the form of a *dīwān* but rather published their creations in the form of anthologies. The most important Mamluk poet besides al-Ḥillī, Ibn Nubātah [22], did not compile a definitive version of his *Dīwān*. The collection known today as *Dīwān Ibn Nubātah* is a compilation of his pupil al-Bashtakī, who drew on several anthologies compiled by Ibn Nubātah himself (a collection of his poems on Abū al-Fidā', a collection of *ghazal* epigrams, a book containing seven liners, etc.).[47] Unfortunately, none of these anthologies has been published (though several of them are preserved in manuscript form) so that we cannot identify the sources of many poems of the *Dīwān*. A critical edition of the *dīwān* of as important a poet as Ibn Nubātah

---

MSR 7, [no. 1] (2003): 211–34; idem, review of *'Ā'ishah al-Bā'ūnīyah*, by Ḥasan Rabābi'ah, ibid., 237–39.

[45]A comprehensive but necessarily preliminary survey is given in my article ″Literarische Anthologien.″

[46]Brockelmann saw the only value of these books in their preservation of older texts that have been lost (*Geschichte der Arabischen Litteratur* [Leiden, 1949], 2:7–8).

[47]A survey of Ibn Nubātah′s works is given in 'Umar Mūsá Bāshā, *Ibn Nubātah al-Miṣrī: Amīr Shu'arā' al-Mashriq* (Cairo, 1963).

would be a desideratum anyway, and I would strongly favor a critical edition of Ibn Nubātah′s poetic anthologies first.

Perhaps the most important edition of a literary anthology compiled by the poet himself is the edition of the *Nuzhat al-Nufūs* of Ibn Sūdūn [37][48] which opened a window into a hitherto little-known area of ″popular″ poetry of the Mamluk period. Ibn Ḥajar′s and Ibn Sūdūn′s contemporary, al-Nawājī [36], has found a competent and engaged advocate in Ḥasan ʻAbd al-Hādī. So far, ʻAbd al-Hādī has edited two of al-Nawājī′s anthologies and a bio-bibliographical text.[49] Al-Nawājī, an outstanding *homme de lettre* of the first half of the ninth century, is known primarily for his anthology of wine poetry (and related subjects) entitled *Ḥalbat al-Kumayt*,[50] which, due to its importance, deserves at least a reprint or better yet a critical edition. But I would encourage even more an edition of al-Nawājī′s comprehensive *ghazal* anthology *Marātiʻ al-Ghizlān* (a model for two anthologies by al-Shihāb al-Ḥijāzī [38] already published)[51] and his anthology of beard-epigrams (*Khalʻ al-ʻIdhār fī Waṣf al-ʻIdhār*) preserved in many manuscripts and widely know in his own time. I am afraid that again pseudo-moral scruples will get in the way in the case of these titles. Therefore it was a wise decision by ʻAbd al-Hādī to start his Nawājī project with the poet′s collection of his poems in praise of the Prophet. Though this genre is doubtlessly morally unquestionable, it remains virtually unstudied.[52] The Mamluk period witnessed a great blossoming of this genre, but Western scholars were reluctant to book this fact on the positive side of the balance of Mamluk literature because this form of religious poetry led the Arabs even further away from the direction of secular modernity. It is high time now for an unprejudiced pioneering study on the genre of *madḥ al-nabī,* which is not even treated in the standard dictionaries. In this context, it should be noted that we still lack an edition of Ibn Sayyid al-Nās′ [15] collection of his own

poems in praise of the Prophet.[53]

As far as anthologies comprising material from different authors are concerned, we can record a few very welcome editions of texts hitherto accessible only in poor prints, such as al-Ibshīhī's [34] *Mustaṭraf*.[54] The *tadhkirah*-style anthology *Al-Muḥāḍarāt wa-al-Muḥāwarāt* by al-Suyūṭī has been edited in an exemplary way.[55] Its diligent philological method of editing, its detailed indices, clear print, and solid binding stand in marked contrast to the faulty and negligent way Mamluk literary texts are usually presented, which only reflects the general disdain in which these texts are held. But the great majority of existing texts still remain in manuscript form. In a survey of Mamluk anthologies, I mentioned ninety anthologies by fifty different authors.[56] This list can easily be augmented, but it may provide a first orientation for future efforts. What we need most urgently given the present state of our knowledge are preliminary studies of as many of these anthologies as possible. They should determine the contents of the book, the plan of the author, its main sources, and give a first judgement of the supposed target group of the author. To exploit the enormous wealth of Mamluk anthologies, dozens of studies are needed to determine the character of all of these books, in order to give a comprehensive idea of the literary market in Mamluk times, to establish the literary canon of the Mamluk period, and to find out which of these books deserve to be edited.

In this context, I would like especially to point to anthologies by unknown authors or to altogether anonymous works designed for those with less education and which may yield valuable insights into the values and the world view of the lower middle class. They are perhaps an abundant, still untapped source for the study of the culture and the mentalities of the people below the class of the highbrow ulama.[57]

(3) *Maqāmāt*: One of the most famous legends so typical of the "orientalist" approach to post-Saljuq literature is the often-told story that Nāṣīf al-Yāzijī (1214–87/1800–71) was drawn to the genre of *maqāmah* by de Sacy's edition of

---

[53] *Bushrá al-Labīb bi-Dhikrá al-Ḥabīb;* his anthology of early Islamic poems of this genre entitled *Minaḥ al-Midaḥ* has been edited by 'Iffat Wiṣāl Ḥamzah (Damascus, 1407/1987).

[54] *Al-Mustaṭraf fī Kull Fann Mustaẓraf,* ed. Ibrāhīm Ṣāliḥ (Beirut, 1999).

[55] Jalāl al-Dīn al-Suyūṭī, *Kitāb al-Muḥāḍarāt wa-al-Muḥāwarāt,* ed. Yaḥyá al-Jubūrī (Beirut, 1424/2003).

[56] Bauer, "Literarische Anthologien," 41–52 (no. 30k should be deleted from the list).

[57] See, with special reference to Yūsuf al-Mālikī's *Kanz al-Madfūn,* ibid., 28–36, and see also G. Canova, "Una pagina di *al-Kanz al-Madfūn* sugli uomini più illustri," in *Ultra mare: mélanges de langue arabe et d'islamologie offerts à Aubert Martin,* ed. Frédéric Bauden (Louvain, 2004), 93–107.

the *maqāmah*s of al-Ḥarīrī.[58] According to this legend, al-Yāzijī ″revived″ a classical Arabic genre, thus becoming a protagonist of the *nahḍah,* the ″revival″ of Arabic literature. In reality, however, there was nothing to revive, because there had been no death. Instead, al-Yāzijī must have been familiar with the *maqāmah* genre, because quite simply, there was a living and uninterrupted tradition of *maqāmah* literature from al-Hamadhānī right down to al-Yāzijī. In the colonialist view, however, the *maqāmah* tradition had to be hushed up (with the exceptions of al-Hamadhānī and al-Ḥarīrī) in order to present a picture of death and decadence. Ultimately, however, this view is no longer tenable, because in the interim the first (!) comprehensive presentation of *maqāmah* literature has appeared.[59] Its author Hämeen-Anttila has recorded 175 authors of *maqāmāt* between al-Ḥarīrī and al-Yāzijī.[60] Sixty of them belong to the Mamluk period,[61] but only a small portion of these *maqāmāt* is accessible in print,[62] and studies are lacking almost altogether. But we see that it is sometimes enough just to compile a simple list in order to refute prejudiced claims about Mamluk literature. This list also provides the necessary data for future research, which hopefully will not fail to materialize before too long. I am confident in this respect, since the *maqāmah* genre seems to be more attractive for modern scholars than poetry. At the present stage of research, an overview of the different types of the Mamluk *maqāmah* and their respective literary and social functions would be especially welcome. Still, a great number of relevant texts have not yet been edited, and so editions remain a major agenda in this field also.[63]

(4) *Inshā':* The next point on the list is *inshā',* the drawing up of official and private correspondence, official documents, notes, and related texts (such as prefaces to books) in elaborated and rhymed prose. And here again we have to cope with established Western assumptions. According to these standards, texts of an outright pragmatic nature, such as letters of appointment, are not considered to be proper literature. But Mamluk texts speak a different language. Texts in rhymed prose

[61]Ibid., nos. 66–123 (some of them do not belong to Mamluk literature in the sense of being the literature that was created within the borders of the Mamluk empire).

[62]Ibid., nos. 69, 75, 85, 89, 94, 97, 97bis, 98, 103, 112, 115, 116, 119.

[63]A recent edition is Ibrahim Kh. Geries, *A Literary and Gastronomical Conceit: Mufākharat al-Ruzz wa ´l-Ḥabb Rummān: The Boasting Debate Between Rice And Pomegranate Seeds Or al-Makāma al-Simāṭiyya (The Tablecloth Makāma)* (Wiesbaden, 2002).

are included in literary anthologies. Ibn Nubātah devotes a whole section of his *Maṭla' al-Fawā'id* to *inshā'*. His and Ibn Ḥijjah's travelogues are presented in the previously mentioned *Thamarāt al-Awrāq*. Furthermore, al-Ṣafadī's congratulatory note on the occasion of the Nile flood is even included in the popular anthology *Kanz al-Madfūn*. In several Mamluk *dīwān*s, such as the *Dīwān* of al-Qīrāṭī [26], poetry and *inshā'* are presented side by side without any real difference in status. Therefore, to understand Mamluk and Ottoman perceptions of *inshā',* new approaches to the aesthetics of literature must inevitably be developed, ones that will surmount the still current "Diskreditierung der Okkasionalität durch die Erlebnisästhetik."[64] But before this can be accomplished, philologists will have to do their job and provide us with an edition of the most important *inshā'* collections above and beyond al-Qalqashandī's *Ṣubḥ,* especially *Alḥān al-Sawāji' bayn al-Bādi' wa-al-Marāji'* by al-Ṣafadī [21], *Al-Saj' al-Muṭawwaq, Zahr al-Manthūr,* and *Ta'līq al-Dīwān* by Ibn Nubātah [22], and *Qahwat al-Inshā'* by Ibn Ḥijjah [33].[65]

(5) *Theory:* When we talk about *adab* of the Mamluk period, it is not out of place to discuss several texts that themselves claim to be about history or have to do with religion, whether in the form of, as Irwin aptly puts it, "literature of piety and rigorism," or in the form of Sufi literature.[66] There should be no objection to that because the boundaries of *adab* are fluid, anyway. But there is another vast field which indeed is part of *adab,* although it is usually omitted when talking about Mamluk literature. This is the field of *'Ulūm al-adab*. In the Mamluk period, the term *adab* was no longer primarily associated with the entertainment and education of *belles lettres,* but rather more closely with those scholarly disciplines that deal with the Arabic language. Many professional *udabā'* must have recognized that their most powerful justification for taking their rank among the ulama and their presence in the madrasahs lay in their theoretical preoccupation with philology and linguistics.

At a time in which everyone composed poetry, it is difficult to distinguish oneself by poetry alone. Of course, poets could distinguish themselves by composing better poetry than their contemporaries, but poets may have sought a more scholarly field to become on a par with the hadith and *fiqh* specialists. We should probably

[65]A profound study on *inshā'* with special reference to *tashrīf* is Werner Diem, *Ehrendes Kleid und ehrendes Wort: Studien zu* Tašrīf *in mamlūkischer und vormamlūkischer Zeit* (Würzburg, 2002); an edition of the *Qahwat al-Inshā'* is in preparation by Rudulf Veselý: see Veselý, "Das *Taqrīẓ* in der arabischen Literatur," in *Die Mamluken,* ed. Conermann and Pistor-Hatam, 379–85.

[66]See, e.g., Irwin, "Mamluk Literature," 16–77 (history); 18 (magic); 23–25 ("literature of piety and rigorism"); 25–26 (Sufi literature).

locate the many complaints of Ibn Nubātah about his poverty and the low esteem in which poetry is held within this context. Of course, such complaints are a topos and are plainly contradicted by the overall presence and overwhelming social importance of poetry, and also by the fame and respect that Ibn Nubātah acquired during his lifetime. But it seems as if Ibn Nubātah had a different sort of appreciation in mind when he composed his aforementioned anthology *Maṭla‘ al-Fawā'id,* which, on a closer look, turns out to be a manifesto for the importance of the professional *adīb*. It shows that the *adīb* had his place in the madrasah as a scholar in the field of the propaedeutic linguistic disciplines; in the chancellery as specialist in *inshā',* and in a way also in everybody's home as an advisor in literary matters and as a supplier of poetic stuff. Therefore, the picture of *adab* is not complete if we do not regard the achievements of Mamluk *udabā'* in the fields of philology, linguistics, and rhetoric. Again, this is a vast field, and again, the Mamluk contribution to it is only superficially known. Thus all I can do here is to limit myself to a kind of name dropping. In the discipline of grammar, besides the great and well-known names such as Ibn Mālik, Abū Ḥayyān al-Gharnāṭī [16], Ibn Hishām, and al-Suyūṭī [42], lesser-known figures ought not to be overlooked, such as Ibn Kaykaldī, the author of a recently-printed work on linguistic generalization and specification *(ṣiyagh al-‘umūm),* which is equally relevant for linguistics and *uṣūl al-fiqh.*[67] In the field of lexicography, we have the famous dictionaries by Ibn Manẓūr, al-Fayyūmī, and al-Fīrūzābādī with their respective merits, and we should not forget al-Suyūṭī's *Al-Muzhir fī ‘Ulūm al-Lughah wa-Anwā‘ihā* with its unconventional theoretical approach towards lexicography.

Much to our chagrin, the Arabs still displayed only minor interest in the Arabic lexicon of later periods and of substandard Arabic.[68] Therefore, the reader often encounters more lexical difficulties with Mamluk *zajal*s than with pre-Islamic odes. Those texts in which different registers of speech are mixed, such as the shadow-play and the *zajal,* especially still give Arabists a lot to do. Besides Dozy's indispensable *Supplément,* several studies on special terminological subjects (to mention only Ayalon's studies on administrative and military terminology) have been carried out, and many studies in cultural history treat lexicographical problems. However, a comprehensive dictionary that would give convenient access to our present knowledge is still lacking. I would like to call attention to the genres of dialect poetry such as the *zajal*. There are more of them than is commonly

---

[67]Ṣalāḥ al-Dīn Khalīl ibn Kaykaldī, *Talqīḥ al-Fuhūm fī Tanqīḥ Ṣiyagh al-‘Umūm,* and Taqī al-Dīn al-Subkī, *Aḥkām "Kull" wa-Mā ‘alayhi Tadull,* ed. ‘Alī Mu‘awwaḍ and ‘Ādil ‘Abd al-Mawjūd (Beirut, 1418/1997).

[68]I could find no further details about al-Bishbīshī's (d. 820/1417) *Al-Tadhyīl wa-al-Takmīl li-Mā Ustu‘mila min al-Lafẓ al-Dakhīl,* mentioned in *GAL,* 2:26, and possibly a forerunner of al-Khafājī's (d. 1069/1659) famous *Shifa' al-Ghalīl fīmā fī Kalām al-‘Arab min al-Dakhīl*.

assumed, and most of them are not written in imitation of Andalusian Arabic, but rather neatly reflect the dialects of Cairo and Damascus. A critical edition of these texts will also contribute to our knowledge of the Arabic language of the Mamluk period.

But let me return to Arab linguistics. The Mamluk era is a post-Sakkākian era. In the beginning of the seventh/thirteenth century, al-Sakkākī systematized the ingenious ideas of ʻAbd al-Qāhir al-Jurjānī and thus revolutionized the Arab perception of language. His achievements have been superficially studied, and there is a German translation of the *ʻIlm al-Maʻānī* section of al-Sakkākī′s *Miftāḥ*[69] that also contains a useful terminological glossary. Still, however, the real importance of al-Sakkākī′s and his successors′ teachings has not yet been realized. Even a superficial glance in Ḥājjī Khalīfah′s *Kashf al-Ẓunūn* demonstrates that al-Sakkākī′s *Miftāḥ,* together with its revision and abbreviation by al-Qazwīnī, is one of the most influential and most studied books of the post-Saljuq Arabic world.[70] The three fields of *ʻilm al-bayān*, *ʻilm al-maʻānī,* and *ʻilm al-badīʻ* comprise subjects that are studied today under headings such as stylistics, rhetoric, semantics, and pragmatics. As far as the Mamluk production in these three fields is concerned, besides al-Khaṭīb al-Qazwīnī (d. 739/1338), the names of Ibn al-Zamlakānī (651/1253), Ibn Abī al-Iṣbaʻ (654/1256), and Badr al-Dīn ibn Mālik (686/1287) come to mind, none of them yet the subject of thorough study. In this regard, Sharaf al-Dīn al-Ṭībī (743/1343) should also be mentioned. He wrote an important book on *al-maʻānī wa-al-bayān,* but also tried to apply his results in the study of rhetoric to his commentary on hadith.[71]

One of the most comprehensive commentaries on al-Qazwīnī′s *Talkhīṣ* is the ″Bride of Happiness″ by Bahā' al-Dīn al-Subkī (d. 773/1372).[72] In a book of this scale, the text of al-Qazwīnī′s précis provides for little more than the structure and the chapter headings. As a matter of fact, a book like that of Bahā' al-Dīn is an independent and critical work of rhetoric that contains many insights which can still enrich contemporary linguistics and communication theory.

Works dedicated in a more practical way to literary theory and criticism, as well as of rhetoric, often take the form of anthologies, to mention only the treatises

[72]Bahā' al-Dīn Aḥmad ibn ʻAlī al-Subkī, *ʻArūs al-Afrāḥ fī Sharḥ Talkhīṣ al-Miftāḥ,* ed. Khalīl Ibrāhīm Khalīl (Beirut, 1422/2001).

on the stylistic devices of *jinās, tashbīh,* and *tawriyah* composed by al-Ṣafadī, Ibn Ḥijjah, and al-Suyūṭī. Several of them have been edited recently, among them al-Ṣafadī's book on comparison, containing interesting remarks on the neuropsychological background of literature.[73]

In addition to this monographic treatment of rhetoric, a new form of dealing with rhetoric appeared, the *badīʿīyah*, a poem, composed as a *muʿāraḍah* to al-Būṣīrī's *Burdah* in praise of the Prophet, in which each line exemplifies one or more stylistic devices. This curious mixture between poetry, theory, and piety (invented by Ṣafī al-Dīn al-Ḥillī [18]) has been utterly misunderstood by its modern critics, who complain that *badīʿīyāt* are neither profound theoretical texts nor emotionally overwhelming literary works of art, nor even deeply felt expressions of religious feelings. But they fail to understand that the fascination of the *badīʿīyah* is exactly the fact that it represents so much all at once! Thus far, twenty-five authors of *badīʿīyāt* from the Mamluk period are known, with each of their texts displaying its own characteristics. Studies are almost totally lacking.[74] From a literary point of view, the most beautiful *badīʿīyah* is probably the poem composed by ʿĀʾishah al-Bāʿūnīyah [43]. More interesting from a theoretical point of view are those *badīʿīyāt* that were accompanied by a commentary plus an anthology. The only Mamluk representative of this sort of text is Ibn Ḥijjah al-Ḥamawī's [33] *Khizānat al-Adab,* which is one of our most important sources for thinking about literature and rhetoric from the Mamluk period.[75] There are two mediocre editions of this book, but a critical and indexed edition of this key text is a strong desideratum. Equally important would be studies on the actual usage of rhetorical devices in the texts of Mamluk authors in order to establish the relation between theory and practice in this vast field.[76]

To sum up, the Mamluk period is one of the apogees of Arabic literature, displaying an extremely broad, lively, and vital literary culture—as every unprejudiced observer

surely will concede. During the two and a half centuries of the Mamluk period, its literati composed some veritable masterpieces of Arabic literature, many interesting and original works of literature, literary theory, and rhetoric, as well as countless less remarkable works of everyday poetry, which, despite its lack of originality, reflects an interest in literature and a linguistic consciousness. And Mamluk literature is fascinating because it transcends boundaries: the boundaries between everyday and literary communication; between popular and high literature; between poetry and prose; between the private and the public; between theory and praxis. Colonial delusions have thus far prevented a proper appreciation of this culture. It is high time now to critically investigate and question these prejudices and erroneous assumptions and to open up new ways to a better understanding of the fascinating world of Mamluk literature.

Popular Culture under the Mamluks: A Historiographical Survey

There is something apparently appealing about the topic of popular culture. Perhaps the appeal lies in the riotous nature of the festivals in which popular culture was frequently expressed. The medieval ulama critics who chose to address popular religious and cultic practices of which they disapproved described them in almost rapturous detail, dwelling at sometimes astounding length on transvestitism, games of sexual inversion, bacchanalia—of all of which, of course, they disapproved. Their disapproval may or may not be shared by contemporary historians, but we do seem to love to dwell on it. This is not, perhaps, surprising. What early twenty-first-century historian, having just plowed his or her way through one of those endless passages in the chronicles about the price of bread, or about the relative value of one copper coin or another, or about which deputy qadi resigned his office and was replaced by another—what twenty-first century-historian could fail to be intrigued by the violent expostulation of Ibn al-Ḥājj against the muleteers who helped guide female visitors to the Qarāfah around the tombs, furtively leading them to abandoned cells and dark corners on moonlit nights, chatting them up in a place which should inspire feelings of religious awe and thoughts of eternal damnation, and sliding their mischievous hands over the thighs of the unsuspecting—or perhaps the all-too-suspecting—women?[1]

Whatever the reason, popular culture has, directly or indirectly, been the subject of much research in recent years.[2] It should be acknowledged at the outset that cultural historians of the Mamluk period owe a great deal to those social historians who have described the social structures of medieval Egypt and Syria over the last four decades. The publication of Ira Lapidus′ study of *Muslim Cities in the Later Middle Ages* was a turning point for everyone working in the field of medieval Islamic social and cultural history, but it has been supplemented by important works such as Louis Pouzet′s book on religious life in Damascus, Jean-Claude Garcin′s important study of a provincial Egyptian town, and Carl Petry′s analysis of the *Civilian Elite of Cairo in the Later Middle Ages*.[3] These works provide the

[3]Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, MA, 1967); Louis Pouzet, *Damas au VIIe/XIIIe siècle: vie et structures religieuses d′une métropole islamique* (Beirut, 1988);

necessary foundation for any analytical investigation of popular culture in the period. In particular, they have provided us with a clear understanding of the character of the ulama and their authority. This is especially important, both because the ulama will figure prominently as arbiters of cultural practices, and also because their peculiar function in Islamic societies is one of the most important features distinguishing those societies from, say, those of medieval Europe. Special mention should also be made of what appears to be a distinctive sub-topic of the field of Mamluk social history: namely, the character and function of crowds in Mamluk society. Again, Ira Lapidus initiated this line of research, but it has been continued in more focused studies by others.[4] What emerges from these studies is a view of crowds consisting of ad hoc assemblages of common people articulating specific grievances against ruling authorities, very often the market inspector. Significantly, however, these crowds seem to have lacked any propensity to embrace a political vision completely dismissive of the existing order—on the contrary, they occasionally expressed a rather conservative support for the legitimacy of the status quo. That nuanced relationship between the common people and the Mamluk authorities, with crowds willing to express frustration on particular issues but reluctant to pose a structural challenge to existing patterns of authority, may foreshadow a similar complexity in the character of popular culture.

Despite the attention the topic has received in recent years, the historian must first consider the question: ″Does popular culture exist?″ The question is not an idle one, particularly if the historian of the Near East hopes to participate in the broader historiographical discourse that until now has taken place largely among European historians. The issue, of course, is not whether the ″people,″ that is, social groups beyond a social or cultural elite, had ″culture.″ Rather, the central issue might be phrased this way: is there a stratum of cultural activity and production that is self-consciously distinct from that of the elite, and which is produced independently from, or even in opposition to, elite culture?[5]

For all that historians of the Near East, to overcome our deeply-rooted sense of methodological inferiority, might wish to meet the challenge of European historians on their own rarefied turf, it is important to recognize the distinctiveness

of Islamic societies. They are structured differently than, say, European societies, and consequently questions about cultural transmission and the social frameworks that make that transmission possible will necessarily be different, as will the character of the sources available to the historian. A festival such as that of Nawrūz, celebrated by medieval Egyptians apparently with some abandon despite the disapproval of various religious and secular authorities, displays plenty of parallels to the saturnalia and carnivals of misrule that colored the late medieval and early modern European scene; but noting the parallels takes us only part of the way down the road of understanding the specific historical significance of the festival.[6] This is a point which, in a slightly different context, Michael Chamberlain made convincingly in his excellent book on *Knowledge and Social Practice in Medieval Damascus* in the late Ayyubid and early Mamluk period.[7] It would be delightful to find an Islamic Montaillou, a French village whose inhabitants′ controversial religious beliefs and practices Emmanuel Leroy Ladurie famously brought to light, or a medieval Muslim artisan whose unconventional cosmological convictions could be elucidated like those of the Italian miller studied by Carlo Ginzburg.[8] It would be silly, however, to wait for studies which, given the nature of the source material, probably will never emerge. Better, as Chamberlain demonstrated, simply to work with the sources we are given. From them, in fact, much can be said, if we pose questions that are appropriate and relevant to a medieval Islamic society.

So: Was there such a thing as ″popular culture″ in Egypt and Syria during the Mamluk period? There have been at least two distinct answers to this question in recent literature on the subject. One is that of Boaz Shoshan, who tackled the issue directly in his study of *Popular Culture in Medieval Cairo.* Shoshan was sympathetic to the arguments of European historians that it is misleading to think of ″popular culture″ as something distinct from the culture of elites. In the Islamic Middle East, of course, that distinction may be even harder to draw, since the lines separating one social group from another were, in general, more porous than they were in medieval Europe. Nonetheless, Shoshan considered the concept of ″popular culture″ analytically useful, in so far as it pointed to ″genres of ′texts′, both written and non-written . . . , which, despite their unavoidably uncertain

[8]*Montaillou: Cathars and Catholics in a French Village, 1294–1324*, trans. Barbara Bray (London, 1978); *The Cheese and the Worms: The Cosmos of a Sixteenth-Century Miller*, trans. John and Anne Tedeschi (Baltimore, 1980). Boaz Shoshan actually found such an Islamic miller, but the sources were far too limited in nature to allow a study similar to Ginzburg′s; ″On Popular Literature in Medieval Cairo,″ *Poetics Today* 14 (1993): 349–65.

boundaries, provide safe bases for analysis as primarily popular″—that is, which are in some way the preserve of social groups ″inferior to the bourgeoisie.″ (Shoshan actually went further and suggested that these social groups were ″supposedly also illiterate, at least by and large.″ That is probably a slightly more problematic assertion, since illiteracy can take different forms and can be found in different degrees, particularly in an Islamic society where some familiarity with the Quran and other religious texts was so highly valued, and since the task of measuring illiteracy in a pre-modern Islamic society is daunting.)[9]

A second answer to the underlying question is considerably more skeptical that the designation ″popular culture″ has any serviceable meaning. Some scholars, following perhaps the dominant trend in European historiography, have been deeply suspicious of conventional ″two-tiered″ models of culture, setting, for example, ″high″ or ″elite″ culture against ″low″ or ″popular″ culture. If E. H. Carr was right, that all history is in the final analysis contemporary history, then it is likely that this line of analysis stems at least in part from the suspicion of hierarchies which is endemic in our contemporary *zeitgeist,* or at least in the *zeitgeist* dominant within academic circles. It also perhaps reflects the extraordinary influence of the work of Peter Brown, the pre-eminent historian of religious culture in late antiquity, an influence that derives both from its sheer intellectual force and also from the particular academic ″genealogies″ of many historians in our field. Whatever its origins, this suspicion of a ″high-low″ model of medieval Islamic culture has been enthusiastically embraced by several historians in important recent works. Ahmet Karamustafa, for example, argued strongly against seeing the practices of the Qalandarīyah and other odd or antinomian Sufi groups as in any sense a manifestation of a ″popular religion,″ and insisted instead that they should be viewed as normal and natural outgrowths of mainstream Sufi values and principles.[10] Christopher Taylor′s study of the *ziyārat al-qubūr* in medieval Cairo makes similar points. He argues in the first place that the visitation of tombs was a ″liminal″ practice and the cemeteries a liminal space, in which conventional social distinctions and hierarchies broke down. Secondly, he points out that those religious scholars who opposed the practice did not by any stretch of the imagination represent a consistent ulama voice, and so it is difficult if not impossible to identify what would constitute the ″high″ end of a two-tiered cultural model. Ibn Taymīyah, for instance, famously opposed the cult of saints and visitation of tombs, or at least certain aspects of them; but his arguments grew more out of specific theological concerns than any

[10]Ahmet Karamustafa, *God′s Unruly Friends: Dervish Groups in the Islamic Later Middle Period, 1200–1550* (Salt Lake City, 1994).

generalized suspicion of ″popular culture.″[11] (And to complete the confusion, of course, Ibn Taymīyah′s tomb became an object of pilgrimage after his death.)

These two historiographical positions are not perhaps mutually exclusive. It may be possible to accept that there is a cultural stratum which can meaningfully be called ″popular,″ while at the same time agreeing with Karamustafa, Taylor, and others that the two-tiered model is inadequate and misleading, especially in a medieval Islamic context.[12] Without trying to resolve the question in any definitive way, I will attempt in this article to outline the parameters of the issue and how the topic of ″popular culture″ has been and could yet be productively approached. Much of the following discussion will necessarily focus specifically on religious culture.

Some evidence for a distinctive ″popular culture″ can be found in the character of the surviving historical sources themselves. While the historian of Mamluk society mostly lacks certain types of sources that have been the bread and butter of European medievalists—archives, for example, or documentary sources—in broader terms the period is extremely rich in terms of the material available for its reconstruction. Some of these materials—chronicles, biographical dictionaries—are of course widely familiar. For all of their familiarity, they still can, when approached creatively, yield new insights, as demonstrated so clearly by Chamberlain′s book. But the literary foundation on which Mamluk history has largely been constructed has been described as ″deceptively firm.″[13] That is, there exist in the libraries of the Near East, Europe, and North America vast quantities of texts still in manuscript form, many of them of apparently quite a different character than the more polished and familiar works of al-Maqrīzī, Ibn Taghrībirdī, and others. These sources need to be surveyed more thoroughly—especially in terms of their authorship, and in terms of their role in the cultural life of medieval Egyptians and Syrians—before any adequate reckoning can be made of the character and scope of ″popular culture.″

These new or underutilized historical sources vary widely in character. Among them, of course, are the by now famous *waqfīyah*s of Cairo. Their value to the cultural historian is, strictly speaking, somewhat indirect, but nonetheless important. They have proven valuable for reconstructing the history of certain areas of economic

[12]Certainly that is what I tried to suggest in my own recent study of ″popular″ preachers and storytellers. Jonathan P. Berkey, *Popular Preaching and the Religious Authority in the Medieval Islamic Near East* (Seattle, 2001).

[13]Ibid., 10.

life, as in the works of Carl Petry and Adam Sabra. In his recent book on poverty and charity in Mamluk Cairo, for example, Sabra used the *waqfīyah*s to begin to elucidate certain aspects of the economic and social life of those who—if popular culture exists—produced and consumed it.[14] But in the end the *waqfīyah*s are a limited source. A richer vein for the historian of popular culture lies in the vast array of unpublished, even uncataloged manuscripts of a religious nature in the major libraries in Egypt and Europe. On this score it is worth drawing special attention to the most recent, and mostly still unpublished work of Christopher Taylor, who has begun a more systematic survey of prayer manuals, *fatwá* collections, and various other religious texts, all of them outside the well-traveled mainstream of Mamluk-era literature, from the collection in Dār al-Kutub in Cairo.

It was not perhaps exactly the literature that he had in mind, but some evidence for Shoshan′s position can perhaps be gleaned from the literature of popular entertainment. The Mamluk period was an exceptionally fruitful period for the production of literary works such as the *Thousand and One Nights*, the *Sīrat ʻAntar,* and the *Sīrat al-Ẓāhir Baybars*. These texts pose very difficult questions of origin—the question of ″authorship″ is really not even relevant—but there are plenty of indications that the Islamic Middle Period was a critical one for the crystallization of identifiable (if not definitive) versions of them. The *Sīrat ʻAntar,* for instance, concerns the exploits of a pre-Islamic hero, and there are references to ʻAntar in very early Islamic sources. But the versions in which the romance is now known contain numerous references to much later events and persons, including European Crusaders. Moreover, the earliest known more-or-less complete narrative of ʻAntar′s life is found in a manuscript dating from 1466.[15] If dating these entertainments is difficult, so is assigning them to a particular literary genre, since they must at all times have circulated (especially in oral form) in widely different circumstances. Since E. W. Lane′s popular nineteenth-century *Account of the Manners and Customs of the Modern Egyptians,* however, it has been common to see them as the preserve of popular storytellers, reading or reciting the romances to largely illiterate audiences in coffeehouses and on street corners.[16] By itself, that view may perhaps place unfair or unnecessary limits on our understanding of these complex texts, but it certainly reflects one aspect of their manifestation in

medieval society. Complaints by figures representing the cultural elite about how these texts circulated among the *ʿāmmah*, about how popular storytellers fabricated false and distracting tales to the delight of their ignorant audiences, provide a sort of backhanded confirmation of the independence of this popular voice.[17] Students of storytellers and reciters of epics in contemporary Egypt have also stressed the agency of the storytellers themselves: that is, that they are not simply transmitters to common people of texts originally produced for or among elite groups, but actively shape the stories they tell in response to their own experiences and those of their audience. Of course we cannot assume that contemporary practice necessarily reflects that of the Mamluk period, but it does at least support the case for a distinctive cultural stratum which, as Shoshan put it, ″provide[s] safe bases for analysis as primarily popular.″[18]

If there is such a thing as popular culture, then it must be predicated upon some sort of hierarchy: that which is popular is that which is common, and its opposite is the preserve of some elite or elites. At least in general terms, the underlying social distinction is perhaps that which medieval Muslim writers themselves made in separating the *ʿāmmah* from the *khāṣṣah*. Those terms are not terribly precise—it may, for example, be slightly more difficult to identify who was an *ʿāmmī* than who was, say, a serf in a medieval European village. And more generally, the hierarchies that characterized medieval Islamic societies—at least those distinguishing indigenous social groups, as opposed to that separating the Mamluks from the locals—were more flexible and porous than those of medieval Europe. But the fact that the hierarchies were more flexible, or the underlying social categories more porous, does not mean that they were less important. On the contrary, their very flexibility may have made the matter of preserving them more important to those who benefited from them.

This was certainly the case with the religious elite, the ulama. Lacking precise institutional mechanisms for consolidating their authority, they relied instead upon a variety of social and ideological tools. Among the latter was the important distinction between that which was *sunnah,* accepted normative tradition, and that which was *bidʿah,* unacceptable innovation. Of course, the Islamic discourse over innovations was very old and very complex, and not all jurists felt that all innovations were to be eschewed. But hostility to *bidʿah* was a common discursive theme amongst Mamluk-period scholars. Of them, Ibn al-Ḥājj is the most colorful, and consequently he is perhaps the most cited Mamluk-period author on the subject of popular culture—indeed, so pervasive is his presence in the historiography of the field that the study of popular culture in the Mamluk period might more accurately

[18] See Bridget Connelly, *Arab Folk Epic and Identity* (Berkeley, 1986).

be called the study of Ibn al-Ḥājj. But in fact he was hardly alone or unusual in warning his readers against the perils of unlawful innovations; his concerns were shared by many writers from amongst the ulama. Their discursive attack on innovations served as one means of affirming their authority in the face of practices, many of them associated with suspect festivals such as the Prophet′s birthday and the new year celebrations of Nawrūz, which were popular among those the ulama writers dismissed as the *ʿāmmah.*[19]

The attack on innovations was part of a broader effort on the part of the ulama elite to defend their authority in the face of challenges to it which, from the viewpoint of the leading scholars themselves, might be said to have ″bubbled up from below.″ These challenges took different forms. On one end of the spectrum was the group known as the *muwallahūn,* who might be described generously as marginal holy men, who lampooned the rituals and pretensions of the ulama, by living in rubbish heaps, or wearing dirty clothes, or urinating in their robes, and generally indulging in behavior which was, at least superficially, both anti-social and contemptuous of *sharʿī* norms. Such individuals, however, were so far beyond the pale that, as has been argued, their transgression of the ″normal order″ served paradoxically to reaffirm it, and to affirm the dominant role of the leading ulama in the production of knowledge and in putting it to social use.[20] A less dramatic but more serious threat was posed by those preachers and storytellers who, operating independently, sometimes in mosques and sometimes on street corners, and catering to a primarily non-elite audience, transmitted to their listeners a body of religious knowledge that, from the standpoint of the ulama, was of dubious legitimacy: unsubstantiated hadith, for example, or popular but suspect stories of the pre-Islamic prophets. Jalāl al-Dīn al-Suyūṭī, in his attack on these miscreant storytellers, understood their authority to derive directly from their relationship with the common people. He was moved to write his treatise, he says, after being humiliated by a storyteller whose authority and learning he had challenged. When Suyūṭī had suggested to the man that he should check the authenticity of the hadith he recited with recognized scholars in the field, the storyteller had reacted with rage. ″You expect me to verify my hadith with the scholars? Rather,″ he said, ″I will verify them with the people [*al-nās*].″[21] What these storytellers represented was a challenge to the authority of the ulama, not simply or even primarily because of the *content*

of what they transmitted to the common people, but because the texts and stories they transmitted they had acquired outside the channels—such as personal training with a reputable teacher, attested by an *ijāzah*—which defined the ulama′s authority.[22]

In the challenge posed to the ulama by purveyors of knowledge and culture such as the storytellers and popular preachers, we can locate a cultural stratum which is in some meaningful sense ″popular.″ While they did not use the term popular culture, many medieval ulama at least *thought* that they were conducting a rear-guard action against threats to the integrity of Islam posed by cultural attitudes and practices associated with the common people, the *ʿāmmah*—that is, *they* perceived a distinct popular culture and the threat it posed. At the same time, it is important to remember that, when we survey the cultural scene through a lens broader than the narrow ideological one of scholars such as Ibn al-Ḥājj, what we perceive is less a bipolar cultural world than a rich and complex one, in which various cultural attitudes and practices cannot be assigned unambiguously to one end of the spectrum or another. This has been the dominant theme embraced by cultural historians of the Mamluk period over the last decade or two. At one end of the spectrum, we encounter men and women from diverse social backgrounds—not just scholars or scholars in training, but common folk, men and women, and Mamluks— participating actively and meaningfully in the transmission of Islamic religious knowledge, of the texts in which that knowledge is embedded.[23] At the other, we meet perfectly reputable and elite jurists such as Taqī al-Dīn al-Subkī who, as Christopher Taylor has amply demonstrated, mounted a vigorous defense of popular practices such as the visitation of tombs from *within* the mainstream Islamic tradition. Even Ibn al-Ḥājj morosely admitted that ulama could be found indulging in various popular religious practices of which he disapproved, such as participating in festivals associated with non-Muslims.[24]

One forum in which the various strands of culture, elite and popular, came together and mingled fruitfully was, of course, Sufism, a topic in Mamluk cultural history which has probably been addressed more thoroughly than any other. In addition to an enormous and comprehensive survey of late Mamluk Sufism in all of its organizational, institutional, and theological forms,[25] we have now a plethora of more focused studies on particular saints, orders, and institutions. It sometimes

seems as though the category of ideas and practices labeled ″Sufi″ has become so broad as to be almost meaningless; but until a more precise vocabulary of scholarship is formed, we must continue to use it.

Sufism was an unmistakably ″popular″ cultural phenomenon. Developments within Sufism during and around the Mamluk period contributed to the increase in the number of those Muslims who would identify themselves in some way as ″Sufis″: the proliferation of *khānqāh*s and other Sufi institutions, for example, and the crystallization of the ″orders″ *(ṭuruq,* sing. *ṭarīqah)* as objects of Sufi affiliation. Michael Winter has suggested that, in a way, by the later Middle Period Sufism had for many supplanted the study of hadith as a cherished pious activity open to virtually any Muslim. Not, of course, that the transmission of hadith had died out—on the contrary, large public recitations of some of the principal collections of prophetic traditions remained a prominent feature in the religious landscape. But as Winter put it, the recitation of hadith ″lost its place to Sufism as the sphere in Islam where a ruler, an *ʿālim,* or a commoner could request a personal, or least a partially creative and active participation in religion.″[26]

But here again, we perceive an ambiguity in what, culturally speaking, popular Sufism involved and implied. Part of the appeal of Sufism lay in the fact that, as Winter suggested, it provided a forum in which non-elite voices could be heard addressing and contributing to religious life. Hence, for example, those occasional women identified as *shaykhah*s, serving in leadership roles within various Sufi groups, and about whom we would like to know much more. Hence, too, the figure of the *shaykh ummī,* the ″illiterate″ or more precisely (since not all of them were really *illiterate*) the ″unlettered″ Sufi master, who typically came from a humble background, who lacked much if anything in the way of a systematic education, but who nonetheless claimed an authority based on his access to religious knowledge via dreams or visions, or more vaguely through his ″heart.″[27] More generally, religious practices which may or may not have been technically ″Sufi″ but which nonetheless shared Sufism′s emphasis upon a cult of personality focusing on holy men and women, such as the practice of visiting the tombs of the dead, provided scope for the articulation of the religious concerns of the common people. One cannot, for example, read the stories told about the miraculous intercession of ″saints″ buried in the cemeteries of Cairo to relieve the hunger, or illness, or fear of those who visited them in their tombs, without recognizing in them an expression of the religious concerns, priorities, and world-view of the ″common people.″[28]

[28]Taylor, *In the Vicinity of the Righteous,* 130–54.

More pointedly, there is evidence that Sufism became a channel for embracing magic and the occult, and for a recasting of popular thaumaturgical expectations in Muslim garb, aspects of the mystical life which certainly made Sufism, or at least some Sufis, the target of the ulama's wrath.[29]

But Sufism did not speak with a single voice, and if it allowed the common people to articulate their religious vision and concerns, it could also serve to reinforce the authority among them of the ulama. In the first place, of course, Sufism was not simply popular with the common people. Sufi affiliations became common among the leading ulama, even among those most inclined to criticize certain aspects of Sufi ritual and behavior, such as Ibn Taymīyah and Ibn Qayyim al-Jawzīyah. Even more telling are those rural Sufis studied by Jean-Claude Garcin, who constitute a reminder that "popular culture" need not always oppose itself to elite culture. These figures were held in considerable esteem by their neighbors, very often, however, not because they represented in the eyes of their beholders any sort of popular resistance to dominant Islamic authorities, but precisely because they were taken as models of the pious Muslim living in accordance with *shar'ī* norms. *Popular* Sufis may thus have been quite "normal"—that is, Muslim in a very conventional, shari'ah-oriented way, providing a level of basic education to the common folk who followed them, even undertaking the Quranic injunction to "command the good and forbid the evil."[30] By contrast, the outlandish, antinomian behavior of groups like the Qalandarīyah was not limited in either origin or appeal to lower social strata, despite efforts by some medieval writers to make precisely that connection as a way of discrediting them; on the contrary, there is evidence that many of those most drawn to such movements were young dissenters from within the various social elites.[31]

There are several other important themes connected with the study of popular culture in the Mamluk period which are worth mentioning, in part because they may yet contain considerable scope for further investigation. The first is that of intercession. Intercession, of course, is at first glance more a topic of social or

---

[29]See, for example, J. Spencer Trimingham, *The Sufi Orders in Islam* (Oxford, 1971), 27–28 and 199–200; Winter, *Society and Religion,* 172–76; Shoshan, *Popular Culture,* 18–22. Michael Winter in particular has insisted on a persistent tension between Sufis and juristically-oriented scholars, the *fuqahā'*. See *Society and Religion,* esp. 230–36.

[31]Karamustafa, *God's Unruly Friends,* 5–10 and 93.

even political history, but it may offer some chance at investigating the complex place of popular culture in Mamluk society. The importance of intercession in this society is of course well known. The intercession to be sought from the Prophet or respected holy men and women was the foundation of the cult of the saints and the visitation of the tombs, and provided a cultural forum in which Muslims of very different social strata might meet and participate in a common activity. More practically, Sufis became prominent over the course of the Mamluk period as intercessors, both with God and with secular powers. Theirs was not so much a comprehensive political threat, since there is little evidence they held any grand political ambitions; but they did seek in various ways to ameliorate the lives of the common people. Their power was very real, if Ibn Ḥajar al-Haytamī is to be believed—he ascribed the defeat of Sultan al-Ghūrī to the ruler's quarrel with a popular shaykh—and judging by the Mamluks' own frequenting of these shaykhs, the perception of their power was widely shared. Al-Ghūrī himself is a case in point, since his respect for Sufi shaykhs led him (to no avail, apparently) to take the shaykh of the Badawīyah order with him to Syria on his last campaign. (By contrast, he had earlier offered his police a reward for every drunken *faqīh* they could find.)[32] What intercession offers is a way of measuring the precise social and political consequences of cultural ideas, practices, and the individuals engaged in them *in the specific context of Mamluk society*—that is, a way of studying popular culture in a framework that makes specific sense for the medieval Islamic world, and that does not rely on categories or insights drawn from European history.

A second promising theme is that of religious syncretism—the degree, that is, to which Jewish, Christian, and Muslim ideas, texts, attitudes and practices may have influenced one another. This constituted a consuming worry of people such as Ibn al-Ḥājj and Ibn Taymīyah—the concern, that is, that Islam might be corrupted by its adherents adopting and participating in practices associated with the infidels in their midst. The need to draw sharp boundaries between the faith communities was an old concern in Muslim discourse. Given the conditions of medieval life, with reduced but still significant populations of Jews and especially Christians living alongside Muslims, the opportunities for the sharing of religious ideas and practices were legion. This made it all the more necessary to draw firm cultural and psychological lines between them, especially with regard to the seductive appeal of religious festivals. "Participation with [the *dhimmī*s] in their festivals

[32]Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* 3rd ed. (Cairo, 1984), 5:85–86; Winter, *Society and Religion,* 19, 100. On Sufi shaykh*s* and the ruling elites more generally, see Fernandes, "Some Aspects of the *Zāwiya*;" Jean-Claude Garcin, "Deux saints populaires du Caire au début du xvi[e] siècle," *Bulletin d'études orientales* 29 (1977): 131–43; Geoffroy, *Le soufisme*, 120–28.

wholly or partly is synonymous with participation with them in unbelief wholly or partly," Ibn Taymīyah said. Indeed, "festivals are that which most particularly serves to differentiate one religious law from another and constitute their most prominent symbols."[33] One can understand, perhaps, Ibn al-Ḥājj's horror at the behavior of Muslims who participated in the sort-of Coptic, but decidedly non-Muslim festival of Nawrūz, when they would (among other things) drink wine, or indulge in a sort of wet tee-shirt contest. If a professor in a school had the temerity to try to hold a lesson on that day, his students might pounce upon him, and throw him into the institution's fountain.[34] Less dramatic, perhaps, but more remarkable are the details given by Ibn al-Ḥājj and others of Muslim participation in specifically Christian festivals, including Christmas and Easter. Given the shrill character of the ulama's expressed fears, it is surprising that the question of syncretism, which would seem to be so potentially rich a topical area, has not received more explicit attention from contemporary historians. Taylor's study of the *ziyārat al-qubūr* took note of the importance of the question, especially with regard to the cult of the saints, but left it for later and fuller investigation.[35] Joseph Meri's recent book on the cult of the saints in medieval Syria does include a study of the Jewish as well the Muslim cult, and takes note of a number of pilgrimage sites which were common to adherents of the two faiths, such as the shrine of Ezekiel in Iraq. Jews and Muslims, he observes, shared a "common language of ritual communication," and, more grandly, "shared sacred places and undertook sacred journeys together," but the book leaves for the future a systematic confrontation with the specific question of syncretism.[36]

Finally, there is the question of gender. Popular culture, and popular religion in particular, provided unusually fertile territory for the active participation and creative contribution of women. There are, in the first place, those women identified in the sources as Sufi *shaykhah*s; the ranks of the storytellers and popular preachers, too, included a number of women. More generally, Ibn al-Ḥājj's account leaves the reader with the impression that it was *women* who were in many cases the driving force behind the popular religious practices of which he disapproved—the unregulated visiting of tombs, the active and gleeful participation in *dhimmī* festivals, etc. Ibn al-Ḥājj's concerns may well have been exaggerated, but at the very least they seem to provide an opportunity for an analysis—perhaps even a Freudian one—of the *gendered* character of the ulama's authority. Veneto-Saracenic Metalware, a Mamluk Art*

The provenance of the so-called Veneto-Saracenic metalware has been a subject of controversy ever since it attracted scholarly attention in the last century.[1] The bronze vessels known by this label include several stylistic sub-groups, which have in common the frequent use of European shapes combined with a new style of linear silver inlay displaying an unconventional style of arabesque. Their workmanship is characterized by extreme fineness. An important number of Veneto-Saracenic vessels bear craftsmen′s signatures, most of which include the title *mu'allim* or master. The most frequently signed names are Zayn al-Dīn, Muḥammad, and Maḥmūd al-Kurdī, who signed his name with or without the *nisbah* al-Kurdī. The appellation Veneto-Saracenic has been coined to categorize this particular group of vessels because they were first thought to be the product of a Muslim workshop in Venice during the fifteenth and sixteenth centuries. On the basis of socio-historical grounds, however, Hans Huth in an article published in 1972 discarded the possibility of a Muslim workshop operating in Venice at that time.[2] This argument has not been challenged ever since.

A number of authors, among them A. S. Melikian-Chirvani and James Allan, have related the Veneto-Saracenic vessels to late Mamluk metalwork, which is also the common attribution adopted in most art catalogues. Although there are

still some diverging opinions on that matter, it is widely agreed that one of the sub-groups of the Veneto-Saracenic family can definitely be attributed to a late Mamluk production. Syria is believed to be the provenance of the objects characterized by a dense knot-work that is also found on vessels of uncontested Mamluk origin (fig. 1).

The Mamluk provenance of the mainstream of the Veneto-Saracenic metalware, however, which includes objects signed by Maḥmūd, Zayn al-Dīn, and Muḥammad, has been contested. Rachel Ward attributed the Maḥmūd al-Kurdī vessels to Western Iran and in a more recent monograph Sylvia Auld argued in favor of an attribution of the Maḥmūd al-Kurdī group to Aq Qoyunlu lands in southeast Anatolia or western Iran. She moreover places Zayn al-Dīn's work in an Ottoman context.[3] Neither author, however, has provided any visual evidence for a connection between the Veneto-Saracenic and Iranian or Aq Qoyunlu homologues. This article presents new evidence to confirm the Mamluk attribution, and more particularly James Allan's arguments, which established a stylistic connection between the Maḥmūd al-Kurdī group and the decorative arts of the reign of the Mamluk Sultan al-Ashraf Qāytbāy (872–901/1468–96).

Among the multiple features which connect the Veneto-Saracenic style with late Mamluk metalware are some shapes. A variety of shapes have been decorated in this style, many of which are European while others are Mamluk. The rounded, lidded bowl, which is not of European origin, has been used across all stylistic sub-groups, with some variations, and can be considered as the most characteristic form of Veneto-Saracenic vessels. The profile of these bowls is common in late Mamluk vessels, which are not associated with a lid, however (figs. 2, 3). Likewise, the spherical hand-warmer or incense-burner (see fig. 1), another characteristic utensil produced in the Veneto-Saracenic style, is common in the mainstream style of metalware of the entire Mamluk period. Also the shallow basin, of which there is a remarkable Veneto-Saracenic specimen in the Victoria and Albert Museum (Inv. 741-1898), is a shape adopted in a number of luxury vessels, sometimes in a faceted version, attributed to the reign of Sultan Qāytbāy. Among these is the basin in the Türk ve Islam Eserleri Müzesi (TIEM) in Istanbul bearing the sultan's name.

There are, moreover, a number of objects of evidently late Mamluk provenance on grounds of their shape, inscriptions, and blazons which are decorated in a style

[3]Rachel Ward, *Islamic Metalwork* (London, 1993), 102; idem et al., "Veneto-Saracenic Metalworks: An Analysis of the Bowls and Incense Burners in the British Museum," in *Trade and Discovery: The Scientific Study of Artefacts from Post-Medieval Europe and Beyond* (London, 1995), 235–57; Sheila Canby, *The Golden Age of Persian Art (1501–1722)* (London, 1999), 21; Sylvia Auld, *Renaissance Venice, Islam and Mahmud the Kurd: A Metalworking Enigma* (London, 2004), 11–35.

akin to the decoration of conventional Veneto-Saracenic vessels, including those with European shape. Two basins with Mamluk inscriptions, one in the Poldi Pezzoli Museum in Milan (1657) (fig. 4)[4] and the other in the Musée des Beaux Arts in Lyon (E 538), could have been manufactured by the same hand that produced the uninscribed Veneto-Saracenic jug with a European body in the Poldi Pezzoli collection (1656) (fig. 5).[5] They share the same engraved patterns displaying a sequence of curved cartouches of alternating format with flowers in the background.

Two late Mamluk caskets, one in the Metropolitan Museum of Art in New York[6] and the other in the Victoria and Albert Museum, both inscribed with their patron's name, are decorated with curved interlocking cartouches of linear inlaid silver on a background of scrolls, which recall the work of Maḥmūd al-Kurdī on the lid of his bowl in the Victoria and Albert Museum (2290-1855) (figs. 6, 7). Although these caskets have not been considered Veneto-Saracenic because of their inscriptions and shape, the design of their decoration is hybrid, combining conventional late Mamluk with Veneto-Saracenic features.

Although inscriptions are rare on published Veneto-Saracenic vessels, the few inscribed pieces we know bear texts which belong to the late Mamluk epigraphic repertoire. Melikian-Chirvani has identified one benedictory poem, which starts with the words "*balaghta min al-ʻulyā*" on a Veneto-Saracenic footed bowl and a salver in the Victoria and Albert Museum.[7] Another poem, inscribed on the cartouches of a Veneto-Saracenic bucket in the Islamic Museum in Berlin (Inv. B72), which Auld wrongly interprets as a pseudo-inscription,[8] can be read on many mainstream late Mamluk vessels (fig. 8). This poem starts with the phrase "*man tamaʻnā fī jamālī*" meaning "who examines my beauty."[9] It is inscribed on a

[9]The word "*tamaʻnā*," from *maʻnā,* has an unusual form, comparable to *tafalsafa*. I am copying and transliterating the inscribed texts according to their spelling as it is, not as it should be.

lunch box in the British Museum[10] and a covered tray in the Staatliches Museum für Völkerkunde in Munich in the name of Taghrībirmish, the great *dawādār* and vizier of Sultan Qānṣūh al-Ghawrī (see Appendix).

Both poems, the one starting with *"balaghta min al-ʻulyā"* and the other starting with *"man tamaʻnā,"* appear among the multiple texts inscribed on a lidded box in the Khalili collection and on a spouted bowl in the Benaki Museum in Athens, both of which are common late Mamluk ware (figs. 9, 10). These two vessels are interesting reference pieces because they display a whole set of inscriptions, which appear individually on various other late Mamluk objects.

In addition to shape, decoration, and inscriptions, which associate them with late Mamluk metalwork, a decisive argument, so far disregarded, for attributing the Veneto-Saracenic vessels to late Mamluk craftsmanship is the use of the title *muʻallim* in the majority of their signatures. The title *muʻallim* is a characteristic feature of Mamluk craftsmen's signatures. It is also regularly used in literary sources from Egypt and Syria from the Mamluk and Ottoman periods in association with craftsmen and in fact down to the present. It was not used in the Iranian world and it was not common on craftsmen's signatures elsewhere. Considering its close association with Mamluk culture it is unlikely that contemporary craftsmen from other lands would have used this title unless they would have liked to be mistaken for Mamluk.

Some signatures by Maḥmūd and Zayn al-Dīn include the phrase *yarjū al-maghfirah* following the name. This phrase appears on other late Mamluk metal vessels following either the name of a craftsman or the patron. All vessels mentioned in Gaston Wiet's catalogue in connection with this particular phrase are late Mamluk.[11]

Moreover, the tripartite disc used by Maḥmūd al-Kurdī as a frame for his signature on a tray in the British Museum (1895 5-21) is clearly reminiscent of Mamluk royal blazons, thus signaling a Mamluk context at the same time as it is a demonstration of the craftsman's pride.[12] The title *ra'īs* is used on another Veneto-Saracenic lidded bowl in the Victoria and Albert Museum before the name of the craftsman Muḥammad Ibn al-Ḥājj ʻAlī Ibn *al-muʻallim* Khaḍr *al-naqqāsh*.[13] The title *ra'īs* was commonly used in Mamluk chronicles to qualify the head of a guild. It is not exclusively Mamluk, however.[14] This *ra'īs* Muḥammad could be

the same who signed as *mu'allim* Muḥammad on a ewer published by Christie's.[15]

Another most interesting signature occurs on an unpublished Veneto-Saracenic bowl in the Khalili collection. It has in its interior two unframed signature cartouches, inscribed in Mamluk *naskhī* script. The first includes the words *"'amal Zayn al-Dīn."* This name appears elsewhere sometimes in conjunction with *"ibn 'Umar"* or *"ibn al-mu'allim 'Umar al-naḥḥās."*[16] The second inscription, separated from the first, includes only the patronym "Ibn Zanbū'ah," (fig. 11), which sounds rather like a nickname. I assume that Ibn Zanbū'ah refers to Zayn al-Dīn and not to a second craftsman. The style of the bowl suggests that he is most likely the same Zayn al-Dīn known from other signed vessels. In any event,the name *zanbū'ah* with the letter *'ayn* can obviously not be Persian or Turkish. In the Mamluk dictionary of Fīrūzābādī the word *zunbā'ah* means the tip of a shoe.[17] *Zanbū'ah* might be a colloquial transformation of *zunbā'ah,* but this is speculation. This signature, however, suggests that the cultural environment of Ibn Zanbū'ah is a traditionally Arabic-speaking one**.** This type of four-radical word sounds rather colloquial Egyptian.

James Allan has rightly compared the style of the Maḥmūd al-Kurdī objects with the architectural decoration of the Qāytbāy period in Cairo; in his arguments he includes the remarkable marble inlaid spandrels of the mosque of Qijmas al-Isḥāqī built in 1479. The spandrels of the windows and, notably, the mihrab are decorated in the same novel style and they are signed by the craftsman 'Abd al-Qādir *al-naqqāsh,* who also signed similar work in the mosque of Abū Bakr ibn Muzhir built in 1489–90.[18] The mihrab of Qijmas' mosque is of particular interest here because it displays in the space beneath the conch a central rosette radiating in a complex deployment of arabesque towards the edges (fig. 12). The central rosette bears a striking resemblance to the patterns used on the lids and bottoms of Veneto-Saracenic bowls (fig. 13). This type of marble inlay was a novelty, which might explain the craftsman's multiple signatures in the mosque. Most interestingly, the signature of the mihrab is placed in the very center of the rosette and consequently of the mihrab itself, which is an unprecedented, almost blasphemous place for a craftsman's signature. Maḥmūd al-Kurdī is known to have placed his signature in such a central position on several pieces, including the lid of his bowl in the Victoria and Albert Museum, another one published in Sotheby's catalogue, a tray

in the Louvre, and another tray in the Hermitage Museum.[19] One of Auld′s arguments against a Mamluk origin of Maḥmūd al-Kurdī is this very central position of this signature. She argues that ″It would be tantamount to an insult to the Mamluk hierarchy,″ and that there is no other instance where a craftsman puts his name so prominently in the place normally reserved for the name of the sultan.[20] The signature of ʻAbd al-Qādir *al-naqqāsh* in the center of a mihrab contradicts this view and reveals at the same time the pronounced craftsman′s pride during the reign of Sultan Qāytbāy.

A key-piece for my attribution of the Veneto-Saracenic metalware to the late Mamluk period is an unpublished bowl in the Khalili collection (MTW 1542), signed by *al-muʻallim* Maḥmūd (fig. 14). It has a Mamluk shape and is entirely silvered. An inscription on the rim, which compares the whiteness of the bowl to that of the full moon, confirms that although the present silver is of a later date, its white appearance is original. Many Veneto-Saracenic vessels have a gilded or silvered interior, which might well be original.

The decoration of this bowl is of remarkable delicacy, hardly visible to the naked eye, displaying a variety of juxtaposed patterns that surpasses the common practice on Veneto-Saracenic objects, where the interlace network is often set against a rather uniform background of scrolls. This juxtaposition of several alternating patterns is one of the characteristic features of luxury vessels of the reign of Sultan Qāytbāy.[21] In spite of its monochrome appearance, which distinguishes it from the characteristic inlaid work of this group, the design of this bowl is in the Veneto-Saracenic style. Its background scrolls are similar to those of the lidded bowl at the Courtauld Institute Art Gallery signed by Maḥmūd with the *nisbah* al-Kurdī.[22] The general layout of the design with interlacing curved lines, which divide the surface in cartouches, is basically a derivation of the traditional interlocking bands with cartouches and medallions, which are common on some late Mamluk basins and bowls (fig. 17).

Most interestingly, the bowl bears two epigraphic cartouches on the body and four on the rim, all of which contain poetry (see Appendix). One of the cartouches of the rim bears the *muʻallim*′s signature at the end of the poem. The first cartouche starts with the words *anā ṭāsah* meaning ″I am a bowl,″ a common phrase in the epigraphy of late Mamluk metalwork (figs. 15 a, b, c, d). Inscriptions on the rim are one of the characteristic features of late Mamluk tinned copper bowls. The

two inscriptions on the body of the Maḥmūd bowl are repeated on another late Mamluk bowl of a more ordinary type in the Khalili collection (see fig. 3).

As on many vessels of the later Mamluk period, the inscriptions on both bowls do not follow the calligraphic esthetics nor the epigraphic conventions established in the Bahri period. Rather the text meanders up and down, which makes it difficult to read. Each of the two bowls has spelling mistakes, as often happens on late Mamluk vessels. Fortunately, the mistakes on the two bowls are not identical so that I was able to read most of the text (see Appendix). The text, which belongs to what can be called vernacular craftsman′s poetry of poor quality, praises the beauty and the craftsmanship of the bowl and includes good wishes to the owner. It also indicates that the bowl was made for drinking.

The design of the decoration conforms with that of other vessels signed by Maḥmūd, who is likely to have himself composed the poem on the rim, which ends with his name. The shape of the bowl is typically and exclusively Mamluk. Both the shape of the bowl and the inscriptions identify Maḥmūd′s work with Mamluk art.

Maḥmūd′s Mamluk provenance does not define his ethnic origin, however. The *nisbah* al-Kurdī, which he included in his signature elsewhere, can be misleading and does not justify an association of Maḥmūd′s work with the Aq Qoyunlu kingdom. There is a Mamluk madrasah in Cairo known by the name of an amir called Maḥmūd al-Kurdī, who cannot be our craftsman and who was not even a Kurd.[23] A *nisbah* might refer to the place where someone originated, or migrated to or spent a period of time, as it could also refer to an affiliation with a patron or even with a Sufi order. Mamluk biographical literature mentions scholars with multiple *nisbah*s because they studied in several cities. Maḥmūd might have been a Kurd from Mamluk territory, which, it should be recalled, included southeast Anatolia and Cilicia. The Mamluk army included Kurds, who, together with the Turcomans, dominated the region of Aleppo in the fifteenth century.[24] On a salver in the British Museum (1878 12-30 711) Maḥmūd signed his name as ″*Maḥmūd ibn al-Kurdī ibn al-mu‘allim li-amr mawlāh,*″ the last two words meaning ″on the order of his lord.″ This signature suggests that his father might have been the one who migrated and was therefore known as al-Kurdī.

The Mamluk attribution of the work of Maḥmūd or other craftsmen working in the Veneto-Saracenic style is not challenged by the presence of Iranian elements

[23]Al-Maqrīzī, *Al-Mawā‘iẓ wa-al-I‘tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1270/1853–54), 2:395 f.; K. A. C. Creswell, ″A Brief Chronology of the Muḥammadan Monuments of Egypt to A.D. 1517,″ *Bulletin de l′Institut Français d′Archéologie Orientale* 16 (1919): 39–164, here 117.

[24]David Ayalon, ″ The Auxiliary Forces in the Mamluk Sultanate,″ *Der Islam* 65, no. 1 (1988): 13–37.

in this style noted by several authors including Melikian-Chirvani and Allan. It is well known that the Mamluk decorative arts of the fourteenth as well as the fifteenth centuries show many features in common with their Iranian homologues; this is true also for other stylistic groups of late Mamluk metalwork. The number of Iranian refugees escaping the Timurids was so high in fifteenth-century Cairo that orders were repeatedly issued to evict them (without success, however).[25]

Another sub-group of Veneto-Saracenic vessels shows parallels with our Maḥmūd bowl as well as with some mainstream late Mamluk copper vessels. A copper bowl in the Ashmolean Museum in Oxford (1982.6), inscribed and adorned with a Mamluk blazon (figs. 16, 17), has the same shape as the Maḥmūd bowl of the Khalili collection. Its engraved decoration, however, is of a different style, and very similar to that of a bowl in the Bargello Museum in Florence (Bg. B 839), which has been identified by G. Curatola as of Veneto-Saracenic style, but of Italian craftsmanship.[26] The decorative composition of this bowl is simpler than that of the Ashmolean piece, without inscriptions or blazon, consisting of continuous patterns filling three horizontal registers. Like the bowl of the Ashmolean Museum, the engraved decoration of fine scroll patterns is raised against a cross-hatched ground. This engraving style characterizes a group of late Mamluk vessels, most of which, however, are of rather coarse work. An exceptionally fine specimen in the Benaki Museum (13068) shows parallels with these two bowls (figs. 18, 19).[27] Its cartouches are inscribed with the Mamluk votive inscription mentioned earlier, which starts with *″balaghta min al-ʻulyā″* alternating with a pattern of knot-work, which can also be seen on the bowl of the Ashmolean Museum.

The body of this bowl, which bears traces of gilding, has two main inscribed cartouches in the middle and four smaller ones in the upper and lower registers that divide its external surface. The rim is entirely inscribed with a benedictory inscription common on late Mamluk bowls, referring to drinking. The cartouches of the body also include multiple references to drinking. One of the phrases can also be found among the set of texts inscribed on the spouted bowl in the Benaki Museum mentioned earlier. This includes the words *″asāka tustaqā bi-kās mizājuhā kaf . . .″* referring to the Quran verse 76:5.

The poetical inscriptions on the main cartouches start with the phrase *"anā ṭāsah"* like the inscription on the rim of our Maḥmūd bowl; however, this one is followed by a different text. The composite blazon with a cup and powder horns has an unconventional quatrefoil profile and the minuteness of the engraving is of Veneto-Saracenic quality. Whereas traditional Mamluk blazons are circular, the blazon with a lobed profile has also been used on the basin in the Musée des Beaux Arts in Lyon discussed by Melikian-Chirvani and on the basin of the Poldi Pezzoli Museum of Figure 4. In spite of its inscriptions and the patterns of its engraving connecting it with Mamluk art, this bowl is unusual and represents another variation in the spectrum of late Mamluk metalwork.

Another point connecting the Maḥmūd bowl in the Khalili collection with the Ashmolean bowl as well as with late Mamluk metalware is an engraved medallion in the center of their respective inner bottoms. It consists of concentric circles around the spin mark including a circle of smaller circles (figs. 20, 21). The circles in the Ashmolean and the Khalili bowls are similar with the difference that the first is centered by a whirling rosette. Many late Mamluk bowls of the more crude type have such circles, which replace the circle of fishes common in Bahri vessels. The late Mamluk bowl of Figure 3, which shares the same inscription as our Maḥmūd bowl, has also an inner circle with a whirling rosette (fig. 22). These similar circles attribute the vessels in question to a common late Mamluk workshop. Considering its strong similarity with the bowl of the Ashmolean Museum, the Bargello bowl should also be attributed to Mamluk craftsmanship. It is possible, however, that the bowls were produced in one workshop and decorated in another.

The genre of inscriptions engraved on the Maḥmūd bowl of the Khalili collection and the bowl of the Ashmolean Museum is a characteristic feature of late Mamluk tinned copper bowls. These inscriptions display a variety of texts, which begin with *"anā ṭāsah"* and continue with words spoken in the first person praising the beauty and the craftsmanship of the vessel.[28] The term *ṭāsah* is the Arabic colloquial form of *ṭās,* which is used in classical Arabic and is a word of Persian origin. Mamluk anthologies refer to a poetical genre which praises the *ṭāsah* in connection with wine drinking. The Mamluk poets Burhān al-Dīn al-Qīraṭī, Ṭaqī al-Dīn ibn Ḥujjah al-Ḥamawī, and al-ʻAfīf al-Tilimsānī are reported to have composed verses in praise of the *ṭāsah* alongside other drinking vessels, such as the ewer and the cup or *kās*.[29] Their poetry must have inspired the vernacular and often awkward poems inscribed on late Mamluk vessels, including the two bowls discussed here.

---

[28]I am currently working on a study of these inscriptions.

[29]Muḥammad ibn al-Ḥasan al-Nawājī, *Ḥulbat al-Kumayt fī al-Adab wa-al-Nawādir al-Mutaʻalliqah bi-al-Khamrīyāt* (Cairo, 1299/1981–82), 171ff.; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 2003), 10:73.

These poems, which do not belong to classical literature, are unlikely to have circulated outside the cultural environment where they were composed, or to have been inscribed on Iranian or Anatolian objects, unless as part of a premeditated scheme to imitate Mamluk work.

It is interesting to note that, according to their inscriptions, these metal bowls were dedicated to drinking. Some of them refer to water and others to water and flowers, whereas others mention wine and love. The use of these bowls for drinking seems to be confirmed by two eyewitnesses in Cairo. Leo Africanus, who visited Egypt during the Ottoman campaign in 1517, writes about shops in Cairo selling drinks made of water flavored with various flower essences in artfully made metal bowls.[30] Also Evliya Çelebi in the seventeenth century mentions shops serving clear water to prominent clients in beautifully decorated bowls and cups *(kâseler ve taslar)* which looked like pure gold. He also mentions various fruit drinks sold by peddlers in tinned bowls.[31]

The fact that most recorded Veneto-Saracenic vessels, unlike the mainstream of Mamluk ware, are not inscribed and that they were found in European collections suggests that they were produced for a European clientele. However, the bowls of the Khalili and the Ashmolean collections, with their traditional Mamluk shapes and inscriptions referring to their use for drinking, are likely to have been made for a local market.

On the basis of chemical analysis of the metal, which shows that the Maḥmūd al-Kurdī group includes less nickel than the rest of the Veneto-Saracenic and the common Mamluk metalware, Ward has argued that this production should be attributed to west Iran. The analysis she refers to is based on a comparison with three western Iranian specimens.[32] Considering the recycling possibilities of metalware in the past as in the present, as can still be seen in the practices of metalworkers in the bazaars of the Middle East today, the variation of the metal composition is not a compelling argument. The metal composition which, according to Ward, differs even between a bowl and its lid, is one of many divergences between the sub-groups of the Veneto-Saracenic family. Late Mamluk metalwork altogether displays quite disparate features that might well have included the use of different materials or even imported vessels to be locally decorated. Differences in style appear not only between Veneto-Saracenic sub-groups signed by different craftsmen, but also within a group signed by the same craftsman. This is apparent even in the craftsmen′s signatures themselves, in their wording as well as in the style of their engraving. Maḥmūd′s signature is occasionally but not always set

[32]Ward et al., ″Veneto-Saracenic Metalworks.″

against a cross-hatched ground, sometimes including the word ʿ*amal* and sometimes *naqsh,* and even his name was presented in different manners. With his inscribed silvered bowl Maḥmūd demonstrates yet another variation within his own production. These inconsistencies suggest that the names might not refer to the artisan who engraved the bowl, but perhaps to workshops, which produced various styles, or to designers responsible only for the patterns. The *ra'īs* Muḥammad, who signed a lidded bowl in the Victoria and Albert Museum, was the grandson of a *naqqāsh,* who is not to be understood necessarily as metalworker since the decorator of the mihrab of Qijmas al-Isḥāqī was also a *naqqāsh.* He could be merely a designer. Al-Maqrīzī mentions in the early fifteenth century two markets for designers *(rassāmīn),* who produced patterns, in the central bazaar of Cairo.[33]

In spite of their variety of styles the Veneto-Saracenic vessels have a common origin, i.e., they were produced in the same artistic environment, which as a matter of fact earned them their label.[34] They all share a significant feature, which is a conceptual one: They represent a new esthetical approach to forms and to arabesque decoration without entirely departing from tradition and they display a taste for extremely minute engraved design, which is among the finest Islamic metalwork ever produced. Whether the European style bodies were imported or produced locally is a question that still needs to be answered. As I demonstrated elsewhere, there is some evidence that European expertise permeated Mamluk craftsmanship during the reign of Qāytbāy.[35] The new esthetics displayed in the Veneto-Saracenic metalwork conforms to the renaissance of the decorative arts during this period, which produced a remarkable and fascinating variety of styles and techniques in Mamluk metalwork with some surprising specimens, such as the gold inlaid basin in the Türk ve Islam Eserleri Müzesi with the sultan′s name or the ewer in the Victoria and Albert in his wife′s name.[36] Other crafts, like ceramics and glass also attest to innovative initiatives. An underglaze-painted blazon with Qāytbāy′s name shows a high quality unprecedented in Mamluk ceramics.[37] A singular lamp in the Islamic Museum in Cairo also inscribed with this sultan′s name reveals the attempt during this period to revive the lost art of enameled glass, perhaps with the help of European craftsmen working in Cairo.

---

[33]Maqrīzī, *Khiṭaṭ,* 2:101,105.

[34]Some vessels, however, have been identified as Venetian imitations of the Veneto-Saracenic. Most of these attributions seem justified.

[36]Wiet, *Objets en Cuivre,* 116; Ward, *Islamic Metalwork,* 118; Tim Stanley, *Palace and Mosque: Islamic Art from the Middle East* (London, 2004), 90.

[37]Marilyn Jenkins, *Islamic Art in the Kuwait National Museum* (London, 1983), 85.

The Mamluk carpets known from European collections are also likely to have been produced on Qāytbāy's initiative.[38] Likewise, architectural decoration during the reign of Qāytbāy produced new combinations of designs and techniques in marble, stone, and stucco. The creation of the so-called Veneto-Saracenic metalware in this innovative environment could well have continued in the following decades and perhaps further after the Ottoman conquest of Egypt and Syria.

While multiple and compelling arguments associate Veneto-Saracenic metalwork with Mamluk art, so far no comparable metalwork from the Islamic world has provided parallels to contend the Mamluk attribution. As to the question of a more exact provenance of the Veneto-Saracenic metalwork, i.e., Egypt or Syria, this still needs further investigation.

[38] A large Mamluk carpet found in the Alhambra and recently exhibited in the Alhambra Museum is attributed to the reign of Qāytbāy. This has been communicated to me by Dr. Purificación Marinetto Sanchez, who is currently preparing a publication on this subject.

APPENDIX

I. INSCRIPTION ON THE BERLIN VENETO-SARACENIC BUCKET[39]

Four cartouches on this bucket include a poem common on late Mamluk vessels, written in *naskhī* script and alternating with cartouches of good wishes written in Kufic. I am including here the text of this poem. A fifth cartouche in *naskhī* includes the sentence *"al-ṣabr ʿibādah."* The text is not distributed in the cartouches according to the sentences, but haphazardly.

من تمعنا في جمالي نزهة العين يراني
لي طرز من الخير قد حوى كل المعاني
كيف لا يسمو جمالي و النفوس تهوى وصالي

> Who contemplates my beauty will find me a delight to the eye
> I have a form which includes all the essence of good
> How would my beauty not be outstanding when the souls long for
> my love?

II. INSCRIPTIONS OF THE BOWL SIGNED BY MAḤMŪD IN THE KHALILI COLLECTION

Because of the vernacular character of the text and the unconventional writing, the reading of these inscriptions remains problematic and to some extent conjectural. The text on the rim is clear; the inscriptions of the body, however, which occupy four lines, pose a problem as to the sequence of their words. The same inscription on the late Mamluk bowl in the Khalili collection (MTW 1349) ends with an additional phrase: *"al-ṣabr ʿibādah,"* probably to fill a space at the edge of the cartouche that would have been otherwise empty. The inscriptions of the rim of the Maḥmūd bowl, however, are according to my knowledge so far unparalleled.

A. The Rim (Numbered by Cartouche):

١. انا طاسه كماله البدر شكلي وبياضي يحكى القمر في السمو و كزهى (كزهر؟)
٢. الرياض صنعة نقشي و على الكف اتجلى كالعروس الفناعه
٣. تواضع تكبرا كالنجم لاح لباصر (؟) على سفحات الما و هو رفيع ولا
٤. تكو كالدخان يعلو بنفسه الى طبقات الجو و هو ضيع عمل المعلم محمود

[39]See note 7.

1. I am a bowl which looks like the full moon, my whiteness resembles the moon in the sky like the flourishing (like the flowers?)
2. In gardens is the art of my decoration, I appear in the palm like a perfumed bride
3. Be humble to be great pride like a star shining to the viewer on the surface of the water while it is high and
4. Do not be like smoke which raises itself in the air and then is lost. Work of master Maḥmūd.

B. Cartouche 1 on the Body:

فكر اللبيب تحير في اوصافي و بديع نقشي مدعش [كذا][40] للنواظر منهل عذب و ورد صافي و باخر ضبط في (؟)[41] لعينك خافي

> The mind of the thoughtful wonders about my looks, my decoration is magnificent and stunning to the viewer, (like) a sweet stream and clear water, in finest (?) work hidden to your eye.

C. Cartouche 2 on the Body:

يكاد ظاهري ينظر من باطني لصفائه والحسن ليس بخافي فانظر الى حسني ومحكم صنعتي و اشرب هنيا صحه وعوافي

> My exterior almost looks through my interior for its clearness, beauty is not hidden, look at my beauty and the excellence of my craftsmanship and drink in happiness, health, and strength.

[40]The correct form *"mudhish"* is used on the Khalili bowl with the same inscription.

[41]The placement of *"fī"* ("in" or "in me") is not clear.

Mamluk Elite on the Eve of al-Nāṣir Muḥammad´s Death (1341): A Look behind the Scenes of Mamluk Politics

> When God made the morning rise and the muezzin announced the hour of prayer, the amir Sayf al-Dīn Qawṣūn left his house with a large retinue of his followers and sat down at his gate, thinking about the loss of his king and *ustādh* which had befallen him. After an hour, the amir Sayf al-Dīn Bashtak left [his house] with some of his companions. The amir Qawṣūn stood up, quickly walked over to him, and met him on the road. He embraced him, wept, and consoled him over his sultan, the like of which time will never ever allow again. After an hour, the sultan´s mamluks came out [of their barracks] and the amir Sayf al-Dīn Qawṣūn consoled them over their master, whereupon they sat down for a moment. Then, the gate of the Citadel was opened and out came the *khāṣṣakīyah* amirs, like Yalbughā, al-Ḥijāzī, al-Māridānī, Aqsunqur, and another, while they were weeping and mourning, and the amirs Qawṣūn and Bashtak consoled them. Then they [all] asked for the veteran amirs, so these entered [the Citadel, came] to them and were informed of the death of the sultan. Then, they [all] wept and they asked [the veterans´] advice on whom to appoint over them. But al-Aḥmadī said: ″You, you haven´t buried the sultan yet and you are already arguing. Have you forgotten what has been decreed to you and [have you forgotten] the oaths you have sworn? By God, you are not to appoint anyone but his son Abū Bakr; if not, [I swear that I will fight until] my white hair will be colored by my blood and my head will fly from my body.″ But the amir Sayf al-Dīn Qawṣūn told him: ″O lord Rukn al-Dīn, don´t be angry; [I swear] we will decapitate anyone who disagrees.″ And Bashtak said to them: ″Whoever disagrees with me will have to make the effort to join us in our agreement to the rule of the son of our *ustādh* [or he will be eliminated].″ So the *khāṣṣakīyah,* the mamluks of the sultan, and the *muqaddam*s *alf* all left to fetch the amir Abū Bakr. They brought him, made him sit on the royal throne in the *īwān* and the army

> came by, kissing the ground before him. Then he was given the royal epithet ″al-Malik al-Manṣūr.″ Everyone′s mind was set at rest and, thank God, contrary to what the people had been thinking, nothing [bad] happened and the issue ended well.[1]

This very visual and dramatic picture of the first reactions to the demise of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn (r. 1293–94; 1299–1309; 1310–41) reveals the names of some members of his socio-political elite of the highest-ranking amirs of one hundred at the end of his reign. As highly unlikely as the actual scene may be, it hints not just at the identity of these individuals, but also at the nature of their relationship with the sultan and with each other (some are inside the Citadel, others not; some take counsel on the succession, others give counsel; some take the lead through these events, others follow, etc.). As such, this story, to a certain degree, reflects the approach that will be taken in this article to establish the nature and identity of this Mamluk elite in its most consolidated form, i.e., at the very end of one of the Mamluk empire′s longest, most prosperous, and most successful sultanic reigns.

Indeed, this article′s central purpose is to identify and define this elite of highest-ranking amirs at al-Nāṣir Muḥammad′s court. And as it happens, we are very fortunate to have a list of all the amirs that held the highest military rank—that of amir of one hundred—at the time of al-Nāṣir Muḥammad′s death in June, 1341, left to us by the obscure historian Shams al-Dīn al-Shujāʻī (d. ca. 1354):

> There were twenty-five *muqaddam*s *alf* in Egypt on the day of his death: Badr al-Dīn Jankalī ibn al-Bābā, *al-ḥājj* Almalik, Baybars al-Aḥmadī, ʻAlam al-Dīn Sanjar al-Jāwulī, Sayf al-Dīn Kūkāy, Najm al-Dīn Maḥmūd Wazīr Baghdād—these are the senior outsiders *(barrānīyah kibār);* the rest are his mamluks and intimates: his son Abū Bakr, Qawṣūn, Bashtak, Ṭuquzdamur, Aqbughā ʻAbd al-Wāḥid, Aydughmish, the *amīr ākhūr,* Quṭlūbughā al-Fakhrī, Yalbughā al-Yaḥyāwī, Maliktamur al-Ḥijāzī, Alṭūnbughā al-Māridānī, Bahādur al-Nāṣirī, Aqsunqur al-Nāṣirī, Qumārī al-Kabīr, Qumārī, the *amīr shikār,* Ṭurghāy, Aranbughā, the *amīr jāndār,* Barsbughā, the *ḥājib,* Bulrughā ibn al-ʻAjūz, the *amīr silāḥ,* and Baygharā.″[2]

---

[1]Shams al-Dīn al-Shujāʻī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi,* ed. B. Schäfer as *Die Chronik Aš-Šuǧaʻīs,* Quellen zur Geschichte des Islamischen Ägyptens, vol. 2a (Wiesbaden, 1977), 1:107.

[2]Ibid., 111–12. For the individual identification of each of these amirs, see the appendix to this

His son and successor Abū Bakr excepted, these twenty-four individuals were indeed the political and military elite at the end of al-Nāṣir Muḥammad's regime, many of whom were to play significant roles in socio-political life in years to come. Rather than dealing with each one of them individually, the approach chosen to engage the issue of their identity and socio-political role (Who were they? What did they do?) in this article is their interaction with their "king," "ustādh," "master," or "sultan." This study will also attempt to establish whether such an analysis of this elite might allow for a behind-the-scenes look at Mamluk political culture at al-Nāṣir's court[3] and hence, narrow the wide spectrum of characterizations so far given to al-Nāṣir's rule, from ruthlessly enforced

article. For references to this list, see also Winslow W. Clifford, "State Formation and the Structure of Politics in Mamluk Syro-Egypt, 648–741 A.H./1250–1340 C.E.," Ph.D. diss., University of Chicago, 1995, 262; Mounira Chapoutot-Remadi, "Liens et Relations au sein de l'Élite Mamluke sous les Premiers Sultans Bahrides, 648/1250–741/1341," Ph.D. diss., Aix-en-Provence, 1993, 604–5.

[3]On the correlation between such interaction, politics, and authority in the Mamluk state, also defined as patronage, household politics, or even factionalism, see also Reuven Amitai-Preiss, "The Mamluk Officer Class during the Reign of Sultan Baybars," in *War and Society in the Eastern Mediterranean, 7th–15th Centuries,* ed. Yaacov Lev, The Medieval Mediterranean: Peoples, Economies and Cultures, vol. 9 (Leiden, 1997), 275; Chapoutot-Remadi, "Liens et Relations," 65; idem, "Liens propres et identités séparées chez les Mamelouks Bahrides," in *Valeur et distance: Identités et sociétés en Egypte,* ed. Chr. Décobert, Collection de l'atelier méditerranéen (Paris, 2000), 179–180; Clifford, "State Formation," 5–6, 47, 65, 244–45, 272; Robert Irwin, "Factions in Medieval Islam," *Journal of the Royal Asiatic Society* (1986): 228; Amalia Levanoni, "The Consolidation of Aybak's Rule: An Example of Factionalism in the Mamluk State," *Der Islam* 71 (1994): 252; idem, "The Mamluk Conception of the Sultanate," *International Journal of Middle East Studies* 26 (1994): 374–75. A number of studies have already noted the existence of one or more such relationships, never however exhaustively with respect to this specific episode and the elite of amirs involved (see Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad ibn Qalāwūn, 1310–1341*, Islamic History and Civilization, Studies and Texts, vol. 10 [Leiden-New York-Cologne, 1995], esp. 28–60; Chapoutot-Remadi, "Liens et Relations," esp. 67, 604–6; idem, "Liens propres et identités séparées," 175–88; Peter M. Holt, "Al-Nāṣir Muḥammad ibn Qalāwūn [684–741/1285–1341]: His Ancestry, Kindred and Affinity," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras*, ed. U. Vermeulen and D. De Smet, Orientalia Lovaniensia Analecta, vol. 73 [Leuven, 1995], esp. 319–23; D. S. Richards, "Mamluk Amirs and Their Families and Households," in *The Mamluks in Egyptian Politics and Society*, ed. Th. Philipp and U. Haarmann [Cambridge, 1988], 32–40).

authoritarianism[4] to spendthrift monarchism[5] to well-balanced oligarchism.[6]

It will be argued that it actually was a combination of this elite′s ″mamluk,″ family, and exchange relationships with al-Nāṣir Muḥammad that largely defined its composition, identity, and socio-political function at the end of his reign; furthermore, it will be suggested that these precise relationships not only characterize this elite, but also shed some light on the actual nature of al-Nāṣir′s authority.

″Mamluk″ Relationships

A first aspect of this elite′s identity and composition concerns their origin and subsequent status as mamluks or manumitted slaves. For when analyzing this elite′s composition in terms of the allegedly basic feature of Mamluk political culture—the relationship between a mamluk, his manumitting *ustādh,* and his peers[7]—a remarkably varied patchwork of mamluk origins and status is revealed. Though an *ustādh′*s basis of power was supposed to be the loyalty and cohesion of his corps of personal mamluks, all acquired, trained, and manumitted in his service and all identifiable by a *nisbah* that was derived from his name,[8] this group of senior amirs encompassed such a variety of mamluk ″categories″ in and outside his Nāṣirīyah corps of personal mamluks, that there remain surprisingly few grounds for assuming that such a bond supporting his authority really existed.

Barrānīyah, Nāṣirīyah, Khāṣṣakīyah

A first clear mamluk ″category″ of amirs of one hundred were those six that did not have the *nisbah* al-Nāṣirī at all.[9] Actually, in his list al-Shujāʻī already identified these six as a separate group, labeling them ″senior outsiders″ *(barrānīyah kibār).* And this clearly reflects the fact that, as suggested by their *nisbah*s, they had

---

[4]Most importantly in H. N. al-Ḥajjī, *The Internal Affairs in Egypt during the Third Reign of Sultan al-Nāṣir Muḥammad* (Kuwait, 1978, 2000), 96–163, esp. 159–63; Peter M. Holt, *The Age of the Crusades: The Near East from the Eleventh Century to 1517,* History of the Near East (London, 1986), 114; Reuven Amitai-Preiss, ″The Remaking of the Military Elite of Mamluk Egypt,″ *Studia Islamica* 72 (1990): 145–60.

[8]Ibid.

[9]They are the amirs Jankalī, Almalik, Baybars, Sanjar, Kūkāy, and Maḥmūd.

never been members of al-Nāṣir′s corps of personal mamluks.[10] In fact, what most of these outsiders in the Nāṣirīyah-dominated ranks of senior amirs actually had in common was that they had entered the Mamluk empire as young mamluks long before al-Nāṣir′s third ascendancy to power in 1310, i.e., they definitely were senior amirs ″who had priority in immigration″[11] and they were therefore also occasionally referred to in the sources as ″the veterans″ *(al-mashāyikh)*.[12] Almalik, Baybars al-Aḥmadī, Sanjar al-Jāwulī, and allegedly also Kūkāy were all members of the Manṣūrīyah, the corps of mamluks trained and manumitted by al-Nāṣir′s father al-Manṣūr Qalāwūn (d. 1290) more than fifty years earlier.[13] And the remaining two, Jankalī ibn al-Bābā and Najm al-Dīn Maḥmūd, actually were not even mamluks and therefore complete outsiders, yet with a remarkable record of service: both of them had been high ranking officials in the Ilkhanid empire before they had fled

---

[10]According to al-Qalqashandī, the term *barrānīyah* was used for mamluks and amirs who did not belong to the *khāṣṣakīyah;* they were also called *al-kharajīyah* (al-Qalqashandī, *Ṣubḥ al-A‘shá fī Ṣinā‘at al-Inshā’* [Cairo, n.d.], 3:386; 4:56). According to Rabbat, the term should also be taken literally, as the amirs who lived outside the sultan′s quarters in the Citadel′s southern enclosure (Nasser O. Rabbat, *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture,* Islamic History and Civilisation, Studies and Texts, vol. 14 [Leiden, 1995], 289); this may also be derived from the following quote from al-Maqrīzī: ″In it, the sultan reviewed the mamluks of the barracks and the outsiders *(al-barrānīyah)*″ (al-Maqrīzī, *Kitāb al-Sulūk li-Ma‘rifat Duwal al-Mulūk,* ed. Muḥammad M. Ziyādah [Cairo, 1956–58], 2:313). Combined with the information in this article′s opening story from al-Shujā‘ī, these outsiders indeed seem to have lived outside the sultan′s quarters, unlike their colleagues.

[11]On the specific terminology of a ″senior amir″ *(amīr kabīr),* probably also referred to when al-Shujā‘ī called them *″kibār,″* see Peter M. Holt, ″The Structure of Government in the Mamluk Sultanate,″ in *Eastern Mediterranean Lands in the Period of the Crusades,* ed. Peter M. Holt (Warminster, 1977), 55; Abū al-Maḥāsin Ibn Taghrībirdī, *Kitāb al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), 10:303.

[12]Cf. al-Shujā‘ī, *Tārīkh,* 1:107; Khalīl ibn Aybak al-Ṣafadī, *A‘yān al-‘Aṣr wa-A‘wān al-Naṣr,* ed. ‘Alī Abū Zayd et al. (Beirut-Damascus, 1998), 1:618, 4:162; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá ba‘da al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 1984–2003), 3:85; Ibn Qāḍī Shuhbah, *Tārīkh,* ed. ‘Adnān Darwīsh as *Tārīkh Ibn Qāḍī Šhuhba par Abū Bakr ibn Qāḍī Šhuhba al-Asadī al-Dimashqī (779/1377–851/1448), Tome Second, Premier Partie du Manuscrit, 741/1340–750/1350*, Publications de l′Institut Français de Damas, vol. 145 (Damascus, 1994), 487.

[13]Al-Ṣafadī, *A‘yān*, 2:81–83, 467–70, 618–20, 4:162–63; al-Maqrīzī, *Kitāb al-Mawā’iẓ wa-al-I‘tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1996), 3:83, 4:108, 247–48; Ibn Ḥajar, *Al-Durar al-Kāminah fī A‘yān al-Mī’ah al-Thāminah,* ed. H. al-Nadawī (Beirut, 1993), 1:411, 502, 2:170–72, 3:270; al-Maqrīzī, *Sulūk,* 2:768; Ibn Taghrībirdī, *Al-Manhal,* 3:85–88, 479–81, 6:74–76. See also Clifford, ″State Formation,″ 262. Kūkāy′s claims are rather more dubious, as there exists only one reference linking him to the Manṣūrīyah (al-Maqrīzī, *Sulūk,* 2:768). On the Manṣūrīyah corps, see Linda S. Northrup, *From Slave to Sultan: The Career of al-Manṣūr Qalāwūn and the Consolidation of Mamluk Rule in Egypt and Syria (678–689 AH/1279–1290 AD),* Freiburger Islamstudien, vol. 18

to Mamluk Syro-Egypt, in 1304 and in 1337 respectively.[14]

Mamluk society generally seems to have shown these amirs respect for their long experience, veteran status, and continued loyalty to the sultan. Hence when Damurdāsh, the former ruler of Anatolian Bilād al-Rūm, fled to Cairo in 1329 and was given an official position inferior to one of those veterans, al-Maqrīzī recorded the following telling story:

> [Damurdāsh] was so upset about it that the sultan had to send the amir Badr al-Dīn Jankalī to him to apologize and [explain] that he did not want to disrespect his [royal] status, but that . . . the sultan's father had senior mamluks who had brought up the sultan, so that he wanted to honor their status. "Therefore I make you sit next to them."[15]

The other eighteen amirs of one hundred are all mentioned in the sources with the *nisbah* al-Nāṣirī, i.e., they actually were members of al-Nāṣir's personal corps of mamluks; yet two different "categories" in terms of mamluk status may be discerned within this group of Nāṣirīyah amirs of one hundred.

There were seven Nāṣirīyah amirs whose relationship with the sultan actually went far beyond the mere formalities of *ustādh*-mamluk loyalty. For all seven—Qawṣūn, Bashtak, Aqsunqur, Maliktamur, Qumārī, Alṭunbughā, and Yalbughā—are specifically identified in one or more of the era's sources as members of the sultan's special private retinue of forty favorite mamluks and amirs, the *khāṣṣakīyah*.[16] These were the real "insiders" among the amirs of one hundred. Very often, they had been picked for their good looks and, as such, they were all attached to the sultan by a more personal bond of sultanic favor and affection—often

(Stuttgart, 1998), 189–96.

[14]Al-Ṣafadī, *A'yān*, 2:163–66, 5:399; Ibn Ḥajar, *Durar,* 1:539–4,; 4:331–32; Ibn Taghrībirdī, *Al-Manhal,* 5:22–25; Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250–1382* (London, 1986), 108; Levanoni, *Turning Point,* 41; Holt, "An-Nāṣir Muḥammad," 321. Maḥmūd's "priority in immigration" indeed is nonexistent—in his case, *kabīr* probably refers to his long-standing previous career with his Ilkhanid overlords.

[15]Al-Maqrīzī, *Sulūk,* 2:295.

[16]Al-Yūsufī, *Nuzhat al-Nāẓir fī Sīrat al-Malik al-Nāṣir,* ed. Aḥmad Ḥuṭayṭ (Beirut, 1986), 130; al-Shujā'ī, *Tārīkh,* 1:107; al-Ṣafadī, *A'yān*, 1:605, 4:131, 132, 5:585; al-Maqrīzī, *Sulūk,* 2:475; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:515, 537, 538. For this definition of the *khāṣṣakīyah*, see M. Q. al-Baqlī, *Al-Ta'rīf bi-Muṣṭalaḥāt Ṣubḥ al-A'shá* (Cairo, 1983), 114; Khalīl ibn Shāhīn al-Ẓāhirī, *Zubdat Kashf al-Mamālik wa-Bayān al-Ṭuruq wa-al-Masālik,* ed. P. Ravaisse as *Zoubdat Kachf el-Mamalik* (Paris, 1894), 115–16. Al-Maqrīzī gives even more specific information, as he states that the number of *khāṣṣakīyah* amirs of one hundred at the time of the Nāṣirī *rawk* (1315) was eight (al-Maqrīzī, *Khiṭaṭ,* 3:353). For a very explicit reference to this group of amirs, as the "*khāṣṣakīyah*

even referred to as sultanic "infatuation."[17] Thus, al-Malik al-Nāṣir was said to have been "extremely infatuated and in love with" Qawṣūn,[18] with Bashtak,[19] with Alṭunbughā,[20] with Maliktamur,[21] and with Yalbughā,[22] apparently to the extent that when the latter became ill, al-Ṣafadī says the sultan himself looked after his protegee, meanwhile not administering justice for twenty days and even neglecting his own dying son Ibrāhīm.[23] And al-Ṣafadī has the following telling story about the amir Maliktamur:

> I've seen him when he was in Cairo. . . . Because of the sultan's love for him he would not let him go to the square to play polo on Saturday, rather he allowed him to go down on Tuesday [only] . . . and he used to say to him: "O Maliktamur, cover your head when you play so that the sun cannot harm your face." And he would only allow him to attend the public service very occasionally, so that no one [ever] saw him.[24]

Finally, as regards the remaining eleven Nāṣirīyah amirs of one hundred, the sources do not identify them as having a specific in- or outsider status at the time of the sultan's demise and we may assume they were merely Nāṣirīyah, linked to the sultan by the usual *ustādh*-mamluk relationship.[25]

In terms of their mamluk origins and status, clearly this elite was made up of three groups: the latter majority of common sultanic mamluks and two smaller groups of out- and insiders with a more defined status and more personal bonds with the sultan. Yet, as is often the case with such categories, they do not necessarily reflect historical realities. On the one hand, none of these groups are ever mentioned

---

of the mamluks of the sultan [that are] *muqaddams alf,*" see al-Shujāʿī, *Tārīkh,* 1:107.

[17] See al-Maqrīzī, *Sulūk,* 2:477; al-Shujāʿī, *Tārīkh,* 1:60, 222, 266; al-Yūsufī, *Nuzhah,* 149, 153, 205; al-Ṣafadī, *Aʿyān*, 1:691, 4:131, 137, 445, 5:591–92; al-Maqrīzī, *Khiṭaṭ,* 4:104; Ibn Ḥajar, *Durar,* 1:409, 477, 4:358, 437; Ibn Taghrībirdī, *Nujūm,* 10:184; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:378, 538; Ibn Taghrībirdī, *Al-Manhal,* 3:68.

[23] On Ibrāhīm, see al-Ṣafadī, *Aʿyān*, 5:591–92; also Ibn Ḥajar, *Durar,* 4:437. On justice, see al-Maqrīzī, *Sulūk,* 2:492.

[24] Al-Ṣafadī, *Aʿyān*, 5:446; see also Ibn Ḥajar, *Durar,* 4:358.

[25] These eleven remaining amirs were: Aqbughā ʿAbd al-Wāḥid, Aydughmish, Bahādur, Qumārī al-Kabīr, Quṭlūbughā, Ṭuquzdamur, Ṭurghāy, Urumbughā, Barsbughā, Burunlī, and Baygharā.

as having acted as a self-consciously solidary group during the entire length of al-Nāṣir′s third reign; on the other, lines between the *khāṣṣakīyah* and non-*khāṣṣakīyah* are sometimes not as clear-cut as might be expected. Both of the so-called common Nāṣirīyah amirs Aydughmish and Quṭlūbughā can be identified fairly early in al-Nāṣir′s reign as members of the *khāṣṣakīyah*; it is, however, uncertain whether they retained that status in al-Nāṣir′s final years, since there is no explicit reference to it.[26] Bahādur′s status remains quite undefined as well, because though he was not explicitly identified as a *khāṣṣakī* in any of the sources, he is said to have enjoyed some of the *khāṣṣakīyah* privileges that come with sultanic favor. Thus, all relevant sources agree with Ibn Ḥajar that

> [The sultan] favored him so [much] that he came to stay with him to spend the night, as the fourth out of four: Qawṣūn, Bashtak, Ṭughāy Tamur, and Bahādur.[27]

″Veterans″ and ″Strangers″

Moreover, aside from these three very ″mamluk″ categories, there clearly were some additional distinctive features of mamluk origin and status, which were also known, or at least to some degree noticed, as they did find their way explicitly into the era′s sources. They mainly seem to have resulted from the success and length of al-Nāṣir′s rule and to some extent from his afore-mentioned personal predilection for certain types of mamluks.

Firstly, since al-Nāṣir reigned for so long, the continuous influx of new sultanic mamluks for thirty odd years resulted in serious generational differences in his final years between freshly appointed amirs and those who had managed to stay at the top for one or more decades. And though there is no clear reference to any sort of tension between those generations during al-Nāṣir′s reign,[28] the existence of different generations *(ṭabaqāt)* in the ranks of amirs did not go unnoticed. Quṭlūbughā was said to be ″from the generation of Arghūn al-Dawādār,″[29] and al-Ṣafadī made the following statement, revealing to some extent the contemporary awareness of this aspect of court life:

---

[26]Ibn Taghrībirdī, *Al-Manhal,* 3:165; al-Ṣafadī, *A‘yān*, 4:113; Ibn Ḥajar, *Durar,* 3:205.

[27]Ibn Ḥajar, *Durar,* 1:498; also al-Ṣafadī, *A‘yān*, 2:62; Ibn Taghrībirdī, *Al-Manhal,* 3:431; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:322.

[28]There is a reference to generational tension between Bahādur and the younger Alṭunbughā as the former is said to have born the latter a grudge for his quick promotion; in 1342 this tension is said to have caused Alṭunbughā′s removal from Cairo (al-Maqrīzī, *Khiṭaṭ,* 4:105; also to some extent confirmed in Ibn Qāḍī Shuhbah, *Tārīkh,* 2:323).

[29]Ibn Taghrībirdī, *Al-Manhal,* 10:82; instead of using the noun *ṭabaqah,* al-Ṣafadī talks about ″the high rank *(raf‘ah)* of the amir Sayf al-Dīn Arghūn al-Dawādār″ (al-Ṣafadī, *A‘yān*, 4:113).

> [Ṭuquzdamur] continued to be [the most] senior and revered, from the generation of Arghūn and from those after him, until the very end; he saw three or four generations come and go, while he remained as he had been and the sultan never turned against him.[30]

Thus, looking at these amirs of one hundred in generational terms, a clear distinction may be found between seniors or even ″veterans″ and rather freshly promoted juniors. Apart from the afore-mentioned revered ″veterans″ of the *barrānīyah,* the ranks of the common Nāṣirīyah count some amirs who, like Ṭuquzdamur and to some extent Quṭlūbughā, had considerable years of service as amirs of one hundred. Aydughmish had been promoted about thirty years earlier, shortly after the very start of al-Nāṣir′s third reign;[31] and both Aqbughā and Bahādur are said to have been amirs of one hundred since the late 1320s.[32] And though both Quṭlūbughā and Ṭurghāy were only promoted shortly before al-Nāṣir′s demise, neither of them should be considered a newcomer in these ranks either: Quṭlūbughā had been a privileged member of al-Nāṣir′s elite until he had been sent off to Damascus in 1327 and Turghāy had been a long-standing amir of one hundred when he was appointed governor of Aleppo in 1338.[33] On the other hand, the amirs Barsbughā, Burunlī, and Baygharā had only been appointed in 1338 or even later[34] and this certainly did not go unnoticed by contemporaries like al-Shujā‘ī, for he referred to Baygharā as ″the last of the later [amirs of one hundred and] commanders of one thousand.″[35]

Parallel to these common Nāṣirīyah ranks of amirs of one hundred, there clearly are two generations present among their *khāṣṣakīyah* peers. There is explicit reference to the promotions, often at a very young age, of five of these *khāṣṣakīyah* amirs to the rank of amir of one hundred fairly late in al-Nāṣir′s reign,[36] while the

[33]Al-Ṣafadī, *A‘yān*, 2:578; Ibn Ḥajar, *Durar,* 2:216; Ibn Taghrībirdī, *Al-Manhal,* 6:380; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:383.

[34]Ibn Qāḍī Shuhbah, *Tārīkh,* 2:262, 264; al-Shujā‘ī, *Tārīkh,* 1:43, 94, 221, 223.

[35]Al-Shujā‘ī, *Tārīkh,* 1:94.

[36]Alṭunbughā and Yalbughā apparently were born only in the early 1320s (Ibn Qāḍī Shuhbah, *Tārīkh,* 2:379; Ibn Ḥajar, *Durar,* 4:436–37); Aqsunqur was said to have been given a rank of amir of one hundred in 1336 (Ibn Qāḍī Shuhbah, *Tārīkh,* 2:515); Qumārī was promoted amir of one

promotion of the amirs Bashtak and Qawṣūn conspicuously predated them by as much as ten years.[37]

A final distinctive feature related to the mamluk relationship between this elite and their sultan specifically has to do with the mamluk status of a number of the Nāṣirīyah amirs of one hundred. For like the *barrānīyah* that were explicitly referred to as "outsiders," there were also some "strangers" among the Nāṣirīyah due to certain doubts about the soundness of their claims to Nāṣirīyah status. Thus, for instance, according to al-Ṣafadī the amir Ṭuquzdamur

> only considered himself to be a stranger within the sultan's household, because he had no peer to affiliate with.[38]

This was due to the fact that this Ṭuquzdamur, and also Aydughmish, Ṭurghāy, and Bahādur, had actually entered the ranks of the Nāṣirīyah not directly from the slave markets, but rather from other *ustādh*s' corps: Sultan al-Mu'ayyad Abū al-Fidā' of Ḥamāh, an amir called al-Ṭabbākhī, and the afore-mentioned king Damurdāsh respectively.[39] Furthermore, Qumārī al-Kabīr allegedly had been an adult shepherd of small cattle in "the land of the Turks" before being brought to Egypt by his brother, the amir Baktamur al-Sāqī (d. 1332), which again is hardly the customary way to enter the sultanic mamluks' ranks.[40] In the case of two of the *khāṣṣakīyah*, this "stranger" status definitely had everything to do with the reason for their being brought into the *khāṣṣakīyah*, i.e., the appeal of their good looks to the sultan. Thus, there is the well-known story about Qawṣūn, who had been a young merchant from the Black Sea region, "a beautiful and tall boy, about eighteen years old," whose appearance impressed the sultan so much that he made a considerable effort to acquire him as one of his personal mamluks;[41] and secondly, there was Maliktamur, originally a companion of the Baghdadi scholar al-Suhrawardī, but apparently so famous throughout the region for his beauty that

---

hundred on 10 December 1337 (al-Shujā'ī, *Tārīkh,* 1:29); and Maliktamur "was promoted at the end of al-Malik al-Nāṣir's reign" (Ibn Ḥajar, *Durar,* 4:358).

[37]Qawṣūn was promoted in 1326 (al-Maqrīzī, *Sulūk,* 2:272), Bashtak apparently in 1327 (ibid., 291).

[38]Al-Ṣafadī, *A'yān*, 2:611; also in Ibn Taghrībirdī, *Al-Manhal,* 6:420–21.

[39]Ibn al-Dawādārī, *Kanz al-Durar wa-Jāmi' al-Ghurar,* vol. 9, *Al-Durr al-Fākhir fī Sīrat al-Malik al-Nāṣir,* ed. Hans R. Roemer (Cairo, 1960), 365; al-Shujā'ī, *Tārīkh,* 1:252; al-Ṣafadī, *A'yān*, 1:653, 2:62, 578, 611; Ibn Ḥajar, *Durar,* 1:426, 498, 2:216, 225; Ibn Taghrībirdī, *Al-Manhal,* 3:165, 431, 6:380, 420; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:322, 383, 465.

[40]Ibn Qāḍī Shuhbah, *Tārīkh,* 2:497; al-Maqrīzī, *Sulūk,* 2:723.

[41]Al-Ṣafadī, *A'yān*, 4:138; Ibn Ḥajar, *Durar,* 3:257; al-Shujā'ī, *Tārīkh,* 1:222; al-Maqrīzī, *Khiṭaṭ,* 4:104 (quote).

al-Nāṣir again was determined to acquire him as a mamluk.[42] There are also the cases of the *khāṣṣakī* amirs Alṭunbughā al-Māridānī, who allegedly had first been a mamluk of the Artuqid ruler of Mārdīn, sent to al-Nāṣir as a gift,[43] and Yalbughā, about whom Ibn Ḥajar says that he had been born in Egypt ″while his father was in the service of al-Nāṣir, and he grew up with such an extremely beautiful face and fine figure that he got promoted.″[44] While the latter two especially are more contested stories,[45] in the case of Qawṣūn the actual fact of a perception of his being a ″stranger″ among the Nāṣirīyah may be seen from the reports on the political conflicts following al-Nāṣir′s death, where that specific feature was said to have been used to discredit his political appeal and to destabilize his alliances.[46]

This analysis of mamluk relationships, in terms of these amirs′ mamluk origins and status, provides a revealing look at the nature and identity of these elite amirs of one hundred at the end of al-Nāṣir′s reign. At the very least it gives us some insight, both into the background of the individuals, and into the nature of some of the ties that bound them to the sultan. What is striking is the small role traditional mamluk-*ustādh* bonds played in these relationships. Indeed, the general picture that emerges is of a varied elite composed of both intimates and outsiders, veterans and juniors, mamluks and non-mamluks, and real and outsider Nāṣirīyah, every one of them having a different relationship with the sultan due to their different personal histories.

EXCHANGE RELATIONSHIPS

A second relationship which was inherent in this elite of amirs of one hundred at the end of al-Nāṣir Muḥammad′s reign was of a far more material character, and consisted of the exchange of benefits between the sultan and his amirs.[47] As the

---

[42]Ibn Ḥajar, *Durar,* 4:358; Ibn Taghrībirdī, *Nujūm,* 10:184.

[43]Al-Shujāʻī, *Tārīkh,* 1:266; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:378.

[44]Ibn Ḥajar, *Durar,* 4:36–437.

[45]According to Ibn Ḥajar, al-Nāṣir ″had bought [Alṭunbughā] as a child″ (Ibn Ḥajar, *Durar,* 1:409); the story about Yalbughā especially seems very doubtful, since it is related regarding Yalbughā′s father Ṭābuṭā—even by Ibn Ḥajar, who claimed the opposite—that ″he had come [to Egypt] when he heard about his son′s favored position with al-Nāṣir″ (Ibn Ḥajar, *Durar,* 2:213; also al-Ṣafadī, *Aʻyān*, 2:563; Ibn Taghrībirdī, *Al-Manhal,* 6:358).

[46]See al-Shujāʻī, *Tārīkh,* 1:164.

[47]On the concept of exchange as a major lever of socio-political interaction in the Mamluk state, cf. Clifford, ″State Formation,″ esp. 6, 46–47, 58; Ira M. Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, Mass., 1967), 48–50, 187–88; Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350,* Cambridge Studies in Islamic Civilization (Cambridge, 1995), 38–40; W. W. Clifford, ″*Ubi Sumus?* Mamluk History and Social Theory,″ *Mamlūk Studies Review* 1 (1997): 60, 62.

head of a highly-centralized state bureaucracy, the sultan was the sole authority that controlled access to the military hierarchy (and its financial resources) and to the military administration, while at the same time the wealth of his treasury allowed him to bestow generous rewards on those he favored. Hence exchange relations not only defined the military, socio-political, and economic status of this Mamluk elite, but were also imperative in the absolute subordination of this elite to the sultan.

Promotion

The number of positions for the highest military rank in Egypt was fixed at twenty-four by al-Nāṣir Muḥammad in the course of his 1315 cadastral reform, the *rawk al-Nāṣirī,* when financial resources were allocated for precisely that number of amirs of one hundred.[48] At the end of 1326, al-Maqrīzī mentions an increase of one extra position and *iqṭā',* to twenty-five, as a result of the split of the *iqṭā'* of the arrested amir Arghūn al-Nā'ib.[49] As can be seen from al-Shujā'ī's list, there remained twenty-five amirs up till the very end of al-Nāṣir's reign, though by then this number included one of his own sons, Abū Bakr.

One conspicuous previously-mentioned feature of this elite of amirs of one hundred is that no less than eight amirs, or one third of this elite, had been promoted to this rank within the four final years of al-Nāṣir's reign. Only six amirs of the Nāṣirīyah—Aydughmish, Ṭuquzdamur, Qawṣūn, Bashtak, Bahādur and Aqbughā—had managed to maintain stability in their careers and retain their rank for more than ten years. Actually, when compared with parallel but less complete lists that are known for the years 1312 and 1332, only three (actually even just two) and twelve names respectively still remained in 1341.[50]

The only political authority that was responsible for these bestowments and deprivations of military rank was al-Nāṣir Muḥammad himself. In his position as the sultan, he was the sole official who was empowered to elevate one into the

[48]Al-Qalqashandī, *Ṣubḥ,* 4:14; al-Maqrīzī, *Sulūk,* 2:221, 3:353; al-Ẓāhirī, *Zubdah,* 113.

[49]Al-Maqrīzī, *Sulūk,* 2:280.

[50]From the 1312 list in a work by al-Ḥasan ibn Faḍl Allāh al-Ṣafadī, studied in detail by Reuven Amitai, only the names of the amirs Almalik and Baybars remained, while Amitai himself added another one that returned in 1341, Jankalī (Amitai, "Remaking," 161–62; also Chapoutot-Remadi, "Liens et Relations," 605); from the 1332 list of amirs that accompanied al-Nāṣir on his third hajj, the names of the amirs Jankalī ibn al-Bābā, Almalik, Baybars, Sanjar al-Jāwulī, Ṭuquzdamur, Aydughmish, Qawṣūn, Bashtak, Bahādur al-Nāṣirī, Urumbughā, Aqbughā 'Abd al-Wāḥid, and Ṭurghāy remained (Ibn al-Dawādārī, *Kanz,* 9:366, al-Maqrīzī, *Sulūk,* 2:351–52). On al-Nāṣir Muḥammad's active involvement in the composition of his elite, see also Amitai, "Remaking," 145–46, 151–55; Levanoni, *Turning Point,* 28–30; and Chapoutot-Remadi, "Liens propres et identitées séparées," 180.

ranks of amirs of one hundred and whose signature was required to legitimize the *manshūr,* the document conferring an *iqṭā‘* upon a new appointee.[51] Therefore promotion to the highest rank was not only a matter of timing and circumstance, it was a result of, first and foremost, this elite's relationship with the sultan, inevitably one of gratitude, loyalty, and subordination.

When circumstances and timing are subjected to closer scrutiny, another feature becomes apparent: the absence of any reference to strong competition for this limited number of highly desirable positions. For in those nine cases for which such information exists, three times an amir was promoted to a position left by the demise of his predecessor,[52] while six times promotion took place after the sultan had sent the previous amir to occupy an office in Syria.[53] Only once did this provoke any minor protest, which was resolved peacefully but firmly by al-Nāṣir:

> When the sultan sent [the amir of one hundred Tashtamur al-Nāṣirī] to Ṣafad in the year 738, he requested exemption, implored him and demanded to be excused. . . . On Thursday, [the sultan] made him sit before him after the public service, and said to him: "I'm only sending you to Syria to perform a job for me." He made him bow his head, kissed it, and bid him goodbye.[54]

Generally, in the few cases where an actual reason for such promotion is referred to by the sources, it either concerns exchange of promotion for loyalty and services offered to the sultan,[55] or the sultan's afore-mentioned infatuation with and favoritism towards some of his *khāṣṣakīyah*.[56] Though the sample is admittedly limited and absence of further data renders the conclusion rather conjectural, overall these elements do seem to confirm the picture of a sultan who was all-powerful and

[56]See al-Shujā‘ī, *Tārīkh,* 1:253; Ibn Ḥajar, *Durar,* 1:391, 409, 477–78; Ibn Taghrībirdī, *Al-Manhal,* 2:497; al-Maqrīzī, *Sulūk,* 2:385.

individual amirs who, though high-ranking, had few options but to obey his orders.[57]

The same picture emerges from another example, in which case al-Nāṣir allowed himself to bend the rules of the mamluk military curriculum on a whim, promoting the highly-favored rank-and-file mamluk Bahādur directly from rank-and-file status to the rank of amir of one hundred.[58] Again, this act is said to have provoked unsuccessful protest, in particular from the senior *khāṣṣakī* amir of one hundred, Baktamur al-Sāqī (d. 1332).[59] When the latter was murdered by the order of al-Nāṣir, he is said to have felt himself obliged to promote Baktamur′s little brother Qumārī to the highest rank.[60] Even a sultan′s whims had their limits.

Appointment

Appointment to high offices in the administration was also the sultan′s prerogative. This administration was designed to assist the sultan in governing his empire, and its military branch was mainly comprised of positions representing the sultan in the execution of his prerogatives.[61]

Again, it is actually very revealing that among those military offices that had executive power in the government, that of viceroy *(nā'ib),* financial minister *(wazīr),* and chamberlain *(ḥājib)* are explicitly stated to have been abolished or stripped of their authority by the sultan by the end of his reign:

> When [al-Nāṣir] died, he did not have a *nā'ib,* a *wazīr,* or a *ḥājib* with executive authority, except for Barsbughā al-Ḥājib, who rendered justice without having been given the [ceremonial] staff of the office of *ḥājib*.[62]

The sultan had simply refused to appoint a new amir in these offices when they had become vacant earlier in his reign. Actually, apart from the office occupied by this Barsbughā, the only offices awarded to high-ranking amirs toward the end of his reign were ceremonial offices of the court that managed certain aspects of

---

[57]This is absolutely contrary to how Clifford depicted al-Nāṣir, i.e., as a sultan who continuously had to work to balance the wishes and aspirations of the different mamluk units that served him, and whose success stemmed from his great ability to achieve this (Clifford, ″State Formation,″ 235–74, esp. 272–74).

[61]See, e.g., al-Qalqashandī, *Ṣubḥ*, 4:16–28; Walther Bjorkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten* (Hamburg, 1928), 151–53; David Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 16 (1954): 57–64.

[62]Al-Shujāʻī, *Tārīkh,* 1:111; also ibid., 94.

life in the Citadel, like oversight of the stables and the aviary, access to the public sessions, and management of the barracks and kitchens.[63] According to al-Maqrīzī, there was a very specific reason not to invest his most senior amirs with any executive power:

> He wanted to be independent in the affairs of his realm and to apply the rules single-handedly; therefore, he even abolished the office of *nā'ib al-salṭanah* so that he alone would carry the burdens of the state.[64]

Though this view is al-Maqrīzī's interpretation rather than an objective observation, in this specific case it supports the information so far adduced: though they were amirs of the highest rank and status, they were explicitly excluded from the formal channels of government, and this again confirmed their absolute subordination to a sultan who was the realm's sole executive authority.

Al-Nāṣir Muḥammad seems to have been wise enough, though, not to isolate himself entirely from his elite in the government of his realm. On more than one occasion, advice was sought from the *mashūrah,* the quite informal court council that was to advise the sultan in state affairs.[65] Its membership seems to have been limited, though, to those who indeed had enough experience to offer useful advice. A valuable observation in this respect was made by al-Maqrīzī:

> In [1318] the sultan made a group of the veteran commanders of the *ḥalqah* sit [with him] during the times of the council with the amirs, and he listened to what they had to say.[66]

---

[63]Cf. al-Ṣafadī, *A'yān*, 1:548, 554, 686, 2:81; Ibn Ḥajar, *Durar,* 1:391, 394, 502; Ibn Taghrībirdī, *Al-Manhal,* 2:480, 497, 3:282, 479; al-Maqrīzī, *Sulūk,* 2:202, 341, 342, 377, 508, 754; Ibn Taghrībirdī, *Nujūm,* 10:101, 178; Ibn al-Dawādārī, *Kanz,* 9:298, 374, 380; al-Shujā'ī, *Tārīkh,* 1:111, 223, 251; Zettersteen, *Beiträge,* 127, 128, 158, 184, 189, 195; al-Yūsufī, *Nuzhah,* 230; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:262, 319.

[64]Al-Maqrīzī, *Sulūk,* 2:534.

[65]E.g., in 1311, two "masters of the council" were among the amirs who attended a military review (Ibn al-Dawādārī, *Kanz,* 9:238–39); in 1312 there is reference to a council when Mongols threatened to attack Syria (ibid., 246); in 1336, rumors of war at the northeast border necessitated the organization of a council (al-Yūsufī, *Nuzhah,* 365–66); in 1339 the amirs of the council persuaded the sultan to arrest his financial supervisor, al-Nashw (al-Maqrīzī, *Sulūk,* 2:485); in the same year, there was a council on actions to be taken after the arrest of the Syrian governor Tankiz (Zettersteen, *Beiträge,* 210).

[66]Al-Maqrīzī, *Sulūk,* 2:182.

This quote implies that there was some connection between seniority of service, including experience in state and military affairs, and membership in the *mashūrah*. Indeed, at the end of his reign four of the *barrānīyah* veterans—Almalik, Baybars, Sanjar and Jankalī—were said to have been members of this *mashūrah;* and in fact, they may well have been the only members.[67]

Secondly, the evidence from al-Maqrīzī also implies that there was some vague regularity in these council meetings, probably linked to the timing of the weekly public sessions in the *īwān* of the Citadel. For when al-Maqrīzī, in his *Khiṭaṭ,* depicts this regular public session in the Citadel (*khidmat al-īwān*) he makes a very specific reference, both to this council and its veteran members:

> . . . and at a distance of about fifteen cubits there sat right and left of him [=the sultan] the men of age and standing, belonging to the most senior amirs of one hundred—they are called the amirs of the council. . . .[68]

Grants, Gifts, and Benefits

Apart from promotions in the military hierarchy and appointments in the military administration, there was yet another level of exchange between the sultan and his senior amirs. This indeed was an exchange of a more material, direct, and tangible character, consisting of all sorts of benefits that the sultan dispensed from his apparently abundant wealth to his most senior amirs. And again, this mainly seems to have been one-way traffic. From the abundant income he had allocated to himself after the 1315 *rawk,* exceeding by far any individual amir′s share in the empire′s resources and collected by very efficient financial supervisors, al-Nāṣir Muḥammad spent enormous amounts on many different things, including some of his amirs.[69] In terms of defining the elite amirs at the end of al-Nāṣir′s reign and their relationship with the sultan, there are a number of remarkable features that appear when one scrutinizes this kind of exchange.

First of all, there was one type of payment every sultan had to make to his amirs because it was part of state ceremonial. Among several other payments in kind, it consisted of the payment of certain sums of money *(nafaqah)* and the

---

[67]Al-Shujāʻī, *Tārīkh,* 1:104; al-Maqrīzī, *Sulūk,* 2:485, 523; al-Ṣafadī, *Aʻyān*, 1:618, 2:467, 469; Ibn Taghrībirdī, *Al-Manhal,* 3:85, 6:74; Ibn Ḥajar, *Durar,* 1:411, 2:171. Moreover, if Ibn Taghrībirdī is to be believed, other senior amirs were explicitly excluded from this council (″He [=al-Nāṣir] did not incorporate them [=the amirs] in the advisory council, not even Baktamur al-Sāqī, Qawṣūn, Bashtak, nor anyone else; rather, he would only be guided by the elderly among the amirs″ [Ibn Taghrībirdī, *Nujūm,* 9:174]).

[68]Al-Maqrīzī, *Khiṭaṭ,* 3:339.

[69]See, e.g., Levanoni, *Turning Point,* 53–60.

bestowal of robes of honor and the like, the value and elaborate decoration of which were related to the rank of each amir.[70] They were bestowed by the sultan on his amirs on specific occasions or in return for specific services, like the finishing of a polo ground in 1330, when "robes of honor and golden sashes were granted to the amirs and the commanders, and a robe of honor was bestowed upon the amir Sayf al-Dīn Aqbughā ʻAbd al-Wāḥid . . . and the amir Sayf al-Dīn Almalik al-Jūkandār . . .";[71] the promotion of his son Aḥmad to the rank of amir in the same year;[72] the marriage of another son in 1331, when "a robe of honor was bestowed upon . . . the amir Baybars al-Aḥmadī, upon Aydughmish, Amir Ākhūr, and also upon the remaining state officials . . .";[73] or in 1339, when he had the oath of allegiance to his rule renewed by the amirs, and "handed to every *muqaddam alf* the amount of 1,000 dinars."[74] These grants clearly were a ceremonial expression and confirmation of an amir's rank, status, and office, as well as a consideration for his loyalty and service to the throne, and their value was therefore quite formally weighed and determined.

There was another area of sultanic largess, however, of a completely informal and personal character and quite unrelated to any specific occasion or service. It was clearly directed to one specific group of amirs within the elite, those who, as mentioned earlier, for very personal reasons, had managed to attract the sultan's attention and had come to enjoy the sultan's favor: the *khāṣṣakīyah* amirs of one hundred. This personal expenditure by the sultan upon his *khāṣṣakīyah* amirs was already quite notorious in its time; in his own engaging style, al-Maqrīzī vividly describes it as "exceeding all bounds."[75] Those *khāṣṣakīyah* amirs that are explicitly mentioned in the sources are Qawṣūn, Bashtak, Maliktamur, Alṭunbughā, and Yalbughā, and they were involved in four different sorts of material exchange with their sultan, all of which made them extremely wealthy.

A *khāṣṣakī* amir might be granted an enlargement of his amiral *iqṭāʻ* by the income from additional villages. Thus, for example, in 1332 Bashtak was given the *iqṭāʻ* (and personal properties) of the murdered senior amir Baktamur al-Sāqī;[76]

[71]Ibn al-Dawādārī, *Kanz,* 9:357.

[72]Ibid.

[73]Ibid., 360; al-Maqrīzī, *Sulūk,* 2:343.

[74]Al-Maqrīzī, *Sulūk,* 2:499; for other examples of this kind of official expenditure, on the occasion of the marriages of his sons, his return from the Hijaz in 1332, the completion of large construction works, and a state visit by the "daughter of the sultan of Fez," see al-Maqrīzī, *Sulūk,* 2:345–46, 357, 432, 435, 447–48, 453.

[75]Ibid., 535.

[76]Al-Yūsufī, *Nuzhah,* 157; al-Ṣafadī, *Aʻyān,* 1:690. On the evolution of his colleague Qawṣūn's

when Maliktamur was promoted in 1338, to the *iqṭā‘* he inherited from his predecessor was added the village of ″al-Naḥrāwīyah, with an estimated monthly tax revenue of 70,000 dirhams″;[77] and to the amir Yalbughā′s *iqṭā‘* were added the village of al-Manzilah in 1338, and ″the village of Sūhāy, in the Ṣa‘īd, with an estimated tax revenue of 15,000 dinars″ the next year.[78] Eventually, the *iqṭā‘*s of the most senior *khāṣṣakīyah* colleagues, Qawṣūn and Bashtak, were said to have exceeded 200,000 dinars in value.[79]

Some *khāṣṣakīyah* amirs are also reported to have been fortunate recipients of al-Nāṣir′s extravagance, much to the despair of his financial managers. Thus al-Maqrīzī relates how Bashtak one day got 1,000,000 dirhams in return for a lost tax district[80] and how in the year 1337 he, Qawṣūn, Alṭunbughā, and Maliktamur were given 200,000 dinars each on the same day.[81] Another well-known story of al-Nāṣir′s generosity is the following:

> The *ḥājj* Ḥusayn, his *ustādār,* said: ″One day, [an amount] of 20,000 dinars was mentioned before the sultan, and Yalbughā said: ′By God, O lord, [I swear that] I have never seen 20,000 dinars.′ So when he left from [the sultan], he [the sultan] summoned . . . the financial inspector and said: ′Bring me at once 25,000 dinars and five honorary presents.′ . . . When he brought that, [the sultan] said: ′Carry the honorary presents to Yalbughā and tell him to bestow them upon the *jamdārīyah* when they come with the gold.′ He summoned five from the *jamdārīyah* and made each one of them carry 5,000 dinars, saying: ′Take this gold to Yalbughā.′ So they took it, and he bestowed those robes of honor upon them.″[82]

Even in the financial disputes between the sultan and his financial inspector al-Nashw on the one hand and these amirs on the other, from time to time sultanic

iqṭā‘, see Shihāb al-Dīn al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1931–98), 33:202, 292; al-Maqrīzī, *Sulūk,* 2:314.

[77] Al-Maqrīzī, *Sulūk,* 2:467; Ibn Ḥajar, *Durar,* 4:358.

[78] Al-Maqrīzī, *Sulūk,* 2:463, 493.

[79] Ibid., 525; also al-Kutubī, ″‘Uyūn al-Tawārīkh,″ Cambridge University Library MS Add. 2923, fol. 59. Amirs of one hundred were said to have been granted *iqṭā‘*s with annual incomes that ranged from 80,000 to 200,000 dinars (Ibn Faḍl Allāh al-‘Umarī, *Masālik al-Abṣār fī Mamālik al-Amṣār,* ed. Ayman Fu’ād Sayyid, Textes arabes et études islamiques, vol. 23 [Cairo, 1985], 29; al-Qalqashandī, *Ṣubḥ*, 3:453–54; al-Maqrīzī, *Khiṭaṭ,* 3:350–51).

[80] Al-Maqrīzī, *Sulūk,* 2:535.

[81] Ibid., 432.

[82] Al-Ṣafadī, *A‘yān*, 5:585–86; also in Ibn Ḥajar, *Durar,* 4:437; al-Maqrīzī, *Sulūk,* 2:535.

decisions tended to favor the latter. For instance, in the year 1336 a private sugar factory that was connected to Qawṣūn was targeted by al-Nashw′s new fiscal policies to enhance the sultan′s ever-insufficient income. In the end, however, after the confiscation of its proceeds, these were immediately forwarded by al-Nāṣir to Qawṣūn, leaving the latter perhaps even better off than he otherwise might have been.[83] In all, the high *iqṭā‘* incomes these amirs already had been awarded occasionally seem to have been augmented by such huge sultanic cash gifts and benefits.

Even more than cash benefits, all sorts of valuable presents like horses, mamluks, robes of honor (and in the case of Bashtak even the wife of a murdered colleague) were quite regularly directed by the sultan to amirs like Qawṣūn, Bashtak, Maliktamur, and Yalbughā.[84] In the case of the latter, al-Ṣafadī said that:

> No one was delighted like him by the bestowals that came to him. Horses were offered to him with saddles, equipment, and accoutrements: fifteen saddles decorated with brocade and gold and inlaid with precious jewels for fifteen horses, and two hundred [trappings] for two hundred cart horses; and there were sent to him honorary presents: satin, golden sashes, brocaded embroidery, etc., which he had to give to those who brought those [presents] to him. . . . In all, [the sultan′s] grants and bestowals upon him were beyond [normal] bounds.[85]

And finally, an extravagant example of his unbounded generosity is the huge buildings he had constructed for some of these amirs. Though these were very limited in number, the amount of money spent, the efforts made, and the ground-breaking splendor that resulted again highlight the often outlandish behavior the sultan displayed towards the handful of amirs with whom he was really infatuated. There is passing reference to some sultanic involvement in the construction of Qawṣūn′s mosque and of Bashtak′s palace,[86] but actually, it was the amirs Alṭunbughā al-Māridānī and Yalbughā al-Yaḥyāwī who were the focus of this sultanic extravagance.[87] He had a mosque built for Alṭunbughā in 1334 (even before he

[83]Al-Yūsufī, *Nuzhah,* 369–70.

[84]Cf., e.g., al-Ṣafadī, *A‘yān,* 1:690, 4:138, 5:445; al-Shujā‘ī, *Tārīkh,* 1:222; al-Maqrīzī, *Sulūk,* 2:451–52, 471–72, 491, 535; Ibn Ḥajar, *Durar,* 4:358, 478; Ibn Taghrībirdī, *Al-Manhal,* 3:367.

[86]Al-Maqrīzī, *Sulūk,* 2:320, 501.

[87]On the sultan′s architectural patronage, see Howayda al-Harithy, ″The Patronage of al-Nāṣir Muḥammad ibn Qalāwūn, 1310–1341,″ *MSR* 4 (2000): 219–44.

became an amir), as well as a luxurious palace for each of Alṭunbughā and Yalbughā in 1337.[88] And according to al-Shujāʿī, for the palace of Yalbughā alone an incredibly huge sum of money—he mentions the highly unlikely amount of 40 million dirhams—was set aside.[89]

To sum up, five of the seven *khāṣṣakīyah* amirs of one hundred identified before are mentioned by the sources as recipients of occasional additional benefits in cash and kind from the sultan, who awarded them unprecedented wealth. Nowhere is it recorded that they had to return anything to their generous patron, and no mention is made of any specific reason why such lavish patronage was bestowed upon these amirs, apart from the fact that in the case of the construction of buildings, there are some faint hints of a link between sultanic infatuation and these building projects. However faint these references, it does seem very plausible to assume that in this extravagant patronage and favoritism of his *khāṣṣakīyah* amirs of one hundred, al-Nāṣir′s infatuation with them again had an important role to play.

Family Relationships

Apart from ″mamluk″ and exchange relationships, there remains one small but fundamental issue that also conspicuously characterized a great number of the amirs of one hundred at the end of al-Nāṣir′s reign—their familial relationship with the dying sultan. By an active marriage policy al-Nāṣir had managed to establish links between himself and a great number of his amirs that incorporated an important part of the empire′s socio-political elite into his own family.[90]

Eight of the amirs of one hundred at the end of al-Nāṣir′s reign are mentioned at least once in the sources as married to one of al-Nāṣir′s daughters. Six of these sultanic sons-in-law were again his favorites from the *khāṣṣakīyah:* Qawṣūn, Bashtak, Maliktamur, Aqsunqur, Qumārī, and Alṭunbughā,[91] and number seven

[89]Al-Shujāʿī, *Tārīkh,* 1:25.

[90]The issue of al-Nāṣir′s family and marriage policy has been noted and dealt with in great detail by Peter Holt (Holt, ″An-Nasir Muhammad,″ 313–24, esp. 319–23).

[91]Qawṣūn was married in 1326 (al-Yūsufī, *Nuzhah,* 436; al-Maqrīzī, *Sulūk,* 2:272, 283; al-Ṣafadī, *Aʿyān*, 4:137; Ibn Ḥajar, *Durar,* 3:257; al-Shujāʿī, *Tārīkh,* 1:222; al-Maqrīzī, *Khiṭaṭ,* 4:104); on Maliktamur, see al-Ṣafadī, *Aʿyān*, 5:444; Ibn Ḥajar, *Durar,* 4:358; Ibn Taghrībirdī, *Nujūm,* 10:184; on Aqsunqur, see al-Ṣafadī, *Aʿyān*, 1:554; Ibn Ḥajar, *Durar,* 1:394; Ibn Taghrībirdī, *Al-Manhal,* 2:497; al-Maqrīzī, *Sulūk,* 2:754; Ibn Taghrībirdī, *Nujūm,* 10:178; on Qumārī, see al-Ṣafadī, *Aʿyān*, 4:131; Ibn Ḥajar, *Durar,* 3:256; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:431; Ibn Taghrībirdī, *Nujūm,* 10:101; on Alṭunbughā, see al-Ṣafadī, *Aʿyān*, 1:604; Ibn Ḥajar, *Durar,* 1:409; Ibn Taghrībirdī, *Al-Manhal,*

was the afore-mentioned probable *khāṣṣakīyah*-nominee Bahādur.[92] Number eight, Urumbughā, actually is a rather more doubtful case, as it was only the later historian Ibn Qāḍī Shuhbah who stated that he had been married to one of his *ustādh*'s daughters.[93] Apart from these eight, there also was the amir Aqbughā 'Abd al-Wāḥid, whose sister Ṭughāy was married to the sultan,[94] and there are two more senior or even veteran amirs, in terms of years of service—Jankalī ibn al-Bābā and Ṭuquzdamur—that came to be father-in-law of one or more of al-Nāṣir's sons.[95] So in all, ten or even eleven members of this elite were related to the sultan by ties that went beyond "mamluk" or exchange relations and actually linked them to his family, hence—as the history of the years between 1341 and 1382 shows—firmly connecting his family's future to his military and socio-political elite's fate.

Direct reasons, however, for this marriage policy again remain largely unmentioned (or unnoticed). Only in the case of his brother-in-law Aqbughā 'Abd al-Wāḥid is there unambiguous information that al-Nāṣir's marriage to Ṭughāy actually predated Aqbughā's military career and was "the cause of his promotion by al-Nāṣir. . . ."[96] Gaining political experience and guidance may well have been a key element in linking some of his sons to the dyed-in-the-wool amirs Jankalī and Ṭuquzdamur, though there exists no evidence for such an assumption, and more personal or even other as yet unknown reasons may equally have been involved. The same goes for his *khāṣṣakīyah* sons-in-law, for it remains unclear whether he tried to enhance the loyalty to his reign and family of those men he himself had chosen to be at the very top of Mamluk society, or whether his grounds were less intentionally political, perhaps even more personal or emotional. In any event, at this point information remains too indefinite to allow any conclusive statement on al-Nāṣir's marriage policy, except that there is a conspicuous uniformity

---

3:68; al-Maqrīzī, *Khiṭaṭ,* 4:105; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:378; in general, also al-Shujā'ī, *Tārīkh,* 111; al-Maqrīzī, *Sulūk,* 2:536. So from the seven *khāṣṣakīyah* amirs of one hundred, only Yalbughā was not a son-in-law of al-Nāṣir (there was a—rather distant—link though, as he was married to a sister of one of the sultan's wives [al-Ṣafadī, *A'yān*, 5:591; al-Maqrīzī, *Sulūk,* 2:473]).

[92]See al-Shujā'ī, *Tārīkh,* 111, 253; al-Ṣafadī, *A'yān,* 2:62; Ibn Ḥajar, *Durar,* 1:498; Ibn Taghrībirdī, *Al-Manhal,* 3:431; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:323.

[93]Ibn Qāḍī Shuhbah, *Tārīkh,* 2:319.

[94]Al-Ṣafadī, *A'yān*, 1:548; Ibn Ḥajar, *Durar,* 1:391; Ibn Taghrībirdī, *Al-Manhal,* 2:480.

[95]Zettersteen, *Beiträge,* 195, 199, 210, 218; al-Shujā'ī, *Tārīkh,* 1:3, 18, 29; al-Ṣafadī, *A'yān*, 2:165, 611; Ibn Ḥajar, *Durar,* 1:540, 2:225; Ibn Taghrībirdī, *Al-Manhal,* 5:24, 6:422; al-Maqrīzī, *Sulūk,* 2:407, 417, 432, 436. Jankalī's daughter actually already died in 1339 and the sultan had her son—his grandson—sent to Jankalī to be brought up in his household.

[96]Ibn Ḥajar, *Durar,* 1:391; also in al-Ṣafadī, *A'yān*, 1:548; Ibn Taghrībirdī, *Al-Manhal,* 2:480.

between the list of *khāṣṣakīyah* amirs of one hundred and that of the sultan′s sons-in-law.[97]

Conclusion

If we look back on this reconstruction of the Mamluk elite on the eve of al-Nāṣir Muḥammad′s death, it becomes clear that variety rather than any sort of uniformity is the keyword: there is an enormous variety in this elite′s histories, in their mamluk status, and in their years of service. Though all were promoted to the highest rank, reasons for this were dissimilar, and their involvement in state administration—if any—was not uniform; even in terms of financial benefit from al-Nāṣir′s renowned expenditures, it was only the *khāṣṣakīyah* who benefited so handsomely, while at the same time, their ranks alone were additionally characterized by close and inclusive family connections with their benefactor, the sultan.

We have been able to show that just as this variety characterized the nature and composition of this Mamluk elite on the eve of al-Nāṣir′s death, it equally defined their relationships with the sultan. He showed some of them respect and others personal affection; he employed some to render him specific services and asked others for their advice; he bestowed regular formal benefits upon most of them, and elected others on whom to lavish occasional grants and gifts; and finally, two were chosen to be his sons′ fathers-in-law, while others were chosen to consider the sultan himself as their father-in-law.

Clearly, in dealing both with the nature of this elite and with the nature of al-Nāṣir′s socio-political relationships, these features warn us not to generalize and consider groups of people where we actually should be considering individuals. Even with a small group like the *khāṣṣakīyah,* differences are noted when we take into account concepts like generations and ″strangers.″ The individual amir and his personal history define the socio-political context far better than any other conceptual device.

Is it then at all possible to derive from this very specific cross section of the Mamluk elite a better understanding of al-Nāṣir′s successful rule? Apart from the retrospective observation of their success, there seems to be no conclusive evidence at all on the largely invisible policies and political behavior that contributed to al-Nāṣir′s long, stable, and prosperous reign. This article rather suggests circumstantial evidence. First of all, it is clear from the varied nature of this elite that the basis of al-Nāṣir′s authority over them could not have been any cohesion resulting from his mamluks′ loyalty to their *ustādh*. For membership in his Nāṣirīyah was hardly a compelling argument for promotion, and certainly not for sultanic

[97]There is only one son-in-law of the sultan mentioned who was not an amir of one hundred at all: Abū Bakr ibn Arghūn al-Nā'ib (al-Shujā'ī, *Tārīkh,* 1:111; al-Maqrīzī, *Sulūk,* 2:536).

favor. Moreover it was not exchange of financial benefit for loyalty either that bound this elite to their sultan, as this exchange has been shown to affect the *khāṣṣakīyah* only. Rather, as already suggested, many of this elite's features imply that it was his solid, engaged, and independent position at the very top of the military hierarchy and of the government's administration that account for the continuous subordination of this elite, which was left with no real alternative but to accept and gratefully return his patronage. There exist occasional references to plans to create an alternative order, but in an almost paranoid way the sultan always managed to have them firmly nipped in the bud.[98] Clearly it was this "pro-active" policy of al-Nāṣir that was referred to when al-Ṣafadī stated that—as mentioned earlier—the amir Ṭuquzdamur "saw three or four generations come and go, while he remained as he had been and the sultan never turned against him."[99] Moreover, observations regarding the sultan's often harsh treatment of his amirs are recorded by al-Yūsufī and al-Shujāʻī,[100] and according to the latter, seconded by al-Maqrīzī, on many an occasion awe or even fear determined the amirs' attitudes towards their sultan.[101] All in all, these elements taken together make a very strong case—at least as far as his elite is concerned—for considering al-Nāṣir Muḥammad a sultan whose firm hold on his office, combined with his political experience (and even paranoia), allowed him to dominate Mamluk society's elite. For this elite of individual amirs, with their various backgrounds, lacked any strong sense of solidarity and could pursue their self-preservation only within the parameters their sovereign set for them.

One final question needs to be asked: what was the nature of al-Nāṣir's involvement in creating this quite successful varied composition of his elite? In a previous study on the amir Qawṣūn,[102] I agreed with Reuven Amitai that indeed al-Nāṣir Muḥammad seemed to have "created a system of balances and counter

---

[98]Among many such references, there is the sudden eviction of the *khāṣṣakī* amir Quṭlūbughā in 1327 (esp. Ibn Ḥajar, *Durar,* 3:250) and of the *nā'ib* Arghūn in 1326 (e.g., al-Maqrīzī, *Sulūk,* 2:279), the murder of the *khāṣṣakī* amir Baktamur al-Sāqī in 1332 (e.g., al-Yūsufī, *Nuzhah,* 135) and of the long-standing governor of Syria Tankiz in 1339 (e.g., Zettersteen, *Beiträge,* 210), and there are a number of allegedly false rumors that, regardless of their high positions, time and again endangered the amirs Bashtak, Aqbughā, and Qawṣūn in the period 1339–40 (al-Maqrīzī, *Sulūk,* 2:483–84).

[99]Al-Ṣafadī, *Aʻyān*, 2:611. For a similar, though more general, remark, see al-Shujāʻī, *Tārīkh,* 1:113.

[100]See al-Yūsufī, *Nuzhah,* 153; al-Shujāʻī, *Tārīkh,* 1:113.

[101]Al-Shujāʻī, *Tārīkh,* 1:61, 112; al-Maqrīzī, *Sulūk,* 2:447, 449, 478, 483, 532.

[102]J. Van Steenbergen, "The Amir Qawṣūn, Statesman or Courtier? (720–741 AH/1320–1341 AD)," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras III,* ed. U. Vermeulen and J. Van Steenbergen, Orientalia Lovaniensia Analecta 103 (Leuven, 2001), 451–68.

balances that prevented and disabled the rise of any powerful faction against his rule."[103] On the basis of many features mentioned above, such a foregone conclusion may be perhaps a bit audacious. Clearly, the process of selecting his "lieutenants" and favoring some of his mamluks had as much to do with al-Nāṣir's personal and emotional predilections as with his political insights. Actually, a combination of both may well have been responsible for the (accidental?) origin of this elite's divergent composition and interaction with him, though again, due to its private nature this is an argument that remains conjectural.

Even though the origin of such policies remains obscure, their result is undeniable: al-Nāṣir's success for more than thirty years is aptly epitomized in the subordination of his elite at the very end of his reign and confirmed by the succession of his son Abū Bakr. And this situation was actually very convincingly depicted at the beginning of this article in al-Shujāʻī's highly dramatical story: one by one the elite's many different categories of mourners enter the scene; tension rises between the lead characters; the late sultan's will is executed; and in an overwhelming final chord of unanimity the new sultan is enthroned as al-Manṣūr Abū Bakr. Al-Nāṣir had been "victorious" one last time.

[103]Ibid., 466, referring to Amitai, "Remaking," 162.

APPENDIX: LIST OF AMIRS OF ONE HUNDRED AT THE END OF AL-NĀṢIR MUḤAMMAD´S REIGN

Abū Bakr ibn Muḥammad ibn Qalāwūn (1322–41)
al-Ṣafadī, *A'yān,* 1:720–23; Ibn Ḥajar, *Durar,* 1:462–64; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:254–55; Ibn Taghrībirdī, *Nujūm,* 10:17–18

Almalik al-Jūkandār, al-Ḥājj, Sayf al-Dīn (ca. 1277–1346)
al-Ṣafadī, *A'yān,* 1:618–20; Ibn Ḥajar, *Durar,* 1:411; Ibn Taghrībirdī, *Al-Manhal,* 3:85–88; al-Maqrīzī, *Khiṭaṭ,* 4:108; Ibn Taghrībirdī, *Nujūm,* 10:175–76; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:487–89

Alṭunbughā al-Māridānī al-Sāqī al-Nāṣirī, 'Alā' al-Dīn (ca. 1320–43)
al-Ṣafadī, *A'yān,* 1:604–7; Ibn Ḥajar, *Durar,* 1:409; Ibn Taghrībirdī, *Al-Manhal,* 3:67–70; al-Shujā'ī, *Tārīkh,* 1:266; al-Maqrīzī, *Khiṭaṭ,* 4:104; Ibn Taghrībirdī, *Nujūm,* 10:105; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:378

Aqbughā 'Abd al-Wāḥid al-Nāṣirī, Sayf al-Dīn (d. 1344)
al-Ṣafadī, *A'yān,* 1:548–49; Ibn Ḥajar, *Durar,* 1:391; Ibn Taghrībirdī, *Al-Manhal,* 2:480–82; al-Shujā'ī, *Tārīkh,* 1:267; al-Maqrīzī, *Khiṭaṭ,* 4:225; Ibn Taghrībirdī, *Nujūm,* 10:107; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:377–78

Aqsunqur al-Nāṣirī, Shams al-Dīn (d. 1347)
al-Ṣafadī, *A'yān,* 1:554–56; Ibn Ḥajar, *Durar,* 1:394; Ibn Taghrībirdī, *Al-Manhal,* 2:496–99; Ibn Taghrībirdī, *Nujūm,* 10:178–80; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:515

Aydughmish al-Nāṣirī al-Ṭabbākhī, 'Alā' al-Dīn (d. 1342)
al-Ṣafadī, *A'yān,* 1:652–53; Ibn Ḥajar, *Durar,* 1:426–28; Ibn Taghrībirdī, *Al-Manhal,* 3:165–68; al-Shujā'ī, *Tārīkh,* 1:251; Ibn Taghrībirdī, *Nujūm,* 10:99–100; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:320–22

Bahādur al-Damurdāshī al-Nāṣirī, Sayf al-Dīn (d. 1343)
al-Ṣafadī, *A'yān,* 2:62–63; Ibn Ḥajar, *Durar,* 1:498; Ibn Taghrībirdī, *Al-Manhal,* 3:431–32; al-Shujā'ī, *Tārīkh,* 1:252; Ibn Taghrībirdī, *Nujūm,* 10:104; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:322–23

Barsbughā al-Nāṣirī, al-Ḥājib, Sayf al-Dīn (d. 1342)
al-Ṣafadī, *A'yān,* 1:686–88; Ibn Ḥajar, *Durar,* 1:474; Ibn Taghrībirdī, *Al-Manhal,* 3:282–83; al-Shujā'ī, *Tārīkh,* 1:223; al-Maqrīzī, *Sulūk*, 2:316; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:262

Bashtak al-Nāṣirī, Sayf al-Dīn (d. 1341)
al-Ṣafadī, *A'yān,* 1:690–94; Ibn Ḥajar, *Durar,* 1:477–79; Ibn Taghrībirdī, *Al-Manhal,* 3:367–72; al-Maqrīzī, *Khiṭaṭ,* 3:54–56; Ibn Taghrībirdī, *Nujūm,* 10:18–20; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:264–65

Baybars al-Aḥmadī al-Jarkasī, Amīr Jāndār, Rukn al-Dīn (ca. 1262–1345)
al-Ṣafadī, *A'yān,* 2:81–83; Ibn Ḥajar, *Durar,* 1:502; Ibn Taghrībirdī, *Al-Manhal,*

3:479–81; al-Maqrīzī, *Khiṭaṭ,* 3:83; Ibn Taghrībirdī, *Nujūm,* 10:143; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:459–60

Bayghарā al-Nāṣirī al-Manṣūrī, Sayf al-Dīn (d. 1353)

al-Ṣafadī, *A'yān,* 2:100; Ibn Ḥajar, *Durar,* 1:514–15; Ibn Taghrībirdī, *Nujūm,* 10:294

Burunlī (Bulurghā) al-Nāṣirī, Ibn al-'Ajūz, Sayf al-Dīn (d. 1342)

al-Shujā'ī, *Tārīkh,* 1:175, 221; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:263–64

Jankalī ibn Muḥammad ibn al-Bābā ibn Jankalī ibn Khalīl ibn 'Abd Allāh al-'Ijlī, Badr al-Dīn (1276–1346)

al-Ṣafadī, *A'yān,* 2:163–66; Ibn Ḥajar, *Durar,* 1:539–40; Ibn Taghrībirdī, *Al-Manhal,* 5:22–25; al-Maqrīzī, *Khiṭaṭ,* 3:218–19; Ibn Taghrībirdī, *Nujūm,* 10:143–44; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:460–61

Kūkāy al-Silāḥdār al-Manṣūrī, Sayf al-Dīn (d. 1348)

al-Ṣafadī, *A'yān,* 4:162–63; Ibn Ḥajar, *Durar,* 3:270; Ibn Taghrībirdī, *Nujūm,* 10:241; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:625

Food and Cooking during the Mamluk Era: Social and Political Implications*

Food has been a long-standing object of attention in ethnographic and sociological research. Anthropologists of the nineteenth century focused on the ritual supernatural aspects of food consumption. Their twentieth-century successors, especially field anthropologists, studied rituals surrounding food and then food in the wider context of social systems. Among historians, too, leading historians of the *Annales* School[1] pioneered attempts to develop a ″total history″ emphasizing the macro-historical analysis of societies over long periods and the study of all aspects of human experience, especially material culture. A salient example is Fernand Braudel′s major works, *The Mediterranean and the Mediterranean World in the Age of Philip II* and *Capitalism and Material Life 1400–1800,*[2] in which the author underscored the influence of long-term changes in material culture, including food, on the social systems in Europe. Braudel′s monumental works provided an incentive for the study of social history. Norbert Elias′ *The Civilizing Process,*[3] one of the most important studies written in the last decades in this field, traces the origins of the norms of conduct in today′s western Europe in late medieval royal courts. The western European way of conduct, including table manners, was modeled by cultural factors in royal courts in a long-term political process related to the formation of states and power monopolization in them.

In the last decades, scholars studying the history of Islam have also begun to focus on the study of material culture, including food. The collection *Culinary Cultures of the Middle East,* edited by Sami Zubaida and Richard Tapper,[4] examines

*This article is part of a book on food in the medieval Middle East which is in the advanced stages of preparation.

survey of the modern study of cooking and methodological issues connected with this field of research.

Similar to their western European counterparts, royal courts in medieval Islam were centers of cultural repertoire formation. Courtly models had special prestige value that contributed to their dissemination among the population at large.[15] However, the success of courtly models dissemination in the lower classes was not a forgone conclusion. It depended, to a great extent, on the court′s position within a given society as a whole and the dynamics of the interaction among its functional groups. Generally it was the courtiers who represented important functional groups in the community and were influential in the formation of cultural standards because they had access to cultural capital and held positions in the royal court that enabled them to impose their models of conduct and shunt those of their opponents.[16]

The position of high ecclesiastics in the European courts of the eleventh and twelfth centuries, especially those of the House of Otto, had an impact on European courtly culture. Other agents of culture in the royal courts were intellectuals, such as poets.[17] Similarly, with the rise to power of the Abbasids (133/750), the position of religious scholars, ulama, increasingly grew in the Muslim royal courts too. With the decline of the Abbasid Caliphate in the middle of the ninth century, which entailed a gradual erosion of the caliph′s authority, military elites dominated the royal court with the assistance of orthodox religious circles. Religious scholars brought their cultural repertoire with them; hence, the courtly code of conduct was based on Muslim tradition. Muslim religious law portrays a common way of life, material as well as intellectual. A special section clarifying the Prophet′s attitude to food and eating is included in the hadith, the Muslim tradition. As one of many aspects that constitute the Muslim model of ideal leadership, and as an indispensable factor in everyday life, food was quite naturally converted into a code of social and cultural symbols in the Muslim court. By the middle of the thirteenth century, when the Mamluks rose to power in Egypt, courtly models of conduct had already been a standard of Muslim culture for some time. Therefore, the Mamluk ruling elite were not free to act as they wished; Muslim standards of conduct and models of leadership dictated their behavior.

Mary Douglas, one of the leading scholars of the structural-cultural approach in sociology, has defined food as a code of symbols of social relationship by

which the social structure of society might be deciphered.[18] Messages delivered through the symbolic language of food and cuisine, as much as other fields of material culture, encode social hierarchy, class boundaries, and transactions across these boundaries. Her observations are based on the notion that there is a correspondence between a given social structure and the structure of symbols by which it is expressed.

The present article will endeavor to show that aspects of food preparation and consumption identified especially with the Mamluk ruling elite were used in their dialogue with the general population to cultivate their image as agents of Muslim tradition and reinforce the social structure that defined and buttressed their position as rulers. It is important to mention that ideas and practices related to food constituted a significant part of Islamic tradition and public knowledge. Therefore, beside foods and culinary traditions that were specific to particular locales, there were common features to food in medieval Muslim communities.

THE KITCHEN

In medieval western Europe ″only the great lords and the rich bourgeois had proper kitchens and the necessary personnel.″[19] The preparation of food during the Mamluk era was similarly affected by social stratification, within both the ruling Mamluk elite and the general population. Only people of means could maintain kitchens in their homes, not only because of the great expense involved but also because of the danger entailed in keeping fire indoors since no effective means were available to extinguish it. In 751/1350 the Cairene quarter Khaṭṭ al-Bunduqīyīn, the quarter in which the market of cross-bows *(bunduq)* previously existed, was burnt to ashes by a fire that burned uncontrolled for two days and nights. The prefect *(wālī)* of Cairo together with the high-ranking amirs and their mamluks struggled for another three days to extinguish it. In the wake of this fire, ″some people abandoned cooking at home″ *(wa-taraka jamāʻah min al-nās al-ṭabkh fī al-dūr)*.[20] The owning classes had the resources to invest in the necessary precautions against fire risks. Thus, for example, Sultan al-Nāṣir Muḥammad (709–41/1310–41) ordered that the vaults *(ʻuqūd)* of the new kitchen in the Citadel of Cairo—the seat of the Mamluk Sultanate—be built of stone ″for fear of conflagration″ *(khawfan*

[19]Alfred Gottschalk, quoted in Stephen Mennell, *All Manners of Food* (Oxford and New York, 1985), 47.

[20]Aḥmad ibn ʻAlī al-Maqrīzī, *Kitāb al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1987), 2:31–32. For another example see: Jamāl al-Dīn Yūsuf Abū al-Maḥāsin Ibn Taghrībirdī, *Mawrid al-Laṭāfah fī Man Waliya al-Salṭanah wa-al-Khilāfah,* ed. Nabīl Muḥammad ʻAbd al-ʻAzīz Aḥmad (Cairo, 1997), 201.

min al-ḥarīq).[21] The government palaces in the Citadel of Cairo, the adjacent palaces and homes of the Mamluk amirs, and those of the civilian elite all had running water, which allowed them to supply the needs of a kitchen and also served for purposes of hygiene and extinguishing fires.[22] Khalīl ibn Shāhīn al-Ẓāhirī, the fifteenth-century historian, attests that ″the fire never goes out″ in the sultan′s kitchen.[23] The *khānqāh* (a hospice for Muslim ascetics) Sultan al-Muẓaffar Baybars al-Jāshinkīr established in 706/1306 functioned continuously for fifty years. It was closed down in 776/1374 due to lack of water caused by the Nile receding.[24]

Another difficulty in maintaining a kitchen was the high cost of cooking utensils. The ownership of pots and their quality were symbols of social status. While the elite had kitchens equipped with ″astounding utensils″ *(al-alāt al-ʿajībah),* the lower classes sometimes had to rent utensils in the market.[25] Khalīl ibn Aybak al-Ṣafadī (d. 764/1362), who compiled the biographical dictionary *Al-Wāfī bi-al-Wafayāt* during the reign of Sultan al-Nāṣir Muḥammad, highlighted the miserliness of one of the prominent amirs, Baktamur al-Ḥājib (d. 738/1337), by noting that despite the latter′s great wealth, he used to rent pots in the market.[26] During al-Nāṣir Muḥammad′s long stays at the home of Baktamur al-Sāqī (d. 732/1332), another of his prominent amirs, ″he used to eat nothing but what the mother of Aḥmad ibn Baktamur cooked for him in silver pots″ *(wa-lā yaʾkul . . . illā mimmā taṭbukhuhu lahu Umm Aḥmad ibn Baktamur fī qudūr fiḍḍah).*[27] When al-Nāṣir Muḥammad himself prepared for the hajj in 721/1321, the utensils taken along in his provisional kitchen included copper, silver, and gold pots.[28] Sultan al-Ashraf

Qānṣūh al-Ghawrī (907–22/1501–16) used to drink water from golden cups.[29] Sultans′ meals were routinely served on Chinese porcelain and so were meals in the amirs′ households.[30]

The proportion of copper and silver utensils in the dowries of brides from the civilian and Mamluk elites indicates that running a kitchen was integral to their lifestyle. Describing the market for utensils inlaid with silver in Cairo, Aḥmad ibn ʻAlī al-Maqrīzī (d. 845/1441) relates: ″The brides who were daughters of amirs, viziers, high clerks, and leading merchants used to include in their dowry . . . seven *dikak:* one of silver, one of silver-inlaid copper, one of white copper, one of painted wood, one of Chinese porcelain, one of crystal, and one of Chinese painted paper.″[31] A *dikkah* was a sort of painted wooden bedstead, often inset with ivory or ebony, on which the bride′s dowry was exhibited *(shuwrat al-ʻarūs).* The trousseaus of upper class brides included several *dikak,* with each *dikkah* loaded with different kind of utensils, while that of middle class brides included only one *dikkah* of brass utensils inlaid with silver. The dowry of Baktamur al-Sāqī′s daughter was transferred by porters from her father′s to her husband′s residence. It included, among many other prestigious items, twenty-nine porter′s loads of silver utensils and at least sixty-five loads of copper.[32] The old silver utensils of Bint al-ʻAmā'im, daughter of a Cairo merchant, were inlaid with gold at a cost of 100,000 pure silver dirhams.[33]

In contrast with the elite, most of the lower social strata did not have their food prepared at home. At least in the first decades of the Mamluk Sultanate, rank-and-file mamluks in the service of the sultan were provided with daily meals in the Citadel, while those in the service of the amirs took their meals at their masters′ tables. Sultan al-Manṣūr Qalāwūn (678–90/1279–90) made frequent inspections of the food distributed to his mamluks in order to ensure its excellence and nutritional quality.[34] With the general weakness which beset the Mamluk Sultanate in the fifteenth century, when the mamluks only received money for their lodging and for the rest had to look for themselves—their food was mainly based on cooked broad beans.[35]

Members of the civilian middle class, those who earned a respectable living

but were not well off, prepared their food at home in "kitchenettes." These were most likely without fire and running water, as borne out by evidence that the water was supplied by water vendors and the food sent to the market to be cooked, at the shop of the butcher *(sharā'iḥī),* the cook *(ṭabbākh),* or the baker *(khabbāz),* who also baked bread that had been prepared at home. Muslim scholars gave special attention to the issue of who was to bring the flour back from the miller or the bread and food to and from the market, indicating that in middle-class families it was the women who prepared the food at home. *Ḥisbah* manuals explicitly instruct millers, bakers, cooks, and water carriers to employ professional women for this purpose or, when this was impossible, pious and trustworthy boys or chaste men *(mastūr al-ḥāl).*[36]

*Muḥtasib*s also instructed that when only women were at home, the food or water carrier should lower his eyes when dealing with them. Moreover, it was totally forbidden *(muḥarram)* for him to enter the house when a woman was alone at home. In such a case, he should put the food near the door, conceal himself from her sight and make a sign to her to come and take it. He should leave only when he had made sure that the food had been collected.[37] At least in Ibn al-Ḥājj's (d. 737/1336) lifetime, people ignored these recommendations, and "unchaste," "impious" lads or even Jews and Christians were employed to take food from Muslim homes to the market and back. Ibn al-Ḥājj complains that this situation "generally led to seduction or its anticipation."[38]

Sources indicate that those who belonged to the lower socioeconomic strata could not prepare food at home or found much difficulty when they tried to do so. Therefore they bought food prepared by cooks and butchers at the market: "and generally the butcher cooks for those whose earnings are not sufficient" *(wa-al-ghālib anna al-sharā'iḥī yaṭbukhu li-man lā yurdá hāluhu fī kasbihi).*[39] This "take-away" food was sold in clay containers, while in the cooks' shops food was served in inexpensive clay utensils which often were not washed after use.[40] The pots used for cooking in the market were not always cleaned after use. Stone pots were often repaired, when cracked *(mash'ūbah),* with congealed blood, although Muslim

tradition considered it unclean and therefore forbidden.[41] On the bottom rung of the social ladder were the urban indigents, who depended on the mercy and charity of the property-owning classes.[42]

Kitchens, then, were a symbol of social status and a testament to resources. As such, they were often attached to religious institutions which were created by the ruling groups and run by charitable endowments, *awqāf* (sing. *waqf*) as a part of their policy of state support of religion.[43] Typical of Mamluk patronage policy was the construction of monumental projects that included the founder's mausoleum side by side with a mosque, *khānqāh,* or madrasah. Such monumental buildings clearly propagated the link between the benefactors and the Islamic institution. Naming these religious institutions after their founders perpetuated their memory. The architectural and religious symbols of these monumental projects are beyond the scope of this study. Of interest to our purpose here is that the Mamluk ruling groups provided considerable material support within the precincts of these complexes, such as providing food and other commodities to both Muslim scholars and ascetics and the needy urban populace.

The monumental complex Sultan al-Manṣūr Qalāwūn built in 682–83/1283–84 in the center of Fatimid Cairo[44] included his mausoleum *(qubbah),* a madrasah, and a hospital *(bīmāristān)*—furnished with a kitchen—that was the centerpiece of the complex.[45] The hospital's maintenance was financed by a generous *waqf*. The stipulations laid down in the *waqf* deed show that this kitchen was provided with running water, on-going fire, and the necessary utensils. The hospital's patients came from all social strata of Cairo and its environs.[46] Until the end of the Mamluk Sultanate, Mamluk sultans supported this prestigious project of charity.

The inclusion of a kitchen was obviously necessary for the running of the hospital. Furnishing a madrasah or a *khānqāh* with a kitchen, however, was not obvious. Therefore a special social meaning was attached to this kind of charity. The *waqf* Sultan al-Muẓaffar Baybars al-Jāshinkīr allocated in 709/1309 for the operation of the aforementioned *khānqāh* within the monumental complex of his mausoleum includes stipulations concerning the food supplied to the ascetics

residing there. Each Sufi was provided daily with food prepared and cooked in the *khānqāh*'s kitchen.[47] It included three *raṭl*s[48] of bread, three *raṭl*s of mutton and sweets, while the *khānqāh*'s head received a double share.[49] Al-Maqrīzī relates that when the kitchen stopped functioning in 776/1374, the Sufis were only provided with commercially-made bread and seven dirhams[50] per person to finance the rest of their needs.[51] Al-Nāṣir Muḥammad, the founder of Khānqāh Siryāqūs, stipulated in his *waqf* deed that each Sufi would get daily one *raṭl* of mutton "cooked in an appetizing manner" *(qad ṭubikha fī ta'm shahī)* and four *raṭl*s of "pure" bread (white bread) and other commodities.[52] It is worthy of note that meat, sweets, rice, and white bread were considered symbols of social status and were valued as elite food items.

The college-mosque al-Nāṣir Ḥasan, built 758–61/1356–59, had a kitchen attached to it which, according to the donor's deed, was to supply daily meals to the college's staff and the children residing in its orphanage. Every Thursday evening, the poor living in the vicinity were served a meal that included small, round loaves of bread, mutton, rice, and honey.[53] Amir Yashbak min Mahdī (d. 885/1480) established a *waqf* to support the operation of a kitchen for needy people living near the al-Azhar mosque, providing each diner with bread and a bowl of *qamḥīyah,* a porridge made of milk, wheat, and meat.[54] These cases of feeding the needy people living in areas surrounding mosques might indicate the ways in which the Mamluk rulers or prominent amirs constructed the body of their clientele, *atbā',* from among the lower classes of the civilian population.

Since a great number of the masses could not afford to buy food and others could not prepare it properly at home, it was used by the Mamluk elite as an instrument to enhance their image as devoted Muslim rulers. Providing the destitute with food, often identified with quality food of the elite and cooked in kitchens maintained by the elite, fostered the Mamluks' image as public-spirited and devout Muslims, and their prestige as holders of power and resources.

The Preparation of Food

The preparation of food was of interest mainly to the top echelon of the Mamluk ruling elite, to members of the civilian upper class who were able to cook food at home, and to the professional cooks who kept shops catering to the vast urban lower classes. The latter′s attitude toward food preparation was simple, pragmatic, and aimed at the maximization of profit. The cooks used countless tricks to adulterate the food, while *muḥtasib*s used counter-methods to expose their deceit. As a result, the quality of food prepared in the market, though it varied, was generally poor.[55] *Muḍīrah,* a sour milk soup sold by weight, was deviously made heavier by the addition of ground rice flour.[56] Ways of adulterating meat dishes included the incorporation of much fat and little meat; the replacement of mutton with goat meat or with the meat of impure animals like dogs, and the use of spoiled, cooked meat or carrion masked by the liberal use of spices.[57] Ibn Bassām al-Muḥtasib relates that cooks used to improve the taste of meat dishes with *al-laymūn al-maliḥ,* most probably citric acid.[58] Another common agent in flavoring food was salt *(maliḥ)*.[59]

Bread was often made of spoiled flour or adulterated by replacing the grain flour with ground peas, broad beans, or chick peas. Moreover, despite the strictures of the *muḥtasib*s, bakery workers often kneaded the dough with dirty hands and feet or failed to wear garments with narrow sleeves and don head-bands and mufflers to stop their spittle from falling into the dough when they spoke or sneezed. Nor were instructions to prevent insects from creeping onto the bread always carried out.[60] Ibn al-Ḥājj testifies that it was largely because of the bakers′ lack of compliance with *ḥisbah* instructions that filth such as flies, straw, or hair was often found in commercially-made bread.[61] Therefore people preferred, if they could afford it, homemade bread *(al-khubz al-baytūtī)* which was prepared at

home and then baked at the commercial bakery.[62]

Beyond the concern shown by the *muḥtasib*s, especially the moralists among them such as Ibn al-Ḥājj, regarding the quality and purity of the food prepared in the market, a particular fear is clearly evident in their complaints about the fitness of the food in relation to the requirements of Muslim religious law. Muslim food taboos prohibit carrion *(maytah),* blood *(damm),* flesh of swine *(laḥm khanzīr)* and dog *(kalb),* and wine *(khamr),* as they cause a state of major impurity *(najāsah).*[63] Excretions from the body such as sweat, urine, sperm, etc., when they soil the person or his clothes cause a state of minor impurity *(ḥadath)* that can be dispelled by ablution *(wuḍū')*.[64] Obviously, when workers in the shops of bakers, cooks, and butchers in the market worked with dirty hands and legs and failed to wear the appropriate garments, they defiled the food they prepared. Knowing that cooks and bakers in the market were not observing Muslim requirements for food preparation only heightened the aspiration to have food prepared at home.[65] As we have seen, the ruling and civilian elites possessed kitchens in their palaces where dietary rules could be meticulously observed. A large number of ulama and Sufis resided in religious institutions built for them by the ruling elite, and received their food from kitchens built specially within those institutions. The bourgeoisie, which included numerous religious scholars and officials, took a great deal of trouble over the preparation of food in their homes and incurred the cost of sending it for cooking and baking in the market. In contrast, the masses depended on the grace and favor of those who provided food in the market for its quantity, quality, and ritual fitness. Therefore, the ability to maintain a diet in accordance with Muslim dietary rules was a privilege reserved for the elite groups who held a monopoly on knowledge and wealth.

For members of the Mamluk and the learned elites, food and its consumption were features of social and cultural expression. The banquet was a social event emphasizing the shared status and cultural background of the participants. This was especially true when intellectuals were invited to keep company with the ruling elite. They were expected to display their adroitness at light, enjoyable conversation on various subjects, a practice defined in medieval Arabic literature as *adab*. Food was a theme in Mamluk *adab* literature too. Famous poets of the period dedicated some of their verses to favorite dishes and the pleasures of consuming them. Thus, for example, the famous fourteenth-century poet Jamāl al-Dīn Ibn Nubātah (d. 768/1367) composed verses in praise of *qaṭā'if,* a popular

pastry.[66] Well-known ulama did not refrain from writing on the mundane subject of dining, as illustrated by the anthology *Manhal al-Laṭā'if fī al-Kināfah wa-al-Qaṭā'if* (The spring of witticism concerning the *kināfah* and *qaṭā'if*),[67] composed by the famous scholar and historian ʻAbd al-Raḥmān al-Suyūṭī (d. 911/1505). Since the ulama frequently took part in shared repasts within and outside their social circles, literature dealing with food purity and table manners was of special interest to them. For example, the historian Muḥammad Ibn Ṭūlūn (d. 953/1546) wrote a treatise entitled *Dalālat al-Shakl ʻalá Kammīyat al-Akl* (A guide on how to determine food quantity for consumption).[68]

Appreciation of fine food was a trait associated with the owning class, and therefore they dabbled in culinary adventures. To some of the elite, cooking was a hobby. The vizier Majīd Ibn Khaṣīb owned seven hundred slave girls, two of whom were experts at preparing fried dishes. To illustrate the vast wealth he accumulated during his period of service, al-Maqrīzī relates that large quantities of food were cooked ″in his kitchen at home.″[69] Sultan al-Ṣāliḥ Ṣāliḥ (752–55/1351–54) was an amateur cook. He himself laid the table at a banquet he held in honor of his mother, Qutlūbak, and he served her and other close associates dishes he had cooked ″with his own hands″ *(wa-ṭabakha al-ṭaʻām bi-yadihi)*.[70] Khalīl ibn Shāhīn al-Ẓāhirī enumerates at least forty-four dishes on the menu of the sultan′s kitchen, some of which came in varying flavors.[71] It is worthy of mention that dishes included in the royal menu such as colocasia, *sambūsak* (a small meat pie), and *harīsah* (cooked meat and wheat pounded together) were also consumed in the market in cooks′ shops.[72] This might well indicate that cooking traditions, mainly Arab and Persian, were standard in the urban centers of the Middle East.[73] The elite′s quality dishes that could not be had in the market, however, had their particular prestige value. The masses were aware of these differences because, on occasion, with the elite′s permission, they were exposed to this refined food. Thus, for example, at the end of the banquet Sultan al-Ẓāhir

Barqūq (784–801/1382–99) held for his amirs and mamluks to mark a victory of his, probably in a polo game, huge quantities of food, especially meat and drinks were left to the common people.[74] Considering medieval social immobility, gestures of this kind provided the elite with the opportunity not only to exhibit their social rank and power but also to nurture in the masses′ minds the social structure that secured their position at the top of the social ladder. Status symbols clearly defined the social boundaries between the masses and the elite. All those who were invited to the banquet enjoyed the same status and only when they left the scene were the masses permitted to cross the boundaries and devour the remaining food. Terms of social inclusion and exclusion denoted the holders of power and authority.

DIET

Sociologists who have studied the diet of medieval western Europeans have shown that the higher their rank, the larger was the quantity of food they consumed and the greater the proportion of meat in their diet. Members of the lower strata, though they performed hard manual labor, consumed smaller quantities of food and much less meat.[75] Sources from the Mamluk period reveal a similar picture. The nutrition of the Egyptian rural masses in the Mamluk period was based mainly on locally-available crops. Upper Egypt was abundant in sugar cane and dates, so its inhabitants lived mainly on sweet foodstuffs *(ḥalawah)*.[76] In Lower Egypt, taro (colocasia, *qulqās*) and peas *(jūlabān)* were staples of nutrition. The diet of the peasantry was based mainly on bread: ″And their *fallāḥīn* have a kind of bread called *ka‘k* made of wheat flour, and it is dried and constitutes the main part of their diet all year round.″[77] Fish was also readily available, especially in the autumn, when the Nile tide brought this form of sustenance in large quantities. Fishing in this season was so easy that children could help provide food.[78] Al-Maqrīzī testifies that milk and milk products were also important ingredients in the diet of the masses *(wa-kathīr yukthirūna akl al-albān wa-mā yu‘mal minhā)*.[79] In western Europe in the same period dairy products were always considered a typical peasant food.[80]

Scarcity meant that the lower classes consumed small quantities of meat. In medieval Europe cattle rearing for meat was done for the privileged.[81] Even today in France and the United States a symbolic connotation of wealth is attached to steak.[82] Offal was the principal meat generally associated with the food of the poor, probably because it could not be kept for long.[83] Furthermore, for dietary reasons, the Muslim tradition has restrictions about offal. Slaughtering instructions demand the setting aside of the animal′s blood because it is considered unclean.[84] While it is much easier to separate the blood from the animal′s flesh, offal, on the other hand, has to go through a special process in order to clean from it the blood it contains. There was always a doubt about the cleanness of offal, especially that which was prepared in the market, and therefore it was considered an inferior food.[85] Offal and the heads of large and small cattle were disdained by the upper classes in Mamluk Egypt and treated as waste. The cook of Sultan al-Nāṣir Muḥammad, al-Ḥājj ʻAlī amassed great wealth from selling such waste products accumulated in the sultan′s kitchen and catering at the homes of great amirs and officials during festive events. Al-Maqrīzī reports that al-Ḥājj ʻAlī frowned in response to the sultan′s request that he cook an additional mutton dish at the end of the feast held when Amir Baktamur al-Sāqī′s son married the daughter of Amir Tankiz. When the sultan asked him why, al-Ḥājj ʻAlī told him that his request would deprive him of the 20,000 dirhams he could have made from selling the unused cattle, chicken, and goose parts that he had accumulated during the celebration, which had to be sold immediately, before they spoiled. The sultan insisted he prepare the dish, promising to reward him with an equal sum of money. On the sultan′s order, butchers and cooks from Cairo were brought to the Citadel, where they bought the waste products for 23,000 dirhams.[86]

In contrast to the common people′s diet, meat and sweets, which were prestigious items in the Middle East throughout the Middle Ages, were the mainstay of the upper classes. There were other prestigious comestibles but we will confine our discussion to these two. The annals of the Mamluk period are replete with information about the quantities of food consumed by the military elite. In the first decades of the Mamluk sultanate, it was considered necessary to provide rank-and-file mamluks with a daily portion of meat: ″and they had plenty of meat dishes, sweets, and

fruits . . ." *(wa-kānat lahum al-idārāt al-kathīrah min al-luḥūm wa-al-aṭʿimah wa-al-ḥalawāt wa-al-fawākih).*[87] During the reign of Sultan al-ʿĀdil Kitbughā (694–96/1294–96) the quantity of meat consumed daily in the sultan's household alone reached 25,000 *raṭl*s, while that served at the *simāṭ*s, the daily banquets al-Nāṣir Muḥammad held for his amir*s*, reached 35,000 *raṭl*s, apart from poultry, lamb, kid, venison, and so on. At al-Ẓāhir Barqūq's *simāṭ,* 5,000 *raṭl*s of beef were served, in addition to poultry.[88] Considering the decrease in the royal expenditure during the Circassian Sultanate (784–923/1382–1517), relatively large quantities of meat were served also in the *simāṭ*s of Sultans al-Mu'ayyad Shaykh (815–24/1412–21) and al-Ashraf Barsbāy (825–41/1422–38).[89] It was told of the above-mentioned vizier Majīd Ibn Khaṣīb that "he used to cook daily in his kitchen, at home, one thousand *raṭl*s of meat, apart from geese and other poultry." The quantity of sweets consumed in his household was so large that he had to invent containers for sweetmeats that were later called after him *al-khaṣbīyah*.[90]

The prestige of meat and sweets was so enhanced by their association with the upper classes that they were identified with the food of kings. According to al-Maqrīzī, the provisions packed for the hajj of Sultan al-Ashraf Shaʿbān (778/1376) included "varieties of royal foods" *(anwāʿ al-ma'ākil al-mulūkīyah),* such as the 30,000 boxes containing five *raṭl*s each of sweets made from refined sugar for the sultan's personal consumption. The endless quantities of sweets taken by the amirs and mamluks on the hajj elicited the following comment from al-Maqrīzī: "Consider the greatness of a country in which three hundred and sixty thousand *raṭl*s of sugar can be produced in one month for the sultan and his amirs, apart from [that produced] for others, which probably was of a similar volume." [91]

The special attention paid by the chroniclers of the Mamluk period to the varieties and quantities of meat and sweets consumed at the ruling elite's social events also attests to the role of these foodstuffs as signifiers of class status. Such occasions provided the upper classes with the opportunity to enhance their social position. It is no coincidence that they made extensive use of status symbols in these contested arenas to convey their control of resources and power not only to the public, but also to fellow members of their class. In 692/1293, Sultan al-Ashraf Khalīl held a banquet to celebrate the dedication of the Ashrafīyah palace, the circumcision of his brother Muḥammad (the future sultan al-Nāṣir Muḥammad), and that of his nephew, Mūsá ibn al-Ṣāliḥ. For this banquet 3,000 sheep, 600 head

of cattle, and 500 horses were slaughtered to prepare the meat dishes, while 1,800 *qinṭār*s of sugar were used for the beverages and another 160 for the sweets.[92] At the banquet held on the occasion of the marriage of Amir Qawṣūn to one of al-Nāṣir Muḥammad′s daughters, the refreshments included the meat of 5,000 sheep, 1,000 head of cattle, 50 horses, and great numbers of fowl and geese, together with sweets and beverages made from 11,000 *ablījah,* cones, of sugar.[93] In the inauguration of the great palace al-Nāṣir Muḥammad built for Yalbughā al-Yaḥyāwī, one of his favorite amirs, 300 *qinṭār*s of sugar were used for preparing only the drinks.[94] The inclusion of horseflesh in the food served in these banquets is of interest to our discussion for it signified the Mamluk menu. The Mamluks retained the practice of consuming horseflesh prevalent in the Eurasian steppes,[95] although Muslim tradition rejected it. The Prophet avoided horseflesh and Abū Ḥanīfah (d. 150/767), the founder of the Hanafi school of law, declared horseflesh unlawful.[96] The Mamluks belonged to a minority school of Hanafis that regarded the eating of horses as acceptable.[97] Furthermore, the number of horses is much smaller than that of other animals slaughtered for the Mamluk banquets. This indicates their high value and scarcity. Therefore it was identified as a distinctive Mamluk taste and symbol of their wealth and status.

The dedication of monumental religious edifices,under the patronage of Mamluk sultans and grand amirs, and the ceremonies held in those edifices to celebrate the Prophet′s and saints′ birthdays *(mawlid,* pl. *mawālid)* or religious festivals, were also occasions for dialogue between members of the ruling elite and their subjects that consolidated and sanctioned the existing social order. It was customary on the festivals of ʻĪd al-Fiṭr and ʻĪd al-Aḍḥá and the Prophet′s birthday to serve sweet dishes and beverages. Thus, for example, the inauguration ceremony of the madrasah founded by Amir Sirghitmish in Cairo (757/1356) included a magnificent meal *(simāṭ jalīl)* in which the mosque basin was filled with sugar-sweetened water.[98]

[98]Al-Maqrīzī, *Sulūk,* 3:28.

The sumptuous meal served at the inauguration of Sultan al-Ẓāhir Barqūq′s madrasah (788/1386) included ″. . . varieties of the best foods and roast meat of horses, mutton, geese, poultry and gazelles″ *(anwā‘ al-aṭ‘imah al-fākhirah, wa-al-mashwīyah min al-khayl wa-al-khirāf wa-al-iwazz wa-al-dajāj wa-al-ghizlān).*[99] A sweet beverage that filled the madrasah basin, sweetmeats, and fruits concluded the meal. The sweet refreshments served on such occasions had a double meaning: they combined a traditional religious symbol with the Mamluk elite′s status symbol. According to the hadith, the Prophet liked sweetmeats *(ḥalawah)* and honey. He especially blessed the palm tree and was of the opinion that whoever starts the day with seven dates would not be harmed that day by poison or witchcraft.[100] He himself used to drink a cup of water mixed with honey every day, and used to break the fast during Ramaḍān with a date or raisins.[101]

There is a debate among the religious scholars, the commentators on Muslim tradition through the ages, on the issue of what kind and quantity of sweetmeats the believer is permitted to consume. Ascetics during the Mamluk period interpreted *ḥalawah* as comestibles that were naturally sweet, such as dates, honey, and fruits, on the grounds that it was truer to the way of the Prophet and the period in which he lived, because the early Muslims were only exposed to processed sweetmeats after the great conquests. As processed sweetmeats were considered luxury foods throughout the Middle Ages, ascetics designated them solely for the next world.[102] In contrast, the more permissive of the commentators on sweetmeats, like Aḥmad ibn ‘Alī Ibn Ḥajar al-‘Asqalānī (d. 852/1449) and Badr al-Dīn Maḥmūd al-‘Aynī (d. 855/1451), were of the opinion that *ḥalawah* was a comestible that had undergone processing which turned it into a sweetmeat *(mā dakhalathu al-ṣan‘ah).* As this liberal interpretation appeared to cast aspersions on the image of the Prophet, depicting him as a person who used to consume luxury foods every day, these commentators added a restriction on the quantity that could be consumed and this became the religious precept according to which sweetmeats could be eaten. This broad interpretation of the tradition enabled the Mamluks to introduce, with the consent of the clerics who played an active role in the religious ceremonies, their own interpretation as an accepted way of implementing the traditional Islamic models, particularly that of the Prophet. Thus the Mamluks replaced the Prophet′s dates or raisins with refined sweetmeats or beverages. The inclusion of the status

symbols characteristic of the Mamluk lifestyle, of a quality and measure that only they as rulers could permit themselves, for ceremonies of a religious character and particularly of the Islamic festivals, lent credence to their status within the Muslim establishment. This was one of many other public activities by which the Mamluks wished to cultivate their image as part of the glorious pantheon of earlier rulers, who were perceived in Muslim tradition as the Prophet´s successors and faithful followers of Islam.[103]

It was at these festive ceremonies, which were conducted according to a strict order, that the hierarchy within the functional groups of the society of the Mamluk Sultanate was clearly manifested. Thus, for example, the Prophet´s birthday festivities during the rule of al-Ẓāhir Barqūq were regularly attended by the elite of the religious establishment that included senior orthodox scholars and Sufis, and the Mamluk elite that included amirs and soldiers.[104] The order of entrance to the ceremony and the seating arrangements had a set pattern that indicated the hierarchy between the two elite groups and within each of them. Thus, the jurists entered first and sat on the sultan´s right by their rank *(ʻalá marātibihim),* followed by the Sufis whose place was on the sultan´s left, i.e., they were formally of lower status. Then came the amirs and sat at some distance from the sultan. The soldiers, who were last to enter, were seated at both sides of the amirs, to their right and left. Only those who were members of these two important groups in society, the clerics and the Mamluks, were invited to these ceremonies. The order of seating determined, theoretically at least, the superiority of the religious over the military elite and symbolized the superiority of its cultural repertoire, i.e., the Muslim tradition, over the military-Turkish repertoire of the Mamluks. The common people were not invited to take part in these ceremonies. In the event that they were allowed entry, it was only after the dignitaries had departed after the festive repast and their participation was relegated to the role of cleaning up the leftovers.

A similar role was allotted to the common people at the ceremonies held for ʻĪd al-Fiṭr by al-Ẓāhir Barqūq. He used to hold a special *simāṭ* every day of this holiday. When the ceremonies were over and the dignitaries had left, the servants and common people were allowed in to devour the remaining food.[105] The masses could cross social boundaries and fleetingly observe the lifestyle of the upper class only after the latter had left the scene, and only with their permission, thus

reasserting their status as those wielding power and authority. This pattern, repeatedly manifested in the religious ceremonies and sanctioned by them, enhanced the hierarchical social structure that guaranteed the religious authority of the ulama, and the ruling elite′s political and social preeminence.

TABLE MANNERS

Traditional Muslim table manners involved partaking food in common meals from one central dish, as was the standard among the upper class of western Europe at the time.[106] As there was no recommendation in Muslim tradition to use personal utensils like plates or spoons, the diner was required to take a small morsel with three fingers and deposit it in his mouth without making contact with his saliva. This also held true for drinking: the drinker was required to drink without touching the vessel with his lips. Licking one′s fingers and then putting them into the common dish was considered abhorrent. Licking the fingers at the end of the meal, on the other hand, was allowed as this was equal to wiping one′s hand with a napkin.[107]

Norbert Elias has shown that the etiquette of the medieval western European aristocracy at the table was not designed to maintain personal or common hygiene, otherwise more utensils that the aristocracy could easily afford would have been introduced. What is more, luxury utensils were already abundant at the tables of the upper class, but for different reasons.[108] Therefore, Elias concludes, refined manners were adopted not only for aesthetic reasons, but were also part of conditioned behavior, the self-checking standards, of the upper class molded into a particular form of conduct that constituted one of many other symbols of their social distinction.[109] Islamic sources, too, do not mention hygiene or disgust as an explanation for the rules and regulations that made up proper conduct at the common meal. They do mention, on the other hand, prescriptions and recommendations from the *sunnah,* the authoritative model of the Prophet.[110] Courtly experience in Islam, especially of famous rulers of earlier periods, was also considered worthy of being included in normative Muslim conduct.[111] As manners of partaking food together were part of traditional etiquette, the learned from

religious circles were deeply committed to follow them. A strict adherence to the *sunnah* was doubtless a prominent distinction of their religio-social status. The restrictions that the religious circles imposed on themselves were used against both the lower classes and the Mamluk ruling elite, especially when the latter deviated from normative Muslim conduct.

In public, members of the Mamluk ruling elite could not avoid table manners and food taboos that were *sunnah* as they felt responsible for maintaining normative Muslim order as much as the ulama. In private, however, the Mamluks often indulged in a different cultural repertoire. The sources reveal that prominent amirs not only consumed wine, but also manufactured it in large quantities.[112] Sultan al-Manṣūr Abū Bakr (d. 742/1341) used to associate with his father′s amirs, such as Maliktamur al-Ḥijāzī and Ṭajār and *khāssakīyah* Mamluks, enjoying wine, women, and singers′ performances. These drunken parties were the main cause of Abū Bakr′s downfall.[113] Maliktamur al-Ḥijāzī, who escaped Abū Bakr′s downfall without a scratch, had no reason to suppress his strong passion for wine *(mūla'an bi-al-khamr)* and wine was carried on camels to his house in the Citadel.[114] During his governorship in Damascus, Amir Sudūn min ʻAbd al-Raḥmān (d. 841/1437) made a fortune from his ownership of taverns.[115]

As mentioned earlier, dishes of horseflesh were included in meals served at their banquets. After the Oirat, the Mongol warriors who had fled the Mongol Ilkhanate of Persia (695/1295), found refuge in the Mamluk Sultanate, they were allowed into the Mamluk army and their children into the majority of the amirs′ households. Since they kept their homeland tradition without intervention, they consumed horseflesh as was the custom in the Eurasian steppes. This was abhorrent to the Muslims because they used to tether the beast and beat it to death.[116] The Muslim tradition, however, forbids the flesh of animals beaten to death *(mawqūdhah)*.[117] Furthermore, it provides detailed prescriptions of how to slaughter the animal with minimum suffering and purify it for consumption by setting aside its blood.[118] Such blatant deviations from Muslim codes of behavior by the ruling elite made it easier for the ulama to level sharp criticism against the Mamluks′ cultural repertoire and bar its dissemination to the general population.

CONCLUSION

The social relationship between the Mamluk ruling class, the civilian elite, and their subordinates was conducted through an intricate network of communication. The most influential sphere whereby the ruling elite could buttress its legitimacy for rule was the patronage of Islam. The Mamluks invested special efforts and attention to tie their status symbols with Muslim rituals and festivals in order to foster the right social structure and sanction their position in it. The impact of the implicit language of communication, the messages encoded in symbols, had a strong effect in forming the social structure that enabled the long rule of the Mamluks despite its shortcomings. The messages delivered from the Mamluk elite to the civilians through the semiotic language of food, together with other fields of material culture, established a common structured conception of the normative social order which accorded them social and political authority—the status of rulers over the masses.

The present article discussed the Islamic cultural repertoire in the Mamluk court whose agents were the religious scholars. The Mamluk rulers conducted themselves in the public sphere in accordance with Muslim models of behavior. In another study, which is nearing completion, the author of this article addresses the relationship between the ulama and the Mamluks in the context of an alternative cultural repertoire whose roots were not grounded in Islam. In their everyday lives, the Mamluks clung to another cultural repertoire in addition to the Islamic one, which included the Turkish heritage they brought with them from their homeland in the Eurasian steppes. In accordance with Norbert Elias′ socio-cultural theory, the cultural characteristics of the Mamluk court could have been expected to ″leak″ from the court to the general population. This process did not occur, however, and despite the 270 years of Mamluk rule in Egypt and Syria, their cultural repertoire included the general populace only occasionally and superficially. It may be assumed that the reason for this stems from socio-historic processes that typify the side-by-side existence of two cultures that are unequal in development, in which case the simple culture seeks to adopt the more sophisticated one. Hence, it is only natural that the Mamluk elite with its nomadic culture would adopt, both intellectually and materially, the urban culture of Islam. Not only did the Mamluks preserve their cultural heritage throughout the entire period of their rule alongside that of Islam, but they also used it as a marker to distinguish their status as rulers over the remaining groups within the population. It would appear that preservation of their culture stems from the unique social structure of the Mamluk elite. The reign of the Mamluks was founded on continual recruitment of fresh human resources from the Eurasian steppes and therefore the Mamluk elite, despite long years of rule, was permanently composed of first-generation immigrants within a society with a deep-rooted Arab-Muslim culture. Moreover, the Mamluks, both

during the Turkish and the Circassian periods, did not cut off their connection with their homeland. They brought their relatives from the old country and at times Mamluks′ offspring born in Egypt were sent to the homeland to be raised traditionally.[119] The ulama, in contrast, had been the normative representatives of Muslim culture for generations and their interest, whether stemming from genuine ideological motives or concern for preserving their status, lay in fostering Muslim culture as the sole superculture in Muslim society. This concept led them to consider any alternative cultural repertoire to be inferior. It would appear that the social weakness of the Mamluks as new immigrants, despite their belonging to the ruling elite, was effectively exploited by the religious scholars to direct criticism against the everyday lifestyle of the Mamluks, at times implicitly and at times explicitly, with the aim of heightening awareness that their cultural repertoire, despite being the repertoire of a royal court, was unfit to serve as an alternative to the traditional Islamic repertoire which they represented.

Book Reviews

Die Mamlūken: Studien zu ihrer Geschichte und Kultur: Zum Gedenken an Ulrich Haarmann, 1942–1999. Edited by Stephan Conermann and Anja Pistor-Hatam. Asien und Afrika: Beiträge des Zentrums für Asiatische und Afrikanische Studien (ZAAS) der Christian-Albrechts-Universität zu Kiel, vol. 7 (Hamburg: EB-Verlag, 2003). Pp. 416.

REVIEWED BY DONALD P. LITTLE, McGill University

The extraordinary collegial respect and friendship felt for Ulrich Haarmann are evident from no less than three volumes of articles that have so far been dedicated to his memory: *The Historiography of Islamic Egypt (c. 950–1800),* ed. Hugh Kennedy (Leiden: Brill, 2001); vol. 6 (2002) of *Mamlūk Studies Review;* and the present work. Of these, *Die Mamlūken* is distinctive as a tribute from German (with one exception) Mamlukists. Appropriately, twelve of the fourteen articles are written in German; two, in English. Some of them were originally presented in remembrance of Haarmann at a special session of the 28th Deutschen Orientalistentag held in Bamberg in March 2001. While the predominant use of German in this festschrift will certainly restrict the number of its readers (a fact which Haarmann himself would readily acknowledge since he studied at Princeton and published extensively in English), cultural considerations evidently held sway—another fact which he would have appreciated. Be that as it may, this volume contains many substantial contributions to our field and, accordingly, should serve as a salient reminder of the need to read German in practically all fields of Islamic studies. Here I shall only allude briefly to the contents of each article, hoping that my linguistic inadequacies have not led me astray.

The articles can be roughly grouped in several categories: bibliographical, historiographical, diplomatic, political/military, and general. Coeditor Conermann gives a rousing introduction to the volume in the form of a survey of the recent state of the art: "Es boomt! Die Mamlūkenforschung (1992–2002)," as a sequel to similar efforts by Peter Thoreau, "Zur Geschichte der Mamluken und ihrer Erforschung," *Die Welt des Orients* 20–21 (1989–1990): 227–40; Ulrich Haarmann, "Mamluk Studies: A Western Perspective," *Arab Journal for the Humanities* 51 (1995): 329–47; and Robert Irwin's "etwas uninspirierten Überblick" (p. 1) "Under Western Eyes: A History of Mamluk Studies," *MSR* 4 (2000): 27–51. Commendably, Conermann lists twenty-two books on the Mamluks published in Arabic since 1992, with the caveat, however, that "the modest quality of Arabic secondary

literature is a noteworthy problem of Mamlūk research . . .″ (p. 2). In this survey Conermann introduces his colleagues′ articles by inserting resume-excerpts abstracting their contents. Here, it seems to me, would have been the perfect opportunity to broaden the usefulness of the volume by casting the abstracts in a language other than German. Conversely, the English abstracts of the two English articles could well have been written in German. Also in the bibliographical category is Thomas Bauer′s ″Literarische Anthologien der Mamlūkenzeit.″ In an appendix Bauer gives an annotated list of some ninety anthologies of various types of Arabic literature compiled during the Mamluk period. In the body of his article Bauer argues, contrary to the received wisdom, that this era ″must be considered as one of the most interesting periods of Arabic literary history″ (p. 71), though it has received very little scholarly attention. Characteristically, Rudolf Veselý tackles a technical question in his ″Das *Taqrīẓ* in der arabischen Literatur,″ showing that previously unnoticed ″blurbs″ dating from the fifteenth century ″give a glimpse of a little slice of the sociocultural life of Egypt in the last century of the Mamluk epoch″ (p. 385).

Closely related to the bibliographical studies are two of a historiographical orientation, both focusing on the nature of biography in Mamluk literature. As indicated by the title, in ″Ibn Aǧās (st. 881/1476) ′Ta'rīḫ al-Amīr Yašbak aẓ-Ẓāhirī′—Biographie, Autobiographie, Tagebuch oder Chronik?″ Conermann attempts to define by genre Ibn Aghā′s history *(tārīkh)* of the amir Yashbak, who flourished under Qāytbāy. Predictably, perhaps, Conermann concludes that the work combines autobiographical, biographical, annalistic, and, even, journalistic elements. This article also contains a German translation of Ibn Aghā′s long report on his mission for Qāytbāy to Uzun Ḥasan, of Aq Qoyunlu fame. In one of the two contributions written in English Otfried Weintritt goes beyond the Mamluks to discuss a work by a chief of the Qādirīyah order in Damascus under the Ottomans during the seventeenth century: ″*Ta'rīḫ* ʻAbd al-Qādir: Autobiography as Historiography in an Early 17th Century Chronicle from Syria.″ Justification for including this article in a volume devoted to the Mamluks is not provided. In any case, Weintritt provides a useful introduction to an eclectic work still in manuscript that he characterizes as a ″′Personal Historiography,′ which is notably lacking in a certain kind of historiographical professionalism,″ whatever that may mean (p. 387). The nature/theory of historiography is addressed in Anja Pistor-Hatam′s ″Ursachenforschung und Sinngebung: Die mongolische Eroberung Bagdads in Ibn Ḫaldūns zyklischem Geschichtsmodell.″ Here she, the coeditor, examines Ibn Khaldūn′s account of the 1258 Mongol conquest of Baghdad in terms of his cyclic model of history. In addition she situates the model in the context of traditional Muslim universal histories and compares their interpretations of the catastrophe with those of Ibn Khaldūn. Not surprisingly, Ibn Khaldūn′s philosophy of history

accommodates it as a part of his cyclical historical process in contrast to the conventional apocalyptic version of other historians. Also in a historiographical vein is a contribution to Mamluk diplomatic by Conermann and Lucian Reinfandt: ″Anmerkungen zu einer mamlūkischen *waqf*-Urkunde aus dem 9./15. Jahrhundert.″ This is a translation of, and diplomatic commentary on, a family *waqfīyah* for the benefit of one of the *awlād al-nās,* a document which was first studied by Haarmann in ″Joseph′s Law: The Careers and Activities of Mamluk Descendants before the Ottoman Conquest of Egypt,″ in *The Mamluks in Egyptian Politics and Society,* edited by Thomas Phillip and Ulrich Haarmann (Cambridge: Cambridge University Press, 1998), pp. 174–87, and subsequently edited and published by Conermann and Suad Saghbini, ″*Awlād al-Nās* as Founders of Pious Endowments: The *Waqfīyah* of Yaḥyá ibn Tūghān al-Ḥasanī of the Year 870/1465,″ *MSR* 6 (2002): 21–52. While the German translation and commentary are expert and certainly helpful, it is awkward to separate them from the textual edition both by venue and language. Surely at this juncture we need not erect such obstacles for ourselves and our students.

Seven articles focus on substantive, as opposed to formal, topics. Two of these treat aspects of Mamluk military activity, or the lack of it. In ″Dreikampf um die Macht zwischen Osmanen, Mamlūken und Safawiden (1500–1517): Warum blieben die Mamlūken auf der Strecke?″ Albrecht Feuss works from the observation that the Mamluks abandoned a policy of military expansion after defeating the Mongols and Crusaders and correlates this lassitude with the decline of the Mamluks′ military power on both land and sea as an explanation of their inability to compete successfully with the Ottomans and Safavids as masters of the Middle East. Internal combat is the subject of Henning Sievert′s ″Der Kampf um die Macht in Mamlūkenreich des 15. Jahrhunderts,″ a struggle which resulted from ″practically no hereditary succession to the throne and no method of selection fixed in writing″ during the Circassian period (p. 335). From his review of the standard sources Sievert recommends using the tool of ″network analysis″ to illuminate sociological factors, especially the role of faction in Mamluk government and society. Loosely related to Sievert′s article is Thomas Herzog′s ″Legitimität durch Erzählung: Ayyūbidische und kalifale Legitimation mamlūkischer Herrschaft in der populären *Sīrat Baibars.*″ Both discuss the issue of succession to the sultanate, the main differences being Herzog′s reliance on a fictional source rather the conventional histories and his highlighting of pre-Mamluk—Ayyubid—practice and caliphal sanction in legitimizing the Mamluk sultanate in the eyes (ears) of the popular audience for the *Sīrah.* Gerhard Hoffmann goes back to the roots of the use of mamluks in Muslim armies in ″Die Einnahme von Amorium/‘Ammūrīya im Jahre 838—ein Katalysator frühmamlūkischer Tendenzen im ‘abbāsidischen Militär?″ He judiciously concludes that ″It remains therefore problematic to seek the

underlying structure of the later, developed, Mamluk system in early Abbasid times, especially in the caliphate of al-Muʻtaṣim″ (p. 40). Judicial history is also represented in ″Some Remarks on Mālikī Judges in Mamlūk Egypt and Syria,″ wherein Lutz Wiederhold uses specific cases involving Maliki judges to shed light on the specific role of Malikis in a profession dominated by Shafiʻis and Hanafis under the Mamluks. Finally, there are two think-pieces which examine certain general aspects of Mamluk culture and society. In ″Post-klassisch und prä-modern: Beobachtungen zur Kulturwandel in der Mamlūkenzeit,″ Stefan Leder discusses the cultural and social changes effected and reflected during the thirteenth and fourteenth centuries by the spread of madrasahs and the popularization of literature, using the writings and careers of scholars such as Abū Ḥayyān, Ibn al-Ḥajj, Tāj al-Dīn, and Taqī al-Dīn al-Subkī, among others, as examples. In ″Einige kritische Bemerkungen zum sogenannten ′mamlūk phenomenon,′″ Peter Thoreau takes up one of the themes touched upon by Leder, namely decline, but political (as opposed to cultural) decline, which set in during the Circassian period. Re-examining the reigns of Baybars and Qalāwūn in this paradigm, Thoreau concludes that the years 1260–93 should not be regarded as the classic years of Mamluk rule but as a deviation from the norms of two hundred years of Mamluk history.

Taken as a whole, the book clearly offers much food for thought, not least as a compendium of the extensive work on the Mamluks being conducted by German scholars, inspired by Haarmann. As might be expected, the scientific rigor and command of the sources associated with German scholarship are much in evidence and, to labor the point, demonstrate the necessity for those of us born without a German tongue to cultivate one.

ẒAMYĀʼ MUḤAMMAD ʻABBĀS AL-SĀMARRĀʼĪ, *Al-Manhaj al-Tārīkhī ʻinda al-Qalqashandī: Dirāsah Taḥlīlīyah* (Riyadh: Markaz al-Malik Fayṣal lil-Buḥūth wa-al-Dirāsāt al-Islāmīyah, 2001). Pp. 254.

REVIEWED BY LI GUO, University of Notre Dame

This book sets out to ″investigate the methodology of al-Qalqashandī′s historical writings through analytical studies aimed at identifying the patterns *(al-masūghāt)* and factors *(ṭabīʻat dawāfiʻihi)* determining his choice of topics—civilization *(al-ḥaḍārah),* genealogy and Arab tribes, the succession of dynasties *(al-khilāfah)*—that go beyond the [usual] subjects his contemporaries were preoccupied with, namely

political history and biography of learned men″ (p. 10). The project therefore is ″to focus on the methodological principles upon which al-Qalqashandī based [his] historical research; among these are historical criticism *(al-naqd al-tārīkhī)* and extensive use of documents″ (p. 11), for which al-Qalqashandī is well known to the readers of this journal and, for that matter, to all students of medieval Islamic history. It is noteworthy here that the scope of inquiry is beyond the *Ṣubḥ al-A'shá,* arguably the best known and the most important work of al-Qalqashandī, and extends to other lesser known and rarely studied titles, such as the *Nihāyat al-Arab fī Ma'rifat Ansāb al-'Arab,* the *Qalā'id al-Jumān fī al-Ta'rīf bi-Qabā'il 'Arab al-Zamān,* and the *Ma'āthir al-Anāfah fī Ma'ālim al-Khilāfah,* which, unlike the encyclopedic manual-like *Ṣubḥ al-A'shá,* deal with the history of Arab tribes and dynasties.

The book consists of four chapters, with Preface, Introduction, and Conclusion. The introduction provides a sketch of al-Qalqashandī′s life and work. Chapter One, ″The Form and Content of al-Qalqashandī′s Historical Writings,″ begins with an outline of the organizational principles that guided al-Qalqashandī′s presentation and choice of materials. The author suggests that al-Qalqashandī′s method in treating his primary sources is one of cautious liberty, in that he might have edited, or ″polished″ *(taṣarrafa fī),* these sources for the sake of consistency in style; but the author assures us that this was usually carefully executed without bowdlerizing the essential information contained in these sources.

For me, more interesting is Chapter Two, which is on al-Qalqashandī′s sources. This is a particularly thorny issue insofar as several hundred works, many of which are lost today, were used by al-Qalqashandī, who in turn had a tendency to shorthand, and at times to shortchange them in his citations. The authors are, more often than not, mentioned by nicknames and pen names, whereas the titles are not always given in full. Therefore, the painstaking effort to delineate and sort out the details of these sources in this chapter is to be commended. Particularly helpful is the chart of the hitherto unpublished and lost sources cited by al-Qalqashandī (pp. 122–23).

Titled ″The Foundations *(usus)* of al-Qalqashandī′s Historical Research,″ Chapter Three situates al-Qalqashandī′s writings within the context of medieval Muslim historiography. The author is of the opinion that while al-Qalqashandī distinguished himself by his ″characteristic method″ *(manhajuhu al-khāṣṣ)* and ″unique perspectives″ *(ru'yatuhu al-khāṣṣah),* he is essentially a product of the historical thought and historical philosophy in Egypt during the ninth/fifteenth century. His intensive use of the documents *(al-wathā'iq)* is a hallmark of his tremendous success and significant legacy. A lengthy discussion of al-Qalqashandī′s use of documents (pp. 136–47) concludes with yet another useful chart of the documentary sources utilized in al-Qalqashandī′s major writings (704 for the

Ṣubḥ al-A'shá, ten for the *Qalā'id,* four for the *Nihāyah* and the *Ma'āthir,* respectively). Al-Qalqashandī's achievement is also seen in his role in systematically preserving and standardizing technical terms *(al-muṣṭalaḥ)* for Arabic historical writing and documentation as a whole in the later Middle Ages. A third chart, of the terms used and standardized by al-Qalqashandī (pp. 154–55), constitutes a handy tool for students, although the list itself is far from being exhaustive. The chapter concludes with a layout of al-Qalqashandī's system of abbreviations and cross-referencing (pp. 156–69), which is also very helpful, especially for those navigating al-Qalqashandī's monumental *Ṣubḥ al-A'shá.*

The last chapter deals with "Al-Qalqashandī's Historical Criticism" *(al-naqd al-tārīkhī).* It discusses his critique of primary sources *(al-maṣādir), khabar*-material and historical narratives, and documents. The author points out that al-Qalqashandī's critical use of documents extends from simply quoting the contents of a given document to commenting on the form and formulaic features of the text, an aspect usually ignored by many of al-Qalqashandī's fellow historians (pp. 202–7). By and large, al-Qalqashandī's historical criticism, according to the author, stemmed from his deep belief in employing the principle of *ijtihād,* or "individual reasoning," in the study of Islamic jurisprudence, for historical research. In historiographic terms, this method of *ijtihād* has to do with tracing, and describing, new patterns and trends in history, based on independently verified proofs. In this connection, al-Qalqashandī's understanding of "history" was essentially an exercise of *taḥqīq al-khabar,* that is, critically investigating and vigorously verifying the raw data. This getting-to-the-bottom-of-the-truth approach to history is, according to the author, a further step on the part of al-Qalqashandī that goes beyond the historians prior to him. Furthermore, al-Qalqashandī's critical method also has to do with his "flexibility" *(murūnah)* in accepting, and respecting, various explanations and narratives of a given historical event; and this, according to the author, is in accordance with the general cultural atmosphere in al-Qalqashandī's time when the four Sunni legal schools came to share the landscape of intellectual discourse and the ulama and *mu'arrikhūn,* many of whom wore both hats, worked together in fostering a milieu of competition and free exchange of data, and ideas, among themselves. In the final analysis, al-Qalqashandī's era saw the maturity of medieval Muslim historiography, thanks to him, and to the collective efforts of his fellow historians.

The book is descriptive in nature and at times lacks rigorous in-depth analysis. For example, in describing the devices used by al-Qalqashandī in citing his sources, the author singles out, among others, the use of *qāla* and *qultu* to mark the end of a quote and the beginning of al-Qalqashandī's own comment (pp. 51–52). This technique, however, is by no means al-Qalqashandī's innovation at all, but rather a device frequently seen in Ayyubid and early Mamluk sources. And with regard

to al-Qalqashandī's treatment of sources, he is, according to the author, characterized for his "careful collection and verification of raw data," "his reliance on more than one source for the same story, and his educated guessing *(al-iḥtimāl wa-al-tarjīḥ)*" (pp. 122–35); but weren't such things done by any respected historian? What is so special about al-Qalqashandī? This remains unclear.

That said, the book is overall a work of diligent research. It is encouraging to see a young Iraqi woman historian joining the small, but ever-growing, club of scholars working on Mamluk historiography today. She is well versed in primary sources and current scholarship in the Arab world, and is reasonably familiar with Western literature, albeit mostly through Arabic translations. With valuable observations regarding al-Qalqashandī's source criticism and methodology, and, more importantly, with detailed analysis of his lesser-known works, the book under review is a welcome contribution to our understanding and assessment of this great Mamluk historian.

MAḤMŪD SĀLIM MUḤAMMAD, *Ibn al-Wardī: Adīb Bilād al-Shām* (Damascus: Dār Sa'd al-Dīn, 2002). Pp. 289.

REVIEWED BY KONRAD HIRSCHLER, University of Kiel

The fact that a monograph on the Syrian man of letters Zayn al-Dīn 'Umar Ibn al-Wardī (d. 749/1349) has now been published is to be welcomed, especially as he is usually assigned a minor role in the surveys of Mamluk literature, such as Mūsá Bāshā's *Tārīkh al-Adab al-'Arabī, al-'Aṣr al-Mamlūkī* (Damascus: Dār al-Fikr, 1989). The author, professor of Mamluk literature at the University of Damascus, has previously published on the subject of Mamluk poetry, for example his strongly-criticized monograph on Ibn Nubātah (see review by Thomas Bauer, in *MSR* 6 [2002]: 219–26). The present work is structured in the same way as that previous work: the standard summary of medieval dictionaries relevant to his biography (pp. 7–20) is followed by sections on the "Content of the Poetry" (pp. 21–149), "The Poetical Style" (pp. 151–202), and "Prose" (pp. 207–76).

This monograph certainly reflects the author's work on Ibn al-Wardī's *Dīwān,* an anthology of poems, discourses, treatises, epistles, and *maqāmāt*. However, the implication of the title, which suggests a study of the scholar's contributions in general, is misleading, as the author rarely discusses Ibn al-Wardī's other writings.

Jamāl Fawzī Muḥammad ʻAmmār, *Al-Tārīkh wa-al-Mu'arrikhūn fī Bilād al-Shām fī ʻAṣr al-Ḥurūb al-Ṣalībīyah (521–660 A.H.)* (Cairo: Dār al-Qāhirah, 2001). Pp. 340, tables, (missing) maps.

Reviewed by Niall Christie, University of British Columbia

This book presents an examination of historical writing in the Bilād al-Shām region during part of the Crusading period, from 521/1127 to 660/1261–62. Through the consideration of a number of historical sources for the period, the author explores the relationship between historians and their texts and the historiographical movements of which these writers were members.

ʻAmmār opens his study with a brief survey of previous literature in Arabic on these topics. He then lays out the historical and cultural background to his study, discussing the various dynasties that dominated the area, the external enemies that attacked it, the various ethnic and religious groups that occupied it, and the mercantile and cultural activity that took place in it. He also carefully defines the limitations of his study; he is examining historical writing from the Shām region, from the period beginning with ʻImād al-Dīn Zangī's takeover of Mosul in 521/1127 and ending with the establishment of Mamluk supremacy in Shām in about 660/1261–62, and is examining a limited number of sources, none of which are in any language other than Arabic. In defining his limits in this way, ʻAmmār wisely acknowledges that his study is intended to be selective rather than comprehensive; a full study of historical writing in this region in the Crusading period would certainly require considerably more space than the author has at his disposal! Unfortunately, the temporal limits do mean that ʻAmmār's book will be of limited use for the majority of the readership of this journal, but this should not be regarded as a criticism of the inherent value of the work itself.

Having established his limits, ʻAmmār then proceeds to the meat of his work: the examination of the texts themselves. He divides his sources into three major genres and devotes a section of his study to each genre. He opens the first section, on universal histories, with a definition of what is meant by "universal history," along with a history of the genre and a discussion of its positive and negative features. He then proceeds to the texts themselves, the first of which is the *Miḍmār al-Ḥaqā'iq wa-Sirr al-Khalā'iq* of the Ayyubid amir of Ḥamāh, Muḥammad ibn ʻUmar (d. 617/1221). He presents a short biography of the author, followed by a consideration of the work's content, the types of sources the author uses, the way in which the work is written, the author's style, and how the work compares with those of contemporaries. These are, broadly speaking, the same topics he addresses with regard to the other works considered in his study, although when discussing longer or more significant works he examines other topics as well; thus, when

considering his next text, the *Kāmil fī al-Tārīkh* of Ibn al-Athīr (d. 630/1233), ʻAmmār also addresses Ibn al-Athīr′s treatment of his sources, significant features of his text, his critical and philosophical approaches to history, flaws in his chronicle, and its importance and impact. The remaining texts discussed in this section are the *Tārīkh al-Manṣūrī* of Muḥammad ibn ʻAlī al-Ḥamawī (d. after 633/1235), the *Tārīkh al-Islāmī* (or *Tārīkh al-Muẓaffarī*) of Ibn Abī al-Dam (d. 642/1244), and the *Mir'āt al-Zamān fī Tārīkh al-Aʻyān* of Sibṭ ibn al-Jawzī (d. 654/1256).

In the second section, ʻAmmār turns to histories of regions, states, families, and cities, again defining the genre and discussing its origins and history before proceeding to the texts themselves. In this section he examines the *Tārīkh Dawlat Āl Saljūq* of ʻImād al-Dīn al-Iṣfahānī (d. 597/1201), the *Tārīkh al-Bāhir fī al-Dawlah al-Atābikīyah* of Ibn al-Athīr, the *Dhayl Tārīkh Dimashq* of Ibn al-Qalānisī (d. 555/1160), and the *Zubdat al-Ṭalab fī Tārīkh Ḥalab* of Ibn al-ʻAdīm (d. 660/1262).

The third section of ʻAmmār′s work addresses biographies and memoirs, again discussing the origins and development of the genre before proceeding to discuss two texts, the *Kitāb al-Iʻtibār* of Usāmah ibn Munqidh (d. 584/1188) and the *Nawādir al-Sulṭānīyah wa-al-Maḥāsin al-Yūsufīyah* of Bahā' al-Dīn ibn Shaddād (d. 632/1234).

ʻAmmār finishes his work with a fourth section, in which he makes a number of general comments on historians and the production of histories in the region during the period. This section is followed by three pages with space and headings for maps (the maps themselves appear to have been accidentally omitted). A bibliography and list of contents follow.

In addition to the omitted maps, there are other problems with ʻAmmār′s work. His use of *hijrī* and *mīlādī* dating is inconsistent; at times he will use one, or the other, or both, but is not systematic in this regard. More serious, however, is the fact that he makes use of only seven works of Western scholarship, none of which were published after 1981. This is unfortunate, as more recent work has been carried out on a number of the texts he discusses; for example, Robert Irwin′s article on Usāmah ibn Munqidh[1] would have been helpful when discussing the *Kitāb al-Iʻtibār*. That said, ʻAmmār′s study still provides a useful survey of a number of sources from the Crusading period and will be of interest to scholars working with the texts discussed in its pages.

Ṭāhā Thaljī Ṭarāwinah, *The Province of Damascus during the Second Mamlūk Period (784/1382–922/1516)* (Kerak: Mu'tah University, 1994). Pp. 200.

Reviewed by Bethany J. Walker, Grand Valley State University

Specialists of the Middle Islamic period will benefit from recent publications by Jordanian historians, who are increasingly turning to provincial and local studies. One of the first Jordanian monographs in English on a specifically Mamluk topic is Ṭāhā Ṭarāwinah's *The Province of Damascus during the Second Mamlūk Period (784/1382–922/1516),* published by Mu'tah University in southern Jordan. The author chose Damascus province as a model for all of Greater Syria (p. 13) and intends the work to be an introduction to provincial history. As such, the monograph appears to have been influenced by Muḥammad 'Adnān Bakhīt's *The Ottoman Province of Damascus in the Sixteenth Century,* a work that has guided Jordanian scholarship on the Ottoman period since its publication in 1982. Ṭarāwinah's book is based on his largely unedited doctoral dissertation, written in 1987. It follows the organization and scope of inquiry of most graduate theses written in Jordan today and reflects the state of Mamluk studies in that country in the 1980s.

The monograph opens with a layman's introduction to the Mamluk dynasty and an explanation for the provincial focus of the book. It is divided into six chapters, each of which highlights a theme that is found in most modern Jordanian scholarship on the Middle (Ayyubid-Mamluk) and Late (Ottoman) Islamic periods: administrative and military structures, the educated and tribal elite, social classes and their economic power, Mamluk decline, and education. Very few manuscripts were consulted for this study. The majority of Ṭarāwinah's sources consist of contemporary Syrian chronicles, biographical dictionaries, administrative manuals, local histories, and a few travelogues, all published and edited, and an assortment of related secondary sources in Arabic and English. He makes little use of early Ottoman sources, which is unfortunate given the fact that the Ottoman administration of Syria was largely modeled on late Mamluk practices.

Chapter I ("The Mamluk Administration of the Province") is a summary of earlier scholarship on the structure of Mamluk government. For the physical structure and administrative divisions of the Syrian provinces, the author relies primarily on al-'Umarī, al-Dimashqī, al-Qalqashandī, and al-Ẓāhirī, in the end restating many of the arguments made in Nicola Ziadeh's 1953 study on the same topic: *Urban Life in Syria under the Early Mamluks.* In his description of military and civilian offices, Ṭarāwinah relies on both Egyptian (al-Maqrīzī, Ibn Taghrībirdī) and Syrian (Ibn Qāḍī Shuhbah, Ibn Ṭūlūn) sources. The only new contribution in this chapter is Ṭarāwinah's concern for the instability and unevenness of provincial administration, particularly in terms of regularly shifting borders, short terms of

office, and shortsighted financial practices. While he explores financial concerns in Chapter V, the author merely mentions, and does not account for, the possible factors behind such fluid administrative structures.

The second chapter, "The Military Force and its Role," acknowledges the seminal work of David Ayalon on the structure of the Mamluk army, while highlighting those amiral rebellions against the sultan that punctuated the Burji Mamluk period in Syria. The role of Jordanian tribesmen in the rebellions against (and in support of) Sultans Barqūq and Faraj, in particular, have captured the attention of this author, as well of many other Jordanian historians of his generation.

Civilian society is the focus of the following chapter, entitled "The Population and Local Power Groups." Here Ṭarāwinah is concerned primarily with the political role of the Shiʻi and Druze minorities in today's Lebanon and various clans and tribal confederations in the Golan, Ḥawrān, and Balqā'. Once again, the focus on Jordanian tribal history is apparent in this chapter and should be of interest to anthropologists. However, the author's almost complete reliance on biographical dictionaries and chronicles, to the exclusion of travelers' accounts and modern ethnographic and archaeological reports, strips the narrative of methodological depth and vigor.

In perhaps the most interesting and thought-provoking chapter of the book (Chapter IV: "The Socio-Economic Structure") Ṭarāwinah documents the class conflicts of urban Damascene society and explains, in very modern and politically relevant terms, the organization, leadership, platform, and methods of what might today be called terrorist groups. These "criminal gangs" include the *zuʻr* ("scoundrels"), *ḥarāfīsh* ("hoboes"), *ballāṣīyah* ("confidence men"), and *ḥarāmīyah* ("robber bands") (p. 13). Ṭarāwinah extends his analysis to the state's inconsistent policies towards these gangs, which varied from suppression to co-option. That the modernist political critique subtly used in this chapter was intentional may be indicated in the book's introduction. Here the author rightly describes the late Mamluk period as a transitional one that "contained the legacy of the past and the root causes of a number of modern Syrian problems" (p. 13).

Many readers will be disappointed with Chapter V, "The Mamluk Financial Policy and its Effects on the Province." The main arguments of this chapter concerning the *dirham-fulūs,* provincial mints, arbitrary taxes and monopolies, and the general process of Mamluk decline during the fifteenth century are today out-of-date and contribute nothing new to our understanding of the roots of this process in Syria. The author, however, does document in detail how state officials, merchants, and a pre-modern urban "mafia" colluded in confiscation of property, embezzling, and the sale of offices and how these practices directly impacted the Syrian economy. The effect of Mamluk financial policies on Syrian industries could be a promising new focus of research for provincial specialists.

In his final chapter, ″The State of Learning and the Intellectual Life,″ Ṭarāwinah predictably scours biographical dictionaries and specialized sources on education (namely Nuʻaymī′s *Al-Dāris fī Tārīkh al-Madāris*) to trace the careers of Damascus′ academic elite. His descriptions of the top hadith scholars, Quranic reciters, and legal minds of the day are arguably the most useful and colorful social commentaries in his study. The book then concludes with a sobering assessment of the government corruption and educational stagnation of late Mamluk Syria, a point of view primarily informed by his interest in financial policy and structure of education in the province.

The present work presents some significant shortcomings. This first edition, which came out in 1994, was not edited and updated to reflect important scholarship by Jordanian historians in the 1980s and 1990s. Numerous books and articles published by Yūsuf Ghawānimah, Jordan′s leading Mamlukist, and four volumes of early Ottoman tax registers translated into Arabic by Muḥammad Bakhīt, the country′s most prolific Ottomanist, are not consulted in this study. Furthermore, Ṭarāwinah does not make use of the extensive microfilm archives of Mamluk and early Ottoman manuscripts housed at the University of Jordan (available since the 1980s) and Ahl al-Bayt University (since the 1990s), sources rich in data on provincial administration. Similarly, the author makes no reference to the extensive scholarship on Syrian Mamluk art and architecture, archaeological reports for Greater Syria, extensive secondary literature on Syria′s sugar industry in this period, and many late medieval travelers′ accounts that would have given depth to his description of Syrian trade, industry, and culture. As a result, the monograph, while strong in elements of political and social history, is weak on general culture and does not touch those topics of growing interest today to students of Mamluk provincial history, such as environmental and agricultural history, demographic transformations, and local exchange networks.

The editing and publication quality of the copy available to this reader was unfortunately poor, with numerous misspellings in English and faulty pagination. Several pages in Chapter III were missing (pp. 81, 84, 85, 88, 89, 92, 93, and 96) and replaced with duplicate pages from Chapter I. These are the responsibility of the publisher/printer, however, and not the author. Future printing of the text will need to address this and should, in addition, include an index.

Nonetheless, Ṭarāwinah′s monograph is a very readable and most welcome contribution to Mamluk provincial studies, an area of inquiry that has received little attention to date. While it is far from a comprehensive work on the subject, readers will find its broad coverage of political and social history a good general introduction to the Mamluk′s Damascus province, highlighting Syrian-based sources that are often neglected in Cairo-based studies. Its focus on the ″Burji″ Mamluk period, furthermore, fills in a chronological void in Mamluk historiography and in

this sense could supplement Carl Petry's *Twilight of Majesty: The Reigns of the Mamlūk Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī in Egypt* as a textbook or seminar reader.

OLIVIA REMIE CONSTABLE, *Housing the Stranger in the Mediterranean World: Lodging, Trade, and Travel in Late Antiquity and the Middle Ages* (Cambridge: Cambridge University Press, 2003). Pp. 427.

REVIEWED BY STUART BORSCH, Assumption College

This book strikes one, from the very start, as an astounding endeavor in the scope and scale of the topic. In this age of globalization, when huge food and hotel conglomerates dominate the marketplace, Remie Constable has taken up the task of exploring their predecessors in the medieval world. Drawing on a wide variety of sources, philological, archaeological, and documentary, she explores the various manifestations of the *funduq,* that space for storage, commerce, lodging and boarding that dominated most areas in the Mediterranean at one time or another. For any scholar interested in travel, trade, or the socioeconomic structure of Mediterranean life, this book is a must read.

The parable of the Good Samaritan is a brilliant starting point; the *pandocheion* mentioned is the etymological root for *funduq,* as she establishes in an exploration of sources from late antiquity. The *pandocheion* serves as a Christian metaphor for the life of a pilgrim and the transit of body and soul through this world to the next. Tracing the evolution of the *pandocheion,* she goes on to analyze the purpose and function of *funduq*s as they matured in the eleventh and twelfth centuries. She describes the economic and social functions of *funduq*s and their relationship to other institutions, particularly *sūq*s.

She illustrates how *funduq*s served as loci for government taxation of imports and exports. The nature of taxation served in many cases to raise the price of goods sold in *funduq*s, an item of complaint for some contemporary observers. Constable details the interconnection of high-quality long-distance trade items, such as silk, and the role that *funduq*s played in providing merchants with an opportunity to fetch premium prices for the sale of these goods to wealthy households and local merchants who purchased them for resale. Concerning the sale of staple goods, such as grain, fruit, salt, and other bulk items, she describes how governments in the Mediterranean often sought to regulate prices and used *funduq*s as a means to do so. Interestingly, the market inspector, the *muḥtasib,* seems to have had little

to do with *funduq*s, a fact that further distinguishes *funduq*s from *sūq*s. It seems that the owners, or renters, of the *funduq*s were responsible for many of the functions that would be carried out by the *muḥtasib* in a *sūq*.

Of particular interest to scholars of the medieval Islamic world is the way in which *funduq*s were commonly used to generate incomes for pious endowments. Some *funduq*s served directly as charitable institutions, providing lodging, food, and medicine for poor travelers, in addition to money that would allow them to return home. Others generated funds that were then used to support other charitable institutions. In any case, it would seem that the *funduq*s were often not unlike *waqf*s in the role they played in Muslim societies.

Not surprisingly, *funduq*s were focal points for government taxation and regulation of trade. The government use of *funduq*s for this purpose seems to have grown over time, in Egypt from the Fatimid through Ayyubid to Mamluk eras. However, it seems that the taxes and tariffs were not so onerous as to disrupt trade, and merchants were willing to put up with the taxes in exchange for an orderly institution that they could rely upon for a reliable center of their activities.

Constable describes the architecture of the *funduq*s in detail, using both illustrations and descriptions provided by travelers and endowment deeds. The security provided by *funduq*s was clearly paramount in their economic function, and the practice of using a single gate which was locked at night is noted, along with the surprising role that *funduq*s sometimes played in sequestering suspected criminals for a short period. The basic layout of *funduq*s is well known to most scholars of the medieval Islamic world, but Constable's section on architecture provides a vivid exploration of the various structural elements of the *funduq* and *khān*s that offers a stunningly clear illustration of the ways in which the *funduq* served the medieval traveler.

The overall architectural description provided by Constable goes a long way to reveal the impressive scale and scope of the *funduq,* where there were sometimes as many as ninety-nine rooms provided for travelers' quarters in the upper story of the structure. She goes into great detail in describing the functions of the lower story of the *funduq,* which was used to store goods, sell wares, and stable pack animals. She provides accounts of travelers' sleeping arrangements on the upper stories, including unroofed rooms that allowed for relief from the summer heat at night, as well as areas on the flat roof to which travelers could retire in the heat of the summer night, and describes the use of latrines and the provision of fresh water by underground conduits serving the *funduq*s.

Provision for access to, or the inclusion of, mosques at the *funduq* is also explored. Facilities for prayer were not confined to Muslim travelers solely, but were also provided for Christian and Jewish *funduq*s, in which a chapel or synagogue was often located within the *funduq*. One of the interesting features of this book is

that it illustrates the divergence between accommodations provided by the Dār al-Islām for foreigners and the utter lack thereof for any Muslim who wanted to live as a merchant in the Latin West. Facilities such as churches and communal living were provided for by Muslim rulers in the Dār al-Islām while there was almost no parallel to be found for such accommodations in the European world.

She describes the way in which *funduq*s acquired their own judicial status, independent of laws for Muslims and local religious minorities. They were allowed to settle legal disputes within their own *funduq,* with the exception of capital crimes. She also traces the process by which *funduq*s (Italian = *″fondacos″*) were designated by ″nationalities″ as Italian city-states began to assert their own independence and identity. At the same time, she demonstrates how states in the Muslim world limited the scope in which *fondacos* could operate, restricting their activities to focal points of international trade (e.g., Alexandria) while prohibiting them from operating in key domestic markets (e.g., Cairo).

She also outlines how the growth of Italian city-states paralleled the development of commercial concessions in Muslim cities, where, by the thirteenth century, consuls were chosen to represent the interests of and administer justice in the *fondaco.* Churches were another concession to the merchants in the *fondacos.* The pattern of consul representation and church activities became standard features of the *fondacos* over time. She details the advance of concessions by which *fondacos* were owned by Italian city-states, adumbrating the later development of *fondacos* in the early modern period.

She also explores the development of *fondacos* in Christian Spain and Sicily, demonstrating the similarities and differences with *fondacos* and *funduq*s in the Islamic world. The adaptation of a Muslim institution can be seen in this period in Mediterranean history. She explains how the *fondacos* came to concentrate more on the shipment and taxation of goods, rather than on housing merchants, as they did in the Islamic world.

She explains how the *fondacos* and *funduq*s changed over time, as Christian states became the dominant power in the Mediterranean. Christian *fondacos* dominated the loci of maritime international trade while Muslim *funduq*s continued to dominate overland trade. She details the rise and fall of the institution known as the *khān,* an institution which served rural areas rather than urban ones.

More strikingly, she describes the replacement of the *funduq* and the *khān* by the *wakālah*s, which served the commercial needs of traveling merchants, but did not serve as housing facilities for merchants. The emergence of the *wakālah* was also associated with the rise of more centralized government intent on profiting from regional and international trade. This was particularly true in Mamluk Egypt.

She goes on to explore the different characteristics of *fondacos* in countries north of the Mediterranean. She observes that *fondacos* there, although derived

from the Arabic *funduq,* did not usually house traveling merchants, only their cargo. The impulse for segregating the merchant population was not very strong within a society in which both merchants and their hosts were Christian. In exploring the difference between *fondacos* on the northern and southern shores of the Mediterranean, she focuses on one particular example, the Fondaco dei Tedeschi, in which the *fondaco* of the southern Islamic sphere of influence was replicated by a *fondaco* of the north. She shows how the particular socioeconomic structure of Venice put it in a position to mimic the centralized trading foci of the Islamic south. However, most of the Christian *fondacos* went their own way, drawing away from the function of *fondacos* on the other side of the Mediterranean.

This is a fantastic survey of the cultural and economic terrain of travelers in the middle Ages. Every detail of this institution is explored. This text will serve as a valuable resource for scholars, as well as a text for graduate and undergraduate surveys of the medieval economic world.

RICHARD J. A. MCGREGOR, *Sanctity and Mysticism in Medieval Egypt: The Wafāʾ Sufi Order and the Legacy of Ibn ʿArabī* (Albany: State University of New York Press, 2004). Pp. 246.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

Richard J. A. McGregor significantly advances his earlier studies of the Wafāʾīyah Sufi order with extensive new research on the order's two most important figures, its founder Muḥammad Wafāʾ (d. 765/1363), and his son ʿAlī (d. 807/1405). Together they authored nearly thirty works, most of them still only in manuscript, and McGregor is to be commended for the diligence required for his pioneering study. He focuses, in particular, on notions of sanctity that were central to the thought of Muḥammad Wafāʾ and ʿAlī, and on the possible influences on them of Ibn al-ʿArabī and his school. As such, McGregor's study is concerned primarily with mystical philosophy in the Mamluk period.

McGregor reviews Muslim conceptions of sanctity *(walāyah)* from al-Ḥākim al-Tirmidhī (d. ca. 300/910) to Ibn al-ʿArabī (d. 638/1240). He notes that al-Tirmidhī distinguished between prophetic revelation *(wahy)* and saintly inspiration *(ilhām),* both clearly in contact with the divine. The superior revelation of the prophet brings God's message and law to humanity, while mystical inspiration may reveal spiritual realities, and insights into the law. Al-Tirmidhī and later Sufis constructed various hierarchies of saints, whose assemblies insured the proper functioning of

the cosmos and life on earth. Just as Muḥammad culminated the era of prophecy, so too the seal of the saints will come at the end of saintly rule, along with the Judgment Day. A similar doctrine circulated in Shiʻi circles, though the saints and their seal were replaced by the imams. Al-Tirmidhī's ideas were also taken up and elaborated by Ibn al-ʻArabī, who detailed numerous classes and classifications of saints according to their prophetic inheritance and spiritual function. In Ibn al-ʻArabī's complex system, *walāyah* "is the hyle in which all else operates" (p. 24). Ultimately, all prophets, messengers, and saints are manifestations of the Muḥammadan Reality whose prophetic seal was the historical Muḥammad. As to the saints, the Seal of Universal Sainthood is Jesus, while the Muḥammadan Seal of Sainthood was, hardly a surprise, Ibn al-ʻArabī himself.

Not all Muslims embraced Ibn al-ʻArabī's doctrines and elaborate saintly hierarchy, as McGregor notes in a chapter on the Shādhilīyah order, where Muḥammad al-Wafā' began his religious career. McGregor sketches the origins and development of this order in North Africa and Egypt, especially Alexandria. The Shādhilīyah order was widespread and quite influential in Mamluk domains, producing important mystics, scholars, and preachers such as Ibn ʻAṭá Allāh al-Iskandarī (d. 709/1309) and Tāj al-Dīn al-Subkī (d. 756/1355). Lesser known was Dā'ūd Ibn Bākhilá (d. eighth/fourteenth c.), Muḥammad al-Wafā''s spiritual master and teacher. For Ibn Bākhilá and other early Shādhilī Sufis, sanctity results from proximity *(qurbah)* to the divine. Muslims who undertake spiritual disciplines may acquire a share of sanctity, though only a rare few attain spiritual vision. These saints have been annihilated mystically into God yet abide in creation to guide others, thus serving as a bridge *(barzakh)* between humanity and God. Sainthood, then, is the remnant of prophecy, which was sealed by Muḥammad. The saints are his spiritual heirs, each with a share of the Muḥammadan Reality, like moons reflecting the light of the sun.

Notably absent from this early Shādhilī system is a doctrine of a seal of the saints as found in al-Tirmidhī and Ibn al-ʻArabī, though this would be addressed by Muḥammad Wafā' and ʻAlī. McGregor discusses the hagiographic traditions surrounding Muḥammad Wafā', which declare him to be the seal of the saints and superior to al-Shādhilī and other great Sufis and saints. Recorded here are accounts of Muḥammad Wafā''s visions of the prophet Muḥammad, who commanded him to recite the Quran much as Gabriel had commanded him. These and similar accounts establish Muḥammad Wafā''s privileged place and that of ʻAlī. However, a different view of ʻAlī is given by his younger contemporary Ibn Ḥajar al-ʻAsqalānī (d. 852/1449). He remarked that ʻAlī was quite intelligent, cultured, and a talented preacher, though Ibn Ḥajar disapproved of the excessive veneration shown to ʻAlī by his followers. Further, according to Ibn Ḥajar, ʻAlī spent most of his time with his followers at the Wafā' family home in Roda, where he had a minbar constructed

for the Friday prayers to be said there. Sometime after ʻAlī′s death, the Wafāʼīyah order left Roda for a large *zāwiyah* containing the graves of Muḥammad and ʻAlī in the al-Qarāfah cemetery. Still, despite ʻAlī′s great popularity, and that of his father, their Wafāʼī order does not seemed to have spread beyond Cairo. There, however, direct descendents of Muḥammad and ʻAlī maintained the family′s saintly prestige well into the nineteenth century. McGregor also mentions in passing that ʻAlī′s grandson was a teacher and companion of the Sultan Jaqmaq (d. 857/1453). Though outside the scope of this book, I would encourage McGregor to pursue further research on Wafāʼī relations with other members of the ulama as well as their social and economic relations with Mamluk sultans and amirs.

Next, McGregor surveys many writings by Muḥammad Wafāʼ and ʻAlī. Both were said to have composed poetry ″in the style of Ibn al-Fāriḍ,″ which generally means poetry on mystical union and oneness. McGregor cites a few verses of Muḥammad′s poetry, which resemble the enigmatic verse of al-Niffarī (d. 354/965) and Ibn al-ʻArabī as well as sections of Ibn al-Fāriḍ′s *Naẓm al-Sulūk*. Muḥammad also composed prayers and a work on jurisprudence, while ʻAlī wrote a treatise in defense of popular preachers, recently discussed by Jonathan Berkey in his *Popular Preaching and Religious Authority in the Medieval Islamic Near East* (Seattle, 2001). Their most important works, however, are a series of mystical treatises on a number of topics including the underlying oneness of being, the perfect human *(al-insān al-kāmil),* God′s self-disclosure *(tajallī)* to creation, and, of course, *walāyah* or sanctification. McGregor carefully details the nuanced positions of both mystics on this topic. In short, Muḥammad Wafāʼ developed the Shādhilī doctrine of sainthood as an extension of prophecy by adding to it notions of cyclical renewal. He declares that there will be seven one-hundred-year cycles, each with a saint who will renew the religion of Islam. These seven cycles will be completed by the eighth, whose renewer will be the final seal of sainthood who is, no surprise, Muḥammad al-Wafāʼ himself. ʻAlī builds upon his father′s teachings, maintaining that the shaykh, or spiritual guide, reflects God′s self-disclosure and so serves as the student′s door into mystical experience and divine life. Further, in discussing the relationship of sanctity to prophecy, ʻAlī posits a ″spirit of saintly inspiration.″ Whereas Gabriel comes to each prophet in some form, a spirit of saintly inspiration likewise comes to them, and to the saints. This spirit is a manifestation of God′s self-disclosure, and ʻAlī cites as examples the figure Khaḍir (Khiḍr), who spoke with Moses, and the handsome man who breathed God′s spirit into Mary, the mother of Jesus. Finally, ʻAlī picks up the idea of cyclical renewal, to which he adds a final ninth cycle signaling the apocalypse. By his calculations, this final seal is, to no surprise, ʻAlī himself.

McGregor′s study gives us a fascinating view of some of the religious beliefs and doctrines circulating during the Mamluk period, and he has presented the

teachings of Muḥammad Wafā' and 'Alī in some detail. Less convincing, however, is his claim that Muḥammad and 'Alī ″relied heavily on [Ibn al-'Arabī′s] philosophy″ (p. 75). As McGregor himself notes, neither Muḥammad nor 'Alī ever mention Ibn al-'Arabī or his works, and many of their ideas and terms involving sanctity differ substantially from Ibn al-'Arabī′s on the subject. Given Ibn al-'Arabī′s importance and influence on Islamic mysticism at the time, it is difficult to believe that Muḥammad and 'Alī knew nothing of his ideas. Further, as McGregor points out, passages from the works of Muḥammad Wafā' and, especially, 'Alī resonate at times with Ibn al-'Arabī′s writings or those of his students, including al-Qūnawī (d. 672/1273), al-Qāshānī (d. 735/1334), and, I would add, al-Qayṣrī (d. ca. 748/1347). However, a number of Muḥammad′s and 'Alī′s ideas can also be found in the verse of Ibn al-Fāriḍ, and the writings of al-Tirmidhī and other earlier mystics. Therefore, McGregor must undertake a more extensive and exacting comparison if he wants to assess the scope and strength of Ibn al-'Arabī′s influence on Muḥammad and 'Alī.

Finally, readers owe Richard McGregor thanks for providing in his notes Arabic passages to his translations. Unfortunately, there are many typos in these passages, though the Arabic reader will have little problem correcting them.

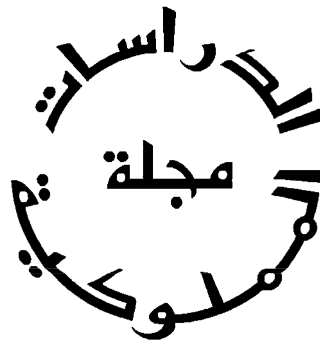
Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	’	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	‘				
		ة	h, t (in construct)			ال	al-		



ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	وُ	ū	ـِي	ī
اَ	ā	وُّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	وَ	aw	ـَي	ay
				ـَيّ	ayy

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before ″sun″ letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, mi’ah, ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shi‘i, Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

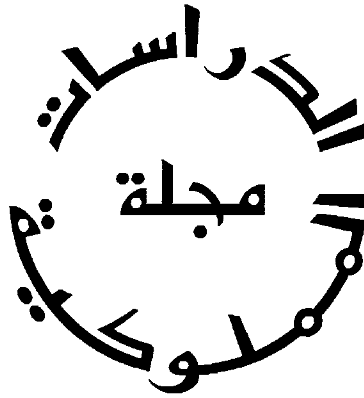
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is an annual journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. Microsoft Word for Mac is the preferred format, but other major software is acceptable (MacWrite, Word for DOS, Word for Windows, WordPerfect).



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/LibInfo/SourcesBySubject/MiddleEast/medoc.html. This site provides a link to the searchable Mamluk bibliography maintained by MEDOC and has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

ISSN 1086-170X.

The Use of Documents for the Study of Mamluk History*

I would like to thank Bruce Craig and the staff of the *Mamluk Studies Review*, the Mamluk Studies Workshop, and the Center for Middle Eastern Studies of the University of Chicago for inviting me to give the First Annual *Mamluk Studies Review* Lecture. Being first is always, of course, an honor which I embrace with gratitude but not without wondering, I must confess, why it has been conferred on me, and this puzzlement has led me to a bit of autobiographical retrospection and speculation which I am afraid will mark much of this lecture. In justification I can only say that when Bruce Craig first invited me he stressed the informality of the occasion; in a later conversation, however, he mentioned in passing that the talk would be published in the *Mamluk Studies Review*, and still later he asked, quite casually, whether I could deliver a final draft upon arrival in Chicago. This query led me to believe that the occasion would not be so informal after all. In any case, my remarks are going to be what might be characterized as semi-formal, partly autobiographical and, I hope, mildly amusing (as an anonymous student once damned me with faint praise in a course evaluation), and partly scientific. In this respect I should warn you that an English reviewer of my catalogue of the Ḥaram documents has characterized some of my work as ″nonsensical,″ while another, more charitable, has stated that my articles on the Ḥaram papers ″demonstrate, rather convincingly, that documentary studies need not necessarily be dull.″[1] These two criticisms need not necessarily be regarded as incompatible, of course, but while I shall certainly strive to be not necessarily dull, I shall also try to avoid the nonsensical. And if the editors of the *Review* insist on publishing my talk, I will trust fully their discretion to delete any comments they deem to be insufficiently serious for publication in a maiden scholarly journal.

Let me spend a few minutes, then, in discussing why and how I became first what might be called, to coin a term, a Mamlukist or a Mamlukologist, if you prefer, and later a Mamluk papyrologist. Not because this story is of any great significance, not enough at any rate to be included in either of the two recent books devoted to the careers of leading contemporary historians of the Middle East,[2] but because it may interest an audience largely composed of graduate students in Middle Eastern and Islamic history, who, if they are typical of my own generation of what used to be called Orientalists before that term was

*Delivered as the First Annual *Mamluk Studies Review* Lecture at the University of Chicago, January 19, 1996.

degraded and fell out of fashion, are both curious about the strange and wonderful professional and personal lives of their professors but also at times discouraged, disgruntled, and disillusioned by the occasionally dreary and relentless grind of the academic mills which produce Ph.D.´s in Middle Eastern and Islamic Studies. To you I bring from my own experience a message of hope.

Reminiscing about my own career has jolted me with the electrifying realization that I am probably the oldest surviving continuing practitioner of Mamluk studies in North America today. Older, certainly, than Stephen Humphreys, who will be next year´s lecturer, and his peers, Carl Petry and Jere Bacharach. Although I am younger than William Brinner, one of my early teachers, Brinner, after an auspicious start as editor and translator of a Mamluk historical manuscript,[3] apparently decided, as he announced in an unpublished paper given at the 1977 conference of the American Oriental Society in Toronto, that the Mamluks were gangsters, a veritable medieval Muslim Mafia, and presumably unworthy, therefore, of further attention. Ira Lapidus, somewhat younger than I, after a spectacular debut as a Mamlukist, also abandoned the field some years ago.[4] In any event, I suspect that my longevity as a North American Mamlukist accounts to a great extent for my being invited as inaugural lecturer today. But there is another reason to invoke Professor Brinner´s name in the context of my own career. After I left Berkeley, at Brinner´s suggestion, after a single year of study there, and moved to UCLA because it had a much larger staff in Middle Eastern Studies than Berkeley did, and a much broader range of seminars and courses, I had the good fortune of studying Arabic for a year with the late Professor Wilhelm Hoenerbach, to whom I once confided, on a social occasion, that I had not the remotest idea about a feasible topic for a doctoral dissertation. Given my academic background in English literature, with an M.A. thesis on Colley Cibber(!), it is not surprising that two years at Berkeley and UCLA were not sufficient to immerse me in the arcane field of Islamic Studies as presided over by the late Professor G. E. von Grunebaum in the early sixties. In fact, the only solid preparation I had had for this discipline was an intensive course in Arabic at the Army Language School in Monterey, California, where for a year, five days a week, six hours a day, I made endless small talk in Iraqi Arabic with six other GIs, one of whom was a WAC, which made it possible for us to practice using the second-person feminine verb forms. The only reason I studied Arabic rather than Chinese or Korean, two other options offered to me, was that in the aftermath of the Korean War I had no desire to make myself eligible for military service in the Far Eastern sector. Believe it or not, Iraq seemed to be a haven of peace and calm in those days, relatively speaking. Two more years in the military which I spent in the Washington area reading Arabic backwards in transliteration gave me a reasonable facility for coping with what is today called Modern Standard Arabic. All this, typically, was irrelevant to the advice that Hoenerbach gave me about selecting a dissertation topic. Since I was a Californian, he mused (actually I was a Tennessean, but never mind), why not join what he characterized as a California tradition in scholarship on Middle Eastern history, namely Mamluk studies? At this point he mentioned the names and work of William Popper, editor and translator of the chronicles of the famous fifteenth century Mamluk historian Ibn

Taghrībirdī;[5] Walter J. Fischel, also at Berkeley, author of several works on Ibn Khaldūn;[6] and Brinner, editor and translator of a fragmentary history of Mamluk Damascus.[7] Being ignorant, as I said, and desperate, I adopted Hoenerbach´s suggestion with alacrity, though it is clear in retrospect that neither he nor I really knew what this decision would entail. But before we leave him, it should be mentioned that although his primary field of interest, besides a secret passion for Arabic erotica, was the Arabic literature of al-Andalus, he was also an expert on Spanish-Islamic documents, and his *Spanisch-Islamische Urkunden aus der Zeit der Naṣriden und Moriscos*[8] (contemporaries of the Mamluks) is one of the great books on medieval Islamic documents. Unfortunately, Hoenerbach was not interested in imparting his knowledge of this exotic subject to his students, so that I had no instruction in Arabic diplomatic from him or from anyone else for that matter. Having chosen the Mamluks as my field of specialization, I was now forced to learn something about them through reading secondary scholarship in order to define a dissertation topic that would satisfy the exacting, but also tolerant, expectations of von Grunebaum and also the criteria for fellowships awarded by the American Research Center in Egypt, for I was determined to study and live in Cairo, the heart of both the Mamluk Sultanate and the contemporary Arab world. For reasons which I cannot recall, after falling under the spell of David Ayalon´s exquisite studies on Mamluk history and institutions,[9] I drafted a proposal on Mamluk relations with the Mongols which satisfied both von Grunebaum and ARCE, so that in October, 1962, I found myself in Cairo with a topic about which I had done very little preliminary research and with a command of Iraqi Arabic that Egyptians found hilarious but which unfortunately did not enable me to understand much of what they were saying to and about me. At this juncture I was helped by still another scholar, an old Cairo hand (in the sense that he had spent a few years in Cairo)—Professor George Scanlon. Scanlon helped me by lending me his copy of Hans Robert Roemer´s edition of volume 9 of Ibn al-Dawādārī´s universal chronicle, recently published by the German Archaeological Institute in Cairo, which was devoted to the reign of the great Mamluk sultan, al-Malik al-Nāṣir Muḥammad,[10] in whose reign Mamluk confrontations with the Mongols loomed large. But soon I realized that what really engaged my attention was not so much the topic itself (fascinating though it was and is—in fact, Reuven Amitai-Preiss recently published his dissertation on aspects of this topic)[11] as the historical sources in light of Roemer´s brief allusions to the relationship of Ibn al-Dawādārī´s work to other histories of al-Nāṣir´s reign. Here began a three-year comparative study of these sources, many of which existed only in manuscripts found in Cairo and European libraries. This fact, along with the

benevolence of the Center, enabled me to spend not just one year but three years in Cairo, broken only by a honeymoon in London, Paris, Berlin, and Istanbul, cities chosen not only for their romantic associations but as the repositories of Mamluk manuscripts.

To make this long story somewhat shorter, the result of my research was not a history of Mamluk-Mongol relations but a dissertation entitled ″An Analysis of Arabic Annalistic and Biographical Sources for the Reign of al-Malik al-Nāṣir Muḥammad ibn Qalā'ūn,″[12] in which I tried to straighten out the relationships among two dozen Mamluk histories one to the other and to determine the originality, if any, of each. Much to my surprise and delight, my nominal but benign supervisor von Grunebaum offered to recommend it for publication by the University of California Press. The Press, of course, submitted it to an external anonymous reader; this person, after a year of not reading it, finally did and delivered himself of the devastating verdict that my dissertation was utterly and completely worthless and that I should never have been encouraged or allowed to embark upon it. Needless to say, as a recent recipient of a Ph.D., I found this contemptuous judgment somewhat daunting, even though von Grunebaum hinted that it had been given by a political scientist at the University of Chicago who neither knew nor cared anything about the Mamluks. But the story grows curiouser and curiouser. By chance our Islamics librarian at McGill, Professor Michel Mazzaoui, happened soon thereafter to visit Professor Roemer at his Orientalisches Seminar in Freiburg, Germany, and told him about my work. As the editor of Ibn al-Dawādārī, Roemer was interested, especially, he declared, since he just happened to have a graduate student of his own, Ulrich Haarmann by name, who was writing a dissertation on virtually the same topic—the sources for the reign of al-Nāṣir—that I had recently completed. As all graduate students know, one of their worst nightmares besides comprehensive exams is that their supervisor will move or pass away before they complete their dissertations; another is that another graduate student, somewhere out there, is working on the same topic and will finish it first. I must confess that this latter *cauchemar* never haunted me, because I was serenely confident that no one else would ever embark on such an obscure scholarly quest. Whether Ulrich Haarmann lost any sleep I don′t know, but I do know that he, and Roemer, acted with utmost courtesy and generosity, for not only did Haarmann revise and adapt his research and dissertation in light of mine, but Roemer accepted it for publication in his ″Freiburger Islamstudien″ series. In this format, along with Haarmann′s published dissertation,[13] it was used extensively in several dissertations by students in Freiburg.[14] I am also proud, perversely, perhaps, that my book, or the first part of it, was translated and published, errors and all, into Arabic, without any acknowledgment to me, by an Egyptian scholar. This was not the only time this happened to me. But as the oldest surviving

[12]Submitted to the University of California at Los Angeles, 1966.

[13]Mine was published as *An Introduction to Mamluk Historiography* (Wiesbaden: Franz Steiner Verlag; Montreal: McGill-Queens University Press, 1970); Haarmann's as *Quellenstudien zur frühen Mamlukenzeit* (Freiburg: D. Robischon, 1969).

[14]E.g., Samira Kortantamer, *Ägypten und Syrien zwischen 1317 und 1341 in der Chronik des Mufaḍḍal b. Abī l-Faḍā'il* (Freiburg: Klaus Schwarz Verlag, 1973); Antranig Melkonian, *Die Jahre 1287-1291 in der Chronik al-Yūnīnīs* (Freiburg: Universitätsverlag Becksmann, 1975); Shah Morad Elham, *Kitbugā und Lāǧīn* (Freiburg: Klaus Schwarz Verlag 1977). For more recent work along the same lines, see Li Guo, ″The Middle Baḥrī Mamluks in Medieval Syrian Historiography: The Years 1297-1302 in the *Dhayl Mir'āt al-Zamān* Attributed to Quṭb al-Dīn Mūsā al-Yūnīnī: A Critical Edition with Introduction, Annotated Translation, and Source Criticism″ (Ph.D. diss., Yale University, 1994).

continuing practitioner of Mamluk studies in North America today, I can afford to be forbearing and admit that I am somewhat flattered by the close attention that two Arab scholars have given to my work.

In this autobiographical section of my lecture, it remains for me to explain how I was converted from a specialist in Mamluk chronicles and biographical dictionaries into a papyrologist, a term I use in the sense defined by Gladys Frantz-Murphy, known to some of you, I am sure, as a former associate at the University of Chicago. ″In its larger sense,″ she has written, ″papyrology is the use of documentary sources for the study of civilization. To limit the definition of Arabic papyrology by the medium on which documents are written would be to ignore the possibility of millennia-long historical investigation.″[15] In our context a papyrologist, then, is a student of documentary sources, or, more simply, documents, for the study of Mamluk history. As I have already intimated, Islamic documents were not expected to be in the province of graduate students′ knowledge at the universities of California in the early sixties. The one professor that knew anything about documents, Hoenerbach, kept his knowledge to himself while he was in California. Although S. D. Goitein′s monumental work based on the documents of the Cairo Geniza was published by the University of California Press, it did not begin to appear until 1967,[16] long after I had taken my Ph.D. comprehensive examinations. If I read the first volume of the venerable Nabia Abbott′s *Studies in Arabic Literary Papyri*,[17] I do not recall it. But I am sure that I considered Adolf Grohmann′s work on the Egyptian papyri as too abstruse and technical for my comprehensives reading list.[18] While it is true that the seminal articles of Bernard Lewis and Stanford Shaw on the Ottoman archives had begun to appear in the fifties, Ottoman studies were not within my purview.[19] The point is that as far as the training of Middle East historians is concerned in the sixties, and still to a great extent today, unless a student is an aspiring Ottomanist with a special interest in archival research, not much training is offered in how to use documents as historical sources.

So I became a papyrologist through happenstance. In 1976 a Ph.D. student of mine at McGill traveled from Cairo to Jerusalem in search of materials for a dissertation on the Mamluk sultan Qalāwūn. In Jerusalem she, Linda Northrup, became a friend of a young Palestinian woman who had been appointed director of the Islamic Museum within the walls of al-Ḥaram al-Sharīf, the sacred enclosure of al-Aqṣá Mosque and the Dome of the Rock; the director, Amal Abul-Hajj, had recently discovered hundreds of obviously old documents stuffed into a locked cabinet in the museum. By a cursory examination of the dates and names it was realized that these were documents from the period of Mamluk rule in Jerusalem, mainly from the late fourteenth century. Overwhelmed by the magnitude of the discovery, her lack of professional training in the preservation and restoration of

documents, and the need to classify and catalog them without recourse to Israeli scholars, Abul-Hajj was led to ask for assistance from various Western scholars. With pronounced reluctance I allowed myself to be convinced that it was my duty to lend a hand. With generous financial assistance from McGill University I headed a group of three from McGill to sort out, temporarily restore, and photograph some nine hundred documents. In highly unusual, even risky, perhaps foolhardy, circumstances, photographs were taken and sent to Montreal via New Hampshire. At this point the question arose as to what to do with them, since I was completely unable to decipher the cursive scripts and technical language in which they were written. Here I can offer some advice to those of you who aspire to teaching careers. When in doubt about your qualifications to teach a subject which may be assigned to you, teach it, preferably in the form of a seminar or a workshop with students who by sharing the labor can help to train you and each other. In my case this method worked very well, for at the end of four months, working with a group of four students, I had managed not only to survey the scholarly literature on Islamic diplomatic but to gain some facility in reading the scripts, classifying the documents, and assessing their significance as sources for the history of the Mamluks and their institutions.[20] This was seventeen years ago. I still regard myself to be in training as a papyrologist.

Now I would like to move, as promised, from the personal and anecdotal, to the objective and scientific part of my remarks. Here I would like, one, to bring to your attention the documentary resources which are so far available to students of the Mamluks; I emphasize *so far* because I am confident that more documents will be discovered and that those that have already been discovered and await a buyer will be bought and made available to scholars. Two, I will allude to some of the challenges and opportunities that using these sources poses to scholars. And, three, I shall briefly review the work of a few representative scholars who have used Mamluk documents to illuminate Mamluk history. Since my purpose is to encourage students to use documents in their own research, I shall try to avoid letting these observations degenerate into a list of the names of scholars, libraries, and archives.

First, the places in which documents can be found. These can be divided into two types, namely copies contained in literary sources, and originals that have been preserved and have turned up in various places. As far as literary sources are concerned, again there are two types: histories, be they chronicles or biographical dictionaries, and manuals, prepared either for chancery scribes or notaries. Several Mamluk historians liked to transcribe documents that were at their disposal into their histories. This should come as no surprise in the case of at least two of the biographers of the first great Mamluk sultans, Baybars and Qalāwūn, for Ibn ʻAbd al-Ẓāhir was both confidential secretary (*kātib al-sirr*) and chief of chancery (*ṣāḥib dīwān al-inshā'*) under these sultans, and his nephew, Shāfiʻ ibn ʻAlī, was his assistant in the chancery. Both, then, were professional drafters of documents, with ready access to them, especially those they had drafted themselves, and did not hesitate to lend authenticity and color to their biographies by including copies in their texts.[21] Several of these are diplomatic documents, treaties, for example, concluded

[20]This seminar was the basis of my article, ″The Significance of the Ḥaram Documents for the Study of Medieval Islamic History,″ *Der Islam* 57 (1980): 165-181; reprinted in my *History and Historiography of the Mamluks* (London: Variorum Reprints, 1986).

[21]See Little, ″The Fall of ʻAkkā in 690/1291: The Muslim Version,″ in *Studies in Islamic Civilization in Honour of Professor David Ayalon*, ed. M. Sharon (Jerusalem: Cana; Leiden: E. J. Brill, 1986), 162, 165-

with Crusaders; but there are also internal documents, such as *khuṭbah*s recited by the caliph on the occasion of Baybars′s investiture, or, more interesting from a historian′s point of view, memos drawn up by Qalāwūn advising his son, al-Ṣāliḥ, on how to conduct the affairs of state during his, the sultan′s, absence.[22] Khalīl ibn Aybak al-Ṣafadī, the author of two voluminous biographical dictionaries, was also employed in Mamluk chanceries, both in Egypt and in Syria, where he drafted or copied many documents that he inserted into biographies. Many of these are diplomas of appointment to offices in the Mamluk state, both administrative and military.[23] Baybars al-Manṣūrī, though not a bureaucrat but a high-ranking military officer, saw fit to enliven his chronicle, *Zubdat al-Fikrah*, with documents, mostly of a diplomatic nature.[24] The already-mentioned Ibn al-Dawādārī was the son of a minor Mamluk and probably did not have easy access to official documents, but this did not deter him from copying the copies contained in the works of his contemporaries, both Egyptians and Syrians, so that his *Kanz al-Durar* contains documents issued during the Mongols′ occupation of Damascus in 699/1299-1300 and a decree condemning those Muslims who espoused the beliefs of the famous Ḥanbalī jurisprudent, Ibn Taymīyah.[25] Later chroniclers, such as Ibn al-Furāt and al-ʿAynī, obviously deemed these documents to be sufficiently important to copy and incorporate into their texts adapted from earlier historians.[26]

Chancery manuals, most notably al-Qalqashandī′s fourteen-volume encyclopedia of essential and trivial knowledge for clerks employed by the vast Mamluk bureaucracy, contain dozens of copies of original documents to serve as models for employees of the chancery and other government offices. These samples of thirty different categories range from royal decrees and diplomas of appointment to peace treaties and safe conducts, official letters, and reports.[27] Although the exemplary documents that al-Qalqashandī transcribes are by no means limited to the Mamluk period, many, if not most, are derived from that era. But the very fact that al-Qalqashandī compares Mamluk chancery practice with that of the Fatimid and Ayyubid periods makes it possible to undertake comparative studies. Notarial manuals—*kutub al-shurūṭ*—constitute a related genre. Designed for the use of clerks associated with Islamic courts, these manuals are similar to the chancery handbooks in that they provide exemplars of many types of documents, legal and judicial in this case. But whereas al-Qalqashandī reproduces transcriptions, sometimes edited, of actual documents, the notarial manuals tend to shun real documents in favor of ideal models, forms, if you

like, of an astonishing variety, with names and dates omitted. These models are similar to the standard printed forms of leases and wills that one can buy in Quebec; they are couched in foolproof legal jargon, and one need only fill in the names, dates, and special conditions that apply. By far the most valuable Mamluk manual of this type is the work entitled *Jawāhir al-ʻUqūd wa-Muʻīn al-Quḍāh wa-al-Muwaqqiʻīn wa-al-Shuhūd* (Essential Contracts and Helper to Judges, Notaries, and Legal Witnesses) by Shams al-Dīn al-Suyūṭī, a notary who practiced in Egypt and Syria toward the end of the Mamluk period.[28] This work contains hundreds of models, ranging from marriage contracts, bills of divorce and sale to court records, proxies, and oaths.

Finally, just for fun, I should mention that documents show up in unlikely literary sources. In a hagiographical work devoted to the career of Ibn Taymīyah, the author, Ibn ʻAbd al-Hādī, has transcribed a poignant letter written by Ibn Taymīyah from Cairo to his mother in Damascus.[29] As trivial as this may sound—and the letter is mundane, of the ″Dear mom, I miss you and wish I could be at home with you, but important business keeps me here″ type, it is of considerable interest both to students of this intellectual giant of the Mamluk era and to students of medieval Islamic epistolary, few though we may be.

What are some of the challenges posed by these documents found in literary sources? Obviously, because of their random selection by historians and compilers they are no substitute for archives, by which I mean systematic collections of records kept more or less intact, which can be exploited for a consecutive span of time. Instead, the discontinuity and isolation of literary documents restrict the historian either to discrete events or to comparative studies. For example, if one happens to be interested in Mamluk-Mongol relations during the reign of Qalāwūn, one can find the texts of his diplomatic exchange with the Īlkhān Aḥmad Tegüder preserved in the manuscript of Baybars al-Manṣūrī′s *Zubdat al-Fikrah*, as yet unpublished but also in the published work of a later historian, Ibn Abī al-Faḍā'il, who obviously copied it from the former or an intermediary.[30] It has also been reprinted as an appendix to Ziyādah′s edition of al-Maqrīzī and was translated by Quatremère.[31] Moreover, since there are other specimens of Mamluk-Mongol correspondence preserved, one could make a comparative study of their diplomatic contacts over a given period of time. This would be tricky, of course, because historians would like to have a complete, or nearly complete, set of such documents, but complete records are exceptional for medieval Islamic history. Nevertheless, on a positive note, one of the main virtues of Mamluk literary documents is their accessibility. Many are available in published form and have accordingly been transcribed and sometimes translated, so that scholars need not take the trouble or waste time in obtaining microfilm copies, or traveling to distant libraries to study the original, or in struggling with difficult hand-written scripts. On the other hand, one must stress that in addition to being transcriptions of original documents, these are by definition editions of originals, in the sense that the historians have often

deliberately or inadvertently changed the texts. This we know from documents preserved in more than one literary source.

Be that as it may, the potential for the study of Mamluk foreign relations through documents is great, as reference to the section on "Foreign Relations" in your own *Mamluk Studies: A Bibliography* will show you.[32] As examples, I would mention only the recent works of two scholars, one senior and one junior. In his *Early Mamluk Diplomacy (1260-1290): Treaties of Baybars and Qalāwūn with Christian Rulers*,[33] Peter Holt has translated, annotated, and analyzed the texts of eleven Mamluk-Crusader treaties drawn from the literary sources discussed above, both histories and manuals. As Holt declares in the "Preface," these deserve study because

> [t]hey reveal some of the realities of the contacts between the medieval Muslim and Christian communities, particularly on that Syro-Palestinian border where the powerful realm of the early Mamluk sultans confronted the diminished Crusader states in the last decades of their existence. They show in detail how, even in this prolonged crisis, life went on with provision for merchants to go about their business by land and sea, and for local authorities to collaborate in the policing of the frontier. The treaties exemplify the sophisticated efficiency of the sultan's chancery—that was to be expected—but they also indicate a diplomatic procedure with respect for legality and precedent, sometimes, admittedly, practised with a degree of finesse.[34]

The junior, but very accomplished, scholar is Reuven Amitai-Preiss. He, like Holt, has also produced a detailed study of specific documents, in the form of an article entitled "An Exchange of Letters in Arabic between Abaɣa Īlkhān and Sultan Baybars" in which he analyzes correspondence already transcribed and translated by the Saudi scholar ʻAbd al-ʻAzīz al-Khuwayṭir.[35] But this article was probably a by-product of the research for his dissertation and book, *Mongols and Mamluks: The Mamluk-Īlkhānid War, 1260-1281*,[36] where this exchange and others are not studied independently but woven into the fabric of historical narrative based on the literary sources. In contrast to diplomatic documents related to foreign affairs that have received considerable, but by no means exhaustive, study, documents related to the internal workings of the Mamluk state have received little attention. Although certificates of appointment to various offices in the bureaucracies are not as exciting as correspondence between the superpowers of the medieval Muslim world, the former do afford opportunities for richer understanding of the workings of the Mamluk bureaucracy and state.

Original documents or remnants of archives are exceedingly important. These can be divided into two groups: documents preserved by non-Muslim institutions and those found in Muslim venues. Of the former the best known are those found in St. Catherine's

Monastery in Sinai, one of the earliest monasteries in the world. In 1950 much of the priceless manuscript collection of the monastery was photographed by an American-Egyptian team, including approximately 1100 scrolls written in Arabic.[37] Most of these date from the Ottoman period, but about two hundred can be attributed to the Mamluk era. They consist of royal decrees issued by Mamluk sultans to the monks of the monastery but also deeds of conveyance for properties belonging to it at one time or another. A similar collection is held by the Franciscan Monastery of Mt. Zion in Jerusalem. Here I must confess to my ignorance; I hope that one of you may rectify it by further study. There is a catalogue of 2644 Arabic and Turkish decrees and legal documents concerning the sanctuaries, properties, and rights of the *Custodia di Terra Franca* in Jerusalem, but I have not seen it.[38] In extenuation, however, I have seen and own a publication which is one of my favorite books because it has no title page, meaning that the author, title, date, and place of publication are not identified. It contains photographs, transcriptions, Italian translations of and commentaries on twenty-eight Mamluk decrees and court records from the Burjī period. This book is so obscure that it has not even found its way into the Mamluk Studies bibliography, so that if this lecture serves no other purpose it will add another entry to that estimable work. It is usually referred to as *Documenti e Firmani* by Noberto Risciani and Eutimio Castellani and was published in 1936 by the Press of the Franciscan Fathers in Jerusalem.[39] I am well aware that there are other scattered Mamluk documents from other non-Muslim institutions, including the Cairo Geniza, but I will mention only those of various Italian archives. Some of these, a handful, have been made available by none other than John Wansbrough. Now famous for his studies of the sources for early Islamic history, Wansbrough wrote his dissertation on ″Documents for the History of Commercial Relations between Egypt and Venice, 1442-1512.″[40] Obviously the main value of documents dealing with non-Muslims, as studied most notably by Hans Ernst in his 1960 published dissertation *Die mamlukischen Sultansurkunden des Sinaiklosters*,[41] Samuel Stern, and others,[42] is the information they provide on Mamluk policies toward Christian institutions such as the two monasteries in question and the Italian city-states studied by Wansbrough. Many of these documents are accessible either in published form, or, in the case of the St. Catherine′s papers, in microfilms available from the Library of Congress and other institutions. Most of these, it should be emphasized, have not yet been studied.

Documents emanating from Muslim institutions dealing with Muslim transactions and affairs are of great significance. These are the least accessible because most of them must be consulted either *in situ*, in Cairo or Jerusalem, or on microfilm if these can be obtained. In the case of the Ḥaram documents, copies are now available in Jerusalem at the Ḥaram Library, in Jordan at the University of Amman and the National Archives, in Canada at McGill and Toronto Universities, in Paris at the Bibliothèque Nationale, and, finally, I hope, now at the University of Chicago. I do not know whether complete microfilm copies of the Cairo Mamluk documents kept at the National Archives (Dār al-Wathā'iq al-Qawmīyah) and the Ministry of Pious Endowments (Wizārat al-Awqāf) are available or not. In any case, they consist of 888 documents, including many endowment deeds (*waqfīyāt*), bills of conveyance, and other legal deeds; these have been catalogued, and a few samples published by Muḥammad Muḥammad Amīn.[43] This collection has been studied and used by several scholars, both Arabs and Americans. Since many of the endowment deeds were drawn up for public buildings endowed by sultans and amirs, they have naturally been exploited by students of Islamic architecture. Two examples are Leonor Fernandes, whose published dissertation, *The Evolution of a Sufi Institution in Mamluk Egypt: The Khanqah*,[44] and several articles rely heavily on *waqfīyah*s, and the Lebanese scholar Saleh Lamei Mostafa, assisted by Felicitas Jaritz, has also used *waqfīyah*s for studies of the buildings of Sultan Barqūq and his son.[45] Carl Petry, in his recent work focusing on the reigns of Sultans Ghawrī and Qāytbāy, has used the same type of documents to supplement material in the narrative histories to reconstruct the fiscal policies of these two sultans and their appropriation of state properties into their personal trust reserves.[46] Jonathan Berkey's book, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education*,[47] also draws on the Cairo papers as primary sources for the development of educational institutions in Mamluk Cairo. But the fullest and most detailed exploitation by a historian of the Cairo records is Muḥammad Muḥammad Amīn's *al-Awqāf wa-al-Ḥayāh al-Ijtimā'īyah fī Miṣr*.[48] Because it is written in Arabic it has been used by only a few Western scholars, but it deserves the attention of every Islamic medievalist as a comprehensive, richly documented study of Mamluk cultural, religious, social, political, and economic life under the Mamluks, based on documents containing endowments established by Mamluk statesmen.

Finally, the Ḥaram documents. About the same in number as the Cairo documents, the Jerusalem papers are very different in character, being, I believe, remnants from the

archives of a late fourteenth century Shāfiʿī judge. As such, they constitute a variegated sampling of judicial and notarial documents, including court records, marriage contracts, wills, and financial records of various kinds. By far the most numerous type is estate, or probate, inventories. There are lists of the possessions of persons already dead or on the verge of dying in Jerusalem, compiled by representatives of the Shāfiʿī court in order to insure that those entitled to a share of an estate, including the government, would indeed get it. These four hundred-plus inventories have been studied extensively by my student, Huda Lutfi, for her dissertation and book: *al-Quds al-Mamlukiyya: A History of Mamluk Jerusalem Based on the Ḥaram Documents*.[49] In this book, using these very limited sources, Lutfi was able to synthesize a wealth of data relating to the administration and organization of Jerusalem under the Mamluks not available in narrative sources, as well as plentiful detail about the economy of the city and the material and social life of its inhabitants. In my own publications I have treated specific problems that can be illuminated by the documents, specifically domestic slavery, intercommunal relations between Muslims, Christians, and Jews, relations between Jerusalem and Cairo, and, most recently, the highly organized but extremely complex manner in which the courts intervened in the settlement of estates in a provincial town in the Mamluk Empire.[50] But the main focus of my inquiries has been the relationship of these documents to the manuals of Islamic law, the *shurūṭ* models formulated by jurisprudents. Whether *fiqh* is a strictly isolated, theoretical enterprise, divorced from the practice of Islamic law, has been a question which has long exercised Orientalists, and the comparison of real documents with the models, I believe, affords us the opportunity to compare theory and practice on an empirical basis.

But here I will stop, almost, for I do want to conclude by mentioning some of the challenges and opportunities raised by Mamluk documents of both literary and archival provenance. As far as challenges are concerned, one must cultivate something which Professor Roemer told me was indispensable for papyrologists. One need not be very intelligent, he said, as long as one has *Sitzleder*, a term you might not find in dictionaries, because it's slightly rude, meaning a rear end calloused into leather by years of sitting in an attempt to decipher the scrawls in Arabic penned by notaries, to translate the legal jargon imposed by the jurisprudents or chancery officials, and to interpret it in accordance with the historical context in which the documents were written and the legal procedures that prevailed. In other words, documents are extremely difficult to use, especially those that have not yet been edited, and this includes most. The first opportunity that they afford to young scholars is to edit and publish some of them and to analyze them as documents, in order to make the task of interpreting them easier for other scholars. A related task is to compare those of the Mamluk era with those of preceding and succeeding periods. Despite recent advances, the study of Muslim diplomatic is still in a rudimentary stage and needs many scholars in search not so much of material rewards as of an intellectual adventure of finding, understanding, and publishing documents. But if this demanding task lacks appeal for you, the Mamluk documents also constitute a rich and indispensable ancillary source for historians who rely on narrative and biographical materials. Here I will leave the last word

to next year′s lecturer, Steve Humphreys, in his exemplary book, *Islamic History: A Framework for Inquiry*:

> In medieval Islamic history we are poor in archives but rich in documents. For the most part we have only begun to identify and study these, let alone integrate them into the main stream of historical research, which still depends overwhelmingly on narrative and literary sources. But documentary materials are quickly moving from the periphery to the center of historical thinking in the Islamic field, and a serious historian can no longer avoid the hard job of learning how to use them effectively.[51]

Mamluk Historiographic Studies: The State of the Art

The past decade has seen an uneven development in Mamluk historiographic studies. On the one hand, a considerable number of important Mamluk sources—chronicles, biographical dictionaries, geographical and administrative encyclopedias as well as treatises on historical theory—have been edited and thus added to our growing Mamluk library. On the other, we continue to witness a dearth of articles, and even fewer monographs, devoted to Mamluk historians and their writings;[1] not since the pioneering works of Jean Sauvaget, Claude Cahen, Donald Little, and Ulrich Haarmann have we seen any ground-breaking study of the historical thought and writing of this extraordinary era, which is commonly believed to have been one of the most prolific in Islamic history for its output of historical and archival documentation. This review thus offers a welcome opportunity not only for stock-taking, but also for sharing thoughts with interested colleagues. My comments are informed by my research on al-Yūnīnī (d. 1326) and a concomitant process of contemplating what has been achieved and what has not, in my own work and in the field at large. Among the various issues, I find three especially important: the editing of Mamluk sources, the study of the biographies of Mamluk historians, and the study of the development of genres and forms in Mamluk historical texts.

I

In his introduction to *The Middle East in the Middle Ages: The Early Mamluk Sultanate, 1250-1382*, Robert Irwin warned us that ″until the publication of all the best sources (among them, al-ʻAyni, the remaining volumes of al-Safadi, al-Dhahabi′s history, al-Nuwayri′s encyclopedia, the rest of al-Yunini, etc.) any history of the period will be premature.″[2] Less than a decade later, remarkable progress has been made in editing and publishing all the above-mentioned primary sources, thanks to the efforts of Mamluk scholars, Western and Middle Eastern alike.

The relevant part of al-ʻAynī′s (d. 1451) massive *ʻIqd al-Jumān fī Taʼrīkh Ahl al-Zamān*, which ranges over the years 648/1250-707/1307 was edited by Muḥammad Muḥammad Amīn and published in four volumes (Cairo, 1987-89). This portion of the

[1]Of course, this is not to ignore the fact that discussions of the sources and related historiographic issues are to be found in introductory essays, or appendices, of some monographs that deal with the Mamluk period; e.g., Carl Petry, *Twilight of Majesty: The Reigns of the Mamlūk Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī in Egypt* (Seattle: University of Washington Press, 1993), 3-14; Nasser Rabbat, *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture* (Leiden: E. J. Brill, 1995), 305-309.

[2](Carbondale: Southern Illinois University Press, 1986), no page number.

text, which contains much original material for the Baḥrī period, is commonly regarded as the most significant segment of the entire work.[3] The facsimile version of al-Ṣafadī's (d. 1363) *A'yān al-'Aṣr wa-A'wān al-Naṣr*, edited by Fuat Sezgin (Frankfurt am Main, 1990), has so far reached its third volume, which touches upon persons who lived in the early Mamluk period. The remainder, hopefully with an index, is eagerly awaited. Also awaited is the rest of al-Ṣafadī's other biographical dictionary *al-Wāfī bi-al-Wafayāt*, volumes 23 and 24 of which have been published during the past decade (Leipzig, 1931-<1993>). Although we do not expect the parts that deal with the Mamluk period from al-Dhahabī's (d. 1348) *Ta'rīkh al-Islām* to come out soon, many of his biographical works on learned persons who flourished during the seventh/thirteenth and eighth/fourteenth centuries have been published. Many of these are short works abridged from the relevant parts of the larger *Ta'rīkh al-Islām*.[4] The project of editing al-Nuwayrī's (d. 1333) *Nihāyat al-Arab fī Funūn al-Adab*, long in progress, has finally reached the Mamluk era with the publication of volumes 29-31, edited by Muḥammad Ḍiyā' al-Dīn al-Rīs, Muḥammad 'Abd al-Hādī Shu'ayrah, and al-Bāz al-'Arīnī, respectively (Cairo, 1990-92); these constitute the last part of the fifth *fann*, namely, the "craft" of historiography, of this monumental encyclopedia,[5] covering events of the years from the later Ayyubids through 700/1300, i.e., the middle Baḥrī period. And after a long pause following the publication of the first four volumes of the Hyderabad edition, the later part of al-Yūnīnī's *Dhayl Mir'āt al-Zamān*, which contains a wealth of information on Mamluk Syria not found in any other source, has been analyzed and edited in two Ph.D. dissertations, by Antranig Melkonian (Freiburg, 1975), covering the years 687/1287-690/1291, and Li Guo (Yale, 1994), covering the years 697/1297-701/1302. The completion of the remaining ten-year portion (702-711) is being planned by the latter as well.

Of the major sources that deal with the Baḥrī period, Baybars al-Manṣūrī's (d. 1325) *Mukhtār al-Akhbār: Tārīkh al-Dawlah al-Ayyūbīyah wa-Dawlat al-Mamālīk al-Baḥrīyah ḥattá Sanat 702 al-Hijrīyah* (Cairo, 1993)[6] and his *Kitāb al-Tuḥfah al-Mulūkīyah*

[3]See Donald Little, *An Introduction to Mamluk Historiography* (Wiesbaden: Franz Steiner Verlag, 1970), 80-87. There is also a second "edition" of al-'Aynī's *'Iqd al-Jumān* by 'Abd al-Razzāq al-Ṭanṭāwī al-Qarmūṭ, professor in the Asyut branch of al-Azhar. The two volumes cover the years 815-850/1412-1447 (Cairo: Maṭba'at 'Alā', 1985; al-Zahrā' lil-I'lām al-'Arabī, 1989). This edition is not on the same level of scholarship as Amīn's work.

[4]For example: *al-I'lām bi-Wafayāt al-A'lām*, ed. Riyāḍ Murād et al. (Beirut: Dār al-Fikr al-Mu'āṣir, 1991); *Tahdhīb Siyar A'lām al-Nubalā'*, ed. Shu'ayb al-'Arna'ūṭ (Beirut: Mu'assasat al-Risālah, 1991); *al-Kāshif fī Ma'rifat man lahu Riwāyah*, ed. Muḥammad 'Awwāmah et al. (Jiddah: Dār al-Qiblah lil-Thaqāfah al-Islāmīyah, 1992); *Mu'jam Muḥaddithī al-Dhahabī*, ed. Rawḥīyah al-Suyūfī (Beirut: Dār al-Kutub al-'Ilmīyah, 1993); *Mu'jam Shuyūkh al-Dhahabī*, ed. Rawḥīyah al-Suyūfī (Beirut: Dār al-Kutub al-'Ilmīyah, 1990); *Mu'jam al-Mukhtaṣṣ bi-al-Muḥaddithīn* (al-Ṭā'if, 1988); *Taqrīb Tarājim Tārīkh Baghdād ma'a Dhaylayhi wa-Istifādāt al-Dimyāṭī*, ed. Sāmī Dallāl (Cairo: Dār al-I'lām al-Duwalī, 1992); *Nuzhat al-Fuḍalā': Tahdhīb Siyar A'lām al-Nubalā'*, ed. Muḥammad Mūsá (Jiddah: Dār al-Andalus al-Khaḍrā', 1995); *al-Mu'īn fī Ṭabaqāt al-Muḥaddithīn*, ed. Muḥammad 'Azab (Cairo: Dār al-Ṣaḥwah, 1987); *al-Dīnār min Ḥadīth al-Mashāyikh al-Kibār*, ed. Majdī Ibrāhīm (Cairo: Maktabat al-Qur'ān, 1988); *Dhāt al-Niqāb fī al-Alqāb*, ed. Muḥammad al-Māliḥ (Damascus: Dār Ibn Kathīr, 1993).

[5]For an analysis of al-Nuwayrī's five *fann*s and the structure of the work, see 'Abd al-Ḥalīm al-Nadawī, *Manhaj al-Nuwayrī fī Kitābihi Nihāyat al-Arab fī Funūn al-Adab* (Damascus: Dār al-Fikr, 1987), esp. 92-97; also Mounira Chapoutot-Remadi, "al-Nuwayrī," *The Encyclopaedia of Islam*, 2nd ed., 8:156-160.

[6]For the manuscript survey, see the editor's "Un nouveau manuscrit attribué à Baybars al-Manṣūrī: Mukhtār al-Akhbār," *Studia Islamica* 67 (1988): 151-153. For a review of the edition by P. M. Holt, see *Bulletin*

fī al-Dawlah al-Turkīyah: Tārīkh Dawlat al-Mamālīk al-Baḥrīyah fī al-Fatrah min 648-711 Hijrīyah (Cairo, 1987), both edited by ʻAbd al-Ḥamīd Ṣāliḥ Ḥamdān, are now available. In his introduction to the latter, the editor, echoing Little′s and Eliyahu Ashtor′s opinions, challenges Cahen′s speculation that the *Tuḥfah* is an abridged version of the same author′s *Zubdat al-Fikrah fī Ta'rīkh al-Hijrah* by stating that it is in fact another original work on the reign of the Sultan al-Nāṣir Muḥammad ibn Qalāwūn, for it contains many details that are not found in the *Zubdah* and also extends three years beyond the *Zubdah*, reaching 711.[7] Another interesting Mamluk text now being published is al-Dhahabī′s epitome of al-Jazarī′s (d. 1338) acclaimed chronicle, edited by Khaḍir al-Munshadāwī.[8] Of al-Jazarī′s original chronicle, the parts that cover the Baḥrī period after 698 are lost today and have only survived in detail in al-Yūnīnī′s *Dhayl Mir'āt al-Zamān* and in al-Dhahabī′s extremely short epitome. The publication of both versions provides a basis for further inquiry into the textual relationship between al-Jazarī, al-Yūnīnī, al-Dhahabī, and other contemporary Syrian historians. In addition, a partial edition and translation of the years 694-696 from al-Jazarī′s chronicle is found in Numan Jubran′s 1987 Freiburg dissertation.[9] A less well-known Syrian chronicle, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh*, by Ibn Ḥabīb al-Ḥalabī (d. 1377), which, as the title suggests, deals exclusively with the dynasty founded by al-Manṣūr Qalāwūn, has also been brought to scholarly attention: volume 1 was published in 1976, followed by volume 2, which covers the years 709/1309-741/1340, namely the reign of the Sultan al-Nāṣir Muḥammad ibn Qalāwūn (Cairo, 1976-in progress). The thinness of the original text, which has already been noticed by modern scholars,[10] is compensated for to a certain extent by appendices containing the *waqfīyah* documents and other related material on which the editor of the volume, Muḥammad Muḥammad Amīn, has done substantial research.[11]

A major event in editing early Mamluk sources during the past decade or so is the publication, in several editions, of Ibn Faḍl Allāh al-ʻUmarī′s (d. 1349) historical, geographical, and administrative encyclopedia *Masālik al-Abṣār fī Mamālik al-Amṣār*.[12] Among them the facsimile edition, in twenty-seven volumes, under the general editorship of Fuat Sezgin, is by far the most complete (Frankfurt am Main, 1988). Based on the major manuscripts preserved in libraries all over the world, the edition makes this fascinating, lengthy work handily available. However, since the parts that deal with biographies are now of secondary importance because most of the original sources from which al-ʻUmarī drew his material have been published in recent years,[13] one might

[12]The most recent study of the work is Shemuel Tamari′s *Topological Studies in the Masālik al-Abṣār fī Mamālik al-Amṣār of Ibn Faḍl Allāh al-ʻUmarī* (Rome: Accademia Nazionale dei Lincei, 1989).

[13]For the sources of the *Masālik*, see Dorothea Krawulsky′s discussion of the manuscripts of the *Masālik*

question the wisdom of publishing the whole work instead of concentrating on the most valuable portions of it, namely, the volumes that deal with geographical and administrative issues. In addition, given the enormous size and complex structure of the work, I find this edition extremely difficult to use inasmuch as it, like the other facsimile editions in the same Frankfurt series, lacks any kind of textual criticism or indices, except for a brief introduction. One can only hope that an accompanying volume of indices will come along. In this regard, Mamluk scholars might find Dorothea Krawulsky′s partial critical edition of the work a very relevant and useful reference (Beirut, 1986). As the subtitle *Dawlat al-Mamālīk al-Ūlá* (by the editor?) indicates, Krawulsky′s edition contains the sixth *bāb* of the work, that is, the portion that deals with geographical and administrative matters in Egypt, Syria, and the Hijaz during the early Mamluk period. This edition has many merits: a detailed introduction, translated from the German into elegant Arabic by Riḍwān al-Sayyid, is followed by a critically edited text, in the real sense of the term, with a meticulously supplied philological apparatus as well as parallel references. There are not only indices of manuscripts, sources, proper names, places, Mamluk administrative and military terms, and other technical terms, but also a much-needed index of Arabic terms for plants, animals, minerals, etc., occurring in the text. Partial editions of special interest are also found in M. Aḥmad′s edition of the eighth through fourteenth *bāb*s, the parts that touch upon North Africa and the Sahara, with annotations and maps (Casablanca, 1988). Worth mentioning also is the much earlier historical-topographical encyclopedia *al-A'lāq al-Khaṭīrah fī Dhikr Umarā' al-Shām wa-al-Jazīrah*, by Ibn Shaddād (d. 1285). The publication of the first part, edited by Yaḥyá 'Abbārah (Damascus, 1991), in two volumes[14] has not only brought this long overdue project to its completion, but also has finally fulfilled Sauvaget and Zayyāt′s aborted editing plan, adding a fuller version to Dominique Sourdel′s previous partial edition (Damascus, 1953).

The later Mamluk sources, namely those major chronicles and biographical works produced during the Burjī period, the latter being the hallmark of the achievements attained by Mamluk historians,[15] have long been available to modern students. The last decade, however, has seen the continuation of major projects, such as the editing of the rest of Ibn Taghrībirdī′s *al-Manhal al-Ṣāfī wa-al-Mustawfá ba'da al-Wāfī*, by Muḥammad Muḥammad Amīn (Cairo, 1984-<1993>), which has so far reached the letter *'ayn* (volume 7, 1993). Some less-known works have been edited as well. Among these, al-Maqrīzī′s *Kitāb al-Muqaffá al-Kabīr*, edited by Muḥammad al-Ya'lāwī in eight volumes (Beirut, 1987-91), might warrant special attention inasmuch as it contains entries for religious, political, and military figures in Ifrīqiyā and the Maghrib as well as the Islamic East, ranging from the establishment of the Fatimid dynasty in Ifrīqiyā in the fourth/tenth century to the end of the eighth/fourteenth century; a host of Egyptian Mamluk amirs′ biographies, which are not found in other works of its kind, are particularly valuable. Ibn Taghrībirdī′s

in *Dirāsāt* (Series A: The Humanities, University of Jordan) 17, no. 2 (1990): 169-185.

[14]Part 1 of the work focuses on Aleppo. Part 2 (two volumes, ed. Sāmī al-Dahhān) on Damascus (vol. 1) and Lebanon, Jordan, and Palestine (vol. 2), and part 3 (two volumes) on the al-Jazīrah and Mosul, were published in 1956 and 1978 respectively.

[15]For the most recent treatment of the Mamluk biographical dictionaries, see Tarif Khalidi, *Arabic Historical Thought in the Classical Period* (Cambridge: Cambridge University Press, 1994), 17, 204-210; Wadād al-Qāḍī, ″Biographical Dictionaries: Inner Structure and Cultural Significance,″ in *The Book in the Islamic World*, ed. George N. Atiyeh (Albany: State University of New York Press, 1995), 93-122.

Ḥawādith al-Duhūr fī Maḍá al-Ayyām wa-al-Shuhūr has also been edited in two ongoing projects, both covering the years 845-860, one by Muḥammad Kamāl al-Dīn ʻIzz al-Dīn (Beirut, 1990-in progress) and another by Fahīm Muḥammad Shaltūt (Cairo, 1990-in progress). Ibn Ḥajar al-ʻAsqalānī's *Dhayl al-Durar al-Kāminah*, edited by ʻAdnān Darwīsh (Cairo, 1992), is a continuation of the same author's biographical dictionary *al-Durar al-Kāminah fī Aʻyān al-Mi'ah al-Thāminah.* The significance of this continuation lies in its coverage of the persons who lived in the first three decades of the ninth/fifteenth century (801-832), a time during which the author himself was at the peak of his intellectual maturity and judgment. The edition is based on a manuscript originally from the Taymūrīyah collection, on the margins of which Ibn Qāḍī Shuhbah's (d. 1448) autograph notes are found. A prominent historian in his own right, Ibn Qāḍī Shuhbah is known for his chronicle in which he continued the works of his Syrian predecessors, al-Birzālī (d. 1339), al-Dhahabī, Ibn Kathīr (d. 1373), and others, reaching the early ninth/fifteenth century.[16] After a long delay since the publication of the first volume (covering 781/1379-800/1397), ably edited by ʻAdnān Darwīsh (Damascus, 1977), volumes 2 and 3 (covering 741/1340-780/1378) of *Ta'rīkh Ibn Qāḍī Shuhbah* were finally published in 1994 in Damascus. The edition is lavishly produced: the introductions, in both Arabic and French, give a detailed description of the manuscripts as well as insightful analysis of the content and form of the work; moreover, each volume is supplied with an analytical summary. The Arabic text is generously vocalized and followed by various helpful indexes.

Apart from the mainstream Mamluk chronicles and biographical works, some minor biographical works, local histories, and works on numismatics have been made available to scholars. Of the former, one is Ibn al-ʻIrāqī's (d. 1423) *al-Dhayl ʻalá al-ʻIbar fī Khabar man Ghabara*, edited by Ṣāliḥ Mahdī ʻAbbās (Beirut, 1989). A supplement to al-Dhahabī's biographical dictionary *al-ʻIbar*, it contains entries for those who lived and died during 762-786, the late Baḥrī era. For those interested in the history of the Druze community under the Ayyubids and Mamluks and its interaction with the rest of Muslim society at large, the two publications of Ibn Asbāṭ's (d. 1520) *Ṣidq al-Akhbār* form a welcome contribution to a field for which there are limited written sources. A partial edition focusing on the later Mamluk era was edited by Nā'ilah Qā'idbayh under the title *Ta'rīkh al-Durūz fī Ākhir ʻAhd al-Mamālīk* (Beirut, 1989). The complete text of the *Ṣidq al-Akhbār* was recently published in two volumes, covering the events of 526-700 and 701-926, by ʻUmar Tadmurī (Tripoli, Lebanon, 1993). Al-Maqrīzī's famous *Shudhūr al-ʻUqūd fī Dhikr al-Nuqūd* has been revisited in a new edition by Muḥammad ʻUthmān (Cairo, 1990). It is based on two manuscripts, one having been recently discovered in King Saud University and the other an autograph from Leiden.[17] This new edition was aimed, as the editor states, at correcting some errors made by previous studies, from partial editions and translations by Tychsen (1797), de Sacy (1905), Mayer (1933), and Father al-Karmili (1939), to Ra'fat al-Nabarāwī's 1988 edition.[18] The part that concerns us here is chapter 3 of the treatise, which is devoted to Mamluk Egyptian numismatics.[19]

[19]See pp. 132-154 of the edition.

The Mamluk era is also distinguished by having produced a core of literature, so to speak, on historical thought and theory, a genre that set the stage for the later development of Muslim historiography in general.[20] The major representative treatises of this genre have been analyzed in Franz Rosenthal′s *A History of Muslim Historiography*, and it is therefore very intriguing to see a new edition of al-Kāfiyajī′s (d. 1474) *al-Mukhtaṣar fī ʻIlm al-Ta'rīkh*, published recently by Muḥammad Kamāl al-Dīn ʻIzz al-Dīn (Beirut, 1990).[21] To justify the necessity of this new edition, the editor claims that Rosenthal′s edition contains ″numerous errors and omissions (*kathīrat al-taḥrīf wa-al-ḥadhf*)″ (p. 32). Nevertheless, after a careful collation of Rosenthal′s edition with ʻIzz al-Dīn′s corrections, I find *all* the alleged ″omissions″ are in fact right there in Rosenthal′s edition.[22] The bizarre fact is that ʻIzz al-Dīn himself has evidently not even seen Rosenthal′s original work, but only an *Arabic translation* of it.[23] Whether the so-called ″omissions″ are from this translation or simply ʻIzz al-Dīn′s ineptness is beyond me. In any case, my collation reveals that it is this new edition that contains numerous errors, some of which are critical.[24] Although ʻIzz al-Dīn has also argued that there are three cases in which the prose in Rosenthal′s edition might be verse,[25] this assertion is itself questionable for, to my knowledge, it is not an infrequent practice in Mamluk historical writing for rhymed prose to be used in a narrative context.[26] And after all, this alone does not justify the need for a new edition, one that is, oddly enough, based on the same manuscript, namely MS Dār al-Kutub 528 *ta'rīkh*. In addition, the arbitrary and inconsistent punctuation and paragraphing applied in this ″new″ edition has contributed to numerous misreadings.[27] This edition itself might not merit much attention; however, it does raise some questions regarding the general methodologies and

[20]The most exhaustive treatment of the role that Mamluk historians played in shaping the landscape of medieval Arabic-Islamic historiography is still Franz Rosenthal′s *A History of Muslim Historiography*, 2nd ed. (Leiden: E. J. Brill, 1968); for a recent discussion, see Khalidi, *Historical Thought*, chapter 5, ″History and *siyasa*.″

[21]*Historiography*, 245-262 (translation) and 547-580 (edition).

[22]E.g., the cases cited by ʻIzz al-Dīn in his introduction to the edition, pp. 32, 33 vs. Rosenthal′s edition, pp. 552, 555, 557, 568, respectively.

[23]Quoted in the introduction as a Baghdad, 1963 edition, but in the bibliography as a Beirut, 1983 second edition.

[24]E.g., the reading of *sittah* (i.e., *six* eras; Rosenthal edition, 553) as *sanah* (ʻIzz al-Dīn edition, 65); *al-tazawwuj* (i.e., Iblīs′s offspring were conceived through his *intercourse* with his own eggs; Rosenthal, 565) as *al-burūj* (ʻIzz al-Dīn, 90); the phrase *mā alladhī* (Rosenthal, 565) as *maladhī* (ʻIzz al-Dīn, 90), just to name a few.

[25]The introduction, pp. 33-34.

[26]For example, al-Yūnīnī wrote the entire preface of his *Dhayl Mir'āt al-Zamān* in rhymed couplets, but this does not mean that they ought to be read as verses; see *Dhayl Mir'āt al-Zamān*, vol. 1 (Hyderabad, 1954), 2.

[27]For instance, in the above-mentioned example (Rosenthal, 553, line 4 vs. ʻIzz al-Dīn, 65, line 2), the original text of: *iʻlam anna al-tawārīkh al-mashhūrah fī zamāninā sittah ta'rīkh al-Hijrah wa-al-Rūm wa-al-Furs wa-al-Mālikī wa-al-Yahūd wa-al-Turk* (there are six eras which are widely used in our time and they are. . . .) is clearly understood from Rosenthal's edition without the need of any punctuation. However, it appears in ʻIzz al-Dīn's version as: *iʻlam anna al-tawārīkh al-mashhūrah fī zamāninā: sanat ta'rīkh al-Hijrah, wa-al-Rūm, wa-al-Furs, wa-al-Mālikī, wa-al-Yahūd, wa-al-Turk. . .* ; that is, all mixed up. One will also find such punctuation absurd: *ka-Ādam—ʻalayhi al-salām mathalan—yaḥṣulu lahu—ḥīna'idhin—ʻindahu* . . . (75), *Ādam—ʻalayhi al-ṣalāh* . . . *—khalaqahu Allāh—taʻālá—min turāb* . . . (82), *ʻasharat qurūn—ʻalá mā qālū—wa-Allāh—taʻālá—arsalahu* . . . (99). In addition, the paragraphing is often questionable.

approaches in our study and editing of Mamluk manuscripts. Two age-old questions are in order here: *what* to publish and *how*?

In concluding this survey of recently-published Mamluk sources, one quickly realizes that despite some exemplary work, the issues raised by Cahen some thirty years ago[28] are still with us. The ″historical method and spirit″ advocated by Cahen in dealing with Arabic manuscripts has still, in Cahen′s words, ″very seldom been followed.″ The Mamluk sources under review are no exception. A case in point is the two editions of Ibn Taghrībirdī′s *Ḥawādith al-Duhūr* mentioned above. Published at approximately the same time, both editions took MS Aya Sofya 3185 as their basis and consulted other available manuscripts, such as MS Taymūrīyah 2404, which is a copy of a Vatican manuscript. However, the most important manuscript of the work, Berlin 9462, copied by al-Sakhāwī (d. 1497), was not used in the preparation of the two separately executed editions. The loss is obvious. The situation is no better in the 1987 Cairo edition of al-ʻAynī′s *ʻIqd al-Jumān*. Of the major extant manuscript sets, only one, MS Cairo Dār al-Kutub 1584 *ta'rīkh*, was consulted. The Cairo manuscript is, as a matter of fact, a copy of an Istanbul manuscript set, although this information is not provided by the editor.[29] Instead of original manuscript research, a common and, of course, much handier practice seems to be to publish any manuscript (or other forms of the text, such as microfilms or photocopies) available in a major library, say, Cairo′s Dār al-Kutub or Maʻhad al-Makhṭūṭāt, without appropriate textual collation and source criticism. For instance, Ibn Iyās′s (d. 1524) geographical and administrative dictionary *Nuzhat al-Umam fī al-ʻAjā'ib wa-al-Ḥikam*, edited by Muḥammad ʻAzab (Cairo, 1995), is, as the editor tells us, based on a single copy of an ″Aya Sofya manuscript″ (namely Aya Sofya 3500;[30] and, again, no other information is given) that happened to come to his attention.[31] The entire edition is virtually devoid of any textual criticism; there are no indexes or aids of any kind, except for a general chronology of Islamic dynasties. And after all, since the work itself does not furnish much original material other than quotations from some well-known sources of the *khiṭaṭ* (historical topography) genre, one might question the desirability of publishing a work of such minor importance, even if it is of some interest,[32] before a thorough source-critical study. The same could be said about Muḥammad Kamāl al-Dīn ʻIzz al-Dīn′s edition of ʻAbd al-Bāsiṭ ibn Khalīl al-Malaṭī′s (d. 1514) *Nuzhat al-Asāṭīn fī-man Waliya Miṣr min al-Salāṭīn* (Cairo, 1987), a short biographical dictionary of the Ayyubid and Mamluk sultans who ruled Egypt. Although the edition is nicely produced, the original work itself is of virtually no importance, consisting of entries that comprise nothing more than the birth and death dates and ruling years of the sultans. One cannot help but wonder why a work of such little importance was published in the first place, while the same author′s very important chronicle, *al-Rawḍ al-Bāsim fī Ḥawādith al-ʻUmr wa-al-Tarājim*, is still unedited.[33]

[32]A short note about this particular work is found in Petry, *Twilight*, 50 n. 69.
[33]For the importance of this work, see the discussion of the sources in Petry, *Twilight*, 8-9.

This kind of rush to publish is also seen in some work done in the West. One instance is Melkonian's edition of al-Yūnīnī's *Dhayl Mir'āt al-Zamān*,[34] which not only lacks a basic survey of the manuscript traditions, but also ignores secondary literature. As a result, it is based on a single manuscript (MS Istanbul Ahmet III, 2907/e), without consulting other extant manuscripts (e.g., MS Yale Landberg 139, which is quite different from the Istanbul version). Given the fact that the first four volumes of the *Dhayl Mir'āt al-Zamān*, published in Hyderabad (1954-1962), already constitute a "bad" edition, in Cahen's assessment,[35] it is rather sad to admit that we may, realistically speaking, never have the opportunity to re-do it properly. Once a work has been published, it is, in most cases in the Islamic field, considered as "done," whether it is a good edition or not. Economic constraints and academic trends have already made publishers shy away from publishing works of a "philological" nature. We cannot afford to waste very limited resources, as Cahen lamented thirty years ago, "preparing unsatisfactory editions"[36] before all the best manuscripts have been consulted and thoroughly analyzed!

In addition to the question of analyzing manuscripts, the technical aspects of presentation should also be taken into consideration. Of course, editing practices vary from one scholar to another, and there is no such thing as a standard formula when it comes to editing medieval texts.[37] What concerns us most here is to take a close look at the problems existing in our common practice: the way to present variant readings, the making of a critical apparatus, indices, punctuation, paragraphing, orthography, and so forth. In practice, I find two extremes which compel discussion. One of these might be characterized as "free editing," which is represented by 'Izz al-Dīn's new edition of al-Kāfiyajī's *al-Mukhtaṣar* discussed above, and the other is the traditional Orientalist method applied in Gunhild Graf's edition of Ibn al-Dawādārī's minor chronicle *Durar al-Tījān*.[38] Since the contents as well as the historical and historiographic aspects of Graf's work have been discussed at length by others,[39] I shall limit myself here to the technical aspects of manuscript editing.

One of the features of Graf's edition is her policy of "faithfully" transcribing the Arabic text as it appears in the original manuscript(s): a painstaking attempt was made to maintain in the printed text all the paleographic peculiarities and orthographic irregularities,

Holt; *Middle East Studies Association Bulletin* 26 (1992): 109-111, by Reuven Amitai-Preiss; *Bulletin critique des Annales islamologiques* 8 (1992): 95-96, by Jean-Claude Garcin; *Die Welt des Islams* 33 (1993): 158-159, by Donald Little; and *Der Islam* 71 (1994): 388-390, by Bernd Radtke.

including the obvious errors (corrections are given in the apparatus), occurring in the manuscript(s). It is too hazardous here, on a theoretical level, to get into the age-old debate of the merits and shortcomings of this approach, which has been followed in the editorial work done by many European Arabists, among which are the editions of various volumes of Ibn al-Dawādārī's major chronicle *Kanz al-Durar* by a group of German scholars.[40] On a practical level, however, I find Graf's approach and its result questionable. For one thing, Graf's transcription is far from being "faithful": errors and inconsistencies are found on nearly every page. And the apparatus is accordingly very confusing.[41] The idea of providing the reader with the philological as well as paleographic features of the original manuscripts might not sound bad, but it is without merit if typographical errors are frequent. To prove its "originality," Graf's edition contains many of the features of "Middle Arabic."[42] It is, of course, a matter of choice if the editor insists on providing the reader with a text full of Middle Arabic orthographic features instead of the modern standard norm. My view on this issue is as follows: (1) This traditional Orientalist approach was justified in a time when the lack of an easy means of reproduction (photocopying, microfilming, etc.) and the difficulties of international travel made most of the manuscripts inaccessible. It was also justified when our knowledge of classical Arabic orthography was so limited that all the editions of manuscripts were supposed to provide, besides their contents, textual samples for paleographic investigation. But are these practices justified today when these conditions no longer exist? In other words, if the purpose of today's edited text is to study orthography, why bother to transcribe the manuscript? Why not simply use a "faithful" photocopy? (2) Many of the characteristics of Middle Arabic, foremost among them the undotted *tā' marbūṭah* and omitted *hamzah*, are well-known today and therefore do not need to be called to one's attention; on the other hand, the undotted letters themselves are very dubious. It is extremely difficult to know whether the dots were omitted on purpose in the original manuscripts, or were effaced by time and circulation. To transcribe undotted letters in the printed text is, therefore, pointless, if I may be permitted a pun; and the impression it gives is sometimes undoubtedly false. (3) Even if the editor feels strongly about preserving the original orthographic features in his edition, the reader deserves, at least in the apparatus, explanations that are in accordance with modern standard spelling conventions. In Graf's case, it does not seem to make much sense that on, for example, p. 102, lines 10 and 14, the orthography of the Middle Arabic, that is, the undotted *tā' marbūṭah*, would be used in the editor's apparatus for the words *al-malā'ikah* and *al-yaqaẓah*.

---

[40]E.g., *Kanz al-Durar wa-Jāmi' al-Ghurar*, vol. 8, ed. Ulrich Haarmann (Cairo: Deutsches Archäologisches Institut, 1971) and vol. 9, ed. Hans Robert Roemer (Cairo: Deutsches Archäologisches Institut, 1960). Interestingly enough, Haarmann himself seems to have altered this editing policy, in that all the rules of Modern Standard Arabic orthography have been strictly observed in his recently published edition of Abū Ja'far al-Idrīsī's *Anwār 'Ulwī al-Ajrām fī al-Kashf 'an Asrār al-Ahrām* (Wiesbaden: Franz Steiner Verlag, 1991).

[41]E.g., 87, line 10, *ya'dū* (with *alif al-wiqāyah*), cited in the apparatus as "ba'dū: ya'dū" (this time without *alif al-wiqāyah*). We do not know whether it was *ya'dū* or *ba'dū* that appeared in the manuscript in the first place; 93, line 11, *bn al-'Assāl*, in apparatus as "bn 'Assāl;" 103, line 7, *al-amal*, in apparatus as "al-amāl: al-āmāl," etc.

[42]On the question of the classical Arabic norm and the so-called "Middle Arabic," see Wolfdietrich Fischer, "Das Mittelarabische," *Grundriß der Arabischen Philologie*, 3 vols. (Wiesbaden: Reichert, 1982), 1:89-95; Joshua Blau, "Das frühe Neuarabisch in mittelarabischen Texten," *Grundriß*, 1:96-109 (with bibliography).

With regard to philological details, another long disputed but never fully resolved issue, transliteration, also deserves discussion. A case in point is Michael Chamberlain's *Knowledge and Social Practice in Medieval Damascus, 1190-1350* (Cambridge, 1994). It is true that the work itself, as a social history, does not naturally fall within the scope of this review; however, one of the many merits of Chamberlain's excellent study lies in the fact that the author often quotes the sources (many of which still remain in manuscript) in the original Arabic. He thus renders the reader a valuable service in presenting not only the author's interpretation but also a partially "edited" text; it thus becomes relevant to our concern here. Chamberlain's work is without doubt one of the finest treatments of Mamluk social history in years; it is therefore a pity that the author's sensitivity and meticulousness in analyzing and conceptualizing his sources is not equally visible in his presentation of textual materials. As a result, the book's numerous misspellings of Arabic terms and phrases have called into question the reliability of the quotations. Again, we are not arguing here over the merits and shortcomings of various transliteration systems. The point is that any system should conform to the standard grammatical rules and intrinsic structure of the Arabic language, and be applied consistently. Unfortunately, on neither count can Chamberlain's work be viewed as acceptable. The most remarkable problems are the handling of the *tā' marbūṭah* and, more important, the verbs. It is indisputable that the spelling of the *tā' marbūṭah* is mandatory (in any transliteration system) when it occurs in the first term of an *iḍāfah* construction. Thus, Chamberlain's transliteration of nearly all the *iḍāfah*s in the book is flawed.[43] It is also very frustrating to see that in many cases the basic forms of Arabic verbs are violated.[44] One is equally troubled with a number of misspellings, or questionable spellings, of certain technical terms, such as the pervasive *tā'rīkh* (for *ta'rīkh*, or *tārīkh*),[45] among others.[46] If Chamberlain's discourses on the

[43]E.g., *Tadhkira*[*t*] *al-sāmi'* (5 n. 5; 105 n. 78, and the bibliography), *khazāna*[*t*] *'ilmihi* (5 n. 5), *Riḥla*[*t*] *Ibn Baṭṭūṭa* (48 n. 63), *tuḥfa*[*t*] *al-nuẓẓār* (48 n. 63), *Zubda*[*t*] *al-ḥalab* (65 n. 147), *ṭabaqa*[*t*] *al-'alyā'* (79 n. 47), *ḥalqa*[*t*] *al-ḥanābila* (81 n. 59), *sanna*[sic][*t*] *qisma*[*t*] *al-waẓā'if* (96), *maḥabba*[*t*] *aẓ-ẓuhūr* (105; also note the inconsistency in spelling the "sun letter" with the definite article), *ma'rifa*[*t*] *al-qawā'id* (117 n. 66), *'ibāda*[*t*] *al-jawāriḥ* (126), *ṭahāra*[*t*] *anfāsihi* (126), *Rawḍa*[*t*] *al-Muḥibbīn* (128 n. 135), *ṣalā*[*t*] *as-sirr*, *'ibāda*[*t*] *al-qalb*, *qurba*[*t*] *al-bāṭin* (129), *baraka*[*t*] *al-ḥadīth* (129 n. 137), *turba*[*t*] *al-muwallahīn* (132), *sūra*[*t*] *al-Nūḥ* (137 n. 174), *ziyāra*[*t*] *qabrihi* (142), *ṣu'ūba*[*t*] *mā* . . . (146 n. 226), *jumla*[*t*] *durūsihi* (147 n. 233), *murāja'a*[*t*] *kitāb* (148 n. 237), *ma'rifa*[*t*] *al-insān* (150 n. 246), *riyāsa*[*t*] *al-'ulamā'* (154; but on the next page: *imāmatu'd-dunyā* and *riyāsatu'd-dīn*!), *baraka*[*t*] *al-waqt* and *baraka*[*t*] *al-'ilm* (157), *ḥawma*[*t*] *al-baḥth* (165), etc.

[44]The examples include verbs and participles in various forms: *yatajazā'* (for *yatajazza'u*, 43 n. 43), *yā'kul* (for *ya'kulu*, 48 n. 65), *mustaḥiq* (for *mustaḥiqq*, 65, 95 n. 22), *iltajā'a* (for *iltaja'a*, 66 n. 150), *li-yaḥṣul* . . . *wa-yartafiq* (for *li-yaḥṣula* . . . *wa-yartafiqa*, 76), *yastiḥiq* (for *yastaḥiqqu*, 79 n. 47), *yatalamadhu* (for *yatatalmadhu*, 79 n. 49), *jayyadan* (for *jayyidan*, 86 n. 88), *yataradid* (for *yataraddadu*, 113 n. 32), *yuḥibūnahu* (for *yuḥibbūnahu*, 115 n. 46), *muṭahhur* (for *muṭahhar*, 126), *yatawakkul* (for *yatawakkalu*, 128), *ḥadartu* . . . *ḥadathanā* (for *ḥaḍartu* . . . *ḥaddathanā*, 139 n. 183), *tā'khudhu* . . . *yaqrā'u* . . . *qarā'a* (for *ta'khudhu* . . . *yaqra'u* . . . *qara'a*, 145 n. 224), *yarwaya* (for *yarwiya*, 146 n. 226), *yaqrā'* (for *yaqra'u*, 147 n. 236), *jā* (for *jā'a*, 157 n. 36), *mutaṣaḥib* (for *mutaṣāḥib*[?], 160 n. 53), *lā taḥsan* (for *lā taḥsunu*, 174 n. 139), etc.

[45]This is also seen in highly respected publications; e.g., *Journal of the American Oriental Society* 114 (1994): 254-255. The misspelling seems to have stemmed from a misconception that there is a *long* vowel, instead of a *short* one, that precedes the unvoweled *hamzah*. Such a misconception and its ramifications seem to be quite common; for instance, Rabbat, *Citadel of Cairo*, a book whose transliteration is otherwise accurate and consistent, persistently spells terms such as *al-mū'tamar* (for *al-mu'tamar*, 17 n. 33; 217 n. 85), *Mā'mūn* (for *Ma'mūn*, 52), *Mū'arikh* (for *mu'arrikh*, also missing the

meanings of these terms[47] are well received by Mamluk scholars, it is unlikely their spellings will be. By and large, the book, which is part of the *Cambridge Studies in Islamic Civilization* series, seems to lack careful editing and proofreading. As far as the transliteration of Arabic terms is concerned, the errors cited above aside, other inconsistencies[48] as well as misprints[49] are too numerous to count.

These general technical issues aside, we are also faced with some particular challenges in dealing with Mamluk texts. One such challenge, as some Mamluk scholars have already shown, is how to handle the striking textual similarities among some sources. This is partially due to the nature of Mamluk historical writing as a whole in that certain bits of information from one source have been copied nearly verbatim in other sources with or without acknowledgment.[50] This common practice among certain Mamluk historians sometimes leads to a very complex and puzzling circumstance wherein works ascribed to different authors turn out to share one identical textual tradition. Let me cite the case of al-Jazarī and al-Yūnīnī again: a close collation of the parts covering the early and middle Baḥrī period, that is, 690-698 (where al-Jazarī's version ends), from al-Yūnīnī's *Dhayl Mir'āt al-Zamān* and al-Jazarī's *Ḥawādith al-Zamān* reveals that the two works actually are one text, and it is likely that this portion of the text was originally penned by al-Jazarī and quoted and edited by al-Yūnīnī later. The problem here is that, of al-Jazarī's original version, only a fragment is extant in a unique manuscript (MS Paris, BN arabe 6973) and the bulk of the material has survived only in al-Yūnīnī's *Dhayl Mir'āt al-Zamān*, in two very well-preserved manuscripts, and in al-Dhahabī's abridged version. Al-Dhahabī's version has now been published, while al-Jazarī's version, except for a selective French translation by Sauvaget, has never been edited. Should we now publish two separate

shaddah on *rā'*, 52 n. 6), *al-mū'minīn* (for *al-mu'minīn*, 69, 71, 72 n. 51), *Lū'lū'* (for *Lu'lu'*, 95, 174), *anshā'* (for *ansha'a*, 144 n. 36), *al-Mū'ayyad* (for *al-Mu'ayyad*, 305); the excessive long vowels are also found in spellings such as *Nūwayrī* (for *Nuwayrī*; *passim*), *qadīmān* (for *qadīman*, 218), etc. There are also some errors concerning case endings, verbs, and participles in Rabbat's work; e.g., *wassa'a* sāḥatuhu *wa nawwara* bāḥatuhu (for *sāḥatahu* and *bāḥatahu*, 191), *taṭṭilu* (for *tuṭillu*, 221), *muta'amimīn* (for *muta'ammimīn*, 269, 301), *yata'ayanūn* (for *yata'ayyanūn*, 290 n. 17).

46E.g., the term *manṣab* (stipendiary post), one of the "buzzwords" of the book (no explanation is given as to why the commonly used *manṣib* is overlooked and its rare form *manṣab* is chosen; all the dictionaries, except Golius, Freytag, Dozy, and Kazirmirski, give the form *manṣib*), *al-muqallad* (for *al-muqallid*[?], "follower of a legal scholar," 152), *dār al-su'ādah* (for *dār al-sa'ādah*, xv, map 2 and 91 n. 1), etc.

47For the *manṣab*, see index, "manṣab"; esp. chapter 3, "Manṣabs and the logic of fitna," 91-107.

48The spelling of case endings, for example, is totally random: one wonders why *khidmatan 'aẓīma* (for *'aẓīmatan*, if the ending is to be given, 117 n. 59), and *lah* (116 n. 52) but *lahu* (118), *qabrihi* (142) but *wajhih* (143), *min ẓahri* but *'alā ẓahr* (147 n. 237), and even when the case ending is given, it is not always correct (e.g., 148 n. 237, *ḥālatu* [for *ḥālata*]). Another major inconsistency is the treatment of the "sun-letters"; it is rather odd to see *'adīm al-nāẓir* while right in the next line *aḥdhaq an-nās* (157); such instances are legion. In addition, we never know why some Arabic terms are in italics while others (even occurring in the same line of the text) are not.

49For instance, the *hamzah*s are frequently mixed with the *'ayn*s; the *shaddah*s as well as other diacritical points are often either missing or added in wrong places.

50The subject has been treated extensively in Little, *Introduction*; the recent discussion by Chamberlain has touched upon the mechanics of book production and reproduction as well as the notion of mutual "benefiting" by quoting from each other held by historians and *ḥadīth* transmitters in Damascus; see Chamberlain, *Medieval Damascus*, 141ff.

versions ascribed to al-Yūnīnī and al-Jazarī respectively; or are we better served by producing a critical edition of *both* versions in one volume?[51]

The next challenge is the frequency of grammatical irregularities in Mamluk historical writing, combined with a tendency, as will be discussed below, to use colloquial language on various occasions. The foremost of these irregularities is the use of the accusative form of the dual and plural even in the nominative case, and the indiscriminate use of the subjunctive mood in plural verbs, among others. The question is: should we publish ″ungrammatical″ texts or, rather, their ″normalized″ versions?[52]

Another technical challenge in editing Mamluk sources is the making of indexes, especially indexes of proper names. Mamluk historical and biographical works are full of names of Turkish, Persian, and Mongolian origin; the matter is complicated by the pervasive use of *al-Dīn* compound titles. A person is likely to be mentioned as Muḥammad, or by a well-known nickname such as Ibn al-Bayyāʻah, or as al-Shaykh Shams al-Dīn, or al-Amīr Sayf al-Dīn, for example. Hans Robert Roemer′s and Ulrich Haarmann′s editions of the *Kanz al-Durar* have set forth a system in which a person′s given name is usually listed as the main entry while cross-references are made by listing his commonly known name and the *al-Dīn* title, or even the variant forms of his given name as well. This method of proper name indexing has been applied in several publications under review, but has largely been ignored in others. One hopes that future publications provide the necessary indexes, thus making the study of Mamluk sources less difficult than it now is.

Thirty years ago, Cahen made no apology for the fact that one of his most significant articles ″was devoted to such elementary matters,″ namely, the very basic methodological issues concerning the editing of medieval Arabic chronicles. Some thirty years later, his call is by no means out of date; and as yet the high standard he urged to provide the reader, not only with ″the textual, linguistic and historical explanations which help him in understanding the narrative, but also give him the references to all other sources,″[53] has yet to be met. It is my belief that despite technical advances in reproduction, which has greatly facilitated access to manuscripts, one of the main tasks for modern Mamluk historians is still to edit critically and publish the sources. In addition to ″literary works,″ i.e., chronicles, biographical dictionaries, and geographical and administrative works that await editing, Mamluk archival documents (official and non-official correspondence, *waqfīyah* archives, legal documents, business transactions, etc.) constitute a field that so far has hardly been explored.[54] The editing and publishing of such materials

[51]In my edition of al-Yūnīnī′s *Dhayl*, his version is presented as the main text while variant readings from al-Jazarī′s version are supplied in the upper apparatus. The purpose here is, first, to present the two nearly identical versions in one volume; and, second, to demonstrate the visible textual similarities between the two and thus help the reader gain a more intimate and sustained look at the actual working relationship between the two authors. However, I am waiting for reactions to this experiment.

[52]Some scholars opt to put the grammatically correct sentences in the narrative, while indicating the original irregular ones in the apparatus. However, the other way around, i.e., to maintain the irregular ones in the main text and supply corrections in the apparatus, also has its merits, in that it will give the reader a sense, or taste, of the language used at the time in scholarly writings. Again, this is a matter of choice.

[53]″Editing Arabic Chronicles,″ 5.

[54]That modern students′ interest in original Mamluk documents has grown rapidly can be seen from S. D. Goitein′s study of the Cairo Geniza documents (1967-1984), Little′s work on the materials from al-Ḥaram al-Sharīf (1984), and Amīn′s study of the *waqfīyah* documents (1980-1981). The most recent discussions

holds great promise for future studies. And besides, Cahen's suggestion to publish lists, with full references, of all the persons listed in those bulky Mamluk biographical dictionaries and chronicles, some of which might never be published,[55] still remains very inviting. Shall we give CD-ROM a try?

II

Paradoxically, despite the Mamluk period's richness in sources, especially biographical literature, we have yet to produce a book-length biography of any of the great Mamluk historians, a study that would, as R. Stephen Humphreys expresses the ideal, analyze "the interplay between the life and career of a historian, the cultural currents in which he was immersed, and the development of his thought and writing;"[56] a study that would frame Mamluk history in not only political, social, military, and institutional but also personal and intellectual terms. It is true that our knowledge of the lives and labors of great Mamluk historians has been expanded enormously during the past decade or so. However, we still lack, except for a few figures of Ibn Khaldūn's (d. 1406) magnitude, biographical and intellectual studies on Mamluk historians[57] that can match, in scale and depth, the work done in our sister fields, e.g., in Ayyubid historiography, David Morray's seminal study of Ibn al-ʻAdīm (d. 1262);[58] and in Ottoman historiography, Cornell Fleischer's biography of Mustafa Ali.[59] With regard to the *ʻulamā'* of the Mamluk era as a whole, attention has long been given to the jurists and theologians such as Ibn Taymīyah (d. 1328), Taqī al-Dīn al-Subkī (d. 1355), and al-Suyūṭī (d. 1505).[60] The only historians that have received book-length treatments, i.e., Ibn Ḥajar al-ʻAsqalānī and al-Suyūṭī, are, however, presented mainly as *ʻālim*s, not just as historians.[61] Nevertheless, full-length biographical studies of

of the study of Mamluk documents are to be found in Daniel Crecelius's introduction (dealing mainly with general *waqf* documents) to a special issue on *waqf*s and other institutions of religious/philanthropic endowment in comparative perspective, *Journal of the Economic and Social History of the Orient* 38, no. 3 (1995): 247-261, and Chamberlain, *Medieval Damascus*, 2-3, 12-21, although Chamberlain's own work is based largely on conventional "literary" sources. Recent publications on the subject include P. M. Holt, *Early Mamluk Diplomacy (1260-1290): Treaties of Baybars and Qalāwūn with Christian Rulers* (Leiden: E. J. Brill, 1995), and Werner Diem, "Vier arabische Rechtsurkunden aus dem Ägypten des 14. und 15. Jahrhunderts," *Der Islam* 72, no. 2 (1995): 193-257.

[57]A number of bio-bibliographical studies of Mamluk historians, written in Arabic, has been published over the past years. Nearly all these publications, however, are of a popular nature: e.g., Muḥammad Kamāl al-Dīn ʻIzz al-Dīn's *Silsilat al-Mu'arrikhīn*, published in Beirut by ʻĀlam al-Kutub, including *al-Maqrīzī Mu'arrikhan* (1990), *Ibn Ḥajar al-ʻAsqalānī Mu'arrikhan* (1987), *Abū al-ʻAbbās al-Qalqashandī Mu'arrikhan* (1990), *ʻAbd al-Bāsiṭ al-Ḥanafī Mu'arrikhan* (1990), *al-Badr al-Zarkashī Mu'arrikhan* (1989); and Ḥusayn ʻĀṣī's *al-Maqrīzī Taqī al-Dīn Aḥmad ibn ʻAlī ibn ʻAbd al-Qādir al-ʻUbaydī 766-845 H./1366-1441 M. Mu'arrikh al-Duwal al-Islamīyah fī Miṣr* (Beirut: Dār al-Kutub al-ʻIlmīyah, 1992), and his *Ibn Iyās Mu'arrikh al-Fatḥ al-ʻUthmānī li-Miṣr* (Beirut: Dār al-Kutub al-ʻIlmīyah, 1993).

the great, and less-than-great, Mamluk historians would shed much light not only on their lives and works but also on the social and cultural implications behind the flourishing of historical writing during the Mamluk era. For instance, in an attempt to answer the question posed by Little, "why so many historians of high caliber flourished at a time when all other arts and sciences save those connected with architecture were in decline[?]," [62] previous research has largely focused on the "big picture" issues, i.e., the political, cultural, and psychological factors during a time of crisis (e.g., the Frankish and Mongol invasions), when the concern for Muslim communal identity and the protection of Arabic-Islamic culture was high.[63] This is, in my opinion, just one part of the story. By examining some representative individuals' lives and careers we may have more success in understanding why this period not only saw an overall flowering of historical writing as compared to other traditional Muslim scholarly pursuits, but also why certain genres such as royal biographies, chancery manuals, geographical treatises (*masālik*), and topographical tracts (*khiṭaṭ*) flourished. This all came about under the pressure of a very practical demand for perfecting the "craft of the chancery clerk" (*adab al-kātib*) under the Mamluk *dīwān* system, a constant source of fierce competition and animosity among the intelligentsia striving for status, recognition, and a better standard of living. In addition, this kind of biographical study would also significantly enrich our understanding of the overall intellectual environment of that time and eventually lead to a larger framework for Mamluk intellectual history. A short list of such biographical studies would naturally include such names as al-Dhahabī, al-Maqrīzī,[64] Ibn Taghrībirdī, and al-Sakhāwī. On the other hand, selected case studies of the lives and careers of some lesser-known authors, i.e., those from non-traditional backgrounds such as the "middle class" that emerged for the first time in Islamic history during the early Mamluk period,[65] Mamluk soldiers of lower status, petty chancery clerks, etc., surely holds the promise of fresh and interesting observations.

It is understandable that the traditional bio-bibliographic treatment of a given author may not stir the enthusiasm of today's researcher. In this respect, Morray's study of the Ayyubid historian Ibn al-ʻAdīm and his principal work *Bughyat al-Ṭalab fī Taʼrīkh Ḥalab* may offer some new insights and directions for research. In Morray's study, three themes, Ibn al-ʻAdīm himself, his world, and the compilation and writing of the *Bughyah*,[66] are treated together organically. In the chapter on Ibn al-ʻAdīm's "network," so to speak, which constitutes the bulk of the study (pp. 20-121), the delineation of Ibn al-ʻAdīm's Aleppine contemporaries, based on information drawn largely from the *Bughyah*, is amazingly reminiscent of the medieval Islamic *mashyakhah* genre,[67] but with a modern

Career of a ʻĀlim in Egypt (Ph.D. diss., Princeton University, 1969).

[62]*Introduction*, 1.

[63]For a discussion of the political and psychological factors that are considered to have contributed to the flourishing of historical writing in general and biographical literature in particular during the Mamluk period, see Dorothea Krawulsky's introduction to her edition of *Masālik al-Abṣār* (Beirut: al-Markaz al-Islāmī lil-Buḥūth, 1987), 29-37.

[64]Al-Maqrīzī is also listed by Humphreys as one of "the most obvious subjects" of such pursuits; see *Islamic History,* 135.

[65]See Ulrich Haarmann, *Quellenstudien zur frühen Mamlukenzeit* (Freiburg im Breisgau: D. Robischon, 1969) 129ff.

[66]Morray, *An Ayyubid Notable*, 20.

[67]The *mashyakhah* genre has commonly been defined as lists of one particular learned person's teachers; it is significant to note here that some *mashyakhah* works also contain lists of the teachers' students, that is,

twist: never before, to my knowledge, has a medieval Islamic historian′s life and milieu been examined in such a way wherein all the people he was associated with, and influenced by, are presented side by side with abundant parallel references for cross-checking.[68] This is followed by detailed discussions of Ibn al-ʻAdīm′s collection of his material, his composition of the *Bughyah*, and his personal reflections on his work (pp. 151-95). We not only learn a great deal about a remarkable historian and his milieu, but also a lot about the workings of his, and to a certain extent his colleagues′, minds, their view of the world, their mentality, ideas, assumptions, and ″tastes″ concerning historical writing, as well as the textual devices employed in conveying such information.

In this connection, it appears that, in addition to the study of individual historians, another area worth investigating would be the study of Mamluk historians as groups—that is, those who were associated with particular settings (e.g., Cairo, Damascus, Aleppo, etc.), or who shared ideological and professional bonds (e.g., the Ḥanbalīs in Syria, the *kātibs* in Cairo, etc.), or the same mentalities, values, and assumptions, and thus demonstrated similar approaches to their writing. This naturally raises another question that has intrigued modern scholars for a long time, namely, the question of whether there was a so-called ″Egyptian school″ and a ″Syrian school″ of historical writing in the Mamluk era. Although more will be said when we discuss the development of genres and forms in Mamluk historical writing, it should be emphasized here that the study of the lives and intellectual environments of these ″groups″ may well shed light on the formation of the conceptions and assumptions shared by these historians and the approaches favored by them.

To ask whether there was an Egyptian school or Syrian school is to ask to what extent they are really *different*. The detectable differences in form and content (which will be a topic of discussion below) aside, other areas such as the differences in background and life experience also merit investigation. To clarify this point, I will survey two groups of chroniclers, Egyptian and Syrian respectively, who lived and wrote around the same time, shortly before al-Dhahabī,[69] that is, during the late seventh/thirteenth and early eighth/fourteenth centuries, and look at the areas of *difference* that might suggest additional topics for investigation.

First is the difference in *career paths*. Previous scholarship has confirmed that since the late Ayyubid period, there were three types of historians: statesmen, court historians, and the *ʻulamā*ʼ.[70] Nevertheless, nearly all the Syrian chroniclers, except for Abū al-Fidā', an Ayyubid prince of Ḥamāh, belong to this last category, i.e., they were

---

the fellow students of the person in question.

[68]Previous studies of Mamluk ʻ*ulamā*ʼ and intellectual life such as those by Carl Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton: Princeton University Press, 1981) and Louis Pouzet, *Damas au VIIe/XIIIe siècle: Vie et structures religieuses d′une métropole islamique* (Beirut: Dar el-Machreq, 1988) were aimed at drawing a larger and more comprehensive landscape, rather than focusing on a particular person and his surrounding.

[69]This is taking into consideration that al-Dhahabī, a Damascene, is believed to have been the one who finally set the stage for the later development of Islamic historiography, not only in Syria, but also in Egypt and elsewhere; and as such, the differences, if there were any, would be much more clearly seen in the pre-Dhahabī chroniclers and their writings.

[70]See Haarmann, *Quellenstudien*, 131-132. Haarmann′s point here is not contradicted by Humphreys′s assertion that prior to this time there were isolated individuals representative of some of these groups; *Islamic History*, 131.

local religious scholars:[71] Al-Birzālī spent most of his life as a *ḥadīth* professor;[72] al-Jazarī was a renowned *ḥadīth* scholar;[73] al-Yūnīnī had taught *ḥadīth* and was, at some point in his life, the Ḥanbalī grand master in Baʻlabakk;[74] and al-Dhahabī was well-known as ″the *ḥadīth* transmitter of the time″ (*muḥaddith al-ʻaṣr*) atop all his other titles. The career background of their Egyptian counterparts is much more complex. On the one hand, all the Egyptian chroniclers in question were members of the Mamluk military elite: Baybars al-Manṣūrī, once the governor of the fortress of al-Karak, held the highest feudal rank: amir of a hundred and commander of a thousand.[75] Ibn al-Dawādārī, though himself a low-ranking officer, had the opportunity to accompany his father, a grand amir who was in the service of al-Malik al-Nāṣir, on numerous occasions and thus witnessed many events.[76] The anonymous author (fl. 14th century) of the chronicle edited by Zetterstéen[77] was himself a soldier who fought in various Mamluk campaigns during al-Malik al-Nāṣir′s reign. A lesser-known figure, Ibn ʻAbd al-Raḥīm (fl. 1295), who wrote a continuation of Ibn Wāṣil′s (d. 1298) *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb* up to the year 695/1295 or 96, was a Mamluk official who accompanied Sultan Baybars′s expedition to al-Rūm in 675/1277.[78] It is thus noteworthy that none of the major Egyptian chronicles of the Baḥrī period were, according to the current state of our knowledge, written by the Cairene *ʻulamā*', or so-called ″men of the pen″ (*rijāl al-qalam*), whose interests seemed to be elsewhere, such as the pursuit of a career in the Mamluk bureaucratic establishment. Examples include al-Nuwayrī, the author of *Nihāyat al-Arab*, whose civil service record includes various posts such as *nāẓir al-juyūsh*, *ṣāḥib al-dīwān*, and *nāẓir al-dīwān*, and al-ʻUmarī, the author of *Masālik al-Abṣār*, who occupied high posts in the Mamluk chancellery, as did his father and brother. It is by no means an accident that the three major Mamluk geographical and administrative encyclopedias (the third being al-Qalqashandī′s *Ṣubḥ al-Aʻshá*) were all compiled by this group of Cairene *kātibs*, i.e., civil bureaucrats. As for the ″court historians,″ their primary concern was definitely writing royal biographies and treatises devoted to praise of the sultan.[79]

78 This information about this person is only found in Amitai-Preiss, *Mongols and Mamluks*, 4, 136, 169f, 219; he is also briefly mentioned in Haarmann, *Quellenstudien*, 102 n. 4.

79 The most recent discussions on the subject are Wilferd Madelung, ″A Treatise on the Imamate Dedicated to Sultan Baybars I,″ *Proceedings of the 14th Congress of the Union Européenne des Arabisants et Islamisants*, Part 1, ed. A. Fodor, *The Arabist: Budapest Studies in Arabic* 13-14 (1988): 91-102, and Remke Kruk, ″History and Apocalypse: Ibn al-Nafīs′ Justification of Mamluk Rule,″ *Der Islam* 72, no. 2 (1995): 324-337.

Second is the difference in *ethnic*, *ideological*, *and intellectual background*. Although known to have been "fond of theological studies,"[80] Baybars al-Manṣūrī had no formal training in the traditional Arabic-Islamic curriculum, and it has been suggested that he wrote his chronicle with the help of a Christian secretary.[81] There is no evidence to suggest that Ibn al-Dawādārī or Ibn ʻAbd al-Raḥīm received any formal education either.[82] Nor did Zetterstéen's anonymous chronicler, clearly a Mamluk soldier, have much formal education in these subjects. There is, therefore, very little possibility for us to speculate on the intellectual pursuits and ideological affiliations of these Mamluks of Turkish or Mongolian stock.[83] Writing chronicles seems to have been a means by which they fulfilled either a personal interest or a sense of duty in recording the *events* they either experienced, witnessed, or learned about from others. The concentration on political and military affairs and the tendency to use colloquial vernacular, instead of classical Arabic, in their writings seems to suggest this. On the contrary, all the Syrian historians in question had not only gone through the full traditional Islamic curriculum, but nearly all of them were, as mentioned above, professors.[84] Among various scholarly pursuits, the transmission of *ḥadīth* was for them the highest calling, while writing chronicles was considered an ancillary discipline, a way to preserve information about the lives and achievements of the *ḥadīth* transmitters of each period within the framework of an annalistic chronicle. It is no wonder that in these authors' works, a great deal of attention is given to the *rijāl* material, i.e., the lives and works of *ḥadīth* transmitters. The incorporation of the *rijāl* genre into an annalistic form, which is conventionally attributed to the Baghdad Ḥanbalī Ibn al-Jawzī (d. 1198),[85] was brought to completion by this group of Syrian authors, and the presentation of obituaries-biographies (*wafayāt*) next to each year's events (*ḥawādith*), the chronicle proper, became the norm for medieval Islamic historiography. It should also be noted that the tools of *ḥadīth* criticism evidently had a certain influence on these Syrian *ḥadīth* scholar-historians' methodology.[86] One notes also that their sensitivity about the competition among the local *ʻulamā'*, both in Cairo and Damascus,[87] is clearly reflected in their tireless effort to record promotions and dismissals within the learned circles of the two cities as well as numerous juicy anecdotes about such events, the kind of materials rarely seen in the Egyptian chronicles. On the other hand, the Egyptian learned persons, i.e., al-

[80]Eliyahu Ashtor, "Baybars al-Manṣūrī," *EI*[2], 1:1127-1128; Little, *Introduction*, 4.

[81]Eliyahu Ashtor, "Baybars al-Manṣūrī," *EI*[2], 1:1127-1128; for Baybars al-Manṣūrī's religious learning, see Levanoni, *Turning Point,* 14-19, 23ff.

[82]See Bernard Lewis, "Ibn al-Dawādārī," *EI*[2], 3:744; also see Haarmann, *Quellenstudien*, 70-79.

[83]The intellectual pursuits of the Mamluks have been discussed in recent scholarship; see: Haarmann, "Arabic in Speech, Turkish in Lineage," 81-114; and most recently, Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education* (Princeton: Princeton University Press, 1993), 143ff., especially 146-160.

[84]For the indigenous scholarly tradition in Syria in Mamluk times, which is believed to have been "more vigorous than in Egypt (in Haarmann's words)," see Henri Laoust, "Le hanbalisme sous les Mamlouks Bahrides (658-784/1260-1382)," *Revue des études islamiques* 28 (1960): 1-71; Haarmann, "Arabic in Speech, Turkish in Lineage," 85f.

[85]Humphreys, *Islamic History*, 240.

[86]The most current discussion of the significance of *ḥadīth* transmission in Damascus at the time and the methodology involved is seen in Chamberlain, *Medieval Damascus*, 138f. Berkey is also of the opinion that the focus in many Cairene *madrasah*s was on *fiqh*, while *ḥadīth* took priority in *madrasah*s in Damascus, see *Transmission of Knowledge*, 82f.

[87]A fascinating examination of the subject is Chamberlain, *Medieval Damascus,* esp. 91-107.

Nuwayrī and al-ʻUmarī, though themselves of the *ʻulamā'* class, were from quite a different educational and intellectual background as compared to their Syrian counterparts: well-versed in the so-called *adab al-kātib*, "the craft of the clerk," al-Nuwayrī and al-ʻUmarī were mainly concerned with the functional aspects of history, and their writings are, not surprisingly, manuals of the bureaucratic system and the formulae to be utilized in its daily executive exercises, occasionally with an idealistic and perhaps ahistorical tone.

Third is the difference of *working relationship*. The Egyptian authors were basically independent individuals.[88] There is little evidence to suggest that they held shared values, or that they regarded their writing as a common enterprise. Conversely, the Syrian authors seemed to enjoy a kind of network: al-Jazarī and al-Yūnīnī's affiliation with Ibn Taymīyah and the Ḥanbalī institutions in Baʻlabakk and Damascus is well documented. Al-Birzālī had been al-Yūnīnī's student and later became his and al-Jazarī's editor (the first volume of al-Yūnīnī's *Dhayl Mir'āt al-Zamān*, we are told, was dictated by the author to al-Birzālī in person). He not only had close contacts with Ibn Taymīyah but also passed on a great deal of information acquired from him to al-Yūnīnī and al-Jazarī. Both al-Birzālī and al-Yūnīnī had taught *ḥadīth* in Damascus and Baʻlabakk, and among their students was al-Dhahabī, who also had studied *ḥadīth* with al-Yūnīnī's brother ʻAlī.[89] This extended network no doubt had a direct impact on the assumptions, thinking, and writing of these Syrian historians: Abū Shāmah (d. 1268), for instance, followed Sibṭ ibn al-Jawzī closely and the latter's *Mir'āt al-Zamān* was also the model for al-Yūnīnī's continuation, which in its turn influenced al-Dhahabī's writing greatly; al-Yūnīnī, al-Birzālī, and al-Jazarī's writings were, as Humphreys puts it, "closely linked to one another in ways that are still not wholly clear";[90] al-Kutubī (d. 1362) and Ibn Kathīr, a disciple of Ibn Taymīyah, both relied on al-Yūnīnī, al-Birzālī, and al-Jazarī for information on the early Mamluk period in their universal histories. It goes without saying that the study of, in Chamberlain's words, "the bonds created by interactions with their *shaykhs* and others in the ritualized environment of the production of knowledge" in Damascus[91] will shed significant light on our understanding of the textual milieu of their writings.

To sum up, it may be misleading at this stage to talk about a "court culture" in early Mamluk Cairo as opposed to an indigenous intellectual milieu in Damascus,[92] and thus the notion of the Egyptian "court chroniclers" vs. Damascene *ʻulamā'* historians is perhaps an oversimplification. However, it is reasonable that the differences discussed above would have had an influence on these historians' writings. For instance, the examination of their different career paths would illuminate what kinds of events they had experienced and what kinds of sources they had been exposed to. A probe into their diverse intellectual backgrounds would help us gain insight into their different views of the world and their diverse approaches to recording history, as well as their distinct styles and formats.

---

[88]See Little, *Introduction*, 19f.

[89]For a discussion of the relationship between al-Yūnīnī, al-Jazarī, al-Birzālī, and al-Dhahabī, see Guo, "al-Yūnīnī," 106-113, 120f.

[90]*Islamic History*, 240-241.

[91]*Medieval Damascus*, 139; on the notion of mutual "benefit" among the Damascene *ʻulamā'*, see 112ff., 118f.; on the copying of books and sharing information among the Damascene *ʻulamā'*, see 141f.

[92]Haarmann has suggested that a Mamluk "court culture" did not exist until the late fourteenth century, that is, the end of the Baḥrī period, and that it blossomed during the fifteenth and sixteenth centuries; see "Arabic in Speech, Turkish in Lineage," 82, 86ff.

Moreover, the investigation of their varied ″networks″ would shed much light on the textual relationship between them, a subject that has long puzzled students of Mamluk source-critical studies.

The recent studies of the *‘ulamā’* elite in Mamluk times by Louis Pouzet, Michael Chamberlain, and Jonathan Berkey hold great promise for this field by setting the stage for such inquiries on a *macro*-historical landscape. Another area into which we should seek to advance, in my opinion, is case studies on a *micro*-historical level, studies that would present and analyze the lives and careers of an individual, or a group of historians, within the context of their social, intellectual, and cultural milieus. Some recently-published sources, among them the *ṭabaqāt* and *mashyakhah* works,[93] and new methodological avenues and research tools such as the macroscopical analytical approach, the use of *waqfīyah* documents (Berkey), and new ways of reading conventional biographical dictionaries (Morray, Chamberlain), will surely provide the impetus for more valuable research to come.

III

As already noted above, biographical studies would help us to appreciate the assumptions and methodology of the historians of the Mamluk era. This would also benefit our study of the development of genres and forms in Mamluk historiography, a subject that has received much less attention than it deserves. It is really a pity that, since the works of Rosenthal,[94] Little,[95] and Haarmann[96] in the sixties and seventies, we have seen very few studies devoted to this very important subject. Although no one would disagree that the amount of Arabic historical writing reached an unprecedented level during the fourteenth and fifteenth centuries, that many fundamental changes and developments in pre-modern Arabic-Islamic historiography occurred during this era, or that many of the genres of medieval Arabic-Islamic historical writing were begun, reformulated, or perfected during Mamluk times, we must admit that the state of our current knowledge of these developments, particularly the textual ones, is far from being exhaustive.

Among the various issues concerning the forms and genres of Mamluk historical writing, some stand out as having long captured the attention of scholars but never having been thoroughly investigated. In what follows I hope to illuminate some of these issues by reviewing current work on them and posing questions that might invite further exploration.

Question One: Was there a ″breakdown″ (*Auflösung*) (in Haarmann′s words) or a trend deviating from the classic medieval Islamic standard in Mamluk historical writing? Previous attempts to answer the question, first posed by Haarmann in his *Quellenstudien*

---

[93]For example, al-Birzālī′s version of Ibn Jamā‘ah′s *Mashyakhah*, ed. Muwaffaq ibn ‘Abd Allāh (Beirut: Dār al-Gharb al-Islāmī, 1988), 2 vols., and Ibn Kathīr′s Shāfi‘ī *ṭabaqāt* and its *dhayl* by al-‘Ibādī, ed. Aḥmad ‘Umar Hāshim et al., 3 vols. (Cairo: Maktabat al-Thaqāfah al-Dīnīyah, 1993), are among the newly edited and published biographic sources.

[94]*Historiography*, esp. 71-86 (on annalistic form), 100-105 (on biography), 146-50 (on world history), 179-86 (on the use of verse in historical writing).

[95]*Introduction*, passim.

[96]*Quellenstudien*, esp. 119-198; idem, ″Auflösung und Bewahrung der klassischen Formen arabischer Geschichtsschreibung in der Zeit der Mamlūken,″ *Zeitschrift der Deutschen Morgenlandischen Gesellschaft* 121 (1971): 46-60.

(1970) and elaborated by him in several subsequent articles, might be summarized as follows: (1) With regard to content, although Mamluk chronicles still followed the traditional ″Ṭabarī″ mode, i.e., they were arranged within an annalistic framework, the content of the entries in Mamluk texts is often of a personal nature rather than the tales of kings and saints that were the core of the classic *ta'rīkh* genre. (2) With regard to form, the late Ayyubid and early Mamluk periods witnessed the emergence of such new genres as the *dhayl* (supplement),[97] as well as new formats such as biographies, as an integral part of the annals.[98] (3) With regard to style, ″*some* . . . Mamluk chroniclers . . . cultivated a new, ′literarized′ mode of historical writing by granting disproportionately high importance to elements of the wondrous and exotic, to popular motifs, to the vernacular language, etc.″[99] A number of factors, Haarmann argues, triggered such developments, or ″breaking down″ of the old norm: the diversity of authorship stimulated the introduction of new elements ranging from high *adab* culture (poetry in classic form, rhymed prose [*al-saj'*], witty sayings [*al-ajwibah al-muskitah*], etc.) to mass entertainment (folk romances, anecdotes, marvels and miracles [*'ajā'ib wa-gharā'ib*], the use of colloquial vernacular, etc.). Also, the changing mechanics in the process of composing and circulating historical writings, which is characterized by Haarmann as a kind of ″public participation,″[100] made it easy for later editors, scribes, or even owners, to add to the texts some personal, local, or partisan flavor.

These ″deviations″ have also been observed by Bernd Radtke, a veteran student of medieval Muslim historiography, but he has come to quite different conclusions. Radtke′s *Weltgeschichte und Weltbeschreibung im mittelalterlichen Islam* (1992) is a collection of his studies on the subject of world history and cosmography in Islam. The bulk (pp. 206-447) of this dense, but unevenly presented, collection focuses on two particular historians: the Ayyubid Sibṭ ibn al-Jawzī and the Mamluk Ibn al-Dawādārī as a case study for the author′s theory of ″Islamic cosmology.″ For Radtke, many of the elements in Mamluk historical writing regarded by modern scholars as ″innovations″ can be, by and large, found also in early Islamic historiography and thus must not in themselves be construed as ″deviations″ from the traditional norm, but rather, reflect the continuation of an Islamic ″salvation history.″

Radtke′s studies are based on a wide theoretical framework aimed at establishing and comparing ″parallel developments concerning the *forms* of historical writings in both Islamic and Christian world-chronicles,″ because ″in both, the history of the world is written within the framework of an *imago mundi*, a conceptual picture of the world.″ According to Radtke, within Islam there were two world views:

[100]According to Haarmann, first drafts and ″work-in progress″ notes were no longer the authors′ private property, but rather, a great number of them were put at the public′s mercy immediately after their having been written down, only to be revised and verified in the course of public circulation. Many works were therefore handed down in their abridged (*mukhtaṣar*), or draft (*muswaddah*), form, not their final version; see *Quellenstudien*, 126ff.

> Both have their own way of presenting time, subjects and of using various literary devices. Salvationist world-history admonishes and educates the soul by teaching the truth. It makes use of the annalistic form, and its cosmological model is the so-called ′Islamic cosmology′. . . . The other kind of world-chronicle may be called cultural history. . . . Its intention is not only to admonish the soul, but also to entertain and to convey practical knowledge. The literary devices have their parallels in Classical rhetoric. The cosmological model and the geographical schemes come from Antiquity. As well as the annalistic form, it uses history of dynasties and caliphates.

As different as these models may be, Radtke admits that ″[f]rom the thirteenth century onwards a mixture of salvationist, cultural, and world history as entertainment became the norm.″[101] In other words, all the Mamluk historical writings, including Ibn al-Dawādārī′s much discussed world history, *Kanz al-Durar*, examined in detail, sometimes tediously, by Radtke, fall into the category of this ″mixture.″ Radtke′s discussion of the *taṣdīq* vs. *ta'ajjub/ta'jīb* in Islamic historiography, namely, the double character of history as both revealed and true (*taṣdīq*) as well as astounding and amazing (*ta'jīb*), a distinction largely ignored by previous students in the field, is thought-provoking. This vigorous discourse not only expounds the old Aristotelian skepticism against history as a mere craft (*technē)* but gives this notion an Islamic interpretation, which will help us to reach a better understanding of the dynamic nature of medieval Islamic historiography in general, and to justify the changes and alterations, or even deviations from the classical norm by historians of the Mamluk era. Ironically, however, many of Radtke′s own conclusions seem to suggest contradictions. For instance, Ibn al-Dawādārī was, as Radtke tries to demonstrate, merely a disciple of Sibṭ ibn al-Jawzī, who followed the latter′s cosmography so faithfully that his own universal history *Kanz al-Durar,* or at least the first volume, is nothing more than a revised, shortened version of its model. No significant distinction can thus be made between the two under the rubric of Islamic ″salvation history.″[102]

Radtke′s overall framework is challenged by Haarmann who, with full acknowledgment of its ″rich scholarly yield,″ criticizes it as largely derived from a ″strangely static world view, as far as the potential of medieval Islamic culture for change is concerned.″[103] Opposed to Radtke′s ″Islamic salvation history,″ Haarmann warns modern students to be more careful and sensitive in tracing down the ″tiniest developments and processes, even abortive ones, as necessarily more significant than the centuries-long apparent immutability of pre-modern mentalities, societies and institutions.″ Here Haarmann advocates that we lift the study of Mamluk historiography to a whole new level, that is, as part of the inquiry into the ″static vs. dynamic″ nature of pre-modern Islamic intellectual life. Thus the ideological controversy, outlined by Haarmann as taking place ″between the historian looking for development and alteration and the sociologist of culture captivated by the phenomena of continuity,″ may be illustrated in the cultivation of a new, ″literarized″ mode of historical writing that has been singled out by Haarmann as the most

---

remarkable measure in evaluating such changes and developments. The key issue here, Haarmann argues, is not whether some of the ″novel″ elements, e.g., the notion of *ta‘ajjub*, already existed in early Islamic historiography, but rather ″the *quantitative* change, the sharp increase of literary insertions in the writing of those few historians who, as a corollary, met the criticism of their more traditionally minded peers.″ However, more questions may be posed: Is the ″literarized″ mode in historical writing the only demonstrable feature of the ″dynamic nature″ of Islamic culture during Mamluk times? To what extent is the quantity of *adab* insertions ″decisive″ enough in measuring such changes? As for the ″few historians″ listed by Haarmann as representing this ″trend,″ i.e., Ibn al-Dawādārī, al-Jazarī, al-Nuwayrī, and Ibn Iyās (who lived much later), what are the similarities and dissimilarities among their writings; and were they the only ones who headed in this direction?

This particular area has been further explored by Otfried Weintritt in his *Formen spätmittelalterlicher islamischer Geschichtsdarstellung* (1992). A revised version of the author′s 1988 Freiburg dissertation, this handsomely produced monograph, volume 45 of the *Beiruter Texte und Studien* series, presents a literary analysis of al-Nuwayrī al-Iskandarānī′s (d. after 1374) *Kitāb al-Ilmām*, a chronicle describing the attack on, and brief occupation of, Alexandria by the Christian king of Cyprus Peter I in 767/1365. It also examines and compares the work in question with two other related sources: Badr al-Dīn al-‘Aynī′s (d. 1451) royal biography of al-Mu’ayyad[104] Shaykh (r. 1412-21) and Ṭaṭar (r. 1421), and Ibn Abī Ḥajalah′s (d. 1375) *Kitāb Sukkardān al-Sulṭān*, a biography of Sultan Ḥasan (r. 1347-51; 1354-60). Weintritt′s work is of special interest for several reasons. First, it introduces a number of Mamluk historical sources that have hitherto never been studied by modern scholarship. Second, it stands out as perhaps the only monograph in years that tackles problems of topoi, motifs, textual devices, and literary styles of medieval Arabic historiography in general, and Mamluk historiography in particular.

After two introductory essays (chapters A and B) on methodological issues and a presentation of the *Kitāb al-Ilmām* and its author, chapter C, which constitutes the core of Weintritt′s work (pp. 37-179), is a detailed literary analysis of a wide range of issues concerning the perception, reflection and presentation of history by the author from a Muslim viewpoint. Under the rubric of the ″medieval Islamic concept of salvation history,″ that is, as defined by Weintritt, he examines the experience of the defeat of Islam that led to a reinterpretation of the historical event by these Muslim historians resulting in the conclusion by them that Christian superiority was not real, and that Muslims were ″intrinsically superior to the unbelievers.″[105] Here Weintritt has meticulously examined a host of literary techniques utilized by al-Nuwayrī al-Iskandarānī to convey such a message. Among these are *istiṭrād* (conceptualized digression, which, as Weintritt explains, ″employs individual historical information as a thematic basis for the systematic insertion of material derived from historiographical and non-historiographical literature,″ pp. 87-100, 223), fictionalization (e.g., the failure of Peter I, pp. 101-117), the *ajwibah muskitah* topos (″witty reply that would silence [the opponent],″ pp. 118-121), and various compositional techniques such as fabricative syntax (pp. 122-125), typology and magic of figures (*jafr*), proverbial prophesying (pp. 126-134), etc. As a whole, Weintritt argues, the work under

[104]Wrongly spelled as ″al-Mu‘aiyad,″ 222.
[105]*Formen*, 222.

study deliberately contains very little factual historical information, while including other genres such as *ḥikāyāt* (tales, anecdotes, pp. 142-168, with selective German translation), elegies (pp. 169-182, with German translation and Arabic transliteration of the verses), among others. Echoing Haarmann and Radtke, Weintritt names this trend ″a new kind of comprehensive representation of history,″ that not only employs non-historiographic *adab* genres, but also ″involves a literary organization″ within the *istiṭrād* framework. These characteristics, suggests Weintritt, are also shared by the two royal biographies examined (pp. 183-200) that were contemporary with the *Kitāb al-Ilmām*. In these three texts, Weintritt emphasizes, we witness an array of deliberately produced literary systems of historical writing, be it chronicle or royal biography, that have generated their own text-forms in representing the ideal concept of the so-called ″Islamic salvation history.″

Weintritt′s work, which has unfortunately not yet received much attention, has brought new authors and titles to the discussion that has long focused on a handful of names such as Sibṭ ibn al-Jawzī, al-Jazarī (mainly by Haarmann), and Ibn al-Dawādārī (whose researchers are legion: Köprülü, Roemer, al-Munajjid, Boratav, Little, Langner, Graf, Krawulsky, Badeen, among others). Indeed, Ibn al-Dawādārī must be considered to be one of the major ″innovators″ of this trend of *Auflösung*, or ″deviation.″[106] However, there is a wide range of opinion regarding the relationship between these historians. For Radtke, as discussed above, Ibn al-Dawādārī was merely a faithful disciple of Sibṭ ibn al-Jawzī, a Ḥanbalī who emigrated from Baghdad to Damascus, and his work was thus no more than a link in the long chain of continuity in the ″salvation history″ tradition. And in the meantime, Haarmann sees another Syrian *ḥadīth* scholar and historian, al-Jazarī, as *the model* for Ibn al-Dawādārī. Even though the interpretations differ, no one argues that there was indeed a Syrian root to Ibn al-Dawādārī′s ″innovations.″ This naturally leads us to another long-debated but never fully resolved question:

Question Two: Was there a ″Syrian school″ of historical writing as well as an Egyptian counterpart? Previous scholarship has been ambiguous on the issue. Notes about a ″long-lived ′school′ of Damascus historians″ were brought together by R. Stephen Humphreys as follows: (1) the starting point of this ″school″ was Sibṭ ibn al-Jawzī and his *Mir'āt al-Zamān*, a universal chronicle; (2) the core of this Damascene group include: Abū Shāmah, al-Jazarī, al-Birzālī, al-Yūnīnī, al-Dhahabī, al-Kutubī, and Ibn Kathīr; and, (3) the ninth/fifteenth century saw some attenuation of historical writing in Damascus, but was still able to produce major chronicles by Ibn Qāḍī Shuhbah and Shams al-Dīn Ibn Ṭūlūn.[107] As for the textual aspects of this ″school,″ Humphreys, basing his remarks on previous studies by M. H. M. Ahmad, Sāmī al-Dahhān, and Haarmann, emphasizes the continuity of the tradition established by Sibṭ ibn al-Jawzī, that is, ″for each year the most notable events were recorded, and then concise obituaries were given for the important persons who had died during that year.″ Humphreys, as well as previous scholars, seems to suggest that this structural technique in combining *ḥawādith* (events) and *wafayāt* (obituaries) within an annalistic framework is the trade mark of this Syrian ″school.″ However, he has been careful to keep the term within quotation marks. Meanwhile,

[106]For an overview of the Ibn al-Dawādārī scholarship, see Haarmann, *JAOS* 115, no. 1 (1995): 134.
[107]*Islamic History*, 240-241.

Reuven Amitai-Preiss appears more at ease calling it ″the Syrian school of fourteenth-century historians″ which began with al-Yūnīnī, among others.[108]

Some recent studies have kept this discourse alive. My 1994 dissertation on al-Yūnīnī and his chronicle *Dhayl Mir'āt al-Zamān* not only confirms what previous scholars have already suggested about the inter-relatedness of these three Damascene historians, but takes a step forward, through a word-by-word collation of al-Jazarī′s *Ḥawādith al-Zamān* and al-Yūnīnī′s *Dhayl* (the part that covers the years from 691 to 699) and an edition (697-701) that presents both authors′ versions (al-Jazarī′s ends at 699). In the dissertation I develop two key points: (1) the later part of al-Yūnīnī′s famous *Dhayl*, the only surviving contemporary Syrian source for the years in question (i.e., 699 onward), was in fact al-Jazarī′s work either slightly edited by, or wrongly attributed to, al-Yūnīnī; and (2) al-Birzālī was perhaps actively involved in this enterprise, as an editor, a primary source, and the dictator of at least one of its early redactions. Al-Jazarī, al-Yūnīnī, and al-Birzālī′s contribution to medieval Islamic historiography was that they perfected and reformulated the *mode* started by Sibṭ ibn al-Jawzī, a mode wherein the two basic sections of each year′s record, namely the *ḥawādith* (events) and *wafayāt* (obituaries), were evenly presented, and in which the latter was also effectively enhanced by adding to it the *ḥadīth*s transmitted on the authority of, and *adab* output by, the *a'yān* of the era, namely the *'ulamā'*, and, less frequently, some Mamluk statesmen. History as recorded by these Syrian historians is not only a record of events, but a register of Muslim religious learning, as well as a selective anthology of the cultural and literary heritage of the time.

With regard to this Syrian ″school,″ many issues still await further investigation. For instance, Humphreys seems more explicit in listing the features of this Syrian mode from Sibṭ ibn al-Jawzī to the Damascene trio than in outlining the later phase of development of this Syrian ″school,″ i.e., from al-Dhahabī onward, which is even more significant in influencing the later development of medieval Islamic historiography. Given the paucity of scholarship on this subject, this silence is quite understandable. It is rather a surprise that we still have not seen any substantial studies of al-Dhahabī, unarguably one of the most important figures not only in this ″school″ but in medieval Islamic historiography as a whole. Other significant figures of this Syria connection, such as Ibn Kathīr and al-Kutubī are also far from having been thoroughly studied, except for the editions of their indispensable works. Of course, given the scope and intellectual vitality of al-Dhahabī′s and Ibn Kathīr′s writings, which touch upon such a wide range of Islamic learning, the task is formidable. And in regard to the puzzle of the relatedness of certain authors, it appears that there may be more facets besides the emergence of a common mode of presentation and the public nature of manuscript circulation at the time that may have led to later confusion and corruption of texts. We may need to tackle the problem from a wider perspective, say, social and cultural history, or even Western textual criticism which has been employed recently by Islamicists in source-critical studies of the Quran and *ḥadīth* literature. For instance, in terms of social and cultural history, modern scholars, such as Laoust, Haarmann, Pouzet, Berkey, and Chamberlain, have all noted the fact that in Mamluk times the indigenous Syrian scholarly tradition remained more vigorous than in Egypt,[109] that the Egyptian Mamluks and their sons (*awlād al-nās*) retained closer ties to

[108]*Mongols and Mamluks*, 4-5.
[109]″Arabic in Speech, Turkish in Lineage,″ 85.

the Mamluk sphere than those who went through their formative period in Syria, the domain of traditional scholarly excellence and ʿ*ulamā*ʾ power,[110] that the science of *fiqh* (jurisprudence) remained ″the jewel in the crown″ of the *madrasah*s in Cairo[111] while *ḥadīth* transmission and study, a discipline very close to historical writing, enjoyed higher esteem in Damascus and other Syrian centers of learning such as Baʿlabakk.

A more limited question thus is susceptible to analysis, namely, what impact these differences might have had on Egyptian and Syrian historians′ assumptions and objectives in writing history. And in terms of textual aspects, while the quantitative change, that is, the amount of *adab* material inserted into historical works, has been singled out by Haarmann as the decisive criterion in determining the fundamental breakthrough made by some Mamluk historians, he is not specific about ″how much is too much?″ Nor has a distinction been made between Syrian authors and Egyptians authors with regard to this quantitative measure. A statistical survey of the textual witnesses of the ″Yūnīnī-Jazarī tradition″ has not only confirmed Haarmann′s hypothesis, but has also revealed that it was quite the opposite, namely, it was al-Jazarī, viewed by Haarmann as ″less″ extreme in this ″deviation,″ and al-Yūnīnī, who showed more distinguishable features of this particular deviation than Ibn al-Dawādārī.[112] For instance, both al-Jazarī′s *Ḥawādith al-Zamān* and al-Yūnīnī′s *Dhayl* are replete with quotations from every level of traditional classical Arabic *adab*, including a total of more than 2,200 poems found in al-Yūnīnī′s version alone, an anthology the scope of which finds no match in any of the contemporary Egyptian chronicles, which are characterized by much shorter biographical-obituary sections and contain much less classical *adab* material. But Ibn al-Dawādārī′s role as an important ″innovator″ is justified by his introduction of popular motifs and themes, anecdotes, folklore, etc., another kind of *adab*, maybe in its ″lower″ form,[113] as opposed to the Syrian penchant for classical flavor and more mainstream ″high″ culture. The same can be said about other contemporary Egyptian chroniclers, such as Baybars al-Manṣūrī and al-Nuwayrī in whose work *adab* and *taʾrīkh* are categorized as belonging to different ″arts.″ The anonymous chronicle edited by Zetterstéen is nearly devoid of biographies, to say nothing of a separate *wafayāt* section.

In this connection, the question of an ″Egyptian school″ of historical writing is even more problematic. To begin with, it is too broad a focus. Unlike the relative homogeneity of the Syrian *ḥadīth*-trained ʿ*ulamā*ʾ historians who seem to have worked around a clearly traceable ″mode″ of historical writing, Egyptian historians came from all parts of society: statesmen, semi-official court historians, ʿ*ulamā*ʾ, ″middle class″ clerks, Mamluk soldiers, etc. Moreover, they seem to have written various genres of history, most of which either started or flourished during the period: royal biographies, chronicles, topographies, geographical and administrative encyclopedias, biographic dictionaries, and so forth. Fatḥīyah al-Nabarāwī, an Azhari historian, has devoted a whole chapter to what she terms the ″Egyptian school of historical writing (*al-madrasah al-taʾrīkhīyah al-miṣrīyah*)″ in her

110Ibid., 110.

111Berkey, *Transmission of Knowledge*, 82ff.

112This statistical survey is part of a revised version of my dissertation, yet to be published.

113Much previous scholarly emphasis has been placed on the folkloric materials found in Ibn al-Dawādārī′s chronicles; e.g., Haarmann, *Quellenstudien*, 162-175; Barbara Langner, *Untersuchungen zur historischen Volkskunde Ägyptens nach mamlukischen Quellen* (Berlin: Schwarz, 1983), passim.

newly published book on medieval Islamic historiography.[114] Her ambitious description of this ″Egyptian school″ begins with the third/ninth century when ʻAbd al-Raḥmān ibn ʻAbd Allāh Ibn ʻAbd al-Ḥakam (d. 871) wrote the *Kitāb Futūḥ Miṣr*, the earliest history of Islamic Egypt, and ends with Jalāl al-Dīn al-Suyūṭī. According to al-Nabarāwī, this Egyptian school has gone through three major phases in its evolution.

First was the early period in which the emergence and growth of historical writing developed side by side with other Islamic ″sciences,″ especially *ḥadīth* transmission and *fiqh* discourse. Starting from Ibn ʻAbd al-Ḥakam, this period features authors like Abū ʻUmar al-Tujībī al-Kindī (b. 897), and al-Ḥasan ibn Zūlāq, among others.

The second phase spans the period from the fourth/tenth to the eighth/fourteenth century, which featured Muḥammad ibn ʻUbayd Allāh al-Musabbiḥī (d. 1029) and his acclaimed history of Fatimid Egypt,[115] and Abū ʻAbd Allāh Muḥammad ibn Salāmah ibn Jaʻfār al-Quḍāʻī (d. 1065). Al-Nabarāwī gives credit to the two Fatimid historians for establishing a ″historiographic method″ or ″mode,″ (*al-manhaj al-tārīkhī*) that was to be followed by all later Egyptian historians; nevertheless, she never speaks, in concrete terms, of what the fundamental features of this ″method″ were, much less of its historiographic significance. The only early Mamluk historian singled out in this period is al-Nuwayrī, who is presented here as the representative of new genres such as the encyclopedia and biographical dictionary. Al-Nabarāwī simply attributes the efflorescence of these new genres to the influence of ″other schools of historical writing, especially the Iraqi school,″ namely al-Khaṭīb al-Baghdādī, Ibn Khallikān, Ibn al-Jawzī, and finally, Ibn al-Athīr (pp. 217ff.). The third phase was the so-called time of ″brilliance″ (*ta'alluq*) of the Egyptian school in the ninth/fifteenth century. The representatives of this ″school″ include al-Qalqashandī, Ibn Khaldūn, al-Maqrīzī, al-Sakhāwī, and Jalāl al-Dīn al-Suyūṭī.

It is clear that al-Nabarāwī is unfamiliar with the current scholarly debate on the subject, and her discussion therefore sheds no light on the ongoing discussions concerning Mamluk historical writing in particular and the recent debate over the theory of ″schools″ in Arabic-Islamic historical writing in general. Furthermore, her analytical framework is based on geographical, rather than historical and intellectual, backgrounds. Accordingly, all those who lived and wrote in Iraq, from al-Ṭabarī to Ibn al-Athīr, belong to an ″Iraqi school″ of historical writing (pp. 143-78), and those of a Syrian background, Ibn ʻAsākir, al-Iṣfahānī, Ibn al-ʻAdīm, up to Abū Shāmah, belong to a ″Syrian school″ (pp. 123-142), and so forth. This kind of grouping neither helps us gain insight into the characteristics of the so-called ″school,″ nor is it in accordance with historical facts. One might easily ask: What about a historian who lived and wrote in different cities? For instance, Sibṭ ibn al-Jawzī is listed by al-Nabarāwī as falling into the category of the ″Iraqi school,″ because of his association with the Ḥanbalī establishment in Baghdad. By emphasizing his Baghdad background, however, she ignores the fact that his career flourished in Damascus, where he not only lived and wrote, but where his method of writing essentially established the basis for the long-lived *Syrian* tradition, as discussed above. Again, if we do not have a clear definition of what a ″school″ really means, if we do not have substantial historical and,

---

[114] *ʻIlm al-Ta'rīkh: Dirāsah fī Manāhij al-Baḥth* (Alexandria: al-Maktab al-Jāmiʻī al-Ḥadīth, 1993), 179-239.

[115] *Akhbār Miṣr*, ed. Ayman Fu'ād Sayyid et al. (Cairo: Institut français d′archéologie orientale, 1978-1984).

more importantly, textual evidence to describe and conceptualize the features that distinguish one ″school″ from another, the mere labeling of ″schools″ is pointless.

The ongoing debate on the subject has proven that applying ambiguous labels to a given group of historians or works can be dangerous and misleading.[116] The purpose in defining and studying a ″school,″ in my opinion, has to do with common forms, genres, methods and traits shared by a group of authors from the same intellectual and ideological, and perhaps also geographical, background. This inquiry into the differences and similarities among the ″schools″ would tell us more about the mechanism of change and development in the world views of pre-modern Muslim historians and their different approaches to recording history. Based on what we know, it is hard to see an ″Egyptian school″ at work, at least in the early Mamluk period, as opposed to a more clearly defined Syrian one.

However, it is undeniable that there are certain traits that ought to be seen as characterizing Mamluk Egyptian authors. For instance, modern scholars have long posited a so-called ″Cairo narrative style,″ which may be characterized, in Carl Petry′s words, as ″a blending of colloquial and formal language unique to the second half of the ninth/fifteenth century,″ and represented by Ibn Iyās.[117] Ibn al-Dawādārī′s unique style, which has attracted the attention of western scholars, is just another example of this phenomenon. Yet another question may be raised. If it is too risky at this stage of our knowledge to talk about an ″Egyptian school″ of historical writing during the Mamluk period, Is it safe to talk about a ″Cairo style″? So we are faced with:

Question Three: What can we say concerning language and style in Mamluk historical writing? In contrast to the relative silence in the West on this subject, Middle Eastern researchers have long shown an interest in examining the art, including language and style, of historical writing by their predecessors, among them the Mamluk authors. Recent publications of this kind include ‘Abd al-Ḥalīm al-Nadawī′s study of the methodology utilized by al-Nuwayrī in the composition of his *Nihāyat al-Arab fī Funūn al-Adab*,[118] and Aḥmad Māhir al-Baqarī′s linguistic study of Ibn Iyās′s *Badā’i‘ al-Zuhūr*, a universal history distinguished mainly for its coverage of the later Middle Ages in Egypt.[119] Since al-Baqarī′s work picks up the theme of the ″Cairo narrative style″ mentioned above, some comments here seem not to be redundant.

Al-Baqarī′s study opens with an introductory essay on Ibn Iyās′s intellectual background, especially his literary talent (*al-mawhibah al-adabīyah*) that would later have a profound impact on his style of historical writing. We learn from this detailed analysis that Ibn Iyās, a prominent historian and prolific poet, was an erudite stylist who not only mastered the intricacies of classical Arabic syntax, prosody, and rhetoric, but also often used plain language that did not hesitate to employ the earthy epithet or the slang of Egyptian vernacular, in an effort to make his writings accessible to a large audience. Western students may find al-Baqarī′s discussion of the samples extracted from Ibn Iyās′s

---

[116]One such instance is the debate over the ″Syrian school″ in early Islamic historiography; for details see Albrecht Noth, *The Early Arabic Historical Tradition: A Source-Critical Study*, 2nd ed. in collaboration with Lawrence Conrad, trans. Michael Bonner (Princeton: Darwin Press, 1994), 4-5, especially note 10.
[117]Cited from Ḥasan Ḥabashī′s introduction to his edition of al-Jawharī al-Ṣayrafī′s *Inbā’*; see *Twilight*, 7.
[118]See note 5 above.
[119]*Ibn Iyās wa-al-Lughah: Min Kitābihi Badā’i‘ al-Zuhūr fī Waqā’i‘ al-Duhūr* (Alexandria: al-Maktab al-Jāmi‘ī al-Ḥadīth, 1989).

work informative and interesting (pp. 17-42, on his poetry; pp. 43-55, on his employment of classical Arabic rhetorical devices as well as his use of rare words and colloquial expressions; pp. 56-61, on his citation of classical Arabic poetry and proverbs with which his history is replete). This is followed by chapters 2 and 3, which constitute the core of the study. Chapter 2 (pp. 63-113) deals with grammatical issues related to Ibn Iyās′s work. The detailed and meticulous analysis asks a wide range of questions about both morphology (*al-ṣarf*) and syntax (*al-naḥw*). A very interesting segment of the chapter (pp. 106-113) touches upon Ibn Iyās′s creative, sometimes deviate, use of classical standard verb forms for the purpose of conveying new meanings with these verbs, or delivering a certain special effect. Chapter 3 is a lexicographic analysis of the ″official language,″ namely, Mamluk technical terms and the classical written Arabic norm, as seen in Ibn Iyās′s work. These include ranks and professions (pp. 119-129), monetary transactions (pp. 130-135), and so forth. Of special interest is a discussion of the terms of crime and its punishment (*lughat al-jarā'im wa-al-'uqūbāt*, pp. 135-142), Mamluk disciplinary procedure (pp. 143-144), and Cairene police jargon (*lughat al-shurṭah*, pp. 145-147). The chapter concludes with a segment on various special usages (inflection, verbal nouns, propositions, etc.) in Ibn Iyās′s work.

Despite the wealth of textual evidence, one may note, minor shortcomings aside,[120] that there is a major methodological flaw reflected in the work′s static treatment of the materials without placing them in historical perspective. No attempt was made to trace the historical development of the language in Mamluk historical writing; besides listing quotations in each of the ″categories,″ the author does not say much about whether the examples examined were Ibn Iyās′s own, or simply his quotations from other sources. For instance, the use of the rare word ″*taqanṭara*″ (p. 47) was in fact not Ibn Iyās′s at all; it is found in a number of previous chronicles that describe the event that took place in 697 in which Sultan Lājīn′s horse *bucked* [*and threw him down*].[121] All of these chronicles derived the story from a common source, i.e., Muḥammad Ibn al-Bayyā'ah′s chronicle (*ta'rīkh*) which is lost today. That is to say, the word that occurs in Ibn Iyās′s *Badā'i' al-Zuhūr* is no more than a quotation, not his own usage. Another example is the colloquial expression ″*īsh*″ (″what′s this?,″ p. 50) which was already pervasive in early Mamluk sources.

Given the fact that the historians often quoted from one another without acknowledgment and this is one of the characteristics of historical writing produced in the period, this static approach will not yield much insight into the subject, and may be totally misleading. Moreover, the author is aware of the complex and nuanced situation regarding the ″duality″ of the Arabic language at a time when foreign elements e.g., Persian, Mongolian, and Turkish, were so widely used, and therefore is careful to assure us that even though two ″languages″ co-existed in Cairo, he concludes that ″the gap was not such that it would totally separate the public′s vernacular (*lughat al-jamharah*) from the official language (*lughat al-ḥukūmah*).″ The extent of the interplay between this blending of

---

[120]E.g., the loose organization (e.g., morphological issues scattered in chapters two and three), the careless editing (e.g., p. 3, the author claims that chapter 2 is on ″official language″ and chapter 3 on grammar, while the opposite seems to be the case), the lack of a bibliography, not to mention necessary indexes and glossary, etc.
[121]E.g., Ibn al-Dawādārī, *Kanz al-Durar*, 8:371; Zetterstéen, *Beiträge*, 44; al-Yūnīnī, *Dhayl* and al-Jazarī, *Ḥawādith al-Zamān* (both in Guo, ″al-Yūnīnī,″ edition, p. 3, and translation, p. 224).

classical, "official," and vernacular language is left unexplained. This "Mamluk split identity," as Haarmann called it, namely to be a Turk and an Egyptian Muslim at the same time,[122] and the mentality resulting from such linguistic and ethnic differences between the Mamluks and the locals must have had some influence on the language and style of Egyptian historians, particularly those from non-Arab Mamluk stock. Given the fact that this trend of "linguistic duality" had already begun, as previous studies have shown, as early as the writings of Ibn al-Dawādārī, a second generation Mamluk (*awlād al-nās*), the enterprise of Ibn Iyās, himself a member of this "sons of Mamluks" elite, may better be placed within this long list of non-Arab Mamluk intelligentsia whose cultural and intellectual achievements are too important to ignore now. It follows that further investigation of the issue of continuity and change in historical writing, including questions of language and style, is needed as an integral part of this comprehensive inquiry.

Among many issues relating to language and style, another rarely touched upon is the use of rhymed prose, the so-called *al-saj‘*, in Mamluk historical writing. William Brinner noted that rhymed prose was taken very seriously in the drafting of Mamluk documents in that a bad piece of writing by bureaucrats would be criticized as "consisting of weak expression, mostly unrhymed."[123] Aside from some isolated observations,[124] we are not sure to what extent this classical rhetorical device had found its way into historical writing in the Mamluk period. Clearly, more needs to be done on this subject as well.

In conclusion, let me briefly recapitulate the main points I have tried to make in this rather long article. First of all, I have examined a substantial number of Mamluk historical texts edited and published since the late 1980s, evaluated them as to their historiographic significance as well as the quality of the editions themselves, and expressed concern that the old problem of unscientifically prepared editions is still a problem in our field. I have called attention to the lack of adequate biographical studies of the major Mamluk historians and suggested that such studies of select Mamluk historians, as individuals and groups, would help frame Mamluk history not only in political, social, military, and institutional, but also personal and intellectual terms. It would also shed some light on the formation of the conceptions and assumptions shared by Mamluk historians and the approaches favored by them. I have addressed the related question of whether there were "schools" of historical writing in the Mamluk period. I have suggested three areas of difference between two groups of early Mamluk Egyptian and Syrian historians for further study: career paths, ethnic, ideological, and intellectual backgrounds, and working relationships among these practitioners of the historian's craft. Finally, I have dealt with the development of genres and forms in Mamluk historiography focusing on three questions: (1) the so-called "breakdown" of the classical medieval Islamic standard in Mamluk historiography; (2) the question of a "Syrian school" vs. an "Egyptian school" in terms of their textual features and composition strategy; and (3) language and style in Mamluk historical writing.

Ubi Sumus? Mamluk History and Social Theory

I

The critical mass of scholarly attention now gravitating around late medieval Syro-Egypt has begun to necessitate for the first time an evaluation of the current state of knowledge within the field of Mamluk history, that is, the interpretive significance of the questions historians have so far posed of their documentary and artifactual evidence. There is bound to be dissatisfaction with the way in which many scholars have so far used their empirical research to address fundamental questions of structure and change in Mamluk society. Yet, this problem is perhaps only typical of the general shortfall in critical thinking within Middle East history as a whole. Even in such a relatively modern field as Ottoman history, for instance, scholars have only recently begun to call for a ″critical revaluation″ of historical methodology, especially with regard to modeling rather than merely assuming the structures of early modern social formation.[1] As the Ottomanist Suraiya Faroqhi has observed candidly: ″The intellectual framework within which Ottoman history is practised is as yet poorly developed and this state of affairs has made us susceptible to the ′occupational disease′ of being overwhelmed by our documents.″[2] Indeed, Faroqhi′s colleague, Halil Berktay, has reified this problem in Ottoman history as ″document-fetishism.″ Obsession with the practices of traditional historical methodology, Berktay charges, has diverted scholars from the ″intellectual sources which could inform them about the proper questions to ask of their documents.″[3]

This emerging reorientation in Ottoman history has stimulated some scholars to conceive of social formation as a dialectic between the state and peasant. The historian John Haldon, for instance, has theorized about a tributary mode of surplus appropriation from peasants as the principal dynamic in the rise of ″feudalist″ states like the Ottoman Empire. Rejecting the class reductionism and economism of traditional Marxism, Haldon has tried to draw attention to the anthropological content of Marx′s early writings and the extent to which macroeconomic production may have been affected by microsocial processes of abstraction, self-reflection and intentionality. Haldon′s view is, of course, speculative since Marx never produced a social psychology able to demonstrate how individual consciousness might have achieved such autonomy from collective order.

Nevertheless, Haldon has sought, as he himself has said, to advance a macrotheory with "the possibility of nesting a multiplicity of meso- and micro-structural analytical approaches within the overall [neo-Marxist] paradigm."[4] Clearly, Ottoman history, at least, has become fertile ground for an appreciation of how "change is structured, and structures change" over time.[5]

By comparison, medieval Islamicists have seemed less conscious of the need for developing intellectual frameworks within which their empirical research might be embedded in larger issues of social process. Indeed, more than a quarter of a century ago the Mamlukist Ira Lapidus warned that "studies of Muslim social structure are few and incomplete."[6] He extolled the need to "expose social relationships," to examine their "total configuration" and "the forces which shaped their interaction." Lapidus later reiterated and expanded his position, urging scholars to begin "to explore not only social action but the concepts and values that bear on the ordering of social relationships, the . . . symbols of social order, and the mentality of peoples."[7] Yet, as R. Stephen Humphreys, another Mamlukist, has been obliged to remind us recently, little interim progress has been made in demonstrating how action may have been linked to order in medieval Middle East society. Indeed, in his omniscient critique of medieval Islamic history, Humphreys has specifically criticized this analytical shortfall in the secondary literature and has gone so far as to call for new "lines of inquiry" and even entire "research strategies" to trim this interpretive deficit. Humphreys has focused particularly on the failure of Islamicists, including Mamlukists, to explicate the "patterns of behavior through which people structure their relations with one another, define common goals, and allocate resources."[8]

What Humphreys has described in so many words is the need for middle range theories of social interaction, culture, ideology, and economic relations for medieval Islamic civilization, in which the Classical Mamluk state was perhaps the premier social formation. However, the gravitational pull of traditional research methods based on philology, chronology, and historiography has tended to inhibit scholars from making the necessary intellectual transition from description to analysis. Only in rare instances has Mamluk scholarship managed to model the "patterns" and "structure" of society to which Humphreys has alluded—most notably in the work of Lapidus himself, as well as his student, Michael Chamberlain. Indeed, the work of these two scholars, separated by nearly three decades, reflects to an interesting degree the development of social theory itself from a synchronic, normative, systems perspective to one with a more diachronic, materialist, and post-structural outlook.

Yet, if most Mamlukists have not been able to interpret social process, that is, demonstrate ways in which social action and order were linked, they have at least shown an

interest in social actors. Scholars, indeed, have taken an essentially positivist view of Mamluk history in their Weberian focus on political and cultural elites as sources of social formation and reproduction. In this they have no doubt been influenced by Lapidus′s own social anthropology of late medieval Syro-Egypt. Yet, if scholars have sometimes acknowledged Lapidus′s ideas they have generally been unable either to develop or engage them dialectically. This may be due in part to the failure of Lapidus himself to explicate the *isnād* of his own social thought. Lapidus has acknowledged the influence of at least two luminaries—Max Weber and Talcott Parsons—but only in passing.[9] And even this admission has not been entirely helpful given the problematic relation between the works of Weber and Parsons, particularly Parsons′s evolutionary and deterministic reading of Weber′s more developmental and contingent concept of social action. Ultimately, though, Lapidus has been indebted to Parsons′s adaptation of Weberian social action. For Parsons′s functional analysis of the evolution of Western society from traditionalism to modernism has provided Lapidus with an important framework for understanding the process through which late medieval Syro-Egyptian society achieved integration.[10]

Certainly, Lapidus′s interpretation of the nature of action and order in Mamluk society bears many of the hallmarks of the kind of systems analysis typical of the normative functionalism practiced especially by Parsons. He has incorporated into his own analysis many of the same functional concepts employed by Parsons—″system,″ ″function,″ ″values,″ ″equilibrium,″ ″adaptation,″ ″atomization,″ ″differentiation,″ etc. Indeed, Lapidus has identified the ″substance″ of his work as a description of the process by which a ″system″ of social relations was structured to achieve social ″equilibrium″—an essentially Parsonsian perspective. For Lapidus, like Parsons, was trying to address ultimately the long-standing Hobbesian problem of social order by advancing a model of society based on consensual rather than coercive social practices. Both sought to describe a social system which legitimated the hierarchical stratification of status groups on the basis of value consensus. Parsons′s focus on values was embedded ultimately in Weber′s emphasis on the cultural context of social action. Weber maintained that social action had to be explained in terms of its cultural meaning for social actors. Action and structure were mediated, Weber believed, through the individual′s subjective interpretation of his own social environment. Social actors were therefore inspired by cultural values to engage in contingent practices which reproduced but sometimes transformed society. Indeed, Weber′s legendary study of the rise of capitalism was essentially an inquiry into why rational social practices emerged in tenth/sixteenth century Europe from irrational religious

[9]Lapidus, *Muslim Cities*, viii.

[10]Functional thought was foundational even in the conventional Orientalist scholarship upon which Lapidus drew; see especially, G. E. von Grunebaum, ″The Structure of the Muslim Town,″ *Islam: Essays in the Nature and Growth of a Cultural Tradition*, Memoir no. 81 (n.p.: American Anthropological Association, 1955), 141-158, who observed, among other things, that ″. . . the unity of the [Muslim] town is functional, not civic.″ Grunebaum in turn seems to have been influenced by the writings of French urbanists attempting to evaluate the social solidarity of the Muslim town in terms of Durkheim′s distinction between the ″mechanical″ solidarity of the traditional/archaic city and the more ″organic″ solidarity of the modern/classical type. That is, they sought to distinguish between an holistic society based on a religious and socially ritualized collective consciousness with undifferentiated forms of social solidarity and a rational society in which social interaction was sufficiently differentiated and diverse to individuate a self-conscious political discourse.

beliefs, that is, how the traditional world developed into the modern through the transformation of social meaning.

To demonstrate this ″contingent acceptance″ of such ″societal values″ Parsons suggested a mechanism—″internalization.″ Drawing on development psychology, Parsons argued that individuals were socialized from an early age through natural interactions with family and peers to assimilate (internalize) symbolic codes of social morality, to accept normative constraints on social action in ways conducive to the reproduction of social order. The concept of internalization allowed Parsons to link social action to the structure of social order in a way that seemed more autonomous and purposeful than, for instance, Durkheim′s concept of mechanical solidarity. Individuals reproduced society because they were socialized to do so. Yet, internalization also allowed Parsons to reinterpret Weber′s concept of social action in a way more conducive to his own belief about the integrative nature of social evolution. For Weber believed that contingent action was historical not teleological; it was meant to analyze changes from patriarchal and patrimonial forms of social organization, not to reify the process of modernization itself. Indeed, Weber felt that modern social action did not lead ultimately to greater social integration, as Parsons believed, but, as Marx believed, to the increased isolation and alienation of the individual from society. In the end structural controls imposed especially by modern bureaucratic structures vitiated individual autonomy and intentionality. Social order depended in the end, Weber believed, on hierarchical coercion not socialization after all.

Parsons attempted to counter Weber′s pessimism by narrowing, though not entirely closing, the gap between social process and social actors themselves. Action was determined ultimately by larger structural issues which tended toward equilibrium in modern society. Indeed, Parsons suggested that there was an evolutionary trajectory from traditionalism to modernism—a ″convergence″ of modern industrial societies toward a common form of internal organization. The functional requirements for that convergence determined historical process. Parsons suggested, in fact, a predictable sequence of social systems each more complex and functional than the last, a process which could not in the end be affected by human agency. This sequencing of social systems was an ″adaptive upgrading″ of society from traditional to modern organization. In this ″directional″ development social relations were determined functionally by the adaptive needs of the social system. Values provided the legitimating control which facilitated the ″adaptive upgrading″ of societies toward modernism. Parsons′s search, therefore, was for the ″core″ of a society, that is, its integrated social subsystems where those values were formed and practiced. Although these subsystems were drawn together through the sharing of common values, a ″consensus of values″ needed to be reflected only among social elites, who then used their power to ″persuade″ other social groups to conform to those values. The power to persuade was based on what Parsons euphemistically called ″confidence″ in the social system, that is, the expectation that force could be used to impose conformity should value orientation prove insufficient.

Clearly Parsons′s inquiry into the boundary between social action and order provided Lapidus with a comprehensive if deterministic model of social process. Lapidus suggested a Weberian condominium between socialized political and cultural elites, following Parsons, as a rationalizing factor in the integration of late medieval Syro-Egyptian society. Lapidus accepted Weber′s focus on cultural values as the source of social action but in his own functional analysis subsumed Weber′s emphasis on autonomy and

contingency just as Parsons had. The teleology of ″convergence″ made value orientation and adaptation functional requirements in the integrative evolution of late medieval Islamic society. Indeed, Lapidus proclaimed that his study of the ″system of [social] relations″ would demonstrate exactly how Muslim urban society adapted itself to ″Mamluk domination″ in order to create ″one political and social whole.″[11] Lapidus thought this sort of collective order was possible precisely because Muslim society ″tended to be relatively undifferentiated,″ and so various social strata ″rarely reflected the autonomous interests of their members.″[12] Clearly Lapidus shared with functionalist anthropology the belief that, the further down the social hierarchy, the more readily individuals were prepared to adopt the values of social elites.

By calling attention in this way to the lack of autonomy enjoyed by urban social groups, Lapidus was challenging traditional beliefs about the autonomy and dynamism of the medieval Islamic city itself. From Marx, who saw history as the ″urbanization of the countryside,″ to Anthony Giddens, who views cities as ″power containers″ engaged in the ″elimination of the countryside,″ social theorists have long attempted to privilege the city as an autonomous engine of social transformation.[13] Indeed, Weber had argued that the origins of Western capitalist society lay precisely in the struggle waged by urban communes to ″usurp″ political and juridical autonomy from patrimonial elites. Naturally enough, Weber saw the failure of capitalism in Oriental societies as the failure of local urban autonomy in the face of patrimonial control, much as Marx had explained the failure of the Asian countryside to resist its ″princely camp″—the Asian city. Yet, Lapidus did not want to privilege the issue of urban autonomy, arguing: ″We must look more deeply into the urban constitution, behind . . . the struggle for local autonomy. . . .″[14] In fact, Lapidus wanted to use his analysis of urban social groups to break down the entire conceptual urban/rural dichotomy upon which traditional Orientalist social history had been based: ″. . . we should eschew the urban-rural dichotomy and avoid using ″city″ and ″village″ as absolute categories . . . we should think in terms of *pays*, districts, and regions, including both urban and rural units, as a natural form of settlement organization in the medieval Muslim world.″[15]

American social theory by Lapidus′s day had of course been subjected already to many conceptual antinomies: status/contract, mechanical/organic, *Gemeinschaft*/*Gesellschaft*, industrial/folk. The foundation of American urban sociology at the University of Chicago helped to establish one more—urban/rural. To Chicago sociologists, the modern city was an unparalleled source of both liberation and challenge to the individual. On the one hand, the spatial segregation created by urbanization emancipated the individual from the social control of traditional intimate groups. However, this weakening of bonds of kinship and folk tradition left the individual isolated, living in a Durkheimian social void. As Louis Wirth observed in his legendary comments about urbanization: ″Nowhere has mankind been further removed from organic nature than under the conditions of life characteristic of great cities.″ The city both initiated and controlled the economic, political and cultural life ″of the most remote parts of the world″ weaving ″diverse areas, peoples, and activities into a cosmos.″ The fact of urban concentration, Wirth believed, naturally invited ″the study of the differences between the rural and the urban mode of living.″ City and country were ″two poles″ around which ″all human settlements tend to arrange themselves.″ For these reasons Wirth saw the ″urban-industrial and rural-folk society as ideal-types of communities . . . for the analysis of the basic models of human association. . . .″[16]

Lapidus, like many sociologists and social anthropologists of his generation, questioned whether Wirthian ″ideal-type constructs″ of the urban and the rural corresponded to actual differences in socioeconomic structures, functions or values.[17] Urban organization seemed too diverse to be typed meaningfully. Possibly there was a condominium, even a continuum between urban and rural forms of social organization; even Wirth finally qualified his own idealized urban/rural dichotomy, admitting before his death that ″cities represent a vast continuum shading into non-urban settlements.″[18] In any case Lapidus did not view urban society as integrated only through what Wirth had called the ″pecuniary nexus . . . [leading] to predatory relationships.″ Man was not freed from moral order by the biotic competition of urban human ecology. Urban life provided the same sort of ″primary″ contacts which traditional socialization had, not just the ″secondary″ kind Wirth had described as ″impersonal, superficial, transitory, and segmental.″ Lapidus believed that informal social networks like families, fraternities, factions, neighborhoods,

[18]Louis Wirth, ″Rural-Urban Differences,″ in *Community Life and Social Policy* (Chicago: University of Chicago Press, 1956): 172-176.

tribes, schools of law, and religious communities transcended both the segmentation and spatiality of the classic urban/rural dichotomy; they provided regional ″social solidarities″ which urban communal institutions like guilds could not. Indeed, Lapidus believed ″religious-communal bonds″ rather than ″urban-rural divisions″ were the ″rule″ throughout all Islamic social organization.[19]

Rather than the autonomous city with its formal coordinating agencies Lapidus, like Parsons, saw the real source of social formation residing in the family-based household. Parsons had associated the rise of industrialism with the emergence of a dynamic ″family firm,″ a result of the separation of property rights from feudal control and their association with intimate or ″sib″ groups. The family firm, not the city, was the early engine of industrial capitalism. The family ″emancipated″ itself from the political structure, it did not try to take it over from patrimonial elites as Weber′s urban agents were expected to do. Lapidus saw the Mamluk ″military household″ similarly as the dynamic center of social power in Syro-Egyptian society, primarily because of its informal domination of the regional economy.[20] Private households rather than statist bureaucracies controlled the economic ″surplus″ of Mamluk society. This control over the economic base of society gave the Mamluk *umarā'* control over the superstructure of ″communal and religious life of the towns″ as well. Yet, because the Mamluk household was not an ″alien military establishment,″ that is, it was a functional subsystem of ″regional″ integration, there was no overt struggle over surplus. ″Regime and society did not confront each other . . . ,″ therefore, social equilibrium was maintained.[21]

The informal network of patronal relationships which the Mamluks established with other social groups did not create the sort of anomic predatory relationships suggested in Wirth′s ideal-typification. Through such patronage networks the Mamluk political elite functionally exchanged economic benefits for social validation from the cultural elite. Lapidus interpreted this Mamluk ″self-interest″ as functional, not, in contradistinction to Parsons, as a source of ″atomism,″ which concerned Parsons about all utilitarian behavior. Indeed, Lapidus saw such self-interest as a form of social control by which the Mamluks actually ″atomized the common people.″[22] Mamluk military households were functionally inhibited from using their power in ways which threatened social reproduction; even their paramilitary squabbles did not, until the final decades, vitiate their ″vital″ function in the socioeconomic integration of ″regional″ Syro-Egyptian society.[23] Other social groups undifferentiated by horizontal class interests, indeed unified through vertical clientelistic structures, merely internalized the reality of Mamluk domination, ″. . . bending, accommodating, assimilating . . . Mamluk powers and actions in ways which created an over-all political and social pattern [of equilibrium].″[24] Only when Mamluk extraction of economic surplus exceeded social norms did ″confidence″ in Mamluk authority fail. The

[20]Household is different from family, though the two are often used interchangeably. Lapidus′s use of the term ″military household″ seems meant to convey the fact that the Mamluk family was surrounded by a constellation of ″personal dependents and clients of the emirs,″ not to imply that the military household was only a unit of co-residence without the capacity to generate normative relationships.

Ottoman conquest of Syro-Egypt in the early tenth/sixteenth century was merely the pushing over of a social system in classic disequilibrium.

II

Lapidus did not see the Syro-Egyptian city as an autonomous force in late medieval society, separated from and transforming the countryside. Certainly there were no emergent Weberian middle class agents attempting to ″usurp″ power from the traditional Mamluk elite; in fact, ″the development of a unified and independent middle class was impossible.″[25] Yet, neither did Lapidus view the city as a social void. Indeed, it seems to have been his principal goal in *Muslim Cities in the Later Middle Ages* to demonstrate that social integration depended on the reduction of isolation and tensions among social groups, not only between urban and rural groups, but also among different social subsystems within cities themselves. Mamluk cities, therefore, were complex units held together more by the functional socioeconomic interdependence of status groups than traditional coercive controls. And a society moving away from traditional beliefs and customs was, definitionally in the early 1960s, a society moving toward modernity. Certainly from a functionalist perspective the likelihood of an ″adaptive upgrading″ of Egyptian society from traditionalism to modernism would be easier to envision if late medieval society was already, as Lapidus seemed to suggest, a coherently organized social system whose subsystems were closely interdependent and relatively stable.

Lapidus′s reconstruction of the social system of late medieval Syro-Egypt clearly ought to have been groundbreaking. Yet, this expectation has gone almost entirely unfulfilled. For one thing, the slow collapse of expectations about modernization over the course of the 1960s made Lapidus′s functionalist macrosociological approach seem problematic. Lapidus′s work had been essentially synchronic, a study of the structure of the functional linkages of Mamluk urban society rather than the mechanisms which affected various social subsystems. Yet, in the developing world of thirty years ago these subsystems did not seem especially stable or interdependent, and there seemed to be little real socio-economic integration in light of the failures of industrial capitalism and pluralistic democracy. In the aftermath of modernization theory, American social scientists began to turn away from the study of functionalism to embrace that of dysfunctionalism. They began to study in earnest the microsociology of conflict, inequality and oppression—a trend which has been accelerated by postmodernist obsession with social pessimism and cultural implosion.

In this degraded theoretical environment, Lapidus gradually changed his own functionalist approach to late medieval Syro-Egyptian society. He recognized that his focus on collective order, regulation, and stability left little room finally for microprocesses of individual socialization and even autonomy. In *Muslim Cities in the Later Middle Ages* social action had been dictated by a socialized environment rather than individual intentionality. Autonomy from collective control suggested the sort of fundamental social change which classic functionalism feared as destabilizing to the entire social system. Lapidus may have been reluctant to model microprocesses of social change because they suggested the sort of internal conflict upon which Marxist social theory thrived and for

[25]Ibid., 190.

which functionalism had long been a preferred alternative among mainstream American social scientists. For such theorists, the pathway to modernity was better through internal value-orientation than internal conflict, through developmental prosperity rather than class struggle.

Although Lapidus continued to identify Muslim urban society as the set of ″informal relations among individuals, classes and groups,″ he no longer felt that those relations ought to be functionally assumed by scholars. He has called instead for works which can actually model ″social action,″ that is, ″the social processes underlying the functioning of urban societies″ as well as the ″concepts and values that bear on the ordering of social relationships. . . .″ Accordingly, Lapidus has suggested microsociologies of ″loyalty, discipleship, patronage, friendship, clientage, politics, and religious education to reveal the patterns of human behavior that make . . . societies.″ Lapidus′s appeal has been essentially for middle range theories which, one suspects, can be retrofitted to support his original functionalist insights. The results have been mixed. In the first place, though Lapidus′s appeal has struck a chord among various Mamluk scholars, their work has reflected generally only low-level theorization, that is, empirical research with generalizations based on repeated observation. On the whole, these social historians have tended to avoid unifying their results into middle range theories where such empirical generalizations could be used to differentiate between material and cultural explanations of human behavior.

Lapidus′s early focus on informal social networks rather than communal institutions as the source of social formation has remained, however, the basic thrust line of Mamluk history. Most of that attention, though, has been focused on isolated descriptions of the social origin, organization, and function of social elites. Thus, we possess a variety of informational studies about religious dignitaries, chancery scribes, judges, *wazīr*s, market inspectors, civil administrators, and law court and police officials.[26] A few scholars have

attempted to introduce some interpretive content, focusing especially on the mediatory role of these elites in urban social structure. Carl F. Petry, for instance, has observed that while civil elites generally failed to mediate proactively on behalf of other social groups, they at least helped to symbolize ″communal cohesion″ in the non-institutionalized social environment of late Circassian Mamluk society.[27] Jonathan Berkey has drawn attention to the role of educators, working through an ″informal system of instruction and . . . personal relationships,″ in helping to level social divisions within Mamluk society.[28] Ulrich Haarmann, for his part, has argued that Mamluk offspring (*awlād al-nās*) were a critical social, political, and even cultural link between the Mamluk ruling elite and other social subsystems.[29]

Unfortunately neither these subsystems nor, indeed, the ruling elite itself have received meaningful analysis. Though urban gangs, rural notables, merchants, peasants, tribal peoples, and even amirs have all been described in some way, they remain little understood as components of social formation.[30] Some scholars, again, have attempted to

be more interpretive. Petry and Robert Irwin, for instance, have called attention to the social dynamic of clientelistic structures in the shaping of Mamluk political action;[31] focus on such dyadic non-corporate and goal-oriented relationships may serve as a corrective to the more rigid and institutionalized politics of *khushdāshīyah* currently favored by traditional scholarship.[32] Toru Miura has argued that the numerous sub-quarters (*ḥārāt*) of the larger Ṣāliḥīyah quarter in Damascus were integrated into a larger ″political unit″ through the social networks of urban gangs;[33] this suggests that the function of social mediation between rulers and ruled may not have been a monopoly of the *'ulamā'*. In a more rural vein, William Tucker has noted that natural disasters may have had a significant social psychological effect on religious practices among late medieval Egyptian peasants.[34] Jean-Claude Garcin, following Lapidus′s thematic rejection of an urban/rural dichotomy in late medieval Egypt, has interpreted the rise of the urban center of Qūṣ in terms of the larger regional dynamic of Upper Egypt itself. Garcin′s observation that ″the city can not be separated from the countryside around it″ clearly recalls Lapidus′s injunction to ″think in terms of *pays* . . . as a natural form of settlement organization.″ As a crucial part of that regional dynamic, Garcin has emphasized especially the social role of the bedouin in influencing ″the structure of the establishment of human groups in a region.″[35]

On the whole, scholars have conformed to Lapidus′s functionalist identification of social integration with stasis.[36] Yet, what about change in Mamluk society? Jonathan

[36]Petry has recently characterized Mamluk society even down to its last days as a ″quagmire of stasis,″ *Protectors*, 225. Problems of social inversion as well have received little attention; see, however, David Ayalon, ″The Eunuchs in the Mamlūk Sultanate,″ in *Studies in Memory of Gaston Wiet*, ed. Myriam

Berkey, who is perhaps better known for arguing that social integration was advanced through the transmission of social knowledge, has suggested recently that social change did emerge from the fundamental tension between tradition and innovation in Mamluk socio-culture. The late medieval period was, according to Berkey, a period of ″vulnerability and decay″ as well as the introduction of ″new peoples, ideas and models of behavior to the Muslim Near East.″[37] Berkey′s historical dialectic suggests that Mamluk society, like all social organizations, possessed both progressive and conservative tendencies whose contradictions inevitably generated energy for social change. Boaz Shoshan, too, has maintained that confrontation between traditional high culture and innovative popular culture affected the structure of social life in medieval Cairo. The cultic veneration of *shuyūkh* particularly created over time ″a common cultural domain consisting of shared practices and meanings.″[38] Concerning the Mamluk army, Levanoni has argued that it experienced in the early eighth/fourteenth century a radical transformation from disciplined fighting force to military proletariat.[39] Moreover, several architectural studies have also intimated social change through physical changes in both sacred and profane urban spaces.[40] This combination of architectural and documentary evidence serves as a kind of settlement archaeology, not in the sense of theorizing the relationship between social groups and their ecology but rather changes in social and cultural behavior over time as reflected in changing patterns of spatial organization. This includes especially the process of

privatization of public space, a key development which many historical anthropologists have recognized about social transition from the traditional to the modern.

III

Nevertheless, Lapidus's view of late medieval Syro-Egypt as a society in equilibrium, functionally integrated through normative behavior, has not been fundamentally challenged. That is, until recently by Lapidus's own student, Michael Chamberlain. Like many before, Chamberlain has adopted Lapidus's position on "institutional" history, that an undifferentiated social formation can be better explained in terms of informal social networks than formal communal institutions. Like Lapidus, too, Chamberlain has located that social dynamic among political/cultural elites. Chamberlain's elites, however, are engaged in a social process which completely transforms Lapidus's integrated social subsystems into autonomous social units operating in "arenas of a never-ending struggle for social power and status."[41] Social action is no longer based on internalized values but on the materialist logic of utilitarian strategy and practices. Power now defines culture; value consensus gives way to value manipulation. The perceptions people have of social life are no longer necessarily stable or shared in such a way that social action can be coordinated. Social knowledge, in short, is no longer functionally supportive of social order. Indeed, the reproduction of social order is no longer based on accepting constraints on social action but in exceeding them. Chamberlain's methodological rejection of Lapidus's normative functional analysis—"metaphors derived from functioning bodies"—appears to be derived largely from his readings in the social psychology of the late German sociologist, Norbert Elias, as well as the cultural anthropology of the French post-structuralist, Pierre Bourdieu.[42]

Like Parsons, Elias had studied at Heidelberg University not long after the death there of Weber. Like Parsons, too, Elias was fascinated by psychoanalysis and admired Parsons's ability to psychologize the macrosocial process. However, Elias disagreed with Parsons's Weberian focus on action, particularly his view that social systems could only be comprehended as abstractions in which there existed a logical necessity that action always be integrated. Elias charged that this made society seem too much like a "medley of disembodied actions" rather than "networks of human beings in the round." Elias and, after him, Bourdieu sought to close the interpretive gap between the individual and society, suggesting that social action possessed its own dynamic, one unpredictable even to social actors themselves. In place of Parsons's immutable, functionally integrated society, Elias and Bourdieu suggested a collation of interdependent human networks forming autonomous spheres of action structured by their own immediate histories and internal logic. Importantly, these spheres were subject to processes not only of integration but disintegration as well. For Elias these spheres or "figurations" were the result of the "interweaving of countless individual interests and intentions" into autonomous outcomes. These "relational dynamics" were created by constantly changing power balances among these human networks, although there was ultimately an historical trajectory from violent

[41]Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190-1350* (Cambridge: Cambridge University Press, 1995), 175.
[42]Ibid., 21-22.

figurations to more pacific ones. For Bourdieu such spheres or ″fields″ are spaces for competition and conflict rather than socialization and cooperation. The structure of the field in turn is determined by the state of the relations of force between various social actors or ″players.″

Elias′s figuration theory and Bourdieu′s field theory share with Parsons′s functionalist systems theory, however, a common focus on differentiation and autonomy in social organization, though as a source of change rather than equilibrium, as process rather than stasis. There are no deterministic relationships among the subsystems, no organic cohesion or self-regulation as in a functionally interdependent social system; coherence is achieved only accidentally and temporarily. Even the imagery is quite different. Whereas Parsons sought a ″boundary″ between action and order in the social system, Bourdieu has conceived of the social field as a ″fluid″ process.

These theories, moreover, are all tied to linear models of social evolution which depend heavily on distinguishing dialectically between pre-industrial and industrial types of social organization. Parsons had described the process of modernization as a series of structural differentiations facilitating the ″directional″ development of early modern rational socioeconomic organization into modern bureaucratic industrialism. Elias attempted similarly to tie his process of *Zivilisation* to the evolutionary expansion and internalization of social control as a form of rational behavior. As webs of interdependent social networks expanded and became more dense, social action became correspondingly more controlled and society more differentiated. The constant division and subdivision of social functions transformed social control from external compulsion to internal self-discipline, part of the emergence of rational behavior.

Bourdieu, unlike Parsons and Elias, has been interested not in Weberian rational action but practical logic—what it makes sense to do—which may in fact be irrational; he has tried, however, to draw the same distinction between ″material″ and ″symbolic″ power in society that Weber once drew between ″economic order″ (wealth) and ″social order″ (honors). In his search for what is essentially the cultural process underlying (intra)class conflict Bourdieu has distinguished pre-industrial (pre-capitalist/doxic) from industrial (capitalist/discursive) social formations in terms of their autonomization of symbolic power. Pre-capitalist societies, being insufficiently developed economically to differentiate the material from the symbolic, were unable to produce an explicit symbolic system capable of generating the sort of competitive discourse leading necessarily to class struggle. The rise of capitalist societies, however, autonomized a discursive symbolic sphere capable of providing the dominated with ″symbolic means of rejecting the definition of the real″ hitherto imposed by the dominant material class. The producers of symbols (artists, writers and other intellectuals) are seen to struggle on a ″field of opinion″ with the dominant material class ″for the power to impose the legitimate mode of thought and expression″ in modern class societies; the dominant class eventually turns to symbolic power as well in order to continue its dominance. In this intellectual field of struggle for position, capital is no longer just accumulated but differentiated into economic and cultural types, each mutually convertible. The dominant class in capitalist society must, for a variety of reasons, convert some of its economic capital into cultural capital. The center of this conversion is the educational system, which is tied to the need to provide a market for cultural capital. Here class struggle is replicated and legitimated through the conversion of social position

into educational merit; the cultural capital produced was then later reconverted into economic power by the dominant class to preserve its position.[43]

Bourdieu figures significantly in Chamberlain′s explanation of the effect of such unconstrained competition on social order in a medieval Muslim city. Part of Bourdieu′s appeal may be that his theory of social strategies is extrapolated from his own anthropological observations about modern Muslim village life among the Algerian Kabyle. For Bourdieu, the Kabyle village was a center of eternal competition for status fought out by kinship groups using symbolic taxonomies. In such pre-capitalist societies, where a ″system of mechanisms . . . ensuring the reproduction of the established order by its own motion″ has not yet emerged, these strategies of ″symbolic violence″ were often more important and ″economical″ than ″overt (physical or economic) violence″ as *″elementary forms of domination.″*[44]

To some degree, then, Chamberlain′s Damascus is Bourdieu′s Kabyle village writ large. Damascene social life was similarly consumed by the constant and largely symbolic struggle for control of knowledge (*ʻilm*) as a way of achieving power and status, ultimately of ensuring ″social survival.″ Sixth/twelfth through eighth/fourteenth century Damascus was a suitably ″precarious″ and ″turbulent period″ in which elite social competition (*fitnah*) ″imposed its own logic″ on the strategies and practices by which medieval Damascenes acquired economic and cultural capital.[45] Chamberlain′s vision of a turbulent *high* medieval period is of course consistent with the belief common to both Elias and Bourdieu that the medieval period antedated the civilizing/modernizing process. Whereas Weber had envisaged the movement toward rational action beginning in the tenth/sixteenth century, Elias had seen already in the ninth/fifteenth century standards of control being imposed on society by political elites who were themselves making the transition from warrior violence to courtly manners. The high medieval period by contrast was a sinkhole of personality development. In language reminiscent of Johan Huizinga′s ″violent tenor of life,″ Elias suggested that social relations in the medieval period were violent, impulsive, aggressive, cruel, and without conscience.

The ninth/fifteenth century was also an important benchmark in Bourdieu′s analysis of the cultural process of modern class struggle. It was the beginning of the historical autonomization of a symbolic system in which the intellectual/artist freed himself culturally from the political and religious agencies of pre-capitalist legitimation in order to produce a competitive ethical/aesthetic discourse. In arguing that this process of autonomization was already underway in Damascus well before the ninth/fifteenth century, however, Chamberlain has modified Bourdieu′s model of historical development. Chamberlain′s focus on the social competition to control knowledge (*ʻilm*) presupposes already in the high medieval period a social elite (*aʻyān*) as a specialized group of symbolic producers, attempting to monopolize the objectified instruments of symbolic struggle (i.e., reading, writing, certification). This further supposes, following Bourdieu, that that struggle was part of a larger social competition with the dominant economic class (*umarā*ʼ) for control of the ″hierarchization of the principles of hierarchization.″ Chamberlain argues, in effect, that medieval Damascus was already sufficiently developed in terms of exchange relations to

[44]Ibid., 190-197.

[45]Chamberlain, *Knowledge*, 4-9.

generate an explicit symbolic system autonomous enough to engender class struggle. Yet, it is difficult to see how that struggle might have occurred since Chamberlain does not believe that there was a ″division of social and political labor″ between the *a'yān* and *umarā'* of Damascus.[46] Moreover, while Chamberlain speaks of the medieval Middle East generally as possessing a ″relatively high monetization of its economies,″ it is unclear if this could have constituted the sort of capitalistic development that Bourdieu has in mind.[47] Finally, according to Chamberlain, medieval Damascus had ″no educational system to reproduce existing social divisions,″ another limitation on Bourdieu′s thinking.[48]

Despite these qualifications, Chamberlain remains fundamentally indebted to Bourdieu′s basic understanding of social structure as a product of radically contingent action by self-reflective individuals rather than an ″institutionalized call to order,″ though even Bourdieu has admitted that rules can facilitate the generation of such action.[49] This has allowed Chamberlain to interpret the ″continuous reshuffling of power and resources″ by practical, self-indicating elite households (*buyūt*; sg., *bayt*) as the ″fundamental dynamic of political and social life″ in medieval Damascus.[50] Damascus, in effect, is no longer a society—the locus of social cooperation—merely a social space dedicated to unlimited ″struggle for social power and status.″ [51] And yet, Chamberlain′s observation that elite social competition (*fitnah*) was responsive to mediation seems to recognize ultimately a limitation to the radical contingency of social practice and strategy. Members of the Damascene elite negotiated among themselves for complementary shares of social and economic capital. Rulers (*salāṭīn*, *nuwwāb*) especially, able only ″to frustrate other social bodies′ independent possession of power or wealth,″ were obliged to negotiate both with the *a'yān* for ″use of the sacred″ and with the *umarā'* for political power.[52] One might infer that the aggregation of such bargaining created in effect a ″negotiated order″ in which differences could be neutralized, if not resolved, in such a way that necessary connective social operations might occur. Individuals could bond at least temporarily, adopting complementary or even similar values, which could become the basis of an occasionally unified social system.

Indeed, rhetoric about practice and strategy aside, the *a'yān* and *umarā'* still appear as functionally interdependent in Chamberlain′s analysis as in that of Lapidus. In what Chamberlain describes as an ″exchange among surplus-consuming groups″ of status for benefit, amirs engaged in a deterministic exchange of their economic capital for the cultural capital of urban notables. Chamberlain′s conclusion that ″the *a'yān* of the city accommodated themselves to the military patronage state″ seems little different ultimately from Lapidus′s earlier observations about the functional ″adapting [of] urban Muslim society to Mamluk domination,″ or its ″. . . accommodating . . . Mamluk power and

[52]Chamberlain, *Knowledge*, 41, 49.

actions.″[53] In both cases the *a'yān* appear to have successfully internalized Mamluk domination. Moreover, it was not just the *a'yān* and *umarā'* that were functionally related. According to Chamberlain the *salāṭīn* and *nuwwāb* also had a ″functional dependence on their subjects.″ Rulers, unable to ″penetrate the cities they dominated through intrusive state agencies,″ fit themselves ″into existing social and cultural practices . . . turning them to political use.″[54]

Precisely because such ″social and cultural practices″ were products of urbanization in Damascus, Chamberlain′s analysis, unlike that of Lapidus, reflects ultimately an urban rather than a regional perspective on social formation in medieval Syro-Egypt.[55] Urbanization, moreover, had a more anomic consequence on Chamberlain′s Damascenes than on those of Lapidus. Chamberlain′s Damascus was, in effect, a social void of secondary contacts possessed of the same ″segmented character and utilitarian accent″ that Wirth originally described. Bourdieu, though, is the real source of Chamberlain′s view of urbanization. Like Durkheim before him, Bourdieu believes that urbanization was crucial to the erosion of traditional social solidarity. For Durkheim urbanization led eventually to increased crime and suicide; for Bourdieu it leads to the emergence of a zone of struggle over the symbolic manipulation of the conduct of social reality—the field. It was only in the city that people with sufficiently diverse cultural traditions were sufficiently concentrated to be able to recognize their own formerly misrecognized social domination; it was in the city that their own cultural traditions were exposed, revealing ″their arbitrariness *practically*, through first-hand experience.″[56] Damascus, according to Chamberlain, experienced a similar process of urbanization at the end of the fifth/eleventh century, when ″pastoralists, professional and slave troops, and urban elites″ found themselves thrown together into an ″empire-building process″ stimulated by external threats to Syro-Egypt.[57] In that dynamic historic moment, however, socialization gave way to survival. Damascus became a social space without a Parsonsian ″core.″

IV

The integration of social theory and Mamluk history over the last thirty years has achieved only limited results. Much of that achievement, moreover, resides in the work of just two scholars, Lapidus and Chamberlain. Only in their writings do we possess meaningful interpretation of social formation and reproduction in Mamluk Syro-Egypt. Social life is generally understood to be composed of such things as beliefs, norms, laws, knowledge, and ideas. Lapidus′s interpretation has been, correspondingly, that of a functional, norm-based, regional society; Chamberlain′s view has reflected a utilitarian, knowledge-based, urban space. Yet, both have underscored recent thinking about the necessity of studying informal urban/regional social groups in terms of attitudes based on

locality, ethnicity, religion, kinship, etc., rather than categorized class-based attributes.[58] In Mamluk Syro-Egypt household, not class, was the basis of social formation—though not apparently of social change. For Lapidus's elite households were socialized, their action functionally integrated; even when their behavior became dysfunctional owing to environmental pressures, Mamluk society did not experience structural change or innovation in the relations of power, only collapse. Even Chamberlain's elite agents of social conflict (*fitnah*) could only manipulate and exploit structure, never consciously question or alter it. Ultimately, Damascus was not a center of macrosocial change, only constant microsocial transformations.

Yet, change is difficult to detect in social processes which appear deterministic or subconscious rather than cognitive. The human capacity for change resides after all in consciousness—the ability to perceive and synthesize many perspectives into one unitary apprehension of reality. Consciousness is formed within the structures of linguistically or symbolically mediated interaction. Society, in effect, is constituted intersubjectively through gestural communication, including language. Gestures are transformed into symbols with meaning understood by both parties. George Herbert Mead's theory of gestures shows how contingent action by individuals is actually enmeshed within symbolic structures. These gestures are in effect a social institution, what Mead called "an organization of attitudes," which condition social interaction. Individuals behave in terms of potential response by partners in these interactions, internalizing the expectations they have of each other. In this way social norms—by extension social order—become susceptible to change through modifications in communication. Cognition, in short, can have an adaptive affect on action and order through linguistic and symbolic expression.

Social order is, of course, hierarchical, and hierarchy has figured importantly in the discussions of both Lapidus and Chamberlain. The structure of such hierarchization can be seen to depend on superiors, equals, and inferiors developing an intersubjective understanding of one another at the cognitive level—"taking the role of the other" as Mead once observed. Individual behavior is integrated collectively by means of reciprocal expectations about behavior. Effective communication about these expectations can be seen, therefore, as supportive of social order; understanding a symbolic action after all means understanding about rules. It seems unlikely that social process can ever be demonstrated as either strictly normative or utilitarian, functional or self-indicating as Lapidus and Chamberlain have suggested. It may be possible, however, to fulfill Lapidus's original mandate about exploring concepts, values, and symbols of social order by demonstrating how action and structure were mediated through the establishment of a communicative order within Mamluk society, and how social order depended ultimately on keeping those lines of communication open.

Reflections on Arabic Poetry in the Mamluk Age

I

Arabic poetry composed during the Mamluk Empire (1250-1517) is a vast and rich resource for the study of Arabic and Islamic cultures. Yet it is a resource that is seldom tapped due largely, I suspect, to its raw state, for the majority of this verse is to be found only in manuscript form. Brockelmann, for example, lists approximately twenty *dīwān*s from this period, most of which are still in manuscript today, and this number grows substantially when one includes additional holdings at Cairo's Dār al-Kutub and the Arab League Manuscript Institute; other collections, such as those in Damascus and Istanbul, will undoubtedly add to the total.[1]

From among these many manuscripts, about a dozen have been edited and published over the last century. In addition, a substantial number of edited Arabic poems from the Mamluk period may be found in a wide variety of published sources including chronicles, such as Ibn Taghrībirdī's *al-Nujūm al-Zāhirah*, biographical works, such as al-Ṣafadī's *al-Wāfī bi-al-Wafayāt*, and several poetic works and anthologies, including Ibn Ḥijjah al-Ḥamawī's *Khizānat al-Adab wa-Ghāyat al-Arab*. Some poems from these and other published works have been collected by ʻUmar Fārūq in volume three of his *Ta'rīkh al-Adab al-ʻArabī*. Fārūq's encyclopedic work is arranged chronologically and includes brief biographies, bibliographical information, and samples of verse by over seventy-five poets of the Mamluk era.[2]

Yet even these many published poems have received scant attention from Western scholars. This continued neglect may reflect the lingering influence of older surveys of Arabic literature which, if they discuss Mamluk Arabic poetry at all, usually dismiss it in a few pages.[3] For instance, at the turn of the century R. A. Nicholson noted that while Mamluk Arabic poetry had yet to receive extensive study, its best poets were "merely elegant and accomplished artists, playing brilliantly with words and phrases, but doing little else."[4]

[3]See Clément Huart, *A History of Arabic Literature* (New York: Appleton and Co., 1903), 323-333; Ignaz Goldziher, *History of Classical Arabic Literature* (Hildesheim: Georg Olms Verlagsbuchhandlung, 1966), 153-154. A. J. Arberry ignores the Mamluks in his *Arabic Poetry: A Primer for Students* (Cambridge: Cambridge University Press, 1965).

[4]R. A. Nicholson, *A Literary History of the Arabs* (1907; reprint, Cambridge: Cambridge University Press, 1969), 448-450.

Fifty years after Nicholson, the situation remained much the same in terms of both the lack of Western research on Mamluk Arabic poetry, and the entrenched scholarly views of Arabic literary history. In the second edition of his survey *Arabic Literature*, H. A. R. Gibb divides this heritage into periods mirroring their respective political developments: the ″Heroic Age″ of pre-Islamic Arabia led to the Umayyad ″Age of Expansion,″ while the early Abbasid ″Golden Age″ inevitably declined in the ″Silver Age″ of the Saljuqs until the Fall of Baghdad. What then follows until 1800, Gibb simply labels the ″Age of the Mamluks″ whose literary output, he says, ″was enormous throughout, but the qualities of originality, virility, and imagination, weak from the first, die away completely by the sixteenth century.″[5]

It should come as no surprise, then, that the last thirty years have seen only a handful of articles in Western languages involving Mamluk Arabic poetry.[6] This lack of Western scholarly concern may also account for an anomaly in the *Cambridge History of Arabic Literature*; having surveyed Arabic prose and poetry from their pre-Islamic roots through their flowering in the Abbasid Age, this series has recently passed over the Mamluk and Ottoman periods to publish a volume on contemporary Arabic Literature.[7]

II

Fortunately, modern studies of Mamluk poetry in Arabic have been more extensive and promising. As early as the 1940s several studies appeared touching upon Arabic literature in the Mamluk era,[8] but it was in the late sixties and early seventies, that the subject drew the attention of a considerable number of Arab scholars. This has resulted in the editing and publication of some additional *dīwān*s, a few new surveys, and a small

[7]The Cambridge series is planning a volume to cover Arabic literature during the period 1150-1850; tentatively entitled *The Post-Classical Period*, this volume is to be edited by D. S. Richards and Roger Allen. As for *The Encyclopaedia of Islam*, the second edition contains brief entries on a number of Arabic poets of the Mamluk period, including al-Būṣīrī, Ibn Abī Ḥajalah, Ibn ʻAfīf al-Tilimsānī, Ibn Ḥijjah, Ibn Isrāʼīl, and Ibn Nubātah.

[8]See ʻAbd al-Laṭīf Ḥamzah′s brief remarks in his *al-Ḥarakah al-Fikrīyah fī Miṣr fī al-ʻAṣrayn al-Ayyūbī wa-al-Mamlūkī al-Awwal* (Cairo: Dār al-Fikr al-ʻArabī, [1945]), 262-287; al-Ṣibāʻī al-Bayyūmī, *Taʼrīkh al-Adab al-ʻArabī bi-Miṣr wa-al-Shām ʻalá ʻAhday al-Mamālīk wa-al-ʻUthmānīyīn* (Cairo: Maṭbaʻat al-ʻUlūm, 1947-48), 78-156. Al-Bayyūmī′s treatment of poetry is very general and lacking analysis and source citations.

number of monographs that target specific poets. As to be expected, several of the surveys are very basic introductions to Mamluk Arabic prose and poetry, based largely on a very limited number of published sources. For example, Muḥammad Kāmil al-Fiqī's *al-Adab fī al-'Aṣr al-Mamlūkī* briefly reviews Mamluk poetry together with prose works in context of the politics and culture of the period. Al-Fiqī notes the "conservative character" of this poetry in both form and content, decries the prominence of ornamentation and literary devices in both prose and poetry, and mentions the spread of new popular poetic forms and folk verse.[9]

A more recent and expanded introduction is that of Shawqī Ḍayf, forming volume six of his *Ta'rīkh al-Adab al-'Arabī*. Ḍayf divides this work into two major sections, one on the literature of Egypt, the other on that of Syria. In his chapters on poetry, Ḍayf draws attention to the long history of Arabic poetry in the region pre-dating the Mamluks, and then briefly discusses popular poetic forms, including *rubā'ī* and *muwashshaḥ*, which became popular in the late Abbasid and early Mamluk periods. He then turns to more traditional genres, including *madīḥ*, *rithā'*, *fakhr*, *hijā'*, and *ghazal*, citing examples of each from poets spanning the entire Ayyubid and Mamluk periods. Ḍayf also treats this poetry thematically, including sections on Shī'ī, Sufi, and philosophical verse, and poems in praise of the Prophet Muḥammad, as well as providing sections on humorous verse and folk poetry. Again, Ḍayf cites numerous verses to illustrate his themes and briefly examines the work of representative poets. Often he provides useful paraphrases of their verse, but offers little other interpretation or analysis; this survey also lacks a bibliography.[10]

Several earlier works may be used to substantially supplement Ḍayf's introduction, and they may have inspired his division of poetry between that of Egypt and Syria. 'Umar Mūsá Bāshā in *Adab al-Duwal al-Mutatābi'ah* concentrates on the prose and poetry of Syria from the Zangids through the Ayyubids and to the Mamluks, ending with the reign of al-Nāṣir Muḥammad ibn Qalāwūn. Bāshā gives an overview of major political events, as well as of the social, religious, and moral life of this period with its use of wine and hashish, both of which were accompanied by other illicit activities. Bāshā notes that in spite of such wayward tendencies, this age, particularly under the Ayyubids, witnessed an intellectual and cultural florescence, which was carried on by the early Mamluks who likewise patronized the various arts and sciences.[11]

Bāshā organizes his long subsequent section on poetry around eleven Syrian poets representing many of the genres and poetic trends of the times; he gives a biography of each poet, noting their literary work, and citing examples of their favored genres, themes, and styles. Included from the Mamluk period are al-Ashraf al-Anṣārī (d. 662/1264) with his elegant poetic style, al-Shāb al-Ẓarīf (d. 688/1289) with his enchanting verse on wine and love, and al-Talla'farī (d. 675/1277) with his simple poetry on life and experience.[12]

Drawing on his substantial studies of these eleven poets, Bāshā next appraises the overall state of poetry during this period, largely in terms of styles and themes. He finds

[12]Ibid., 177-445.

several major literary trends in this verse: (1) *al-madrasah al-taqlīdīyah*, the traditional or imitative school, composing poetry for the most part in accord with the classical canon; (2) *madhhab al-tawriyah wa-al-insijām*, also called the school of "licit magic," an innovative movement using allusion and symbols with an elegant style to express abstract thoughts and feelings, often of a religious nature. This movement produced a third one tending toward ornamentation, (3) a *badīʿ* or highly rhetorical style characterized by *jinās* (paronomasia) and *ṭibāq* (antithesis), and finally there is (4) *madhhab al-funūn al-shiʿrīyah al-mustaḥdathah* representing recent folk and colloquial poetic concerns and forms.[13]

Turning to major themes and genres, Bāshā suggests that poems in praise of Muḥammad—one of the featured genres of the time—arose out of the chaos of the Crusades and the Mongol threat. Following Ayyubid practice, the Mamluks fostered a conscious sense of Muslim identity by encouraging devotion to Muḥammad, clearly manifest in panegyrics of him. Poetry was also used to incite the troops to battle against the Crusaders who were usually portrayed by poets as the evil other. Bāshā also notes Mamluk influence on the archetypal beloved who increasingly appears as a Turkish maiden or young boy. Still, some poets, such as al-Shāb al-Ẓarīf, resisted this innovation, and Bāshā suggests that the continued use of an Arab beloved and the nostalgia for the days of the Arab Prophet may underscore a deep dissatisfaction on the part of many Arab subjects with their Turkish masters and their military rule.[14]

Bāshā further observes that there was a proliferation of poetry among all social classes accompanied by new poetry (*al-funūn al-shiʿrīyah al-mustaḥdathah*) with its folk and musical elements. Bāshā describes and gives examples of many of these newer forms including *muwashshaḥ*, *zajal*, *rubāʿī*, *mawwāl*, and *musammaṭ*. Though popular with the masses for expressing their work-a-day life and humor, these folk genres, Bāshā claims, also afforded accomplished poets an occasional opportunity to escape the burden of the classical Arabic tradition.[15]

In contrast to this often simple, colloquial verse were the traditional or imitative genres (*al-aghrāḍ al-taqlīdīyah*) of intellectuals and more serious poets. But here, too, Bāshā finds an uneasiness with tradition as many poets opened their *nasīb*s with the Nuwāsian rejection of the ruins and beloveds of Arab legend. Further, under the inspiration of Abū Tammām (d. ca. 232/846) and al-Buḥtarī (d. ca. 284/897), poets increasingly used ornamentation and rhetorical devices to embellish their verse, going to great lengths to distinguish themselves from their poetic forefathers.[16] Bāshā surveys, with illustrations, various figures of speech and rhetorical devices including personification (*tashkhīṣ*), simile and metaphor (*tashbīh*, *istiʿārah*), antithesis (*ṭibāq*), and paronomasia (*jinās*), and cites as a typical example of excess Ṣafī al-Dīn al-Ḥillī's (d. 749/1349) *al-Badīʿīyah al-Nabawīyah*; this panegyric on Muḥammad is composed of approximately 140 verses, each featuring a different rhetorical device. Bāshā is disturbed by such *badīʿ* poets, whom he criticizes as mind-slaves to style, wasting their time on verse games, and he quotes several denunciations of their poetry by critics of the period. Nevertheless, Bāshā

[13]Ibid., 446-456.
[14]Ibid., 456-530, esp. 416, 462.
[15]Ibid., 581-635.
[16]Ibid., 531-580.

notes that *badī‘* verse was only one of multiple poetic tendencies of this eclectic period, which also produced less affected, more elegant and sincere verse.[17]

For this study of Syrian poets, Bāshā draws many of his examples from both published works and manuscripts, which he lists separately in a very useful bibliography. However, Bāshā is far more dependent on published and secondary sources for his subsequent study *Ta'rīkh al-Adab al-‘Arabī: al-‘Aṣr al-Mamlūkī*. Again, Bāshā organizes his study chronologically around individual authors whom he finds representative of important literary trends. In matters of verse, he devotes separate chapters to the lives and works of eight poets, including al-Anṣārī, al-Talla‘farī, and al-Shāb al-Ẓarīf, whose chapters are taken verbatim from Bāshā's earlier work, with several useful additions such as a section on al-Anṣārī's ascetic verse, and one on al-Shāb al-Ẓarīf's *Maqāmāt al-‘Ushshāq*.[18]

Bāshā's new studies focus on al-Būṣīrī (d. 694/1295) and his panegyrics to the Prophet Muḥammad; the Sufi verse of al-Shāb al-Ẓarīf's father, ‘Afīf al-Dīn al-Tilimsānī (d. 690/1291); Ṣafī al-Dīn al-Ḥillī's playful and licentious verse in various poetic forms; Ibn Nubātah al-Miṣrī (d. 768/1366) and his elegant poetry replete with symbolism and double entendre; the traditional panegyrist Ibn Mālik al-Ḥamawī (d. 917/1516), and finally, a short chapter on ‘Ā'ishah al-Bā‘ūnīyah (d. 922/1516), her Sufi verse, panegyrics for the Prophet, and poetic exchanges with her literary contemporaries.[19] Unfortunately, Bāshā does not focus on a practitioner of the very popular *badī‘* verse, which he personally dislikes, nor does he examine the new poetic forms in any detail, as he did in his earlier study of the Syrian poets. Further, his studies of individual poets of the Mamluk period are largely descriptive with little analysis or commentary. Nevertheless, Bāshā's history is a very readable introduction, providing a number of poems for further study.[20]

Undoubtedly another fruitful source for Ḍayf and more recent scholars of literature in Mamluk Egypt has been the concise study of life and literature in Mamluk times, *al-Adab fī al-‘Aṣr al-Mamlūkī*, by Muḥammad Zaghlūl Sallām.[21] In volume one of this two-volume work, Sallām draws on a number of primary sources to present a plausible and detailed account of Mamluk politics, cultural and intellectual life, and religion. He pays particular attention to the military nature of the foreign Mamluk regime, which was supported at times by the largely Arab populace due to their fear of invasion by infidels, whether Christian Crusaders or pagan Mongols. But the Mamluk protectors were also predators as they vied with one another for wealth and power, and the endemic Mamluk disputes led to political and economic instability and social unrest. Further, Sallām suggests that the rigid stratification among the Mamluk ranks reinforced efforts to clearly distinguish and rank individuals and groups among the larger populace, whether in terms of occupation or religious affiliation.

[18]‘Umar Mūsá Bāshā, *Ta'rīkh al-Adab al-‘Arabī: al-‘Aṣr al-Mamlūkī* (Beirut: Dar al-Fikr al-Mu‘āṣir, 1989), esp. 126-131, 249-253.
[19]Ibid., 97-451.
[20]Bāshā also adds an appendix on reading and analyzing texts, using as examples al-Būṣīrī's *Burdah* and an elegy by Ibn Nubātah. In both cases, Bāshā makes several relevant observations regarding matters of form and influence, but his primary aim is the daunting task of evaluating the "sincerity" of the poets' intentions and emotions; *Ta'rīkh*, 623-702.
[21]Muḥammad Zaghlūl Sallām, *al-Adab fī al-‘Aṣr al-Mamlūkī*, 2 vols. (Cairo: Dār al-Ma‘ārif, 1971).

Sallām briefly touches upon aspects of the lower classes and popular culture with several critical observations on the place of women within Mamluk society. He notes that while a few women became scholars many more staffed the marginal professions as singers, dancers, and prostitutes. He also cites several edicts that aimed to keep women segregated and subordinate in a man′s world by proclaiming guidelines for their behavior and dress, which included prohibitions against their wearing turbans and men′s clothes.[22] Turning to cultural and intellectual life, Sallām, too, points to its conservative, preservative character as a response to the destruction of Baghdad in the East, and the Christian *reconquista* in the West. Cairo and, to a lesser extent, Damascus became bastions of Arab Muslim culture which, for a variety of political and economic factors, was generously supported by the Mamluk elite. Study of the various religious sciences flourished, and a strong Sunnī interpretation of Islam became ascendant.

Sallām reviews Mamluk achievements in the study of history, language, and the natural sciences, and then turns to religious life. He points out differences and tensions among the Sunnī ‘*ulamā*’, a distinct if diminishing Shī‘ī presence in the empire, especially in the Hijaz, and the varying fortunes of non-Muslims. Sallām claims that the Mamluks consciously played on religious difference to divide and control their subjects.[23] Sallām then focuses on Sufism in the Mamluk era, its doctrines, orders, and major institutions, such as the *khānqāh*. He discusses poetry in praise of the Prophet Muḥammad, and reviews Sufi poetry′s major themes and practitioners, but categorizes them generally in terms of the Sufi doctrines of monism (*waḥdat al-wujūd*), incarnationism (*al-ḥulūlīyah*), and love of absolute beauty, rather than in terms of poetic form and style.[24]

Sallām briefly surveys some of the arts and crafts patronized by the Mamluks, including architecture, textiles, and music, and the possible influence of the latter on the poetry of the period, particularly the newer poetic forms such as the *rubā‘ī*, *mawwāl*, *muwashshaḥ*, *zajal*, and *balīq*. Sallām cites examples of these ″folk″ forms which, he maintains, largely reflect the colloquial speech and everyday experiences of the masses. But Sallām asserts, as did Bāshā, that these popular forms also stimulated poets among the literary elite to experiment in matters of rhyme, meter, style, and modes of expression.[25]

Having set this background, Sallām turns in his second volume first to prose and then to poetry proper. He claims that the non-Arab Mamluks were often ignorant of proper Arabic which, Sallām asserts, led to a slippage in poetic standards, as serious poets lacked an educated and appreciative audience. As a result patronage of verse was sporadic, and only rarely could an individual support himself solely by poetry. Nevertheless, the penchant for composing poetry spread throughout Mamluk society, especially among the scribal class and the ‘*ulamā*’, as well as among the poorer masses, and by the fourteenth century, colloquial Arabic and folk forms were widespread in Arabic poetry. Sallām suggests that such developments may have alienated many serious poets from the elite and commoners alike, and that this alienation may have inspired poems in praise of Muḥammad and Sufi verse, as did the threats of infidel invasion. Still, while most Mamluks had little taste for classical Arabic poems, Sallām notes that they certainly savored sad lamentations

[22]Ibid., 1:13-104.
[23]Ibid., 1:105-192.
[24]Ibid., 1:193-274.
[25]Ibid., 1:275-336.

for captured cities urging them on to action, and the subsequent rousing poetic accounts of their valiant military exploits, and stunning victories over Godless foes.

Turning from *madīḥ* and *ḥamāsah* verse to the *ghazal*, Sallām also draws attention to the Turkish Mamluks and the changing standards of beauty reflected in many *ghazal*s of the period, as the beloved's form shifts from a dark, wide-eyed Arab, to a Turk, soft and white with slanting eyes. As for *hijā'*, or invective verse, Sallām notes its function as a vital form of social satire and criticism, often aimed at judges and other religious officials.[26] Then, leaving traditional poetry (*taqlīdī*), Sallām once again takes up folk forms and themes (*sha'bī*), the influence on them of music and Andalusian elements, and then briefly examines his third class of Mamluk poetry, *badī'*. Sallām catalogs various literary devices that came to dominate much of Mamluk poetry, particularly among the scribal class, once again with ample examples.[27]

Following this overview of Mamluk Arabic poetry, Sallām gives entries for twenty-one poets spanning the Mamluk period. He arranges these entries chronologically according to death dates, determining, where possible, a poet's residence in either Egypt or Syria. Sallām draws his materials from previously published Mamluk sources, carefully cited for each entry, which vary in length from a paragraph to fifteen pages. Further, these entries follow the traditional Arab biographical form, recording, where possible, the poet's full name, place of birth and death, profession, teachers, students, patrons, and opinions on the poet and his verse by his contemporaries. Sallām also notes the types and genres preferred by each poet, often citing examples. Likewise, he pays careful attention to possible literary influences on individual poets, and to a poet's literary companions, including samples of poetic exchanges among them. While Sallām offers little literary analysis of particular poems or of Mamluk Arabic verse in general, his patient descriptive work is among the best introductions to literary life in the Mamluk era, and his bibliography cites many of the published primary sources available for further research on Mamluk Arabic poetry and poets.[28]

A final survey worth noting is Bakrī Shaykh Amīn's *Muṭāla'āt fī al-Shi'r al-Mamlūkī wa-al-'Uthmānī.* Amīn aims to address Arabic verse more in aesthetic than historical terms, and his introduction immediately sets the tone of the work; he deplores the fact that many modern scholars have categorically dismissed the Arabic literature of the Mamluk and Ottoman periods as decadent, particularly due to the prominence of ornamentation and rhetorical devices in much of its poetry and prose. He castigates Arab scholars for turning away from this portion of their heritage due largely to its emphasis on formal qualities while, at the same time, embracing modern artists, like Picasso, who have similar formal concerns. Amīn feels that underlying this reorientation is a rejection of what is Arabic and Islamic in favor of what is Western and, hence, of Judaeo-Christian taste. He therefore proposes to give this Arabic literature its due.[29]

Amīn begins his work with two chapters of general introduction to Arab history and culture from the late Saljuq through the Ottoman periods. Then he divides his study of Mamluk and Ottoman Arabic poetry based on the standard groupings of verse as either

[27]Ibid., 2:121-132.
[28]Ibid., 2:133-250.
[29]Bakrī Shaykh Amīn, *Muṭāla'āt fī al-Shi'r al-Mamlūkī wa-al-'Uthmānī,* 4th ed. (Beirut: Dār al-'Ilm lil-Malāyīn, 1986; 1st ed. 1972), 5-10.

traditional/imitative (*taqlīdī*) or new/innovative (*mustaḥdath*). He notes at the outset the sheer number of poets composing in Arabic from the Saljuq through the Ottoman periods, despite declining patronage under non-Arab rule; most of these individuals supported themselves by occupations other than their poetry which, nevertheless, served as a badge of cultural distinction. He further acknowledges the fact that much of their verse has been either lost or remains in manuscript.

But undeterred by this fact when addressing the major genres of classical Arabic poetry, including *madīḥ*, *rithā'*, *ghazal*, *fakhr*, *ḥamāsah*, *hijā'*, and *waṣf*, Amīn concludes that Mamluk and Ottoman poets were bound by tradition, aiming to conserve it rather than to interact creatively with it. To support his case, Amīn compares panegyric verses by al-Nābighah (d. 604) with those of Ṣafī al-Dīn al-Ḥillī; whereas the former pre-Islamic poet makes a concise comparison between his courageous patrons and a flock of predatory birds sweeping down on their prey, the Mamluk poet cobbles together a disparate host of traditional adjectives and images to praise his patron's courage.[30]

Amīn acknowledges that some Mamluk poets occasionally broke with tradition, as when a few of them make a woman speak to express her feelings in love poetry, or when a poet describes markets, business transactions, or the effects of natural disasters.[31] But in general, due to lack of patronage and a cynicism about the times, many poets turned away from expressing their true feelings only to submerge themselves in intricate word-play. Amīn claims that this tendency is quite evident in invective poetry which, he asserts, no longer critiqued a tribe or society, but rather attacked an individual, personal enemy. Amīn believes that this reflects the dissolution of tribal bonds as a result of urbanization and economic independence, and a refusal to criticize the ruling Mamluks for fear of reprisal. He ignores, however, Sallām's examples of verse critical of both the ruling elite and the religious establishment, perhaps regarding them as exceptions.[32]

However, if poets were hesitant to compose invectives against their Mamluk masters, they were quick to praise them and their efforts on behalf of Islam. Amīn notes that images of the Mamluks as defenders of the faith and counter-Crusaders were essential to their legitimation, as were references to their ascetic almost saintly qualities. Further, these religious and doctrinal elements so central to the legitimacy of the Ayyubid and Mamluk regimes were extended in *ḥamāsah* poetry from praise for an individual amir to lauds for entire armies.[33]

In spite of a few pertinent observations, Amīn's discussion of more traditional Arabic verse in the Mamluk and Ottoman periods adds little that is new. However, his second section on innovative verse is much more detailed, as he contrasts the conservatism in the classical genres to the free and playful spirit he finds in the new and innovative poetic forms and themes. Amīn devotes separate sections to a startling variety of Arabic verse including verses revealing important dates, verse riddles and puzzles, poetic "trees" where individual verses branch off from a central verse to create a poem, poems forming geometrical shapes, verses reading forward and backward, and poems, that if the end word is omitted from each verse, yield new poems with different rhymes and meters. Next, Amīn gives brief examples of various rhetorical devices to be found in this poetry and then,

[30]Ibid., 81-98.
[31]Ibid., 99-125.
[32]Ibid., 137-148.
[33]Ibid., 126-136.

after his detailed account of the many complex and fantastic poetic forms, Amīn pronounces them all to be the trivialities and waste products of the ″killing emptiness″ of the age.[34]

Amīn, however, finds some redeeming qualities in several of the thematic innovations of the period, particularly in the flourishing of Sufi themes and panegyrics of the Prophet. He ascribes the prominence of this religious verse to the tumultuous effects of the Crusades and the Mongol threat, and to a general dissatisfaction with Turkish rule, Mamluk or Ottoman. Amīn gives a sampling of Sufi verse by Ibn al-Fāriḍ (d. 632/1235), Ibn al-ʻArabī (d. 637/1240), and ʻAfīf al-Dīn al-Tilimsānī and a glance at their poetic sources in early poetry praising Muḥammad, and love and wine poetry, which they adapted as a mode of expression appropriate to their efforts and experiences in the mystic way. Amīn then reviews panegyrics of Muḥammad in the context of Sufism and the dominant influence of al-Būṣīrī′s *Burdah* on this religious genre, which often prays for the Prophet′s intercession on behalf of the poet and his sad state.[35] Amīn rounds out this section on thematic innovation with a few brief references to poems on hashish and their possible connection to homosexuality, sarcastic and humorous verse serving as an outlet for personal and social frustrations, poems about one′s own wretchedness, and *ikhwānīyāt*, poems exchanged among friends and colleagues as expressions of admiration and affection.[36]

In his final observations, Amīn stresses the fact that literary history is not identical to political dynasties and geographical borders. Nevertheless, he sees a decline in poetic quality resulting from a loss of state patronage now in the hands of a foreign, largely Turkish elite. This was accompanied by a changing Arabic language with more colloquial elements and less nuance, and a widening gap between popular parlance and a literary language losing vitality and emotive power as it severed its links to life. Fleeing the brutality of their world, poets retreated to their literary ivory towers; they became learned to the point of being esoteric, but while they could be clever, they were not committed to a larger life and its poetic expression.[37]

III

Despite his initial defense of Arabic poetry from the Mamluk and Ottoman periods, Bakrī Amīn, in the end, sides with a majority of Arab literary scholars in holding a dim view of this poetry, which they have labeled variously as decadent, pallid, worn out, and lacking authenticity. While similar Western appraisals seem to stem, in part, from idealized views of Arab culture and Islamic history, most Arab negative opinions appear to be the product of a pervasive reading of this poetry in terms of romantic notions of creativity that embrace the simple and emotional as indicative of personal experience, sincerity, and truth.

Therefore, condemnation of Mamluk Arabic verse as decadent and superficial says more about modern tastes than it does about this poetry and its roles within Mamluk society. A useful corrective to this state of affairs is *al-Naqd al-Adabī fī-al-ʻAṣr al-Mamlūkī* by ʻAbduh ʻAbd al-ʻAzīz Qulqaylah. Inspired by the work of earlier scholars,

[34]Ibid., 161-229.
[35]Ibid., 233-275.
[36]Ibid., 276-294.
[37]Ibid., 298-320.

among them Maḥmūd Rizq Salīm and Muḥammad Zaghlūl Sallām, Qulqaylah presents an extensive survey of twenty-six litterateurs and scholars of the Mamluk period and their views on Arabic literature.[38] He compiles their opinions on a number of specific critical issues, including what factors make a good writer, effects of the environment on a writer, and the appropriateness of artistic elements in writing, and then turns to matters of form, content, and literary borrowing or theft (*sariqāt*).[39]

Specifically in matters of poetry, Qulqaylah shows that Mamluk critics followed earlier tradition in their preference for a largely paratactic poetic structure, and in their appraisals of classical genres: invective poetry may be seen as a negative panegyric; the function of the *nasīb* is to attract the listener′s attention by mentioning the beloved, while a proper *ghazal* relates the words and acts occurring between lovers; elegy should never contain erotic or pleasurable themes but should, instead, focus on the deceased′s good qualities and lasting legacy.[40] As for *badī‘*, it is quite clear that many of the critics surveyed by Qulqaylah appreciated its creative potential and the erudition that it displayed, particularly in high quality verse involving allusion or double entendre (*tawriyah*). Yet a number of critics denounced the burgeoning of rhetorical devices, which threatened to choke poetic spontaneity, and they sought to stem its excesses, though not its creative uses per se.[41]

In addition to Qulqaylah′s study, recent Western research on pre-Islamic and classical Arabic poetry has also challenged persistent romantic misreading of pre-modern Arabic verse.[42] Among this work is Stefan Sperl′s insightful book on mannerism in Arabic poetry of the fifth/eleventh century. Sperl argues that mannerism is defined by the way in which a particular poem relates to previous literary convention and subjects. Specifically, mannerism′s primary subject is the poetic tradition itself, as the poet aims to invoke wonder in his audience through various rhetorical strategies. The poet′s playful and intricate weave of antitheses and metaphorical inversions creates discord between signifier and signified, calling into question normal perception while, at the same time, suggesting a seamless reality where the ordinary may suddenly be transformed into the miraculous.[43]

Such work by Sperl and others holds promise for a better grasp and understanding of Mamluk poetry, particularly in its *badī‘* and mystical varieties.[44] Yet considerable

groundwork remains to be done in the forms of additional edited *dīwān*s and other primary sources, and more focused research on themes, genres, and poets. Presently, there are very few studies on individual poets. Jawād Aḥmad ʻAllūsh, Maḥmūd Rizq Salīm, and Yāsīn Ayyūbī have surveyed the writings of the poet and critic Ṣafī al-Dīn al-Ḥillī;[45] ʻUmar Mūsá Bāshā has examined the work Ibn Nubātah, Maḥmūd Rabdāwī has studied the work of Ibn Ḥijjah al-Ḥamawī, while Ibrāhīm Jād al-Rabb recently completed a study of the writings of Ibn Makānis (d. 794/1392).[46]

Among the many poets requiring further focused attention are al-Shāb al-Ẓarīf, al-Būṣīrī, Ibn Abī Ḥajalah (d. 776/1375), and ʻĀ'ishah al-Bāʻūnīyah, a celebrated woman scholar and litterateur. Her work raises an issue seldom addressed in the study of the Mamluk period, namely verse by women poets. Careful study of their verse and a comparison of it to that of their male contemporaries might reveal differing concerns and experiences based in part on gender. Although extant Arabic poetry by women of the pre-modern eras is scarce, I have found some verse by women in Mamluk biographical dictionaries, and recently I managed to obtain copies of several manuscripts of ʻĀ'ishah's *Dīwān*.

In addition to these poets, many other individuals composed Arabic poetry during the Mamluk period, and we should attempt to distinguish serious poets from interested amateurs. By studying the number and transmission of manuscripts of specific poets we may better appreciate the literary tastes and preferences of the time and so discover which poets were read most often and served as the focus for study and commentary;[47] this was clearly the case with al-Būṣīrī, for instance, whose *Burdah* became a part of the Arabic poetic canon. Also worthy of study are the possible effects of ethnicity, class, education, and occupation on the Arabic verse of individual poets. As discussed by Li Guo elsewhere in this volume, education and occupation were important factors in the approach and style of Mamluk histories distinguishing, to a degree, historians from Damascus from those in Cairo; we should be alert to a similar situation among poets.

A related issue demanding further attention is that of the colloquial and folk-inspired poetic forms, which were also utilized by many accomplished poets. As we have seen, this verse has been described and discussed in a number of surveys, and to these discussions should be added Paul Kahle's recently published edition of three shadow plays by Ibn Dāniyāl,[48] as well as Aḥmad Ṣādiq al-Jammāl's pioneering study *al-Adab al-ʻĀmmī fī Miṣr fī al-ʻAṣr al-Mamlūkī*. Al-Jammāl draws distinctions between official literary Arabic (*fuṣḥá*), ungrammatical variations on this literary language deriving in part from the common parlance of the masses (*ʻāmmīyah*), and the related, though largely oral folk traditions with their anonymous cycles of myth and legend (*shaʻbī*). Al-Jammāl

[48]Paul Kahle, ed., *Three Shadow Plays by Muḥammad Ibn Dāniyāl*, E. J. W. Gibb Memorial, n.s. no. 32 (Cambridge: Trustees of the E. J. W. Gibb Memorial, 1992).

concentrates on the colloquial literature in terms of the political, social, and intellectual life of Mamluk Egypt.[49] He then discusses major colloquial forms, including the *muwashshaḥ*, *zajal*, and *balīq*, their meters, diction, and themes, and major practitioners of several of these popular verse forms.[50]

Al-Jammāl stresses that while colloquial verse is light and musical in style, it may still bear substantive meaning, often of a socio-political nature. Less restricted in both form and theme than the classical tradition, colloquial Arabic became a pliant language for expressing both public and private sentiments, either directly or by insinuation through various forms of word-play. Thus, this delightful verse could momentarily relieve the stress of life′s vicissitudes, while giving vent to the frustrations of the poet and larger populace.[51] Al-Jammāl, too, seems to hold romantic assumptions regarding poetry when he accepts colloquial verse as a sincere and accurate reflection of the poet′s life and personal experience. Nevertheless, he is quite sensitive to this poetry′s functions and value, especially when compared to the majority of scholars who have dismissed this and other playful verse as a waste of time and of little aesthetic worth.

Dealing with a similar situation involving fifteenth century Timurid Persian riddles, Paul Losensky has called attention to the overly serious approach taken by modern scholars to such verse. Drawing on the work of Johan Huizinga and Jan Mukarovsky,[52] Losensky points out that in many periods types of poetry and versification have served as a social ritual or game where play, not profundity, was the aim. In the Timurid case, riddles often play on personal names, promoting an accepted mode of social exchange—a kind of greeting card—created for immediate consumption by a host and his guest.[53]

Losensky′s insightful observations should be extended to riddles, colloquial verse, and other occasional Mamluk Arabic poems, which were probably never intended to meet the highest aesthetic standards, nor to stand the test of time as literary masterpieces. Following Losensky′s lead, we may make a useful distinction between poetry of conscious aesthetic aspirations and sensibilities, and more disposable verse intended for a limited audience and immediate use. Thus poems like those reviewed by Bakrī Amīn—reading forward and backward, or in botanical and geometric shapes, or poems in which the omission of the end words produces new poems—should be seen as a kind of ″verse-search,″ indicative more of playful erudition and cultural sophistication than of artistic decline and decadence.

Similarly serving everyday social needs are the hundreds of occasional poems, including verses exchanged between friends (*ikhwānīyāt*) to express affection and get-well wishes, poems celebrating special occasions, and elegies offering condolences. Again, a modern analogy is our own Hallmark cards containing verses to commemorate particular types of occasions. Few scholars of English would consider this verse to be original

poetry of high caliber, yet it is precisely its standardized form and restricted number of easily recognizable cultural ideals and traditional motifs that render such verse so very useful.

Careful study of Arabic occasional poetry from the Mamluk period could thus sharpen our perceptions of social etiquette and proper conduct, as well as of the cultural ideals and sentiments encoded in this poetry. While it is true that identifiable authors composed this Arabic verse—in contrast to the largely anonymous verse of our own occasion cards—we should not be obsessed with questions regarding the ″sincerity″ of a poet′s sentiments. Rather, we should probe the criteria that culturally identify these sentiments and their appropriateness on a given occasion. In other words, the emphasis here should not be on the truth or actual existence of these feelings in a poet, but of their proper identification, as such; it is not a question of these sentiments *being* so, but of their being *so*.[54]

Clearly, poetry has been fundamental over the centuries to Islamic culture for expressing feelings and beliefs, and for articulating views on life, society, and politics. Though poetry′s importance to Muslim societies has long been noted, there are few studies of this poetry′s place and function within broader historical and religious contexts. Yet poetry and the other arts can be invaluable instruments for sensing the undercurrents of submerged history, what Fernand Braudel has also called the ″unconscious history″ holding the basic values and foundational structures of a civilization.[55] Just as Medieval European painting before and after the Black Death vividly portrays changing notions of life, death, and dying,[56] so too may Arabic poetry reflect and reveal shifting views and patterns of belief fundamental to Mamluk society and its larger Islamic civilization.

In fact, this poetry, too, registered changes wrought by the plague,[57] and some of the many other topics and areas for further research have been touched upon in surveys, especially those by Maḥmūd Rizq Salīm and Fawzī Amīn. Maḥmūd Rizq Salīm filled a large volume of his *'Aṣr al-Salāṭīn al-Mamālīk* with verse regarding Egyptian life during the Mamluk era. Drawing material from published sources and some manuscripts, Salīm cites verse toward the end of volume seven to illustrate various features of Egypt, including the Nile and the Nilometer, the island of Rawḍah, various lakes, and other natural phenomena.[58] Then in volume eight, Salīm cites poetry first to enliven his account of political events, and then to illustrate aspects of the cultural and social life of the period.[59]

[59]Ibid., 8:3-130, 131-279.

Working from the assumption that ″poetry is the interpreter of the milieu,″[60] Salīm has amassed literally hundreds of verses to describe and, occasionally, probe a wide range of subjects, from relations between specific poets and Mamluk sultans, to examples of social criticism and religious movements. He claims that although the foreign-born Mamluk elite were not as inclined as their Arab predecessors to patronize professional poets, poetry continued to flourish, particularly among the *'ulamā'* and scribal classes, where composing verse was a sign of accomplishment.

In the final two hundred and fifty pages of volume eight, Salīm groups the poets of Egypt into seven generations and devotes sections to major poetic genres of the time, including panegyrics for the Prophet Muḥammad, love poetry, descriptive poetry, wine poetry, and Sufi and ascetic verse. In each case, after a few brief general remarks, Salīm cites major representatives and verses of each poetic type. He then concludes his volume with examples of various rhetorical devices found in Mamluk Arabic verse, and a few of the developing popular forms including the *zajal*.[61] Though Salīm′s anthology-like sections offer useful examples, poetic analysis and literary history and criticism are not among this work′s strong points, and his bibliography is too brief and lacking essential information. Yet Salīm was a pioneer in understanding the larger ramifications of the study of Mamluk Arabic poetry, as he clearly grasped the importance of Arabic verse as an essential element for distilling a more precise image of the society and culture of the Mamluk Age.

Salīm′s historical and sociological reading of Mamluk Arabic literature is also apparent in *al-Mujtama' al-Miṣrī fī Adab al-'Aṣr al-Mamlūkī al-Awwal, 648-784*, by Fawzī Muḥammad Amīn, a former student of Muḥammad Zaghlūl Sallām. Fawzī Amīn believes that poetry from the Mamluk period can lend a sense of living reality to the historical accounts of events and society, while contributing a more personal, human element as well. In addition, he hopes that the study of this poetry in its social context will also yield important clues regarding the era′s tastes and standards of beauty.[62]

With these goals in mind Fawzī Amīn organizes his study around eight major topics: (1) government and administration, (2) *jihād*, (3) wealth and corruption, (4) religious currents, Sufi and Shī'ī, (5) sectarian trends, particularly those involving conflicts between Muslims and the Christians and Jews under their protection, (6) characteristics of the Egyptian personality and general life, including the subject of women; (7) amusements, including hunting, chess, riddles, singing and dancing, and legally deviant behavior including the consumption of wine and hashish, as well as homosexual tendencies, and finally, (8) literary tastes among the elite, and among the masses.

Citing numerous verses and poems, Fawzī Amīn renders, at times, a lively account of Mamluk society in Egypt. Nevertheless, this work, like Salīm′s, is largely a survey of the period, with most of Fawzī Amīn′s observations and conclusions echoing those of his teacher Sallām, and other earlier scholars regarding the political, religious, and cultural life of the period. As for his final chapter, promisingly entitled ″Literary Taste,″ it is a general summary of poetic trends. Fawzī Amīn characterizes elite taste by what is referred to usually as traditional or imitative (*taqlīdī*), as well as by the dominance of *badī'*.

[60]Ibid., 8:215.
[61]Ibid., 8:269-525.
[62]Fawzī Muḥammad Amīn, *al-Mujtama' al-Miṣrī fī Adab al-'Aṣr al-Mamlūkī al-Awwal: 648-784* (Cairo: Dār al-Ma'ārif, 1982), 1-6.

Interestingly, Fawzī Amīn ascribes the popularity of *badī‘* to a tendency in Islamic art toward two-dimensional abstraction, with space filled to capacity; as in the arabesque, various elements move together in harmony, creating a symmetry amid repetition and variation, and leaving no place for Satan to rest his evil eye.[63] Not surprisingly, Fawzī Amīn finds popular literary taste embodied in the newer poetic forms which, he too, views as a revolt against literary tradition. The lighter style and colloquial diction of this verse readily expressed the everyday realities of common folk and the poet′s more personal feelings, especially of a humorous or sarcastic nature.[64] Fawzī Amīn completes his study with an extensive bibliography of over 150 relevant primary and secondary sources, both published and in manuscript.

Fawzī Amīn, Salīm, and several others noted above have drawn attention to an area of particular prominence and research potential, namely, religious life, since it was during the Mamluk period that what is often regarded today as Sunnī Islam was extensively codified and spread, linking Abbasid universal religious aspirations to their later Ottoman formulations. While some valuable scholarship has focused on general religious trends, and the theological ideas of a few outstanding thinkers,[65] the broader concerns of Mamluk religious life could be delineated in greater detail through the study of this period′s poetry, which voiced not only theological and political issues, but also more personal spiritual feelings and aspirations.

Islamic mysticism was a distinctive characteristic of Mamluk religion,[66] and several books by ‘Alī Ṣafā Ḥusayn feature Sufi verse from Fatimid and Ayyubid Egypt. Ḥusayn gives special attention to the mystical verse of the Fatimid Sunnī poet Ibn al-Kīzānī (d. 560/1166), as well as to the Sufi writings of Ibn al-Ṣabbāgh (d. 612/1214) during the Ayyubid period. Ibn al-Ṣabbāgh′s work and other Sufi literature from the seventh/thirteenth century are also the main focus of Ḥusayn′s more general survey and anthology *al-Adab al-Ṣūfī fī Miṣr fī al-Qarn al-Sābi‘ al-Hijrī*.[67]

What is clear from these and other works is the singular importance of ‘Umar Ibn al-Fāriḍ to the Arabic religious poetry of the Mamluk era.[68] The most celebrated Arab poet

Nicholson, *Studies in Islamic Mysticism* (1921; reprint, Cambridge: Cambridge University Press,

in Islamic mysticism, Ibn al-Fāriḍ was regarded as a fine poet during his lifetime, and his poetry continued to be read, studied, and imitated by Muslims for generations. His strong influence is evident in the verse of a number of noted poets throughout the entire Mamluk period, including his student Ibn al-Khiyāmī (d. 685/1286), Ibn Isrā'īl (d. 677/1278), Muḥammad ibn Wafā' (d. 765/1363), his son 'Alī (d. 807/1405), Aḥmad al-Manṣūrī (d. 887/1482), and 'Ā'ishah al-Bā'ūnīyah. These and other poets imitated Ibn al-Fāriḍ's *badī'* poetic style with its potential for intimating a largely Neo-Platonic mystical view of life. This, in turn, suggests an "Ibn al-Fāriḍ school" of poets who attempted to reveal the spiritual significance permeating all life, while urging their audience to undertake the quest for self-illumination.

The mystical beliefs and world views voiced by these poets received theological interpretation and elaboration from Sufi theorists, including al-Tilimsānī and al-Dasūqī (d. 677/1278), who used poetry and its commentary to spread their own religious doctrines, particularly the controversial monistic one of *waḥdat al-wujūd*, or "the unity of being." In stark contrast, other Mamluk poets composed verse critical of such doctrines as they sought to promote less speculative interpretations of Islam. Frequently judges and legal scholars, individuals including al-Quṭb al-Qastallānī (d. 686/1287), Ibn al-Wardī (d. 749/1349), and Ibn Abī Ḥajalah, replaced mystical themes with those offering more traditional moral advice and religious instruction, though their poems, too, often formally imitated those by Ibn al-Fāriḍ.[69]

Thus, Mamluk Arabic poetry presents often conflicting perspectives on religious life, exposing some of the complexity and centrality of competing religious views and their underlying roots in Mamluk society. But despite their different emphases, many mystical and non-mystical religious poems from this period reveal a devotional quality, which is particularly pronounced in poems praising the Prophet Muḥammad and his family. Though some such panegyrics were composed prior to the thirteenth century, it was under the Mamluks that a distinct poetic genre to praise the Prophet—*al-madīḥ al-nabawī*—was extensively developed and codified by al-Būṣīrī and his many imitators.[70] Yet, here, too, we find Ibn al-Fāriḍ's lasting influence, since al-Būṣīrī consciously modeled his *Burdah* on an ode by this master-poet.[71]

Similar to Sufi poetry, which came to express a collective view of reality, these panegyrics present an evolving mystical and devotional image of the Prophet Muḥammad. While we must evaluate this poetry in literary terms, we should also focus on this poetry's place in Mamluk religion and society, and the extent to which these panegyrics, as well as mystical verse, assumed liturgical roles at mosques, shrines, and elsewhere particularly

during threatening times, and on social and religious gatherings, including holidays and state occasions.

Further, as Bāshā and Sallām have suggested, panegyrics for the Prophet may express a discontent with non-Arab rule and, in light of the Crusades and the Mongol invasion, a deep nostalgia for an idyllic time of peace, religious purity, and moral order. Still, poets also consciously forged positive links between the Prophet Muḥammad and the counter-crusading Mamluk sultans, and this raises important related issues regarding the types and extent of patronage, and the use of religion and poetry by the ruling elite. Previous studies of political panegyric poetry have examined this relationship in the verse of earlier classical Arab poets, concluding that religious elements were crucial for a regime′s self-definition and for projecting an evolving image of the just Muslim ruler requisite for ideological legitimation.[72]

That this was a primary task of many poems from the Mamluk period, including religious ones, seems evident from verse by al-Būṣīrī, al-Ḥillī, Qānṣūh min Ṣādiq (fl. early tenth/sixteenth century), and many others.[73] Similar to Mamluk architecture and painting, panegyrics of sultans and amirs served to proclaim the Mamluks′ dedication to Islam, and their patronage and defense of Muslim society, while at the same time asserting and justifying their God-given right to imperial rule.[74] Further study of Arab panegyrics should continue to probe models of rule and legitimation, alert to possible Iranian and Turkish elements, especially in light of the destruction of Baghdad and the political domination by the foreign Mamluk sultans.

That the Mamluks were in need of legitimation and public support seems clear, for many of the same poets who composed panegyrics, likewise circulated verse critical of government officials, the religious establishment, and society in general. These poets thus became social critics, frequently using invective poetry (*hijā'*) to drive home their points. Many invective verses were cited by Mamluk historians and chroniclers and, far from being anecdotal, these quotations often appear to hint at the writers′ own sympathies, offering a kind of cipher for reading between the lines of seemingly neutral accounts.[75] In addition to targeting individuals, Mamluk poets often assail entire groups, such as Coptic Christians, and so thoughtful study of invective poetry building on the groundwork laid by Salīm, Fawzī Amīn, Ayyūbī, and Van Gelder[76] could also yield valuable insights into some of the tensions and fault lines lying within various communities of Mamluk society.

These, then, are a few suggestions for further research involving Arabic poetry composed during the Mamluk Age. As is the case with many arts of this era, we know too little at present to meaningfully generalize, let alone precisely formulate standards regarding

the quality of this Arabic verse or the range of its artistic and social meanings. Though reference to poetry was conspicuously absent from the *Muqarnas* volume dedicated to the Art of the Mamluks, Ira Lapidus′s concluding remarks ring true for Mamluk verse as well: ″In the artistic legacy of Mamluk Egypt we have clues to the political culture, the religious goals, and even the mentality or sensibility of the civilization.″[77]

IV

We should continue, then, to probe poetry′s place and functions within Mamluk society through the contextual study of poets and their verse. This research promises to break new and fertile ground in the fields of Mamluk, Arabic, and Islamic studies, and so lead to significant discoveries involving the complex relationships between society, religion, and political authority, and their multiple forms of expression. But we must proceed carefully and with humility, for the sheer quantity of the poetry is daunting, and our findings may lead us in unexpected and exciting directions, as I found during my study of poems by the noted Mamluk scholar Abū Ḥayyān.

Athīr al-Dīn Muḥammad ibn Yūsuf, known as Abū Ḥayyān, typifies the non-Egyptian origin of many scholars of the Mamluk period. Born in Granada in 654/1256, he studied in Andalusia, North Africa, and finally settled in Cairo where he died in 745/1344. He was a noted Quran scholar, a distinguished grammarian, and litterateur composing more than fifty works, including a considerable amount of verse. His *Dīwān* covers nearly 200 pages arranged according to end rhyme and containing an assortment of poems including a panegyric for a teacher, an elegy for a friend, some religious poems, occasional verses on an elephant, the gift of a horse, a wedding, as well as a number of poems exchanged with his contemporaries.[78]

Yet what led me to Abū Ḥayyān′s *Dīwān* was not his poetry, but that of his daughter Nuḍār. By any standards of the time, she had received an exceptional education in the Islamic religious sciences, and while still a young woman, Nuḍār was regarded as an accomplished scholar by her male peers. The noted Mamluk scholar al-Suyūṭī listed Nuḍār among the women poets of Mamluk Egypt, though he did not cite any of her poetry. Not finding any works by her, I turned to her father′s *Dīwān*, hoping to find samples of her verse that she had exchanged with him.[79]

I found none, but what I found instead were nine elegies on her by a grieving father. I discovered that at about the age of twenty-eight, Nuḍār had fallen gravely ill and died after considerable suffering. According to the Mamluk biographer al-Ṣafadī, a family friend, Abū Ḥayyān took his daughter′s death very hard and went into a year of mourning, composing a consolation manual and his elegies for her. These elegies are extraordinary

Bellamy*, ed. Mustansir Mir (Princeton: Darwin Press, 1993), 107-118.

[79]Jalāl al-Dīn al-Suyūṭī, *Nuzhat al-Julasā' fī Ash'ār al-Nisā'*, ed. 'Abd al-Laṭīf 'Āshūr (Cairo: Maktabat al-Qur'ān, n.d.), 83. For more on Nuḍār, see Homerin, ″Bird,″ 255-256; idem, ″Atāki Himāmuki: Marāthī Abī Ḥayyān al-Tisa' li-Nuḍār,″ forthcoming in *Fulbright Occasional Papers* (Cairo), vol. 4.

since even a single elegy for a daughter is rare in Arabic poetry.[80] But in addition to their value to Arabic literary history, these multiple elegies permit us to observe Abū Ḥayyān's grief and his process of mourning as he confronted his daughter's death:[81]

1. Now that Nuḍār
 has settled in the grave,
 my life would be sweet again
 could my soul only taste it.

2. A brave young woman
 seized for six months
 by a strange sickness
 of varied nature:

3. Swelling stomach and fever,
 then consumption, coughing, and heaving—
 who could withstand
 five assaults?

4. She would see
 visions sometimes,
 or leave this world
 for the Realm Divine,

5. And inwardly,
 she was calm, content
 with what she saw of paradise,
 but of life, despairing.

6. Yet she was never angry for a day,
 never complaining of her grief,
 never mentioning the misery
 she suffered.

7. She left her life on Monday
 after the sun's disk
 appeared to us
 as a deep yellow flower.

8. The people prayed
 and praised her,
 and placed her in the tomb—

[80]Homerin, "Bird," 248-255; idem, "'I've Stayed by the Grave'," 107-108. The Ayyubid literary critic Ibn Athīr once noted that the most difficult elegy for a poet to compose is one on women or children due to the paucity of poetic motifs for either group; Qulqaylah, 369.
[81]See Homerin, "Bird," 269-271. The Arabic text of these verses is forthcoming in Homerin, "Atāki."

dark, desolate, oppressive.

These opening verses directly challenge the pervasive view of Mamluk Arabic poetry as slavish imitation, pallid, artificial, and unauthentic. In a restrained and sober language free of hyperbole, Abū Ḥayyān graphically recounts his daughter′s debilitating illness, her eventual death, and funeral. Abū Ḥayyān calls upon the elegiac qualities of the classical *nasīb* to articulate and express his grief and loss; his world is slowly effaced as he stands overwhelmed by his daughter′s final departure.[82]

At this point, however, Nuḍār is not some rarefied classical beloved, but a very real and all too mortal woman. Further, in this and other poems, Abū Ḥayyān declares his daughter a martyr due to her deadly disease. This judgment may, in fact, represent a view of illness and death widespread in Mamluk Muslim society, and similar scholarly opinion would soon prevail regarding Muslim victims of the plague, who were believed to have been struck down and so martyred by the jinn.[83]

Though Nuḍār has been carried to her grave and lost to him, Abū Ḥayyān does not seek consolation in some heroic act, but in signs that her new abode is heaven. In vv. 4-8 Abū Ḥayyān alludes to four separate prophetic traditions intimating immortality: a Muslim, beholding paradise while dying (v. 4), patient as death ensues (v. 5), dying, like the Prophet, on a Monday (v. 7), and praised after death by the community (v. 8), will dwell in paradise.[84] That this is Nuḍār′s God-given blessing becomes clear as later in this and the following poem, Abū Ḥayyān praises his daughter′s scholarly and religious achievements and her bravery in the face of death. Clearly, the beloved of these elegies is not the enticing beauty of the classical Arabic tradition, but a virtuous Muslim lady and martyr. Though Abū Ḥayyān may gain some solace from his daughter′s heroic life, he can not let go, and in his elegies, he strives to hold fast to Nuḍār, if no longer physically here below, then at least in memory and spirit:[85]

1. My body is bound
 to the grave;
  my heart
 stands on affliction.

2. When I remember Nuḍār,
 my eye
  swells with blood
 from a wounded heart.

[82]For more on Abū Ḥayyān′s use of *qasīdah* elements in his elegies, see Homerin, ″Bird,″ 268-273; idem, ″′I′ve Stayed by the Grave′,″ 107-113.

[85]Ibid., 273-274; Homerin ″′I′ve Stayed by the Grave′;″ Arabic text forthcoming in ″Atāki.″

3. The festival passed,
then the greater one,
while Nuḍār was under
earth and stone;

4. I couldn´t see
Nuḍār´s fine face,
Oh, how I crave
that sweet face!

5. Nuḍār was my intimate,
my love;
Nuḍār was my life,
my spirit.

6. Nuḍār left behind
in my heart sorrow;
it will go
when I reach my grave.

7. Never did Nuḍār
have an equal
to her brilliance
and weighty reason,

8. To her poise
and good company,
her priceless hand
and eloquence.

9. She reflected on her studies:
grammar and jurisprudence,
and the apostle´s
sound traditions,

10. And she revealed to you
the people´s histories
and won
the sage´s wisdom.

11. Nuḍār passed her life
then left,
her reputation
undefiled.

12. She was recorded
among the transmitters
from mankind′s master;
how fair her reports and praise!

13. She′s gone on ahead now,
while we stay
for a moment
in our passing time.

14. Then we′ll follow behind
hoping for
a kind Lord′s forgiveness
for our sins.

The beloved′s ruined campsite featured at the beginning of innumerable Arabic odes has been transformed in this elegy to a grave. There, Abū Ḥayyān stands tied like the *balīyah*, the riding-camel left to die at the grave of a great warrior so as to serve as his ghost mare in the netherworld (v. 1).[86] With broken heart and no reason to live, Abū Ḥayyān is oblivious to even the high religious holidays suggesting, perhaps, a skepticism regarding a divine plan which would demand his daughter′s suffering and premature death. Whatever the case, Nuḍār has gone taking with her the very essence of her father′s love and life (vv. 2-5).

In six consecutive verses, Abū Ḥayyān invokes Nuḍār′s name, if not to call her from the dead, then at least to conjure her image, as he moves from lamentation for his loss toward a consoling vision of his pure and pious daughter (vv. 1-6). Among Nuḍār′s fine qualities was her study and transmission of Muḥammad′s words and deeds, and perhaps her father finds solace in the Prophet′s promised intercession on behalf of believing Muslims (vv. 6-11). But for the present, like the *balīyah* camel, Abū Ḥayyān lingers at the grave slowly wasting away. He can only pray that death will end his suffering, and that God will forgive his sins and so grant him a final reunion with his beloved Nuḍār (vv. 12-13).

This elegy and others by Abū Ḥayyān make complex emotions and experiences palpable by intensifying and channeling their emotive energy through time-tested cultural forms. Such elegies have been central to the work of mourning, which has played a vital part in the lives of Muslim men and women, yet rarely have their loss and sorrow been mentioned by scholars of Islam. Generally, the subjects of death and dying are glossed with abstract and doctrinal presentations of Islamic notions of resurrection, punishment, and paradise.[87] But the study of elegies, like those of Abū Ḥayyān, can help us follow changing Islamic beliefs and doctrines on death and the afterlife while, at the same time, informing us of personal grief and individual and communal responses to the death of loved ones.

[87] See, for example, Jane I. Smith and Yvonne Y. Haddad, *The Islamic Understanding of Death and Resurrection* (Albany: State University of New York, 1981).

Abū Ḥayyān's elegies attest to Arabic poetry's potential to reveal crucial aspects of Muslim life and practice during the Mamluk period, substantially enhancing the chronicles, histories, and other relevant sources. Yet, we must remember, too, that much of this poetry aims to evoke feelings and the intensity of experience, and so in contrast to historical documents and more traditional religious texts, this poetry not only tells us about life and existence, but it moves us to participate imaginatively in the experience of them both. These two poetic examples tap a vast and deep source for the study and teaching of the Mamluk period and of Islam, in general. For reading poetry by Muslims in the Mamluk Age can heighten our perceptions of their lives by helping us to feel more sharply and with more understanding some of what they may have felt and believed in their own day, which for a moment, then, may not seem so far away.

The *Maḥmal* Legend and the Pilgrimage of the Ladies of the Mamluk Court

During the Ottoman period in Egypt a legend was created which attributed the origin of the *maḥmal* tradition to Shajarat al-Durr. As women's topics are receiving increasing attention in scholarly research these days, the persona of Shajarat al-Durr ought to be revisited. More particularly, the circumstances that led to the association of the Egyptian pilgrimage with a female royal person deserve our interest. For this purpose, references to the earlier pilgrimage of the Abbasid queen Zubaydah and to the pilgrimage performed by the elite women of the Mamluk court will be examined and compared in the following pages in order to decode the legend about Shajarat al-Durr.

Mamluk history begins with an extraordinary episode—the rule of a female sultan, Shajarat al-Durr, a Turk, who began her career as a slave. She carried the title of *sulṭānah* and was elected by men to fulfill this function. In her name the *khuṭbah* was delivered and coins were minted.[1] One tends sometimes to disregard this fact because of its exceptional character. In her status as *sulṭānah* in the medieval Muslim world, Shajarat al-Durr was of course an almost unique case.[2] Her accession to the throne of Egypt was largely related to the complex and unstable political situation of that time, the end of the Ayyubid dynasty during Louis IX's Crusade against Damietta and the absence of an adequate successor to Sultan al-Ṣāliḥ Najm al-Dīn Ayyūb.[3] Although her reign as *sulṭānah* lasted only three months, or more precisely eighty days, Shajarat al-Durr's involvement in politics covered a much longer period, namely, the seventeen years during which, as the favorite concubine, then as the wife of two consecutive sultans, she was far from being a passive spectator of political events, using all available means to play an active role in decision-making at the sultan's court. This role began during al-Ṣāliḥ's fight for the throne of Egypt, when she accompanied him to prison along with his closest followers. It ended with her decision to murder her second husband Aybak.

Al-Maqrīzī, who seems to have been familiar with Shajarat al-Durr's *waqf* documents, attributes to her important buildings in Cairo. These included her husband's mausoleum as well as a garden, a *ḥammām*, and a palace near the cemetery of Sayyidah Nafīsah where she also founded a *madrasah* with her own mausoleum.[4] Shajarat al-

[1]The main source on Shajarat al-Durr is still Götz Schregle's monograph, *Die Sultanin von Ägypten. Šajarat ad-Durr in der arabischen Geschichtsschreibung und Literatur* (Wiesbaden: Harrassowitz, 1961).

[2]Only another Turk of the slave dynasty of Delhi, Raḍīyah Begum, at almost the same time (1236-1240), achieved such a career, but she was a sultan's daughter.

[4]al-Maqrīzī, *al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*, 2 vols. (Būlāq: Dār al-Ṭibāʻah al-Miṣrīyah, 1270/1853-54), 2:20, 134, 374; Nūr al-Dīn al-Sakhāwī, *Tuḥfat al-Aḥbāb wa-Bughyat al-Ṭullāb*

Durr′s buildings and pious foundations were substantial; a look at their architecture reveals, moreover, a political mind and a great sense of innovation behind their design.[5] The *miḥrāb* of her mausoleum, for example, includes a kind of rebus; its conch is adorned with glass mosaics representing a tree whose branches carry mother-of-pearl, instead of flowers or fruits. This motif refers to her name, ″Tree of Pearls.″ The mausoleum she erected for al-Ṣāliḥ Ayyūb adjoins the *madrasah* he had founded in the city center for the four schools of Sunnī Islamic law.[6] It was the first royal mausoleum in Cairo, and as Christel Kessler observed, the first funerary building meant to assume a role in the life of the city.[7] Placed in the central part of the main avenue, it projects boldly on three sides with large windows on each facade. No doubt, Shajarat al-Durr attached great importance to the commemoration of her husband through whom she derived the legitimacy of her status and authority. She gave him a solemn funerary ceremony, attended by his *mamlūk*s, including her husband and successor al-Mu‘izz Aybak; at that time she had already abdicated in his favor. Quran reciters were hired for the service of the tomb, as stipulated in Shajarat al-Durr′s *waqf* deed. Shajarat al-Durr erected, moreover, a *madrasah* with her own mausoleum in the cemetery. This was a further innovation, as it was the first time in Cairo that a ruler built a personal mausoleum as part of his own religious foundation. This became a tradition throughout the entire Mamluk period. Whereas al-Ṣāliḥ′s *madrasah* was in the heart of al-Qāhirah, her own complex, which included a *ḥammām* and a palace, was in the cemetery of Sayyidah Nafīsah. The choice of the cemetery of Sayyidah Nafīsah as the place for her burial was also an innovation of Shajarat al-Durr; earlier members of the Ayyubid dynasty had been buried at the mausoleum of Imam al-Shāfi‘ī. While she sought likewise the neighborhood of a holy person, she preferred a cemetery connected to a female saint, that of Sayyidah Nafīsah where a number of other holy women and relatives of the Prophet such as Ruqayyah, ‘Ātikah, and Sukaynah were also buried or commemorated in funerary monuments.[8] This choice proved to be shrewd, for despite the scandalous end she suffered—being thrown half-naked from the Citadel—Shajarat al-Durr′s image in historiography as well as in popular tradition became increasingly exalted, as Schregle demonstrates, so that she acquired an almost holy character. The presence of her mausoleum amidst a number of mausoleums of holy women contributed to her sanctification.

Shajarat al-Durr′s buildings are, therefore, among the most political monuments of medieval Cairo. Her religious funerary complex had an impact on the female funerary architecture of the Baḥrī Mamluks. The *madrasah*-mausoleum, built two decades later for Fāṭimah Khātūn, a wife of Sultan Qalāwūn, is similarly located in the neighborhood of Sayyidah Nafīsah.[9] Moreover, several women of the Qalāwūn family built mausoleums

for themselves attached to religious foundations, such as the *khānqāh*-mausoleum of Ṭughāy, al-Nāṣir Muḥammad′s wife (ca. 749/1348, *Index*, no. 247),[10] the *madrasah* of Tatar al-Ḥijāzīyah, al-Nāṣir′s daughter, (761/1360, *Index*, no. 36), the *madrasah* of Sultan Sha'bān′s mother, (770/1368-69, *Index*, no. 125), and the mausoleum of Ṭulbāy, Sultan Ḥasan′s wife (ca. 765/1364, *Index*, no. 80).

THE *MAḤMAL*

In his monograph on Shajarat al-Durr, Schregle refers to the epic known as *Sīrat Baybars*, which is a popular romance based on historical facts, and investigates the *sulṭānah*′s image in it. In this epic, which acquired its final shape in the Ottoman period, the origin of the *maḥmal* is attributed to Shajarat al-Durr.[11] The *maḥmal* was the ceremonial palanquin that accompanied the pilgrim caravan from the reign of al-Ẓāhir Baybars until the reign of King Fu'ād in the 1920s. The earliest association of the *maḥmal* with the Egyptian pilgrimage caravan occurs in connection with Sultan al-Ẓāhir Baybars al-Bunduqdārī in 659/1266.[12] Al-Qalqashandī describes the *maḥmal* as a tent made of embroidered yellow silk and topped by a spherical finial made of gilded silver; it was paraded twice a year in the streets of Cairo.[13] The use of yellow, the official color of the Mamluks, for the *maḥmal* during the Mamluk period indicates its emblematic and political character. The *maḥmal* tradition is distinct from that of the *kiswah*, or veil of the Ka'bah, which was also carried by the pilgrim caravan. The yearly dispatch of the *kiswah* was a prerogative of the caliphate since the early history of Islam, although some Saljuq sultans donated their own. Since the establishment of the Fatimid caliphate of Egypt, a *kiswah* was sent also from Cairo, this one being white, instead of the Abbasid black.[14] The *kiswah* was not carried within the *maḥmal*, which remained an empty and symbolic palanquin. Al-Qalqashandī, in his history and description of the *kiswah*, writes that both were simultaneously prepared and dispatched in Cairo.[15] A well-known miniature of the Baghdad school dated 1237 documents the existence of an Abbasid *maḥmal* at the time of the caliphate.[16] Its shape corresponds very much to the description given by al-Qalqashandī of the Egyptian *maḥmal* and to the much later Egyptian *maḥmal*s, including the one of King Fu'ād, now on display in the Ethnographic Museum in Cairo. In the seventeenth century it was covered with black silk embroidered with inscriptions in gold threads on the four sides.[17] In the Baghdad miniature it has a gold color. The Egyptian

maḥmal was not the only one, however, to appear in Mecca; there were also *maḥmal*s from Yemen and Iraq, the Egyptian one having the most prominent position.[18]

After the fall of the Abbasid caliphate of Baghdad in 1258 and the establishment in 659/1261 of a symbolic caliphate by Sultan Baybars in Cairo, an event celebrated with great ceremony,[19] it was natural that Baybars would also take over the Abbasid privilege of dispatching the *maḥmal* and the *kiswah* from his capital, Cairo. But to achieve this, he had first to eliminate the Rasulid presence from the Hijaz and bring it under Mamluk control. The Rasulid ruler of Yemen, al-Malik al-Muẓaffar Yūsuf ibn al-Manṣūr, had taken advantage of the fall of Baghdad to bring the Hijaz, with the Holy Cities, under his control and have the *khuṭbah* spoken in his name. After having performed the pilgrimage in 659/1261, he provided the *kiswah* for several years, as successor of the Abbasid caliphs.[20] A competition resulted between Yūsuf and Baybars for the privilege of providing the *kiswah*,[21] until 667/1269 when Baybars made his pilgrimage and established the dispatch of the *kiswah* as the acknowledged prerogative of the Mamluks of Egypt in whose name the *khuṭbah* of the Hijaz was now performed.[22] As a palanquin, the *maḥmal* has obvious female connotations, although men sometimes also traveled in a *miḥaffah*, which is the term used in Mamluk sources for the common palanquin. In his study of the Muslim pilgrimage, Gaudefroy-Demombynes has presented three possible interpretations for the *maḥmal*. The first is that it followed the ancient Arab tradition of having a litter with a high-ranking lady accompany military campaigns to incite the soldiers to fight. ‘Ā’ishah, the Prophet's wife, played such a role in the Battle of the Camel.[23] The second interpretation views the litter as a royal symbol, whereas the third identifies it with a parasol. The third interpretation can be discarded; the two others should be considered and even combined.

Although Shajarat al-Durr herself is not mentioned in any source as having ever been to Mecca, and although Mamluk chronicles agree that it was al-Ẓāhir Baybars who introduced the *maḥmal* tradition to Egypt and who also performed the pilgrimage, it was Shajarat al-Durr with whom popular culture preferred to associate the pilgrimage and the palanquin, giving her a kind of patron role. This legend has been repeated by Lane and ‘Alī Mubārak;[24] the Turkish historian and traveler Evliya Çelebi similarly connects Shajarat

al-Durr with the pilgrimage, however not with the *maḥmal*, but with the *kiswah*. Evliya Çelebi, who worked for the Ottoman government for several years in Egypt (1672-1680), reports that at that time the *waqf* of Shajarat al-Durr was quite substantial and included a number of villages which were endowed to provide the *kiswah* for the Ka'bah.[25] The information he gives on *waqf* is usually trustworthy, as he was himself involved in the supervision of *awqāf* in Egypt. His association of the *kiswah* with Shajarat al-Durr, which is the earliest reference on this subject I could find, should not be entirely discarded, at least as long as the *waqf*s of the Ḥaramayn have not been consulted on this subject. What the exact origins of these *waqf*s are, or if they belonged to a namesake of the *sulṭānah*, is not possible to tell at the moment, as the Ḥaramayn archives are presently inaccessible. While he attributes the *kiswah* endowment to Shajarat al-Durr, Evliya Çelebi, who was quite familiar with Mamluk chronicles, confirms the fact that the *maḥmal* tradition went back to Baybars.

It is interesting to note that the *wakālah* of Dhū al-Faqār in the quarter of Jamālīyah in Cairo is known popularly as Wakālat Shajarat al-Durr; it was there that in the late Ottoman period final work on the *kiswah* was performed before its departure.[26] Yūsuf Aḥmad, however, in his detailed documentation of the *kiswah* and its endowment, does not seem to have come across any reference to Shajarat al-Durr.

ZUBAYDAH

Shajarat al-Durr was not the first queen to be associated with the pilgrimage. There are multiple references in early and later medieval sources associating Zubaydah, Hārūn al-Rashīd's wife, with the pilgrimage in most exuberant terms.[27] Zubaydah not only performed the pilgrimage, but she is moreover credited with spending an enormous fortune on infrastructural works to conduct water to Mecca after years of drought. According to Ibn Khallikān she spent as much as 50 million *dirham*s, and according to al-Mas'ūdī 1,700,000 *dīnār*s for infrastructural works on the pilgrimage road.[28] She built hospices and cisterns, and dug wells and canals to conduct water from a distance of twelve miles to Mecca across mountains and valleys in the desert. When her intendant tried to warn her about the expenses, she answered "we shall do it, even if every stroke would cost a *dīnār*." Today the "Darb Zubaydah" in the Hijaz still shows vestiges of the medieval infrastructure.[29] Zubaydah, whose wealth was fabulous, was also famous for her elegance and her creative fashion and life-style, which everybody imitated.[30] Among her innovations, she is reported to have been the first to use a palanquin of silver, ebony, and sandalwood adorned with clasps of gold and silver and draped with sable and silk of blue, green, yellow, and red colors. It is very likely that she used such a palanquin for her pilgrimage, which could be related to the origin of the *maḥmal* of Baghdad.

[30]al-Mas'ūdī, 8:304f.

Coming back to *Sīrat Baybars*, Shajarat al-Durr is identified there as an Abbasid princess, daughter of the caliph al-Muqtadir,[31] who came to Egypt on her way to Mecca. There she met Sultan al-Ṣāliḥ Najm al-Dīn Ayyūb who married her. In the epic, furthermore, Shajarat al-Durr adopts Baybars to replace her dead son Khalīl, who died as a child. She is thus represented as the daughter of a caliph and the adoptive mother of a sultan. This establishes another parallel between Shajarat al-Durr and Zubaydah, who was the only Abbasid queen to have been both a daughter and a mother of caliphs. The superposition of Shajarat al-Durr and the Abbasid queen Zubaydah could have been supported furthermore by another factor, which is the location of the complex of Shajarat al-Durr in the cemetery of Sayyidah Nafīsah. The palace she had built there was later used as the residence of the Abbasid caliphs of Cairo.[32] In the same neighborhood, moreover, close to the Sayyidah Nafīsah shrine, is the undated mausoleum where most of the Abbasid caliphs of Cairo were buried and which was erected in the mid-thirteenth century.[33] In Shajarat al-Durr′s own mausoleum one of the Abbasid caliphs was also buried, probably the last one.[34] The neighborhood connection with the Abbasid caliphs may have contributed to the association of Shajarat al-Durr with Abbasid tradition and Zubaydah.

MAMLUK LADIES

The legend attributing the *maḥmal* to Shajarat al-Durr took shape in the Ottoman period, i.e., three or four centuries after the *sulṭānah*′s death. There must have been in the meantime an additional factor which contributed to keeping her image alive in such a way as to justify the creation of a legend which presented her as patron of the pilgrimage caravan, who visited the Holy Cities a dozen times and, moreover, provided the *kiswah* to the Kaʿbah. This additional factor is to be sought in Mamluk historical accounts about the pilgrimages of women of the aristocracy. Mamluk historians show great interest, even enthusiasm, when referring to the pilgrimages of sultan′s wives or concubines. They describe the pilgrimage of a *khawand*, or princess, as a spectacular event. It was the only occasion during which the Cairene population had an opportunity for contact with ladies of the Mamluk court. Otherwise, the sultans′ wives made no public appearances; the celebrations they attended, such as marriages or circumcisions, took place within the Citadel. There were, of course, exceptions to this rule, which the historians found worth mentioning, like the occasion when Ṭughāy, al-Nāṣir Muḥammad′s favorite wife, joined her husband on an excursion to Giza. But even then, the princess was not supposed to be seen, and an order was given that on her way across Cairo, all shops should be closed and people kept off the streets.[35] When Sultan Khushqadam′s eldest daughter died, her mother, Surbāy, was so grieved that she came down from the Citadel to visit her grave. This visit seems to have been such an exceptional event that it was mentioned in the short biography which al-Sakhāwī dedicated to Surbāy.[36] When Khushqadam′s next wife, Shakarbāy,

[36]Shams al-Dīn Muḥammad al-Sakhāwī, *al-Ḍaw' al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ*, 12 vols. (Cairo, 1896),

traveled to Ṭanṭā to visit the shrine of Aḥmad al-Badawī, this excursion too was mentioned as something unusual. Ibn Taghrībirdī writes explicitly that it was uncommon for Mamluk ladies, *khawandāt*, to go out without their husbands, except for pilgrimage.[37] The departure on pilgrimage was the exceptional event which gave the population the opportunity of seeing the palanquin of a *khawand*; it added an exciting touch to a major religious celebration. Mamluk biographies of the elite ladies refer consistently to their pilgrimages, which some of them performed more than once. Just as the biographies or obituaries of amirs and sultans have to include a mention of their buildings and foundations, for the Mamluk ladies it was the pilgrimage that was recorded as a token of their piety. The reference to the pilgrimage was part of the aristocratic lady′s image.

Historical accounts concerning the pilgrimages of the Mamluk ladies form a kind of topos. They never fail to include statements about the luxury and beauty of the female convoy. The earliest of these accounts is that referring to Ṭughāy who traveled for the first time in 721/1321 with unparalleled comfort and luxury; her pilgrimage is the feature which characterizes her in all biographical references. She traveled in state, accompanied by a ceremonial orchestra and sultanic banners, with an escort of high dignitaries and eminent amirs. Her caravan included cows to provide her with fresh milk all along the journey, so that she could have her customary hot toasted cheese twice a day, and also camels carrying pots planted with vegetables so that she could maintain a healthy diet. Ṭughāy was praised for her charitable deeds and donations during the journey. The sultan spent more than 80,000 *dīnār*s on her pilgrimage and, moreover, exempted the city of Mecca from taxes that year.[38] When referring to Ṭughāy, Ibn al-Dawādārī recalls another lady who had traveled centuries earlier, in a similarly lavish style; this was Jamīlah, the daughter of the Buyid prince Nāṣir al-Dawlah, who was the first princess to make her pilgrimage with camels carrying pots planted with vegetables. She made generous donations and bestowed many robes of honor.[39]

Ever since Princess Ṭughāy went to Mecca, Mamluk historians have emphasized the elegance and luxury of the Mamluk ladies′ outfits and entourage in their pilgrimage, the number of dignitaries who accompanied them, and most of all the charity and benevolence they demonstrated. Sultan al-Ghawrī′s wife was exceptional in that she was criticized for her stinginess, especially when compared with her predecessor, Qāytbāy′s wife.[40] If the display of elegance and pomp were exaggerated, however, it could be severely criticized, as in the case of some amirs′ wives who went on pilgrimage in 746/1346 with extravagant accoutrement, competing with each other in lavishness, and bestowing robes of honor on their servants and bodyguards. This provoked the *qāḍī al-quḍāh*, in his sermon of the *‘īd*, to denounce the ladies′ extravagant behavior as a bad example for others.[41] The episode

demonstrates the public significance of the pilgrimage of Mamluk ladies. Barakah, Sultan Sha'bān's mother, traveled in state with ceremonial orchestra and sultanic banners escorted by high dignitaries. She also had camels carrying pots planted with vegetables.[42] Her liberality and benevolence along the way were so great that the year of her pilgrimage came to be named "the year of the Sultan's mother."[43]

When a sultan's wife made the pilgrimage in the company of her children, her notoriety was increased, as in the case of Sultan Īnāl's wife, who traveled in 861/1457,[44] with two sons, one of whom was the *amīr al-ḥājj*, and two daughters, one married to the Grand Dawādār and the other to the second Dawādār. They traveled with three palanquins followed by a large convoy of dignitaries and courtiers. Khushqadam's wife was accompanied in 868/1464 by her grandson who was the *amīr al-ḥājj* of that year. Ibn Taghrībirdī testifies that this caravan was even more impressive than that of Īnāl's wife.[45] The fact that the *amīr al-ḥājj* belonged to the royal family was, of course, convenient. Qāytbāy's wife, Fāṭimah (d. 879/1475), had an impressive caravan and sat in a palanquin which Ibn Iyās describes at length, as made of silk embroidered with ruby, turquoise, and pearl.[46] Her escort included an orchestra for religious music. When al-Ghawrī's wife went on pilgrimage with her ten-year old son, the sultan himself went to the departure station to ensure the tents were placed in accordance with the proper protocol.[47] It was observed that the sultan's wife traveled in the palanquin once used by Qāytbāy's wife. Among the signs of luxury was a portable bath, made of copper, as well as utensils for heating water.[48]

An unusual episode this year was that the camel with the *khawand*'s palanquin, on its way out, crossed the city in a procession. Usually the sultanic ladies would leave the Citadel on the desert road across the cemetery, without passing through the city, which was a prerogative of the Mamluk dignitaries. But that palanquin was empty and just for display. The *khawand* herself waited at the Citadel for its return so that she could ride, as was the tradition, through the cemetery. In Mecca the *sharīf* gave her a special reception having his courtiers carry her in her palanquin in a procession across the city. As for the *maḥmal* litter, it preceded the convoy of al-Ghawrī's son. Although al-Ghawrī's son was not *amīr al-ḥājj*, as in the cases of Īnāl's and Khushqadam's sons, he crossed the city in a particularly grand procession on his way to Birkat al-Ḥājj, the first caravan station on the pilgrimage road. The special pomp displayed on this occasion was probably due to the presence of an Ottoman ambassador in Cairo at that time, whom the Sultan wanted to impress, as he was inclined to do in such circumstances.

Unlike women of the Cairene bourgeoisie, the ladies of the Mamluk aristocracy are not described as scholars or poets; neither is their contribution in religious patronage of particular significance. 'Abd al-Rāziq lists eleven buildings attributed to female patrons in Mamluk Cairo, and although this number is not high, a closer look reveals that not all of

[48]Ibid., 4:433, 441.

them can even be definitely attributed to the ladies to whom they are ascribed.[49] The number of monuments which can safely be assigned to women of the aristocracy remains low, particularly if one considers their financial potential. Carl Petry estimates that the women′s share in the benefits of *waqf*s of Mamluk sultans and amirs was substantial, amounting to about 28 percent, which makes them appear as active partners in the economy of the Mamluk elite.[50] The estates of females, moreover, were less likely to revert to the state or to be confiscated, as happened with the estates of sultans and amirs. Seen in comparison with the magnitude of religious and philanthropic institutions sponsored by the Mamluk sultans and amirs, the contribution of their female partners is not considerable. The fact that they did not act as founders of institutions does not exclude the possibility, however, that women could have sponsored existing foundations or made donations wherever they were needed. Historians often refer to such philanthropic deeds without specifying what they consisted of.

When a princess built a religious foundation, she did not supervise the construction herself, as the Mamluk amirs and sultans did, but assigned someone else to do it. As previously mentioned, Shaʻbān built the *madrasah* for his mother. Whereas the inscriptions name Asalbāy, al-Nāṣir′s mother, as the founder of the mosque of al-Fayyūm, Ibn Iyās writes that Sultan al-Nāṣir, the son of Qāytbāy, ordered its construction and that Shaykh al-Dashṭūṭī supervised it.[51] In the Mamluk period women did not perform their prayers in mosques, although they did visit shrines and saints′ tombs, especially those in the cemetery. Mamluk mosques, unlike the Ottoman, have no accommodation for female worshipers. It is not even mentioned if the women of the sultan′s harem ever visited the mosque in the Citadel which was located in the non-public section.

The pilgrimage remains therefore the foremost expression of piety for a female member of the Mamluk court. If we recall that more sultans′ wives performed this religious duty than sultans themselves, of whom only four are recorded to have been to Mecca during their reign,[52] the ladies′ pilgrimage added to the sultanate′s religious aura. The opulence displayed by a lady′s caravan reflected the sultan′s own magnificent image. It was part of the court ceremonial, which most Mamluk sultans eagerly cultivated. The pilgrimage of the aristocratic Mamluk ladies was thus a matter of great interest, its notoriety increasing over time. The procession of the empty palanquin of al-Ghawrī′s wife at the end of the Mamluk period reflects the fascination associated with the image of a royal lady as pilgrim, which was not only a product of Ibn Iyās′s fantasy. This episode may have been an intermediary stage in the formation of the *maḥmal* legend around Shajarat al-Durr, the empty palanquin becoming the symbol of an absent queen. How far Zubaydah′s image contributed to the topos of the female aristocratic pilgrim is difficult to ascertain; she was the first Muslim queen to act as patron and sponsor of the pilgrimage and thus could have set an example and an ideal for later Muslim princesses.

---

[49]The inscription on the mausoleum of Fāṭimah Khātūn is in the name of Qalāwūn. The mausoleum known popularly by the name of Umm al-Ashraf is not definitely identified and could have been erected by Sultan Barsbāy himself. In the case of the *madrasah* of Umm al-Sulṭān Shaʻbān, the sources attribute the foundation to the sultan′s mother, the inscription states that it was built by the sultan for his mother, perhaps with her funds. ʻAbd al-Rāziq, 20-24.

[52]al-Ẓāhir Baybars, al-Nāṣir Muḥammad, al-Ashraf Shaʻbān, al-Ashraf Qāytbāy.

Shajarat al-Durr´s image in later Mamluk historiography, especially in Ibn Iyās´s chronicle, became increasingly colorful and impressive.[53] Ibn Iyās is also the author who describes in the most detail the departure of the *khawand*s on pilgrimage which suggests a certain acceptance for a female role in religious life. This acceptance is evidenced by al-Sakhāwī´s last volume in his biographical encyclopedia which is dedicated to fifteenth century women, mainly from the scholarly milieu, the only one of its kind in the Mamluk period. It should be recalled here that there is no restriction in Islam on women´s contribution to religious patronage, just as there were no restrictions for admitting women among the saints. In the Ottoman period several mausoleums of sultans and amirs were visited as saints´ tombs, including that of Shajarat al-Durr; during this period also the cult of Sayyidah Zaynab acquired its prominence in Egypt´s popular religious life. Her religious-funerary complex, the importance of her pious endowments and the use of her palace as caliphal residence in the Mamluk period contributed to enhance Shajarat al-Durr´s memory and bestow it with religious radiance. Popular imagination, which needed a female symbol to associate with the empty *maḥmal*, found no better candidate than Shajarat al-Durr.

Mamluk Archaeological Studies: A Review

This review seeks to address the relationship between archaeology and the field of Mamluk studies. To paraphrase a recent discussion by Marcus L. Rautman, Mamluk artifacts are more than mere historical illustration; their evidence may be considered necessary to overcome the intrinsic limitations of the written evidence.[1] Yet, historians of the Mamluk period do not seem to be aware of this potential or able to assess the relevance of fieldwork to their research. Much of the fault for this separation in disciplinary comprehension lies with the archaeologist, and with what is currently practiced as archaeology.[2]

The role of archaeological evidence in historical research is often misunderstood due to the nature of its evidential base. While study of material culture deals, at least in part, with physical objects, their contribution to historical studies is no more ″real″ or direct than the historian′s more traditional documents; archaeological evidence is cumulative and not specific. In other words, one should not expect new information about specific individuals or historic events. Though new documents may be discovered, archaeological research is more concerned with patterns, repeating contexts, and associations. Thus, one may seek patterns of land use (historical geography) and social organization (settlement systems), that is, broad questions of social and economic history. The following is a general exploration of some examples of excavations, artifacts, and the complexities of historical interpretation.[3]

QŪṢ, A FORGOTTEN CAPITAL

The archaeology of Qūṣ might qualify under the rubric of the re-discovery of a lost (or at least forgotten) provincial capital of Egypt. A history of life in this (provincial) city during Fatimid through Mamluk times was undertaken by Jean-Claude Garcin.[4] This city may be taken as a symbol of the fate of Islamic sites which disappear (from the historic record) when their economic functions change. To paraphrase Garcin: Qūṣ might have

[2]This has been the subject of a dialogue in Donald S. Whitcomb, ″Toward a ′Common Denominator′: An Archaeological Response to M. Morony on Pottery and Urban Identities″ (Los Angeles: Von Grunebaum Center for Near Eastern Studies, 1995).

[3]This paper makes no claim to a comprehensive listing of sites, excavations, and surveys. The casual mentions of Ayyubid-Mamluk evidence on archaeological sites in Palestine would be difficult to enumerate, let alone evaluate.

[4]Jean-Claude Garcin, *Un centre musulman de la haute-Égypte médiévale: Qūṣ* (Cairo: Institut français d′archéologie orientale, 1976). It is instructive to compare J. H. Kramer′s article published in 1927, ″Ḳūṣ,″ *The Encyclopaedia of Islām*, 1st ed., 2:1156-1157, with that of Garcin published in 1982, ″Ḳūṣ,″ *The Encyclopaedia of Islam*, 2nd ed., 5:514-515.

returned to the desert had it not been situated in a rich agricultural region. This is a new research problem for the historian; one is confronted not only by problems of archaeological remains resisting the erosion of water and sand but also by the continuing rural milieu surviving the urban organization imposed upon it.[5]

Garcin began his history by assembling the historical sources, including local accounts and biographies, travelers′ descriptions of the city and its regional context, and documentation such as the Geniza records. He considered the inscriptions and architecture within the town, especially the mosque. He initiated a detailed topographic plan, rather in the manner of Sauvaget, mapping the ″traces of the medieval past still extant beneath the surface of the soil.″[6] Reading the early reports of Aly Bahgat and others, he observed that, ″One after another the extant koms have been attacked; and each time that a kom disappeared, without doubt some new objects went to enrich private collections, saved perhaps but also losing much of their significance, being separated from their context.″[7] He concluded that ″archaeological investigation would furnish us with the most useful assistance.″ Then in 1966, ″during the destruction of some new buildings at the kom″ (next to the tomb of Sheikh Yousef), a hoard of *dīnār*s and a metal basin filled with twenty-six objects, mainly highly decorated metalwork, were discovered.[8] Garcin attempted to begin excavations in 1967 and again in 1973, both years being unfortunate timing for fieldwork.

Subsequent excavations were conducted by the Egyptian Department of Antiquities in the 1980s. In anticipation of a published report, one may generally observe architectural remains of two periods: Fatimid residences exactly like those of al-Fusṭāṭ; and, above that, Mamluk buildings like those found at Quseir al-Qadim. The excavations at Qūṣ hold a potential key to the Islamic archaeology of Egypt, tracing the development of one of many Coptic towns through the Fatimid period and its distinctive Islamic history with the prosperity of the Mamluk period.

QUSEIR, THE PORT OF QŪṢ

The more recent architectural remains uncovered at Qūṣ were strongly reminiscent of the excavations at Quseir al-Qadim. This site is complementary to the research situation of Qūṣ; the port has minimal historical documentation but has remained completely abandoned since the fifteenth century and has thus provided a detailed view of life in a Red Sea port and the commerce which sustained it.[9] The resettlement of this port is indicated by numismatic and other artifactual evidence to have occurred in the beginning of the twelfth century (Fatimid occupation is unlikely). The period of great prosperity was the Baḥrī

[8] This hoard of objets d′art would seem to date from the late thirteenth century; it is described in detail by A. A. el-Emary, ″Studies in Some Islamic Objects Newly Discovered at Qūṣ,″ *Annales islamologiques* 7 (1967): 121-138. He cites a preliminary report on *Excavations at Ḳūṣ* by A. M. Abdel Tawab.

[9] See Donald S. Whitcomb, ″Quseir al-Qadim: Text and Context in the Indian Ocean Spice Trade,″ *al-ʻUsur al-Wusta* 7 (1995): 25-27. This article is critical of Garcin′s presentation of the history of Quseir in *EI*^{2}, 5:519.

Mamluk period, with traded artifacts from India, China, Syria, and even Takrūr (West Africa).

The thirteenth century occupation formed a crescent of residences around the silted-up Roman harbor. While totally lacking architectural embellishments, these well-constructed residences obviously refer to urban architecture of the Nile Valley. In the center was a natural prominence called ″the Sheikh′s house″ during the excavations. The Eastern Area revealed a very different settlement, a complex of foundations (possibly multiple reconstructions) not unlike village constructions along the Red Sea littoral in recent times. Faunal analysis indicates a strong reliance on marine resources (fish, turtle, conch) and a marked preference for goat over sheep. There was a greater reliance on imported foodstuffs (e.g., sheep) in the thirteenth century occupation around the Sheikh′s house.

The settlements of both periods present a paradox of ″rich″ artifactual contents in a ″poor″ architectural setting. The material culture inventory reveals Mamluk ceramics and glass from the Nile Valley, perhaps even from the capital. More importantly, there is a surprising range of imported luxury items; these include celadons and porcelains (blue and white wares) from the Far East, resist-dyed cloth associated with the India trade, majolica from North Africa, pilgrim flasks and enameled glass from Syria, and iron money from West Africa. These artifacts indicate that this small port functioned as a conduit for contacts over most of the known world of the fourteenth century.

The marvelous preservation of artifacts in Quseir al-Qadim includes potential for detailed internal documentation. The excavations have produced a corpus of documents written on paper similar to the Cairo Geniza. Like the Geniza, this is a random preservation rather than an archive; the Quseir letters were not gathered together for storage but found as a part of normal trash accumulation. These letters, about 200 of which are fairly complete, detail the daily life of the community, ranging from discussion of crops and trade to love letters. While several prominent specialists have taken these documents to hand, very little analysis has resulted.[10] One expectable result of such analysis will be more detailed information on the commercial relations of the thirteenth and fourteenth century, and Quseir′s participation in the spice trade.

While on the shores of the Red Sea, one may move north to the port of al-Ṭūr, near the southern tip of the Sinai peninsula. The historical note that the customs station for the northern Red Sea was changed from Quseir to al-Ṭūr in 1380 is fully borne out by the archaeological evidence. Almost no evidence exists in Quseir of the fifteenth century and, conversely, the Japanese excavations have virtually no artifacts from the thirteenth and early fourteenth century.[11] At the old harbor, which had once supported two villages according to Niebuhr′s account, late Mamluk and Ottoman artifacts including numerous Ming porcelains were found. The Mamluk occupation has extensive public structures possibly illustrating the change from *sāḥil* to *bandar* in the late fourteenth century, mentioned in historical documentation.

---

[10]The author is happy to report that Dr. Li Guo has undertaken the study of the letters from the Sheikh′s house and has discovered many interesting details, including the owner′s name, al-Shaykh Ibrāhīm Abū Mufriḥ.

[11]See Mutsuo Kawatoko, *A Port City Site on the Sinai Peninsula, al-Ṭūr* (Tokyo: The Middle Eastern Culture Center in Japan, 1995).

AL-FUSṬĀṬ, IN THE SHADOW OF AL-QĀHIRAH

The lower architectural phase at Qūṣ is strikingly similar to the houses at al-Fusṭāṭ, best exemplified in the early excavations of Bahgat and Gabriel in the 1920s. Al-Fusṭāṭ has received much more intensive and recent archaeological research at the hands of George Scanlon. It is not the intention here to critique these excavations but briefly to describe the nature of the Mamluk occupation and its relevance to Cairo in the Mamluk period. Al-Fusṭāṭ continued from the early Islamic period into the Ayyubid period, when it had become the habitat of "an easygoing middle class."[12]

One reason for discussion of al-Fusṭāṭ is the important corpus of documentation generically known as the Cairo Geniza documents. While most of the dated documents belong to the Fatimid and Ayyubid periods, some indications of the social history in the Mamluk period should be reflected and relations to archaeological evidence should be invaluable. Goitein states a desire to coordinate these sources of information, yet his first consideration, that of topographic elements, explicitly leaves aside archaeological evidence. A separate study of Cairo by Staffa comes to the same conclusion, that social history does not need careful consideration of archaeological evidence. Both Goitein and Staffa were particularly impressed with the discovery and description of the sophisticated water supply and sewage networks revealed by the excavations.[13]

On the other hand, domestic architecture should have been a natural subject of archaeological research, yet Goitein states that "the results of the Fustat excavations are not as helpful for the interpretation and testing of the Geniza documents as one might expect."[14] He goes on to explicate contributory factors of archaeological deposition which account for this situation. This does not dissuade him from observing the "blatant discrepancy between the findings of excavators and competent [medieval] observers" concerning multi-story dwellings. These are related to pre-Islamic Arabian tower structures as evidenced in Yemen and brought to al-Fusṭāṭ by Arab settlers; he later suggests these might have functioned as apartment buildings analogous to Classical *insulae*.[15]

Goitein's volume on daily life contains extensive, detailed consideration of virtually every artifact used by these people. This wide-ranging scholarship contains virtually no reference to actual objects unearthed in the great piles of well-preserved trash in al-Fusṭāṭ. This is not to criticize Goitein, the excavators have a responsibility to take the lead in interpreting the artifacts recovered. Yet the fragments of textiles, which would be of great value in explicating household furnishings and clothing, were not systematically collected until 1982 and the archaeological report appears innocent of acquaintance with the Geniza descriptions.[16] The accomplishment of Goitein was to construct a picture of medieval social

---

[12]See S. D. Goitein, *A Mediterranean Society*, vol. 4: *Daily Life* (Berkeley: University of California Press, 1983), 11.

[13]Ibid., 4:36; the reference is to George T. Scanlon, "Housing and Sanitation, Some Aspects of Medieval Islamic Public Service," *The Islamic City: A Colloquium*, ed. Albert H. Hourani and S. M. Stern (Oxford: Cassirer, 1970), 179-194. S. J. Staffa, *Conquest and Fusion: The Social Evolution of Cairo, A.D. 642-1850* (Leiden: E. J. Brill, 1977).

[14]Goitein, *A Mediterranean Society*, 4:53.

[15]Ibid., 4:53-59. One might also suggest a relationship to the *uṭum* (pl. *āṭām*) of Yathrib/Medina. One may note that only a small portion of the early Islamic city has in fact been excavated and that portion excavated is mostly suburbs developed in the late eighth and ninth centuries.

[16]Louise W. Mackie, "Textiles," in *Fusṭāṭ Expedition Final Report,* vol. 2: *Fusṭāṭ-C*, by Władysław Kubiak and George T. Scanlon, ARCE Reports 11 (Winona Lake, Indiana: Eisenbrauns for the American

history from difficult fragments of written evidence; the archaeologist also has his multitude of fragments (sherds of many different materials) available for analysis and interpretation.

BILĀD AL-SHĀM, THE MIDDLE ISLAMIC LEVANT

Turning to Syro-Palestine, one may begin to understand the problems confronting Mamluk archaeology by noting the origins of archaeology in Biblical (and Classical) studies. Thus, Kenyon's popular account of excavating Jerusalem has about 200 pages, of which three deal with the Crusaders, and half a page with the Mamluks. Such Eurocentrism has lessened; still, a recent issue of *'Atiqot*, devoted to Islamic archaeology, contains nine articles on early Islamic (read Umayyad), one on Fatimid, and two on Crusader subjects.[17]

Study of the Middle Islamic period in the Levant thus turns around appreciation of the Crusader occupation. In her summary of the Ayyubid and Mamluk periods in Palestine, Rosen-Ayalon could make no more reliable reference than the excavations at Abu Ġôsh.[18] This site centers on the Crusader church of St. Jeremias, which incorporated part of an Abbasid caravanserai. The archaeologists found the structures reverted to a *khān* in the Mamluk period, dated 1250-1500. The nearby site of al-Qubeibah produced the same two Islamic periods of occupation, this time framing Crusader occupation of a castle.[19] The same pattern is found in Pringle's more recent excavations at al-Burj al-Aḥmar (the Red Tower).[20] Beginning with a survey of the Sharon Plain (between Caesarea and Apollonia), the discussion turns around its structure (settlements and roads) in the Crusader period. The contribution of archaeological evidence is seen to be a refinement of dating and thus any assessment of the settlement system for this and later medieval periods.

Description of the excavations naturally focuses on principal occupation of the castle (al-Burj al-Aḥmar, phases B, C). Subsequent phases are labeled Destruction (D, D1) and Later and post-Medieval (E, E1). Pringle cautions that "strata were too confused . . . to allow any more precise definition of the exact phases of occupation."[21] When he turns to the ceramic evidence, these phases become more interesting. The evidence describes the characteristics of "an agricultural village settlement, to which for a period of 150 years . . . were added Frankish residents of the castle."[22]

The Crusader castle was in fact one of many rural *burgi*, part of a process called "incastellamento" in the contemporary Mediterranean world. Such *maisons fortes* were analogous to manor houses as the core of agricultural reorganization. Ronnie Ellenblum has analyzed the locations of such "castles" and suggests extensive integration in settlement

[22]Ibid., 136.

during the latter century of Crusader occupation (1187-1291).[23] This would indicate both change within the Crusader period and continuity into the succeeding Ayyubid and Mamluk periods, at least as far as archaeological indicators are concerned (one of the reasons the periodization of Middle Islamic 1 begins ca. 1200; see chart following text).

Other excavations in Islamic sites have focused on standing architectural monuments of the Umayyad period. In the process most of these sites have revealed Ayyubid/Mamluk occupation. One of the most prominent was the palatial complex outside of Jericho, Khirbat al-Mafjar, in which the latest phase (Phase 4) is Mamluk.[24] The extensive burnt material suggests that the building was still carrying a wooden roof at the end of occupation. The ceramics have the very distinctive geometric painted juglets and slip painted glazed wares, that is, a balance between hand-made and glazed wares, culminating in a limited number of finely decorated frit wares, typical of Mamluk occupation. A rather similar early Islamic complex with an Ayyubid/Mamluk reoccupation was Qasr al-Hayr East (Period II). Around the standing monuments, the large and small enclosures, was the mounding of an extensive mud-brick settlement; walls within and between the earlier structures also belong to this resettlement. Grabar described the site as a small bidonville-like settlement, the "rather primitive small town" of ʻUrd, beginning with Nūr al-Dīn's redevelopment of Raqqa.[25] In a shift from this focus on standing monuments, the excavations at Khirbat al-Fāris in southern Jordan have mapped and excavated a medieval and Ottoman village. Likewise, the excavations at Tell Tiʻinnik have advocated a "reverse chronology," working back from the Ottoman to Mamluk and earlier (see below).[26]

ARTIFACTS AND SOCIAL HISTORY

The phenomenon of the twelfth through fourteenth centuries in northern Bilād al-Shām continues to be treated by archaeologists as a monolithic entity with fuzzy edges, usually labeled Ayyubid/Mamluk. The pattern was set with the publication of the Hama excavations by the Danish team in the 1930s. While the actual stratigraphic data has never appeared, the pottery was presented in great and influential detail.[27] Among the many types

---

[23]Ronnie Ellenblum, "Settlement and Society Formation in Crusader Palestine," in *The Archaeology of Society in the Holy Land*, ed. Thomas E. Levy (London: Leicester University; New York: Facts on File, 1995), 502-511.

[24]See Donald S. Whitcomb, "Khirbat al-Mafjar Reconsidered: The Ceramic Evidence," *Bulletin of the American Schools of Oriental Research* no. 271 (1988): 51-67. The dichotomy of identifications into Umayyad/Abbasid and Ayyubid/Mamluk is a problem in classification yet to be systematically addressed by Islamic archaeologists.

[25]See Oleg Grabar et al., *City in the Desert: Qasr al-Hayr East*, 2 vols. (Cambridge: Harvard University Press, 1978), 160-161. Grabar states that this upper phase was excavated in "arbitrary levels of 50 to 100 cm." One section claimed more careful attention by Robert Adams, see p. 81. The evidence of Ayyubid/Mamluk occupations in the Euphrates region deserves separate consideration. One may note the potential of the Bālis excavations, for which the historical setting has recently appeared: A. Raymond and J.-L. Paillet, *Bālis II: Histoire de Bālis et des îlots I et II* (Damascus: Institut français de Damas, 1995).

Ghada Ziadeh, "Ottoman Ceramics from Tiʻinnik, Palestine," *Levant* 27 (1995): 209-245.

[27]The main information on these excavations is in Harald Ingholt, *Rapport préliminaire sur sept campagnes des fouilles à Hama en Syrie (1932-1938)* (Copenhagen: Munksgaard, 1940). See also Poul Jørgen Riis and Vagn Poulsen, *Hama, fouilles et recherches 1931-1938*, vol. 4, pt. 2: *Les verreries et*

of ceramics in this site, one may examine two types as holding possible relevance as reflections of social organization: geometric painted pottery and slip-painted glazed ware.

Geometric painted pottery is also known as pseudo-prehistoric ware and, more formally and recently, as hand-made geometric painted ware (HMGPW). This ceramic features an often elaborate decorative scheme, sometimes with multiple colors, on a crude, ill-fired ceramic. The ware has often been associated with domestic production by women (as opposed to industrial wheel-made wares by men in urban settings). Following these assumptions, the ware is usually considered a devolution of an important Islamic craft, indicative of decline in the late Mamluk and Ottoman periods.[28]

In Syria, the existence and dating was signaled at Hama, where the collection includes extremely rare vessels with animal and human figures.[29] An intensity and variety of production is revealed in its occurrence in surveys and rural sites suggesting a popular craft with an important meaning and/or function. When one plots temporal and regional distribution, one sees a surprising fit with the Crusader occupation in Bilād al-Shām. This is not Crusader ware but possibly a reaction to this occupation, a reaction which continued as a popular symbol through the Mamluk period.

The Hama excavation report also describes slip-painted glazed ware as a Syrian product.[30] Rogers, in a brief discussion of its occurrence at Apamea, calls it ″gamma″ ware and suggests a distribution in Syria.[31] This ceramic is usually a red ware upon which a design in white slip is painted; the designs and distribution are strongly reminiscent of the geometric wares, a sort of up-scale domestic ware. The vessel is then covered with a yellowish clear lead glaze turning the decoration yellow and the remainder a glossy red-brown. The technique and elements of its style continue into the Ottoman period and extend into Spain and the New World, where descendants of slip-painted glazed ware were most popular in the Spanish and English colonies. Slip-painted glazed ware is a prominent product of Mamluk Egypt where it occurs as a specialized goblet form.[32] The village of al-

poteries médiévales (Copenhagen: Nationalmuseet, 1957). A final presentation of the archaeology of the Islamic levels has been announced by P. Pentz.

[28]There is a roughly contemporary phenomenon in North Africa, Nubia, and Iran/Persian Gulf; such a wide-spread style would be labeled an archaeological ″horizon,″ had it occurred in a prehistoric or early historic period. A similar type of ceramic has been linked with medieval transhumance in southern Iran; see Donald Whitcomb, ″Pseudo-Prehistoric Ceramics from Southern Iran,″ *Golf-Archäologie: Mesopotamien, Iran, Bahrain, Vereinigte Arabische Emirate und Oman*, ed. K. Schippmann et al. (Buch am Erbach: Marie L. Leidorf, 1991), 95-112.

[29]The type was labeled simply Geometric ceramic, type D XX, figs. 1000-1046, in Riis and Poulsen, *Hama*, vol. 4, pt. 2.

[30]Ibid., type C XVI, figs. 821-832.

[31]The origin of this name remains a mystery; the presentation of the Apamaea ceramics remains an unstratified puzzle; see J. M. Rogers, ″Apamaea, the Mediaeval Pottery: Preliminary Report,″ *Apamée de Syrie: Bilan des recherches archéologiques, 1969-1971*, ed. Janine and Jean C. Balty (Brussels: Centre belge de recherches archéologiques à Apamée de Syrie, 1972), 253-270; and idem, ″Mediaeval Pottery at Apamaea in the 1976 and 1977 Seasons,″ *Apamée de Syrie, Bilan des recherches archéologiques, 1973-1979*, ed. Janine Balty (Brussels: Centre belge de recherches archéologiques à Apamée de Syrie, 1984), 261-285.

[32]See George T. Scanlon, ″Some Mamluk Ceramic Shapes from Fustat: ′Sgraff′ and ′Slip′,″ *Islamic Archaeological Studies* [Cairo] 2 (1980): 59-145; idem, ″Mamluk Pottery: More Evidence from Fustat,″ *Muqarnas* 2 (1984): 115-126. Also, Donald S. Whitcomb, ″Islamic Ceramics,″ *Quseir al-Qadim 1980*, ed. Donald S. Whitcomb and Janet H. Johnson (Malibu: American Research Center in Egypt 1982), 132-

Burj al-Aḥmar used quantities of both hand-made painted pottery and glazed slip-painted ware during the first century of Mamluk rule (1265-1390). Both the household ceramic and the finer glazed ware are described as local Palestinian products.[33]

SPECIALIZED CERAMIC ARTIFACTS: GRENADES AND PIPES

There are two classes of ceramic artifacts which bear special consideration for Mamluk studies. The first are grenades, a specialized vessel firmly established in Mamluk and contemporary assemblages for which no persuasive utilization is known. The other is the ceramic pipe bowl, for which use is apparently agreed but association with Mamluk archaeology sadly misplaced.

The so-called grenade, or better, sphero-conical vessel, is a hard well-made ceramic (usually approaching a stoneware) with a very small opening at the rounded end. The surface usually has a glaze (often a firing by-product) and impressed or stamped decorative elements.[34] Traditional identifications of these sphero-conical vessels has been as fire-throwers, based on the superficial similarity to modern grenades. Other popular identifications are perfume or mercury containers, to which may be added postulated uses as hanging lamps, water pipes, or aeliopiles. Most recently, some currency has been granted the idea of beer or alcohol bottles; this last identification relies on unique and undocumented examples from Iran and the evidence solely poetic in form.[35] What is certain is a wide distribution from Khorasan to Egypt during the Mamluk period; one may suggest that a search of Turkic or even Mongol paraphernalia might yield a cultural usage.

By way of contrast, there is little doubt of the use of clay pipe bowls, moulded, decorated, and burnished. This is a common element of paraphernalia in depictions of the Ottoman period and indeed maintains a formal similarity with original (stone) pipe bowls of native American usage. Excavated examples from Tell Ti'innik in Palestine have been used to shift the hand-made geometric painted ware to the Ottoman period, a radical revision in dating.[36] When Pringle found pipes at al-Burj al-Aḥmar, he considered the testimony of Hama and Tell Qaimun (Tel Yoqne'am)[37] where pipes were dated to the Mamluk period; in the end he followed his own stratification to post-Mamluk occupation (phase E, 17-19th

192, pl. 36; and Kawatoko, *al-Ṭūr*, pl. 21.7.

[33]Pringle, *The Red Tower*, 135-36, 149-150.

[34]There is an extensive literature treating grenades, beginning with Hama; Riis and Poulsen, *Hama*, vol. 4, pt. 2, type DXXI, figs. 1047-1058. Recently Peter Pentz has offered new archaeological evidence from Hama, claiming to strengthen the traditional identification as "grenades," in "A Medieval Workshop for Producing 'Greek Fire' Grenades," *Antiquity* 62 (1988): 89-93.

[35]A. Ghouchani and C. Adle, "A Sphero-Conical Vessel as *fuqqāʻah*, or a Gourd for 'Beer'," *Muqarnas* 9 (1992): 72-92.

[36]Ziadeh, "Ottoman Ceramics."

[37]Pringle, *The Red Tower*, 142. The Tell Qaimun evidence is often cited but the extant reports do not offer details necessary for independent stratigraphic contribution. See Amnon Ben-Tor and Renate Rosenthal, "The First Season of Excavations at Tel Yoqne'am, 1977: Preliminary Report," *Israel Exploration Journal* 28 (1978): 57-82; and Amnon Ben-Tor, Yuval Portugali, and Miriam Avissar, "The Second Season of Excavations at Tel Yoqne'am, 1978: Preliminary Report," *IEJ* 29 (1979): 67-83. Another nearby site, this time with a Crusader castle, is 'Afula, with no better contexts or reportage; see M. Dothan, "The Excavations at 'Afula," *'Atiqot* 1 (1955): 19-74; and more recently, Benjamin Z. Kedar and Denys Pringle, "La Fève: A Crusader Castle in the Jezreel Valley," *IEJ* 35 (1985): 164-179. Yet another site with published potential is Buṣrá (Bostra), see Sophie Berthier, "Sondage dans le secteur des thermes sud à Buṣrā (Syrie) 1985," *Berytus* 33 (1985): 5-45.

centuries).[38] Ever since Hama, pipes have been suggested to have fourteenth century associations, but St. John Simpson has carefully refuted this association as, in a large number of cases, the result of faulty stratigraphy.[39] This should raise a red flag for readers of archaeological reports: isolated artifacts (or special types) should fit with the remainder of the assemblage or, put another way, archaeological evidence comes in repeating patterns.[40]

CONCLUSIONS

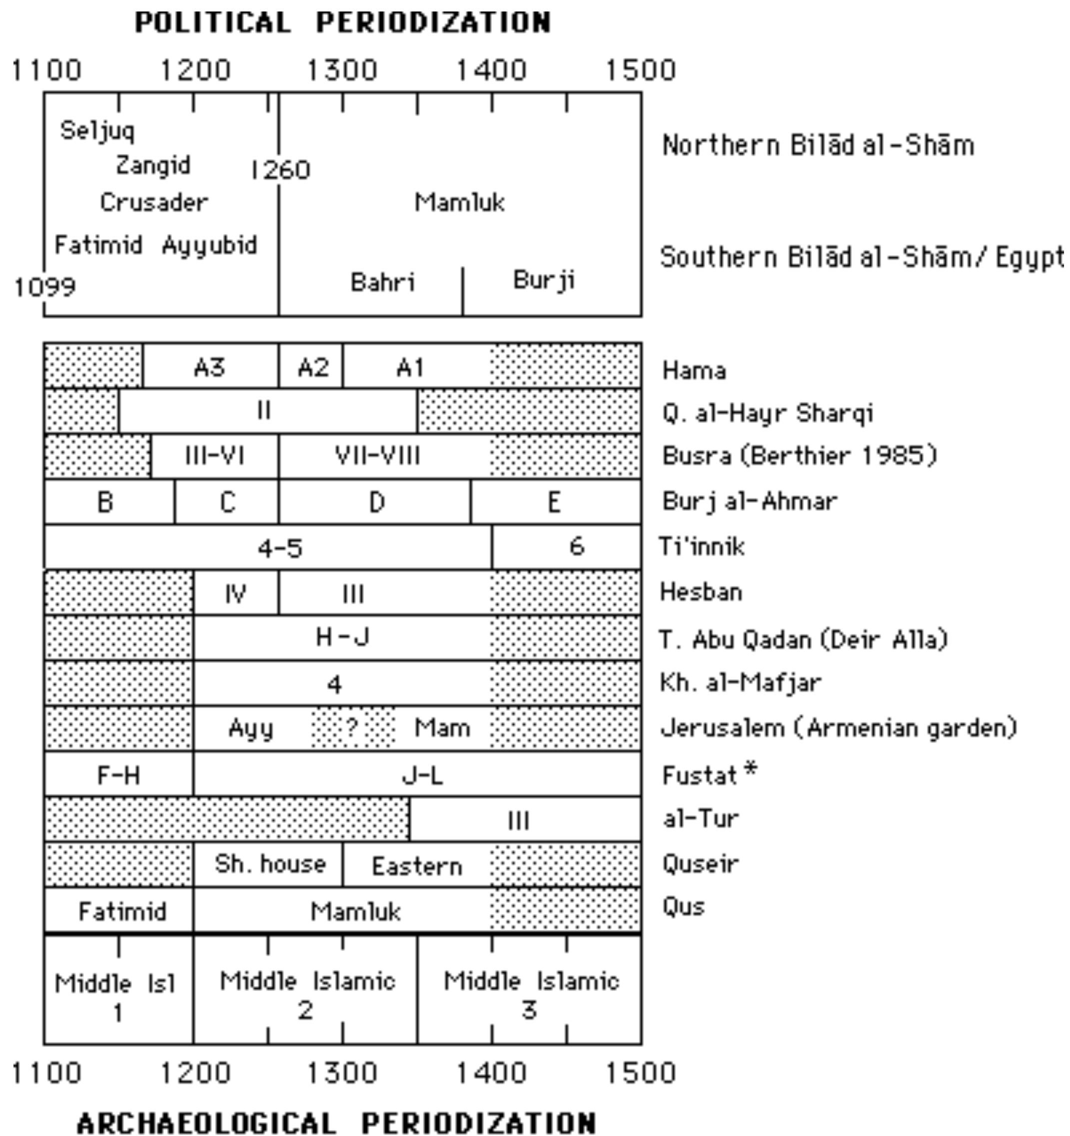
The preceding discussion of Mamluk archaeology has not touched on many places and monuments which are usually considered important for an understanding of Mamluk history; the architecture of Cairo or Jerusalem are two obvious beginning points.[41] Study of such monuments falls into the realm of art history, which runs on parallel tracks but employs a very different methodology from archaeology. Archaeology is suited for inquiry into long-term change. One may seek in archaeological research patterns of land use (historical geography) and social organization (settlement systems), or rather ecology and economy in human development. Archaeology also provides information about the characteristics/functioning of particular places and periods, e.g., the dramatic change observed in the beginning of the Middle Islamic period induced by a new mix in the Middle East, the long-term affects of Crusaders and Mongols on early Islamic civilization.

Since an understanding of Mamluk culture must take into account the changed nature of social organization in its rural and urban settings, the primary evidence from the archaeological record must be integrated with that from the documents. One might well return to a description of the Egyptian scene:

> Besides being a highly centralized country with an administration organized to maximize royal revenues, Egypt was and remained a traditional peasant society in which primary social relations, those of family and friend, of patron and client, remained of supreme importance. The focus of loyalty was the village. . . .[42]

This description, actually applied to Ptolemaic, not Mamluk, Egypt, is advanced here not for some vague romantic sense of continuities, but to draw a parallel between two societies in multi-cultural transitions, in which ethnic origin became less important than

[38]*The Red Tower,* 142.



[39]The Hama references are: Riis and Poulsen, *Hama*, vol. 4, pt. 2, type D XXII, figs. 1069-1082. The refutation is found in St. John Simpson, "Ottoman Clay Pipes from Jerusalem and the Levant: A Critical Review of the Published Evidence," *Society for Clay Pipe Research, Newsletter* 27 (October, 1990): 6-16. An example of such stratigraphy with pipes is in G. J. Wightman, *The Damascus Gate, Jerusalem*, BAR 519 (Oxford: British Archaeological Reports International, 1989), pl. 63.

[40]Likewise, the evidence of coin finds must be treated as only one element of a large pattern; like C14 samples, there is an unavoidable sampling error which requires rejection *unless* the interpretation fits all other lines of evidence.

Mamluk Architecture and the Question of Patronage

The study of patronage of the arts and architecture during the Mamluk period helps us sharpen the picture that we have of this alien ruling class. At the same time, it illuminates the relationships which existed between the Mamluks, the religious elite, and the rest of the population. In examining the patronage of architecture in the Mamluk period, historians and art historians face a number of complex problems. Some derive from the nature of the buildings themselves or their inscriptions, while others result from the conflicting accounts provided by the various literary sources and, sometimes, by the *waqf* documents. Scholars also have to be aware of external factors—economic, social, political—which had an impact on the decisions of patrons to construct one type of building rather than another.

The present article is an attempt to reflect on the patronage practices and to raise some questions about the architectural achievements of the Mamluk period. It also tries to sort out the patterns followed by both the military and civilian elite when commissioning their buildings. A survey of the extant monuments from the period between 1250-1517, as well as those no longer extant but recorded in the literary sources, allows us to identify four broad categories of buildings of either a religious or a secular nature. The classification of the buildings under a given category is based on the function of the buildings as defined in their inscriptions, literary sources, or *waqf* documents.[1] Accordingly, buildings may be grouped under four categories: (1) religious, which includes the *jāmiʻ*, *masjid*, *madrasah*, *khānqāh*;[2] (2) social, which includes the *zāwiyah*,[3] *ribāṭ*, *bīmāristān*, *sabīl*, *sabīl-kuttāb*, *ḥammām*; (3) domestic, which consists of the palace, *dār*, and house (*qāʻah*, *riwāq*, *ṭabaqah*, *rabʻ*); (4) commercial/industrial, which includes the *qaysārīyah*, *wakālah*, *khān*, *funduq*, *sūq*, *miʻṣarah*, *ṭāḥūn*, *furn*, *maṭbakh sukkar*, *sirjah*.

The ratio of religious to secular buildings constructed at a certain time is difficult to assess. At the present time our understanding of the economic, political, and social factors which had an impact on the choice of buildings constructed by patrons allows us to draw only broad conclusions as to how this choice was made. We can sometimes speculate that

---

[1]The reader is asked to keep in mind the fact that, in some cases, buildings—especially large complexes—had multiple functions. In such cases the predominant function of the building will determine the category into which it falls. Civil and military architecture have been deliberately left out of this discussion since both categories included buildings which were generally part of large projects placed under the aegis of the state.

[2]Although *madrasah*s and *khānqāh*s had functions which were not directly related to religious rituals, their primary concern was the teaching of the religious sciences and/or Sufism; therefore, their inclusion under this category is justifiable.

[3]*Zāwiyah*s have been deliberately excluded from the category of religious buildings since their function—at least as far as Mamluk Egypt is concerned—was not directly associated with "orthodox" religious practice. See Fernandes, "The *Zāwiya* in Cairo," *Annales islamologiques* 18 (1982): 116-121.

the need to control or create ties with religious scholars often motivated patrons to establish foundations providing positions for the civilian elite.[4] We can further point out the relationship which existed between the growing interest of patrons in constructing commercial buildings such as *wakālah*s or *qaysārīyah*s and *funduq*s around the end of the fourteenth century and onwards, and the growth of Mediterranean trade. One can also speculate on the lack of interest shown by the Mamluks in the construction of mosques per se on the basis of the religious developments of the period.

However, before turning our attention to the pattern of patronage arising from the varying motives of patrons, let us pause for a moment to ask the question, Who were the patrons? We could use—although with reservation—the answer provided by L. A. Mayer, who writes:

> . . . although the bulk of public buildings in Islam were either devoted to religious use (like mosques, madrasas, kuttâbs, zâwiyas, cemeteries) or founded out of a religious impulse (like hospitals or sabîls), with very few exceptions they were constructed by order of laymen. Economically they were entirely the work of the governing classes, military or civilian, and independent of any ecclesiastical authority. . . . And just as there is no ecclesiastical architecture of any consequence except that ordered by laymen, so there is no bourgeois architecture worthy of the name.[5]

The preceding statement calls for two comments. Firstly, it uses a terminology which totally ignores the nature of Islam when it refers to an ″ecclesiastical authority″ and ″ecclesiastical architecture.″ Secondly, the statement mentions the absence of ″bourgeois architecture″ without taking into consideration the structure of the Muslim society under study. Despite its defects, we have to agree with Mayer′s statement that the patrons were those who could afford to pay for the construction of a building, whether from the military or civilian elite. It would also be appropriate to include explicitly two groups who were actively involved in the establishment of both religious and secular foundations: women and merchants.

The best documented of the various groups of patrons are the rulers and their military elite. The sources provide us with enough information to allow us to reconstruct the pattern of patronage of this group during the Mamluk period. It is evident that religious foundations, which helped the ruler legitimate his rule, were the primary focus of patronage by the sultan and his amirs. For the Mamluks, perhaps even more than for any other group, political power was acquired and maintained by force and legitimized by an ideology at the center of which was Islam. According to the medieval scholars, a good ruler was the one striving to impose and uphold the *sharī'ah* and thus hold high the banner of Islam.

With this ideal of rulership in mind, the Mamluk rulers arranged and rearranged their public buildings so as to project and maintain an image of themselves in harmony with the expectations of their subjects, both the religious elite and the masses. The patronage of religious buildings such as the *jāmi'*, for instance, was regarded as part of the ruler′s

[5]L. A. Mayer, *Islamic Architects and Their Works* (Geneva: Albert Kundig, 1956), 22-23.

duties.[6] Thus, it is not surprising to note that every effort was made by the Mamluks to associate their names with the greatest possible number of religious buildings, whether newly constructed or rebuilt. Among the most important foundations were *jum'ah* mosques, which provided a place for the community to perform their daily rituals, attend the Friday prayer, and listen to the *khuṭbah*. Sultan Baybars encouraged the introduction of the *khuṭbah* in a number of mosques in the same urban agglomeration.[7] He also ordered the building of his *jāmi'*, which was constructed between 665-67/1266-69. Many important mosques date from the time of Sultan al-Nāṣir Muḥammad who, along with his amirs, embarked on a large program of building and rebuilding mosques as mentioned by al-Maqrīzī.[8] However, after a period of about twenty-five years of intense activity involving the construction of mosques, one notes that fewer mosques were built after the death of this sultan.

Talking about a fifteenth century *madrasah*, van Berchem pointed to the fact that the Friday rituals were now celebrated in such foundations: ″À cette époque, on ne bâtissait presque plus de Mosquées, et l′office du vendredi ce célébrait dans la plupart des madrasahs.″[9] By the mid-fourteenth century, a number of *madrasah*s also had the function of *jāmi'*s. Despite the strong opposition of the Shāfi'ī school of law to the deliverance of more than one *khuṭbah* in an urban center, this practice was introduced in a number of foundations.[10] However, we should point out that permission to build a *jāmi'* or to introduce a *khuṭbah* in a *madrasah* had to be obtained from the sultan and approved by the religious scholars. It is clear that this privilege was enjoyed primarily by members of the military elite. With time, however, the same privilege came to be shared by members of the civilian elite, women related to the sultans, and rich merchants. Al-Sakhāwī mentions a number of cases in which construction of, or introduction of the *khuṭbah* in, a foundation were authorized. Thus, we read that the *khuṭbah* was delivered in the *madrasah* built by al-Zaynī ibn al-Jī'ān next to his house, with the permission of the sultan and sanction of the religious scholars.[11] Elsewhere, we read that the *khuṭbah* was delivered in the mosque built by al-Zaynī al-Ustādār in Būlāq with the permission of the sultan (*bi-idhn al-sulṭān*) and the agreement of the jurists.[12]

Because the *khuṭbah* was delivered in so many *madrasah* foundations, some jurists felt the need to point out that a *madrasah* was not a mosque. Indeed, we read: ″*madrasah*s are not to be considered mosques but only the *miḥrāb* itself or some say the *īwān al-miḥrāb* exclusively [is to be considered as a *jāmi'*]; the rest of it is not to be treated as a *jāmi'* since it is permissible [for people] to gather in it, to eat and to work in it, and so

---

[6]Ibn Taymīyah, in a number of his *fatwá*s, goes so far as to consider a ruler′s neglect in building or restoring mosques as deviant behavior; *Majmū' Fatāwī Shaykh al-Islām Aḥmad Ibn Taymīyah* (Riyadh: Maṭābi' al-Riyāḍ, 1381).

on."[13] The practice of delivering the *khuṭbah* in *madrasah*s was still frowned upon by the Shāfiʻī jurists as late as the middle of the fifteenth century. Al-Sakhāwī mentions an incident which took place between Shāfiʻī and Ḥanafī jurists regarding the introduction of the *khuṭbah* in the *madrasah* of Qāḍī Badr al-Dīn Ḥasan ibn Suwayd, built in Miṣr in 845/1441-1442.[14] The author clearly states that Ḥanafī jurists allowed more than one *khuṭbah* in one *miṣr* while the Shāfiʻīs opposed it. He then provides his own opinion on the matter saying: "non-authorization of multiplicity [of *khuṭbah*s] is more appropriate and God provides guidance" (*ʻadam al-taʻaddud awlá wallāh al-hādī*). The opposition of the Shāfiʻī jurists was so strong that when the introduction of the *khuṭbah* in the *madrasah* of Qalāwūn was proposed in 774/1372-73, a great debate took place between the Ḥanafīs and the Shāfiʻīs. *Fatwá*s were issued on the subject, explaining their respective positions. Al-Suyūṭī[15] adds that al-Bulqīnī wrote to support the practice while al-ʻIrāqī opposed it. Could this strong opposition to the deliverance of more than one *khuṭbah* in an urban center have influenced the decision of patrons regarding the type of building to be commissioned, especially in centers like Bayn al-Qaṣrayn? Baybars, Qalāwūn, al-Nāṣir Muḥammad, Barqūq, and Barsbāy, each of whom erected one of their foundations in this location, declined to build a *jāmiʻ*. They all chose to build religious foundations, the functions of which were associated with teaching and Sufism. Furthermore, the *khuṭbah* was not given originally at some of the early foundations.[16]

The former site of the Fatimid palaces, which had been transformed by the Ayyubids into a center of religious and commercial activities, Bayn al-Qaṣrayn became a prime locus for the construction of large foundations during the Mamluk period. Indeed, early patrons, in imitation of their former master al-Ṣāliḥ Najm al-Dīn Ayyūb, elected to build at least one of their foundations here whenever possible. The fact that Bayn al-Qaṣrayn was deemed an important site highly appreciated by religious scholars is reflected in a comment that al-ʻAynī made when talking of Sultan al-Mu'ayyad Shaykh. According to this author, when the sultan discussed his intention to build a *madrasah*/*jāmiʻ* in al-Qāhirah with his advisors, they all recommended the location opposite the *madrasah* of Sultan Barqūq in Bayn al-Qaṣrayn so that al-Mu'ayyad Shaykh, too, would have a foundation standing among those of other sultans.[17]

It is also worth mentioning that by the Mamluk period Bayn al-Qaṣrayn had become, as al-Maqrīzī says, the site of an important *sūq*.[18] This probably would also have influenced the type of foundation erected there, and would perhaps have caused reluctance to build a *jāmiʻ* in this location. Indeed, the objection to the building of a *jāmiʻ* in a *sūq* is well documented. Al-Sakhāwī and Ibn Ḥajar al-ʻAsqalānī both mention a heated debate which took place apropos the *jāmiʻ* of al-Ghamrī (d. 849). Many religious scholars, we are told, admonished him and some tried to dissuade him from building the *jāmiʻ*. Ibn Ḥajar al-ʻAsqalānī mentions that he was among the people who advised the shaykh to forego

[18]al-Maqrīzī, *al-Khiṭaṭ*, 2:27-29.

introducing a *khuṭbah* in the foundation (i.e., keep it a *masjid*) but that he was faced with the patron's total refusal of his advice.[19] Al-Sakhāwī, who reports the same event, writes: "The scholars censured him for that" (*fa-ʿāba ʿalayhi ahl al-ʿilm dhālika*).[20]

Both the opposition of the Shāfiʿīs to more than one *khuṭbah* in a *miṣr* as well as the jurists' stand regarding the construction of a *jumʿah* mosque in a *sūq* must have inevitably influenced the choice of the foundations to be built on the site of Bayn al-Qaṣrayn. It is therefore not surprising that a sultan like Baybars al-Bunduqdārī, who commissioned a very large mosque in 665-67/1266-69, chose for its location a *maydān* outside al-Qāhirah proper. The same sultan had already built a *madrasah* in Bayn al-Qaṣrayn a few years earlier and had requested explicitly that no changes be made to this building. We read in al-Maqrīzī[21] that Baybars went to his *madrasah* in al-Qāhirah and, "He entered it and so did the *fuqahā'* and the *qurrā'* . . . and he said, 'this is a place I have dedicated to God. . . . When I die do not bury me here and do not alter the plan of this place'."[22] There was always an attempt to keep burial grounds away from urban centers. Al-Suyūṭī confirms that Baybars was firmly opposed to any urban development around burial grounds.[23] Interestingly, when the custom of adding a *qubbah* to religious foundations in urban centers was adopted by the early Mamluk sultans, their legal function as specified by the *waqf* documents was that of a *masjid* and/or teaching place. Only the *fisqīyah* (burial chamber) underneath them was to be considered a burial ground.[24]

Talking about the complex of Qalāwūn, al-Nuwayrī writes that when the sultan saw al-Turbah al-Ṣāliḥīyah, he ordered the construction of a *turbah* for himself, containing a *madrasah*, a *bīmāristān*, and a *maktab sabīl*. He established as *waqf* a number of his properties including *qaysārīyah*s and *ribāʿ*, and most of the income from these was endowed on the *bīmāristān* and then on the *turbah bi-al-qubbah*. The use of the two terms juxtaposed clearly indicates that the two words were not synonymous. Often the functions of the *qubbah* went beyond what was specified in the *waqfīyah*. Indeed, many sultans made it a place for holding important *majālis* and paid regular visits to their mausoleums. For instance, Mamluk chronicles report a number of *majālis* taking place in the *qubbah* of Qalāwūn and attended by his sons and grandsons.[25] Furthermore, this *qubbah* became the locus of an important ceremonial: the swearing of the oath, which took place at the manumission of a *mamlūk* and his promotion.[26] In an article entitled "Reflections on Mamluk Art" Oleg Grabar writes:

> The problem with all these Mamluk foundations is that there are so many of them, located so close to each other—as in the Shariʿ Bayn al-Qaṣrayn in

> Cairo . . . and in Cairo's eastern cemeteries—that one begins to doubt their actual social, religious, or intellectual uses and usefulness.[27]

One has to wonder why it is that we are still left in doubt as to the "usefulness" of a number of monuments whose function is clearly indicated in their inscriptions and explicitly described in great detail in their *waqfīyah*s and by the chroniclers. Referring back to the descriptions of buildings provided by the literary sources and the *waqfīyah*s of the buildings erected along Bayn al-Qaṣrayn, one can not help but notice their importance in the eyes of the people who witnessed their construction. There can be no doubt whatsoever as to the purpose and usefulness of a complex such as the one erected by Qalāwūn in which a *bīmāristān* was joined to a *madrasah* and a *qubbah*. Al-Maqrīzī describes the building, explaining the patron's choice of foundations and deals briefly with some of the services provided by the *bīmāristān*.[28] Details of the services provided by this hospital are found in its endowment deed.[29]

It is equally interesting to read the texts of two chancery documents issued in the name of Qalāwūn, both dated 684/1285, appointing the *ra'īs al-aṭibbā'*. In the first document we read:

> Since *'ilm* (science), as we are told, consists of two types, *'ilm al-adyān* (religious sciences) and *'ilm al-abdān* (sciences of the body, anatomy), it was incumbent upon us to focus on both and create for them, during our days, whatever will ensure their existence in perpetuity. . . . Thus we have constructed for the two a monument rooted in piety.[30]

In another document of appointment issued by the same ruler to designate Qāḍī Muhadhdhab al-Dīn as teacher in the *bīmāristān* one reads:

> We have seen former rulers adopt sound policies towards their subjects. They showed great care for the sciences of religion but neglected the sciences of the body. Each constructed a *madrasah* and yet neglected to build a *bīmāristān* ignoring thus [the Prophet's] saying: Science is of two types (*al-'ilm 'ilmān*). . . . We have built a *bīmāristān* that fills the eyes with admiration and which surpasses other buildings and preserves the health and well being of people.[31]

[27]Oleg Grabar, "Reflections on Mamluk Art," *Muqarnas* 2 (1984): 8.
[28]al-Maqrīzī, *al-Khiṭaṭ*, 2:406-408.
[29]Ḥujjat Waqf al-Manṣūr Qalāwūn, al-Awqāf 1010; also see Ibn Ḥabīb, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh*, ed. Muḥammad Muḥammad Amīn (Cairo: al-Hay'ah al-Miṣrīyah al-'Āmmah lil-Kitāb, 1976-86), 1:359.
[30]The text of the document is preserved in Ibn al-Furāt, *Ta'rīkh*, 8:22-25, as indicated in Muḥammad Māhir Ḥamādah, ed., *al-Wathā'iq al-Siyāsīyah wa-al-Idārīyah lil-'Aṣr al-Mamlūkī* (Cairo: Mu'assasat al-Risālah, 1980), 324-327.
[31]al-Qalqashandī, *Ṣubḥ al-A'shá fī Ṣinā'at al-Inshā'* (Cairo: al-Mu'assasah al-Miṣrīyah al-'Āmmah lil-Ta'līf wa-al-Tarjamah wa-al-Ṭibā'ah wa-al-Nashr, 1964), 11:253-256.

Baybars al-Manṣūri writes about the complex of Qalāwūn which poets described in a number of *qaṣīdah*s, from which he quotes a few verses:

> A minaret shining like a star in the darkness providing guidance to the world / A *madrasah* standing as testimony to its high civilization, a lofty achievement / The light of which eclipses the Ẓāhirīyah. . . . / Knowledge by it remains soundly rooted and disseminated thus suppressing atheism and debauchery.[32]

Waqf documents and other sources also mention some of the reasons motivating patrons to endow pious foundations. Among the principal reasons for constructing *jāmi*'s or *masjid*s is the desire to follow the sayings of the Prophet, who is reported to have encouraged their building in a number of *ḥadīth*s. In the statement of purpose contained in the *waqfīyah*s one reads that the Prophet said, "After the death of an individual three of his deeds will survive. Among the three, the most important is the construction of a house for God." One also reads that the Prophet said, "He who builds a house for God, no matter how small its size, God will build a place for him in heaven." In addition to the sayings of the Prophet, the idea of reward in the afterlife is always stressed in the statement of purpose found at the beginning of the *waqfīyah*s.[33] It is also interesting to note that the buildings themselves often carry at the beginning of the foundation inscription the Sūrat al-Tawbah (S. 18).

The decision of a patron to build a religious building was not, however, always dictated by personal considerations such as self-aggrandizement or reward in the afterlife. Indeed, sometimes the decision to build a *jāmi*' was a direct response to the needs expressed by the people or by religious scholars. Discussing the Jāmi' al-Jadīd al-Nāṣirī, Baybars al-Manṣūri writes that al-Nāṣir Muḥammad gave the order to construct this *jāmi*' on the Nile opposite the Isle of Rawḍah because the inhabitants of this *maḥallah* (urban center) had no *jāmi*'. They kept expressing the wish to have a *jāmi*', which would save them the trouble of walking to other mosques on Fridays. Baybars al-Manṣūri writes that al-Nāṣir, "being aware of their needs, ordered the construction of this mosque and took a personal interest in its planning." We are told that it was constructed in the best way "displaying beauty, perfection and grandeur. . . . Trees lined its sides surrounding it with the perfume of their flowers and the shade of their branches."[34]

Discussing the same mosque, al-Maqrīzī writes that Qāḍī Fakhr al-Dīn ibn Faḍl Allāh, the *wazīr al-jaysh*, built this mosque "in the name of" (*bi-ism*) the sultan.[35] Although the statement of al-Maqrīzī leaves no doubt as to who the real patron was, or that the Qāḍī must have been the supervisor of the construction, there are other cases where the question of patronage poses a problem. Indeed, how should we define patronage? On what basis do we attribute a building to a patron, especially when we are dealing with royal constructions? Is the person giving the order to construct a monument and whose name figures in the inscription on the building preceded by "has ordered construction" (*amara bi-*

[32]Baybars al-Manṣūrī, *al-Tuḥfah al-Mulūkīyah*, 111-112.
[33]Ḥujjat Waqf al-Manṣūr Qalāwūn, al-Awqāf 1010; Ḥujjat Waqf al-Sulṭān Ḥasan, al-Awqāf 881, fols. 4-9; Ḥujjat Waqf al-Sulṭān Abū al-Naṣr Qāytbāy, al-Awqāf 886, fols. 4-6, to name but a few.
[34]Baybars al-Manṣūrī, *al-Tuḥfah al-Mulūkīyah*, 226.
[35]al-Maqrīzī, *al-Khiṭaṭ*, 2:304.

inshā') to be considered the patron or is the one who undertakes the construction at his own expense the real one? Furthermore, in cases of the reconstruction of a building in ruins, are we entitled to credit the new monument to the patron whose name is on the new inscription or the previous patron?

The presence of phrases like ″from his personal funds″ (*min mālihi al-khāṣṣ*) or ″has constructed [it] for″ (*ansha'a li*) found in some inscriptions on buildings, as well as a number of other oddities which exist in the inscriptions of some monuments, and discrepancies between the reports of chroniclers and *waqf* documents dictate great caution when deciding the question of patronage. For example, in the case of the *madrasah* of Khawand Barakah (Umm al-Sulṭān Sha'bān) constructed in 770/1368-69, the inscriptions clearly state that Sultan Sha'bān ″has ordered the construction of this blessed *madrasah* for his mother″ (*Amara bi-inshā' hādhihi al-madrasah al-mubārakah li-wālidatihi Mawlānā al-Sulṭān al-Malik al-Ashraf Sha'bān*).[36] Yet the *waqfīyah* and the sources explicitly state that she is the one who commissioned (*ansha'at*, *banat*) it and paid for its construction.[37]

Another interesting case is presented by the complex of Faraj ibn Barqūq (803-813/1400-1411) in the desert, where all the inscriptions, except for one, mention that this sultan ordered its construction.[38] The only inscription which does not associate the construction of the *turbah* with the name of Faraj is that found in the interior of the northern mausoleum at the base of the dome. It reads: Sultan Barqūq ″has ordered the construction of this blessed *turbah* . . . in the reign of his son Mawlānā al-Sulṭān al-Malik al-Nāṣir Abū al-Sa'ādāt Faraj. . . .″ (*Amara bi-inshā' hādhi*[*hi*] *al-turbah al-mubārakah Mawlānā al-Sulṭān al-Shahīd al-Malik al-Ẓāhir Abū Sa'īd Barqūq . . . fī ayyām walidihi Mawlānā al-Sulṭān al-Malik al-Nāṣir Abū al-Sa'ādāt Faraj. . . .*).[39] The information provided by the sources indicates that Barqūq was the one who had selected the location for the construction of a *turbah* and had left a large sum for its erection. Al-Maqrīzī mentions that in his will (*waṣīyah*) Barqūq set aside 80,000 *dīnār*s for the construction of the *turbah* outside Bāb al-Naṣr and that he indicated that the surplus money was to be used for the acquisition of properties to be made *waqf* on the foundation.[40] There seemed to be no doubt in people′s minds at the time as to who was the real patron since Ibn Taghrībirdī thought it important to correct their beliefs when he wrote:

> People think that this *turbah* was built (*ansha'ahā*) by al-Ẓāhir Barqūq before his death and they call it Ẓāhirīyah but this is not so, for none other than al-Malik al-Nāṣir Faraj built it after his father′s death.[41]

It is clear that Barqūq did not witness the construction of the *turbah* and that Faraj probably was the one who gave the order to build it. However, since Barqūq expressed the wish to

[41]Ibn Taghrībirdī, *al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo: al-Hay'ah al-Miṣrīyah al-'Āmmah lil-Ta'līf wa-al-Nashr, 1963), 13:102.

build it, selected the location, and left the money to erect it, should we not consider him, as his contemporaries did, the real patron?

Another odd case is reported by Ibn Iyās who discusses a *madrasah* built in 859/1455 by the *nāẓir al-khāṣṣ* al-Jamālī Yūsuf. He writes that "al-Jamālī began to construct a *madrasah* in the *ṣaḥrā'* for the sultan . . . and the expenditures for the work were paid out of his own money, not that of the sultan (*wa-kāna maṣrūf dhālika min māl nāẓir al-khāṣṣ Yūsuf dūna māl al-sulṭān*). . . . He built a *zāwiyah* opposite this *madrasah* and a *ḥawsh* for the burial of the family of the sultan."[42]. Elsewhere, we read that the same amir restored (*jaddada*) a *madrasah*—the Madrasah Fakhrīyah—and placed on it an inscription in the name of the sultan.[43] Ibn Iyās's reports lead us to assume that we are faced here with a gift offered to Sultan Īnāl and his family.

Occasionally we find references to sultans' names in inscriptions on buildings built by amirs. For instance, we find an inscription on a wooden door in the mosque of Azbak al-Yūsufī (900/1494-95) which mentions the name of Sultan al-Malik al-Ashraf Abū al-Naṣr Qāytbāy and praises him.[44] Could the references to the name of a ruling sultan possibly indicate that the latter contributed to the construction of the building, donating money or building materials, and that as a gesture of gratitude his name would be mentioned in one of the inscriptions? The most interesting example is the one offered by the inscription on the mosque of Qānībāy built in 845/1441-42, which mentions the name of Sultan Jaqmaq.[45] Indeed, in that particular instance we know that when the sultan died in 857/1453 he was buried in the *qubbah* attached to the mosque. We also know that when the sultan's son died he too was buried in this mausoleum.[46] The questions raised here are, Why was the sultan buried in this mausoleum and why does his name appear in the inscription? Did Jaqmaq build this mosque and donate it as a gift or did Qānībāy build it?

The largest group of patrons was undoubtedly the military elite who would have had no trouble securing for themselves a permit to build a public building. However, one should not ignore the contributions of other groups such as members of the civilian elite, women, and rich merchants. Some women of the households of Mamluk sultans became actively involved in the construction of religious buildings, especially from the time of al-Nāṣir Muḥammad's rule. Some of them, such as Sitt Hadaq (740/1339-40), built mosques; others built *madrasah*s like the *madrasah* of Umm al-Sulṭān Sha'bān (770/1368-69). A number of them patronized Sufi foundations or other charitable ones. Hence, Umm Anūk[47] built the *khānqāh* known under her name, the *khānqāh* of Ṭughāy in 749/1348; Khawand Ṭulbāy built hers in 765/1363-64. The daughter of Baybars al-Jāshankīr built the Ribāṭ al-Baghdādīyah in 684/1285-86.

---

[42]Ibn Iyās, *Badā'i' al-Zuhūr*, 2:330-331, 367. The amount spent on the construction as reported by the author was 12,000 *dīnār*s.

[43]Ibid., 291; see also al-Sakhāwī, *al-Tibr al-Masbūk*, 346.

[44]van Berchem, *CIA, Égypte* 3:531, no. 356; 'Alī Mubārak, *al-Khiṭaṭ al-Tawfīqīyah*, 4:115.

[45]van Berchem, *CIA, Égypte,* 3:381, no. 260.

[46]Ibn Iyās, *Badā'i' al-Zuhūr*, 2:300-303, 306; Ibn Ḥajar al-'Asqalānī, *Inbā' al-Ghumr*, 9:216-217.

[47]Khawand Ṭughāy, also known as al-Khawand al-Kubrá, was a concubine of Sultan al-Nāṣir Muḥammad who later became his favorite wife. Ṭughāy, who was known for her beauty, had acquired great power and influence and, according to al-Maqrīzī, some *qāḍī*s and amirs would go so far as to kiss the floor in front of her as they would do for the sultan. Ṭughāy gave birth to a son Anūk, hence the title of Umm Anūk that al-Maqrīzī uses to refer to her foundation. Ṭughāy died in 749 leaving behind a great fortune. See al-Maqrīzī, *al-Khiṭaṭ*, 2:425-426.

A number of important religious foundations were built by civilians, patrons whose influential position and/or wealth earned them the privilege of erecting public buildings. Some were built by viziers, for instance, the *jāmi'* at Dayr al-Ṭīn rebuilt by Tāj al-Dīn ibn Ḥannā in 672/1273. Ibn Ḥannā, we are told, had moved to a new residence in the Bustān al-Ma'shūq. Realizing that the old *jāmi'* was too small for the inhabitants of the quarter, and for his own convenience (so as not to have to walk too far for the Friday prayer) he decided to tear down and rebuild the mosque in 672/1273.[48] Likewise, the vizier Sa'd al-Dīn Ibrāhīm al-Bashīrī rebuilt the Jāmi' Birkat al-Raṭlī when he decided to move to a new house nearby.[49]

Members of the religious elite, especially *qāḍī*s, also rebuilt, restored, or built religious foundations. Qāḍī Shams al-Dīn Muḥammad ibn Ibrāhīm ibn 'Umar al-Suyūṭī, *nāẓir bayt al-māl*, built the Jāmi' al-Suyūṭī in 671/1272. This mosque was restored and enlarged by Nāṣir al-Dīn Muḥammad, known as Ibn al-Bārizī, the *kātib al-sirr*, in 822/1419.[50] Qāḍī 'Abd al-Bāsiṭ, one of the most famous patrons, is said to have commissioned a number of public buildings, among which was a *madrasah* dated 823/1420 at which he had the *khuṭbah* read, and behind which he added a *ribāṭ* for women, and a mosque in Būlāq built in 817/1414.[51] Al-'Aynī and al-Bulqīnī both built *madrasah*s, while the Jāmi' al-Ḥanafī was built by Shaykh Shams al-Dīn Muḥammad al-Ḥanafī in 817/1414.[52]

It is interesting to note that a number of mosques and *madrasah*s were built by influential officials who were converted Copts or of Coptic descent and/or rich merchants. Al-Maqrīzī mentions the Madrasat al-Baqrī built by Ra'īs Shams al-Dīn Shākir, one of the converted Copts who held the position of *nāẓir al-dhakhīrah* during al-Nāṣir Ḥasan's rule.[53] Al-Ṣāḥib 'Abd al-Karīm ibn Shākir ibn al-Ghannām al-Qibṭī, who was a vizier, built and rebuilt the *madrasah* near al-Azhar.[54] Qāḍī Badr al-Dīn ibn Suwayd al-Miṣrī al-Mālikī (d. 829) built al-Madrasah al-Suwaydīyah. This individual was originally a Coptic merchant whose father was a poultry seller in Sūq Shanūdah.[55] Vizier Fakhr al-Dīn 'Abd al-Ghanī ibn Niqūlā al-Armanī (of Armenian descent) built a *jāmi'* and a mausoleum in Bayn al-Sūrayn,[56] and 'Abd al-Bāqī ibn Ya'qūb, a *kātib* known as Abū Ghālib, built a *madrasah* near Qanṭarat al-Mūskī.[57]

By the end of the fourteenth century, many of the religious officials who supervised *waqf*s were increasingly involved in the restoration of religious foundations. The work was often undertaken with the revenues derived from the *waqf*s but sometimes with the restorer's own money. We also note the growing interest of other civilians such as merchants or physicians in the construction or restoration of educational foundations. Thus

[57]al-Sakhāwī, *al-Tibr al-Masbūk*, 153.

we learn that the Ra'īs al-Aṭibbā' Ibn al-Maghribī built a *jāmi'* and next to it a *qubbah*.[58] Al-Maḥallī, a well-known merchant, built a *madrasah* on the Nile and restored the Jāmi' 'Amr.[59] Al-Maqrīzī mentions the Madrasah Musallamīyah built in the *khuṭṭ* of Bayn al-Sūrayn by Kabīr al-Tujjār Nāṣir al-Dīn Muḥammad ibn Musallam (d. 776).[60]

The close ties which existed between the merchant class and the religious class as well as the support of the former for the latter is well documented in the chronicles and biographical dictionaries. From these sources we learn that many rich merchants encouraged their children to get an education and often boasted of having sons who were members of the *'ulamā'*. Furthermore, many religious scholars seem to have been involved in some type of trade at an early stage of their lives and sometimes even after they had been appointed to prominent positions.[61] Ibn Ḥajar al-'Asqalānī himself worked as a merchant before he dedicated his life to scholarship.[62]

The case of Qāḍī Badr al-Dīn Ḥasan ibn Suwayd al-Miṣrī, mentioned above, is relevant here since he had accumulated great wealth by investing in the Kārim trade in Yemen.[63] Qāḍī Muḥammad ibn Abī Bakr al-Makhzūmī, known as Badr al-Dīn al-Damāmīnī, who held the position of *nā'ib al-ḥukm*, was also involved in trade. In fact this *qāḍī* died in 828/1424 while he was in India on business.[64] The direct involvement of the *'ulamā'* in trade during the rule of al-Nāṣir Muḥammad may be inferred from Ibn Khaldūn's statement mentioning the emigration of the dealers from among the *'ulamā'* and the merchants to Miṣr during the sultan's rule (*wa-raḥala arbāb al-baḍā'i' min al-'ulamā' wa-al-tujjār*.[65]

Whatever the intent of the patrons when ordering the construction of a religious foundation, in order for it to provide its intended services, it needed fixed revenues. Such revenues were produced by *waqf*s which consisted mostly of buildings falling under categories three (domestic) and four (commercial/industrial) mentioned above. Although land represented an important part of the endowments, it seems that greater attention was given to investments in commercial properties such as the *wakālah*, *qaysārīyah*, *funduq*, *maṭbakh sukkar*, and *mi'ṣarah*, together with the construction/restoration of rental properties such as the *rab'*, *qā'ah*, *riwāq*, *ṭabaqah*, or *ḥawsh*. These foundations provide us with insights into investment practices as well as the transformation of the urban environment during Mamluk rule.

While the religious buildings remained as fixed landmarks, it was the secular buildings falling under categories three and four which defined the urban transformation of the quarters. The acquisition of large plots within the urban centers allowed patrons to restructure them in ways which suited their interests. The texts of *waqfīyah*s often allow us to follow what happened to a certain quarter when its land was acquired by the founder.[66]

The sources also note the transformation of quarters due to the acquisition of their properties by rich owners. For instance, when al-Nāṣir Muḥammad decided to rebuild the Jāmiʻ al-Jadīd, he acquired a number of houses and appropriated part of the road. When the *jāmiʻ* was constructed the area around it became a prime location.[67]

The pattern followed by patrons when planning their investments was to try to integrate the life of their quarters by building or reconstructing commercial and rental properties around their religious foundations. The advantages of having buildings clustered in one quarter were twofold. First, it allowed the *nāẓir* of the *waqf* to keep an eye on the foundations and control them. Second, from the economic point of view, it made sense especially if one takes into consideration the fact that water could be shared by more than one foundation (one *sāqiyah* or *biʼr* could serve two or three buildings). Transportation of drinking water would also cost less and the collection of rents would be faster. In addition to these advantages, by constructing his secular buildings next to each other, a patron could avoid some of the building restrictions which the *sharīʻah* imposed on the proximity of buildings to each other, their architecture, their heights, and so on.[68] Rich and powerful patrons would invest in the construction of a number of such clusters throughout the city and thus be able to control the development of those quarters. Although such quarters usually developed around religious foundations,[69] sometimes patrons planned their religious foundations as part of a much larger project, as was the case with the foundation of Azbakīyah where the presence of the *birkah* (pond), rather than the mosque, was responsible for its development.[70]

The booming trade of the fifteenth century gave impetus to the construction of a number of new commercial foundations such as *wakālah*s, and resulted in the growth of a new quarter, Būlāq, west of al-Qāhirah.[71] According to the information provided by our sources, there was an increasing interest on the part of merchants and religious officials in the construction of either *wakālah*s or *qaysārīyah*s. Hence, Qāḍī Tāj al-Dīn al-Manawī built a *qaysārīyah* in 750/1349 and Qāḍī Jalāl al-Dīn al-Bulqīnī built another one in the same quarter (*khuṭṭ*) in 811/1408.[72] Small industries based on imported agricultural produce, such as olives, were also increasing. Indeed, the *waqfīyah*s of sultans Barsbāy, Qāytbāy, and al-Ghawrī bear witness to the increase in the number of *maṭābikh sukkar* or *maʻāṣir*.[73] One notes that regardless of the class to which the patrons belonged, there was

a growing tendency for them to invest in the construction of buildings which would produce greater revenues: *sūq*s, *qaysārīyah*s, and *maʿṣarah*s. These investments served no other purpose than to increase the patron's wealth.[74]

As for real estate investment, patrons showed great interest in diversification. In areas around their foundations they built or rebuilt *rabʿ*s, *ribāṭ*s, *qāʿah*s, *riwāq*s, *ṭibāq* and *ḥawānīt* and endowed them as *waqf*s. Rich *wāqif*s would sometimes invest in the acquisition of whole quarters, as in the case of amir Mughultāy al-Jamālī, who acquired a large *ḥikr* land on which twenty-four properties were constructed.[75] Since the *ḥikr* was made *waqf*, the money collected from the lease of the land to the property owners was left under the control of the amir who was the *nāẓir al-waqf*.[76]

The restoration and rebuilding of urban properties as well as the creation of new urban centers never ceased to attract the interest of the Mamluks and other elite elements of society, who through their *waqf*s were transforming and restructuring the city of Cairo.[77] This paper has attempted to focus on some of the problems of the patronage of architecture in the Mamluk period. The discrepancies between some sources—chronicles and *waqf*s—and the inscriptions of the buildings themselves indicate that it is still difficult to know who the real patron of a building was. Identifying the patron or group of patrons still leaves us with the task of determining what factors influenced the choice of monuments to be built and the selection of their location. In this endeavor we benefit greatly by looking at

---

[74]Even though revenue-producing foundations were placed under the umbrella of *waqf*s, the money collected exceeded, by far, the needs of the religious foundation on which they were made *waqf*.

[75]*Ḥikr* (pl. *aḥkār*); a simplified definition of the term would be "long-term lease." In his discussion of the term, Claude Cahen wrote: "il s'agit d'une forme de louage à long terme et trés souple, qui à la fois sauvegarde l'éminente propriété du propriétaire—ici l'État—, de l'autre donne au locataire une liberté d'usage plus grande que dans une ordinaire location. Les *aḥkār* dont il est question ici sont connus d'Ibn Mammāṭī, qui les dit tantôt bâtis, tantôt exploités en jardins"; "Contribution à l'étude des impôts dans l'Égypte médiévale," *Journal of the Economic and Social History of the Orient* 5 (1962): 270. The *ḥikr* as a long-term lease of land—built upon or used as orchards—was regulated by the *sharīʿah*. A freehold property could equally be held as *ḥikr* which the lessee could enjoy for a certain period of time. The lease of a *ḥikr* covered a period of time agreed upon between the two parties. The period could be ten to thirty years, but occasionally up to ninety years. A *ḥikr* was not always the property of the "state" since it could be bought from the *bayt al-māl* (public treasury), in which case it became private property of the individual. Usually, the lessee of the *ḥikr* agreed to pay the owner a lump sum, in addition to the monthly or yearly amount fixed by the lease. The money paid in advance granted the lessee the privilege of disposing of the land or the freehold property the way he wanted with the proviso that at the end of the lease, the land or property be returned to its owner in its original condition. During the Mamluk period the lease of *ḥikr* had become widespread, even though the practice was frowned upon by conservative jurists. Many of them opposed it since it often resulted in disputes between parties and/or claims of ownership by the lessees or their descendants. For information on the *ḥikr* during the medieval period, see Ibn Mammātī, *Kitāb Qawānīn al-Dawāwīn*, (Cairo: Maṭbaʿat Miṣr, 1943), 342. For interesting information on the practice and its developments during the Ottoman period, see Nelly Hanna, *Habiter au Caire: La maison moyenne et ses habitants aux XVIIe et XVIIIe siècles* (Cairo: Institut français d'archéologie orientale, 1991), 168.

[76]Ḥujjat Waqf Mughultāy al-Jamālī, al-Awqāf 1666; the passage dealing with the *ḥikr* is soon to be published by the present writer.

[77]Ḥujjat Waqf al-Sulṭān Qānṣūh al-Ghawrī, Awqāf 883, fols. 33-37, 128-157, provides a good example of how the urban center around the mosque of al-Azhar was restructured by al-Ghawrī who left his permanent imprint on the quarter. See also Ḥujjat Waqf Tatarkhān, daughter of Ṭashtumur, Awqāf 913, fols. 27-29, 34; Ḥujjat Waqf al-Sulṭān al-Ashraf Barsbāy, Awqāf 880, fols. 246-249, 249-261, to name but a few.

the information provided by sources such as legal opinions or epistles in addition to the accounts of the chroniclers. Indeed, these sources provide us with insight into the discourse taking place between scholars of the different schools of thought. Since many of the debates often dealt with issues concerned with the application of the law to daily life, for instance, the legality of some practices or innovations touching on religious matters, they may have had an impact on the planning of some types of religious buildings and their locations. The buildings in Bayn al-Qaṣrayn may represent a case in point as the patrons′ choice of building type and architecture may have been influenced by the debates between Ḥanafīs and Shāfiʻīs over the validity of the multiplicity of *khuṭbah*s in one urban center. Finally, thanks to the details they provide on the patterns of investment and the descriptions of the income-generating properties, *waqf* documents allow us to form a better picture of the relationship between power, wealth, and urban policies in the Mamluk period.

Book Reviews

SYLVIE DENOIX, *Décrire le Caire: Fusṭāṭ-Miṣr d'après Ibn Duqmāq et Maqrīzī: L'histoire d'une partie de la ville du Caire d'après deux historiens égyptiens des XIVe-XVe siècles*. (Cairo: Institut français d'archéologie orientale, 1995). Pp. 159.

REVIEWED BY AMY W. NEWHALL, University of Arizona

In many parts of the city, the study of the urban history of Cairo is very rewarding. A profusion of standing monuments and rich remains complements textual evidence in the form of legal documents and, most importantly, late medieval descriptions. In contrast, the area of al-Fusṭāṭ, the site first occupied by the Muslim conquerors, is available to us almost only through the historical descriptions of two historians, Ibn Duqmāq (d. 809/1406) and al-Maqrīzī, who, although close contemporaries, wrote entirely independently of each other. The purpose of Sylvie Denoix's book is to reexamine their descriptions of al-Fusṭāṭ in order to reconstruct its form in the Mamluk period, an era which scholars have until recently largely ignored. Her particular method of textual analysis also throws light on events that are the great clichés in accounts of al-Fusṭāṭ's history: the chaotic reign of the late Fatimid ruler al-Mustanṣir billāh in 446/1060, the burning of al-Fusṭāṭ in 1168, and the great time of troubles that occurred in the reign of Faraj ibn Barqūq in 1403. She attempts to determine the true effects of these events: How far east did the early city extend? What was the true nature of the contraction after these events? Where did revival or new development occur? The crisis of 1403 is of special interest to Denoix because, chronologically, her two accounts bracket it. It provides a kind of high-tide mark by which she can measure the flow and ebb of Mamluk urban prosperity.

The chronicles of Ibn Duqmāq (*Kitāb al-Intiṣār li-Wāṣitat ʻIqd al-Amṣār*) and al-Maqrīzī (*al-Mawāʼiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*) are well-known: they combine the authors' observations with information they have gathered from earlier sources now lost to us. Ibn Duqmāq's chronicle is of critical importance for al-Fusṭāṭ, and Denoix concentrates on it. Because Ibn Duqmāq frequently does not distinguish between historical and observed reality, the picture of the city he presents is timeless and highly subjective. Denoix, by making a very close reading of the text and examining its choice of language and phrasing, attempts to unfreeze and reorder the sequence of his "stills" and reanimate our picture of the evolution of al-Fusṭāṭ. In the course of this examination she comes to some conclusions about the attitudes of her chroniclers and how they reflect the times in which they wrote.

From the results of this analysis, Denoix develops a schematic map of Mamluk al-Fusṭāṭ. Both in order to test her textual reading and to see if Ibn Duqmāq has neglected to tell us of certain areas, she then superimposes her diagram on the street network generated by two archaeologists at the beginning of the century, Ali Bahgat and Albert Gabriel (and

redated by George Scanlon). While the two do not overlap, they do meet, thus suggesting the limits of the Mamluk revival of the city.

Denoix proceeds to fill in her diagrammatic schema with the street and building information of Ibn Duqmāq and al-Maqrīzī. She is frustrated by their failure to give any sense of quarters, so she works at identifying various agglomerations. Appropriately enough for an important agricultural and commercial entrepôt, warehouses figure largely in the urban inventories, as do such water-reliant enterprises as mills, sugar refineries, paper mills, and potteries. She notes that the concept of nuisance industries did not exist at this time for they were fully integrated in the normal urban fabric. (Under the Ottomans they were regulated and moved.) As in the northern districts of Cairo, buildings frequently had multiple purposes; commercial and residential functions were combined. As for the differing religious groups, there seems to have been no strict partitioning in practice. There were natural concentrations, but no exclusive areas. Nor does there seem to be much clustering by class, although the presence of twenty-four *madrasah*s founded in the Ayyubid and Mamluk periods suggests a vogue for living in the area among the military elite.

Denoix´s study is one more piece in a long term effort (mostly French) to study and reconstruct medieval Cairo. This effort started in the nineteenth century with Paul Casanova, Paul Ravaisse, and G. T. Salmon and, as she points out, was begun in an arbitrary (and typically colonial) manner by dividing up the areas to be studied before knowing anything about the sources available for them. Nevertheless, these early works remain of fundamental importance; they have paved the way for a crop of scholarship in the last twenty-five years by André Raymond, Władysław Kubiak, Nelly Hanna, Doris Behrens-Abouseif, and Nasser Rabbat, among others. Denoix´s study follows upon the pioneering work of Paul Casanova, *Essai de reconstitution topographique de la ville d´al-Fusṭāṭ ou Miṣr* (1919), but, whereas Casanova´s work was primarily concerned with topography, Denoix´s is concerned with historical context and the evolution of the region of al-Fusṭāṭ-Miṣr. Her multifarious analytical methods (close textual reading, schematic mapping, archaeological findings, and comparison of her two main sources) succeed in developing new understanding from familiar texts and lead us to a better sense of the fortunes and misfortunes of the oldest section of Cairo, al-Fusṭāṭ-Miṣr. She also makes an interesting but speculative attempt to characterize the mentality of the two historians.

The text contains numerous maps illustrating the results of the textual analysis, and the appendices provide a useful selection of translations from Ibn Duqmāq, a list of the region´s *madrasah*s, a glossary, and an index of toponyms for both Ibn Duqmāq and al-Maqrīzī.

MICHAEL MEINECKE, *Die Mamlukische Architektur in Ägypten und Syrien*. (Glückstadt: J. J. Augustin GmbH, 1992). Vol. I: Pp. 243, Vol. II: Pp. 576.

REVIEWED BY DORIS BEHRENS-ABOUSEIF, University of Munich

Michael Meinecke´s study of Mamluk architecture in Egypt and Syria consists of two volumes. The first includes the analysis, plates, and bibliography. The second is a

detailed catalogue of references in Mamluk literary sources concerning buildings erected in this period; it is followed by a detailed, one hundred page long index (pp. 496-596).

The first volume has eight chapters which follow a chronological sequence. Chapter 1 describes the Cairene school of architecture in the mid-thirteenth century. The second deals with the revival of early Islamic architecture under al-Ẓāhir Baybars. Chapter 3 deals with the early Qalāwūnid dynasty, chapter 4 with al-Nāṣir Muḥammad′s reign, and chapter 5 with the internationalization of Mamluk architecture in the later phase of the Qalāwūnid dynasty. Chapter 6 presents the period of Barqūq. Seven deals with Syria in the aftermath of Tīmūr′s invasion. The last chapter discusses the continuity of Mamluk architectural traditions under Ottoman rule.

This is the first work to survey Mamluk architecture as a whole, dealing with Egypt and Syria together. Meinecke′s study is concerned with the whole of Syria (Jerusalem, Hebron, Damascus, Hama, Aleppo, and Tripoli) and Cairo, but not with all of Egypt, as it does not tackle the subject of provincial architecture within Egypt. This is partly justified by the scarcity of extant medieval buildings in the Egyptian provinces. There are, however, extant medieval monuments in the Delta (Damietta, al-Maḥallah al-Kubrá, and Fuwā) and Upper Egypt dating from the Mamluk period or built under the Ottomans in the Mamluk tradition, which one would have expected to see in this survey. Since this study discusses Mamluk influence on Anatolia and Turkestan, it should not have omitted entirely the question of how far the style of the capital was adopted in Egypt itself. The relationship between the imperial style of the capital and the provincial style is an interesting question, as has been shown in connection with Ilkhanid and Ottoman architecture by Renata Holod and Aptullah Kuran.[1]

Meinecke′s analysis of Mamluk architecture is marked by the great emphasis it puts on foreign influences and transfers of patterns between the Mamluk and other Muslim schools of architecture, as well as between the various regional schools within the Mamluk empire. This idea, which he explains with a busy migration of ″workshops″ or ″lodges,″ is a kind of *leitmotif* in the book. The following comments will focus, therefore, on this aspect of the study.

In his discussion of the mosque of Sultan Ḥasan the author attributes the stucco inscription frieze in the prayer hall to Iranian craftsmen (pp. 121f.). One of the author′s arguments is based on the fact that at that time some Iranian dignitaries built mausoleums in Jerusalem (p. 120). These mausoleums, however, were erected in the local Mamluk style, without apparent Iranian influence. J. M. Rogers has given a much more plausible interpretation of this frieze when he compared it with Mamluk Quran illuminations of the same period, with which it has a striking similarity, much more than with the remote eastern Iranian examples that Meinecke presents.[2] As for the chinoiseries on the portal of Sultan Ḥasan′s mosque, they have been common on Mamluk portable objects of metal, pottery, and textile and in Quran illuminations since the reign of al-Nāṣir Muḥammad. As again convincingly demonstrated by J. M. Rogers,[3] they were transferred by the trade with China

following the Mamluk-Mongol entente during al-Nāṣir Muḥammad′s reign, through portable objects, such as porcelain or textiles, rather than through migration of ″Iranian specialists,″ who would have come from eastern Iran just to carve this one frieze and leave the country again.

Coming to Mamluk influence on Anatolia, the author ascribes it to craftsmen who participated in the building of Sultan Ḥasan′s mosque, and migrated in large numbers afterwards, exercising a tremendous influence on the architectural development of the Muslim world (p. 131). Meinecke attributes to these craftsmen the plan of the Ulu Cami (1366-67) in Manisa (p. 136), whose prayer hall consists of four naves cut by a large central dome over the *miḥrāb*. He argues that this plan, having no precedent in Asia Minor, must have been built under Mamluk influence, as it recalls some mosques of al-Nāṣir Muḥammad′s reign which have a large dome over the *miḥrāb*. Would craftsmen of Sultan Ḥasan have migrated in the 1360s to Manisa to build there a mosque that recalls the buildings of al-Nāṣir Muḥammad? Why so complicated? There are two mosques in Mosul erected in the late twelfth century, the Jāmi‘ Nūrī and the mosque of Mujāhid al-Dīn, which show far more similarity with the Manisa plan than the mosques of al-Nāṣir Muḥammad, and which probably belong to the architectural tradition which produced the Manisa mosque plan. This type of prayer hall was also used in Mardin in eastern Anatolia (1172-76), in Dunaysir in Upper Mesopotamia (1201) and, with some variation, in Aleppo (1223), and is more likely to have pertained to Saljuq Upper Mesopotamian or eastern Anatolian architecture. From there it went under Ayyubid influence to Yemen where we find it at the Ashrafīyah mosque in Ta‘izz, whose prayer hall was built in the years 694-97/1294-97. Lewcock has rightly connected the Ashrafīyah plan with that of Dunaysir and, further back, to the plan of the Great Mosque of Lashkari Bazar (ca. 1020).[4] The mosques of al-Nāṣir Muḥammad, which Meinecke declares to be the prototype for Manisa follow the model of Baybars′s mosque in Cairo, which Creswell rightly ascribed to the influence of Mardin! An attribution of the Manisa mosque plan to the craftsmen of Sultan Ḥasan, who were building four-*īwān* mosques in Cairo, seems therefore far-fetched indeed.

When discussing the dome built by Amir Yashbak al-Dawādār in 1481 and known as Qubbat al-Fadāwīyah (p. 168), Meinecke attributes its architecture to Ottoman influence, basing his argument on the fact that it is a single-dome prayer hall, and comparing its ground plan with that of the mosque of Dāwūd Pasha in Istanbul. A ground plan is not sufficient for such an attribution; the Mamluks were familiar with domed chambers which they used as mausoleums. Neither the elevation, nor the dome profile, nor the transitional zone, nor any other feature in Cairene architecture at that time, or in this monument in particular, betrays any Ottoman influence. Meinecke′s analyses are based on ground plans alone, disregarding elevations. The author overlooked, moreover, that this dome had predecessors in Cairo, the earliest being the dome of the Rifā‘ī *zāwiyah* built in the 1430s by Sultan Barsbāy near his mausoleum in the cemetery, which is mentioned in his *waqf* deed and is still extant. Another one was erected by Jānībak, *nā'ib* of Jiddah, in 1463, also as a *zāwiyah*, which later was used by the Baktāshī order in Cairo and of which a nineteenth-century photograph has been published in *Annales islamologiques*, vol. 19,

---

l′histoire du Caire (1969) (Cairo: Ministry of Culture, n.d.), 385-403.

[4]Ronald B. Lewcock and G. R. Smith, ″Three Medieval Mosques in the Yemen: A Preliminary Report,″ parts 1 and 2, *Oriental Art* 20, no. 1 (Spring 1974): 75-86; no. 2 (Summer 1974): 192-203.

1983. There is thus a whole group of domed buildings, all of which were *zāwiyah*s, whose tradition seems to be rooted in Baḥrī Mamluk architecture. Qubbat al-Naṣr is mentioned by al-Maqrīzī as a *zāwiyah* built during the reign of al-Nāṣir Muḥammad. Although it did not survive, we know at least that it was a domed *zāwiyah*, which leads the tradition back to a period prior to the articulation of Ottoman architecture.

By focusing on the ″migration of workshops,″ the author neglected other possibilities for the transmission of architectural knowledge. The question of how far drawings, elevations, models, or even oral communications might have been used to transfer architectural ideas from one place to another is not considered. The use of the octagonal shaft in Syrian minarets might well have occurred under Cairene influence (p. 189, pl. 133) without necessarily implying that craftsmen from Cairo moved to Damascus to erect such shafts. This kind of influence, which did not involve much more than just an idea and did not include equivalence of proportions and elevations, could have been transmitted by simple drawings or by oral communication. Most of the examples of foreign influences, whether Iranian patterns in Cairo or Mamluk patterns in Turkestan refer to details, often minor details, rather than to entire projects, thus contradicting the idea of migrating lodges. This does not exclude, however, the mobility of individual craftsmen, just as that of scholars or physicians.

The rich material of the survey itself demonstrates, more implicitly than explicitly, that Mamluk architecture on the whole was regionally oriented, and furthermore that Cairo, as imperial capital, enjoyed the lion′s share both in quantity and refinement of the work produced. Notwithstanding similarities here and there, it should be recognized that the Cairene style of Mamluk architecture is not much represented outside the capital. Except for Qāytbāy′s *sabīl* in Jerusalem, there is not one single dome or minaret profile in Syria that could be attributed to the Cairene style. Qāytbāy′s buildings in Jerusalem are an exception because the sultan was unsatisfied with the first building after he visited it. He eventually ordered it rebuilt by craftsmen he sent from Cairo; the minaret, however, was built in the local style. Also, when the same sultan sent craftsmen to rebuild the Prophet′s mosque in Medina, the minaret was erected in a style that had ceased to exist in Cairo more than a century earlier, the latest similar shaft being that of Qūṣūn (736/1335-36). Interestingly, however, this style continued to be used in the Egyptian provinces, namely in the city of al-Maḥallah al-Kubrá.

Meinecke seems to have been under the influence of European art history, especially when he uses the terms ″Bauhütte″ and ″Architektengilde,″ or guilds of architects (pp. 193f.), basing himself on the term *mi'mārīyah* mentioned in the late Mamluk chronicle of Damascus by Ibn Ṭūlūn.[5] A careful reading of Ibn Ṭūlūn, however, shows that the term *mi'mārīyah* here refers to masons and other building craftsmen rather than designer-architects as understood by Meinecke, who uses the terms ″Architekt″ and ″Künstler″ (p. 194) in this context. In Mamluk *waqf* documents of Egypt and Syria, the *mi'mār* is a craftsman, hired on a monthly basis with a relatively low income to take care of a building′s maintenance, along with the plumber.

[5]Shams al-Dīn Muḥammad Ibn Ṭūlūn, *Mufākahat al-Khillān fī Ḥawādith al-Zamān*, ed. Muḥammad Muṣṭafá ([Cairo]: al-Mu'assasah al-Miṣrīyah al-'Āmmah lil-Ta'līf wa-al-Tarjamah wa-al-Ṭibā'ah wa-al-Nashr, 1962), 1:143, 148, 197.

As for Shihāb al-Dīn Aḥmad ibn al-ʻAṭṭār, mentioned here as artist and head of a guild, he was the sultan′s contractor in Damascus. He is designated as the sultan′s *muʻallim* or *miʻmār*, and the context identifies him as contractor: he had to evaluate costs and was in charge of demolition and excavation works. When, following the Ottoman conquest, he was involved in the building of the shrine of Ibn al-ʻArabī in Damascus, he was part of a team of clerks and bureaucrats, as the text explicitly states, all of whom designed the building together.[6] In the Mamluk period the buildings were designed by a consortium of founder, contractor, clerks, land-surveyors, and master-masons.

Neither the lists of urban trades included in the Mamluk *ḥisbah* literature nor the lists of guilds during the Ottoman period ever refer to ″guilds of architects″; only craftsmen such as masons, decorators, carpenters, etc., are considered practitioners of trades. The building activity of the Mamluk sultans and amirs was organized by a *dīwān*, or office, at the court under the control of an amir of ten, who was called *shādd al-ʻamā'ir al-sulṭānīyah*, and later *muʻallim*, who was also the supervisor of the building craftsmen (al-Qalqashandī, vol. 4, p. 22). In the Ottoman period these crafts were under the supervision of the *miʻmār bāshī.* In the later Mamluk period the *muʻallim* of the sultan could also be a bureaucrat. In any case, he was a member of the Mamluk establishment, equivalent to the modern minister of public works. Moreover, each royal building had its own *shādd*, who often recruited the craftsmen on an ad hoc basis. Aḥmad al-Ṭūlūnī, the *muʻallim* of Barqūq, who was a contractor of non-Mamluk origin, was made amir of ten and his descendants belonged socially to the *awlād al-nās*, i.e., the sons of mamluks; he was, moreover, the sultan′s father-in-law.[7] The *muʻallim al-ʻamā'ir*, Ḥasan al-Tanamī, who was appointed in 869/1465, had been governor of Jerusalem and Hebron.[8] The *muʻallim*s, as supervisors of the building craft and members of the Mamluk administration, did not migrate, as free-lance professionals, from one region to another in search of jobs, as they could be transferred from one to another. The idea of lodges (*Bauhütten*), which implies an inner organization or even autonomy, migrating from one region to another according to the market′s requirements thus does not conform with our knowledge of Islamic social history. The building craft was largely in the rulers′ hands rather than a free trade.[9]

Meinecke should have been more careful while using the term ″Gilde,″ or guild, in connection with the Mamluk period. While according to Subhi Labib there were no guilds under the Mamluks in the medieval European sense of autonomous corporations, Ira Lapidus even states they were ″nonexistent″ in Mamluk cities.[10]

As for the identification of Mamluk monuments, the author calls a four-*īwān* building a *madrasah*, and identifies a hypostyle building as a mosque; the building of Barsbāy in the Coppersmiths′ quarter is designated a *madrasah* whereas that of al-

Mu'ayyad Shaykh is called a mosque (pp. 154f.). This distinction between *madrasah* and mosque, which is based on the building′s plan, is not exact. According to recent works based on Mamluk *waqf* documents, both foundations had the same functions as a combined *madrasah-khānqāh*-Friday mosque. It has already been demonstrated that a hypostyle mosque could be as much a *madrasah* as a cruciform one; in the late Mamluk period various plans were used to fulfill the same functions. In this matter, epigraphy, which is often arbitrary, can be misleading; *waqf* data are more reliable.

The analysis of the first volume concentrates on religious architecture. The discussion of plans deals exclusively with prayer halls and their adjoined mausoleums, without referring much to the presence, or absence, of living quarters in the complexes of *madrasah*s and *khānqāh*s. An important share of Mamluk monuments included *madrasah*s or *khānqāh*s or both, i.e., they were also boarding institutions. The originality of Sultan Ḥasan′s mosque is not only its monumentality, as stated by the author; it is the first *madrasah* to have the living units away from the courtyard and fully integrated along the facade. Since it is also the first *madrasah* with the status of a Friday mosque, this change is not accidental, but related to the new, more public, functions of the institution. The location of the living quarters in relationship to the prayer hall is therefore significant. The evolution of the multiple complex *madrasah-khānqāh-jāmi'* in the late Mamluk period had a decisive impact on the organization of space in religious architecture, leading ultimately to the living units being detached from the main building and taking the form of an independent *rab'*.

In the bibliography the author confuses Shams al-Dīn Muḥammad al-Sakhāwī, the author of *al-Ḍaw' al-Lāmi'*, with his namesake, Abū al-Ḥasan Nūr al-Dīn 'Alī al-Sakhāwī, who wrote *Tuḥfat al-Aḥbāb*, identifying them as the same author.

The reader will be grateful for the unique collection of ground plans included in the first volume; some elevations would have been useful to facilitate comparisons.

The second volume is divided into forty-nine entries, chronologically ordered and named by the sultans who ruled in the Mamluk period. The buildings are recorded under the name of the city or location. They are documented with the founders′ names and dates and a bibliography of primary and secondary literature. The primary sources used are published historiographical literature. This volume, which according to the introduction was done by Viktoria Meinecke-Berg, comprises very important documentation, no less valuable than the first volume; it is of great use to all scholars of Mamluk architecture and history as well. The detailed three-register index gives easy access to the survey.

The reader should not expect to find in Michael Meinecke′s survey of Mamluk architecture a discussion of social, urban, or iconographic aspects of architecture. The study does not refer to *waqf* documents nor does it deal with epigraphy, except to date the building and identify the founder. Unlike Golombek and Wilber′s study of Timurid architecture and Goodwin′s books on Ottoman architecture, which are agreeable and appealing as readings, this is essentially a reliable survey and reference book. The taxonomic aspect of this gigantic work places it in the Creswell tradition, as an important document for historians of Mamluk architecture.

ʿALĪ AL-SAYYID ʿALĪ MAḤMŪD, *al-Ḥayāh al-Iqtiṣādīyah fī Jiddah fī ʿAṣr Salāṭīn al-Mamālīk, 648-925 H./1250-1517 M*. (Cairo: al-Maṭbaʿah al-Tijārīyah al-Ḥadīthah, 1991). Pp. 147.

REVIEWED BY CARL F. PETRY, Northwestern University

The appearance of a monograph addressing the economy of an important commercial entrepôt within the Mamluk state, other than the capital Cairo itself, is a welcome event. And since so much contemporary scholarship in Arabic is neglected by Western readers for obvious linguistic reasons, the inclusion of recent works in this language by the editorial staff of *Mamluk Studies Review* for assessment is to be commended. The author has produced a straightforward, if somewhat verbose, description of economic activity in Jiddah as mentioned by Arabic narrative sources that were compiled from the thirteenth through the fifteenth centuries. Without exception, these texts are available in print; most belong to the roster of well-known chronicles consulted by virtually everyone who has delved into the Mamluk era (There are exceptions, for example: p. 100, note 394; p. 140, entry 7: the Maghribī traveler al-Tujībī's *Mustafād al-Riḥlah wa-al-Ightirāb*, although published in Tunis, is not a frequently cited work. It nonetheless contains noteworthy details on shipbuilding in Jiddah).

This monograph's value derives exclusively from its factual information. It contributes no fresh methodological insights, nor does it significantly alter existing perceptions of the commercial economy of prominent Red Sea ports throughout the Middle Ages. Indeed, the author himself frequently asserts that details on commercial or manufacturing activity in the port of Jiddah occur rarely in the chronicle literature, thereby enabling only glimpses into the town's economic history rather than a thorough reconstruction of its foundations. The author seems also minimally acquainted with the profound conceptual transformation in approaches to the economic history of the eastern Mediterranean and Southwest Asia that has occurred over the past three decades. While numerous monographs published in Arabic are listed in the bibliography, these fall into the same particularistic category as the book under review. Few works of broader scope, either in Arabic or other languages, are noted. The absence of any reference to such a comprehensive survey as Subhi Labib's *Handelsgeschichte Ägyptens im Spätmittelalter* (Wiesbaden, 1965), which frequently alludes to the prominence of Jiddah in the commerce of the Red Sea throughout the Mamluk era, is disconcerting.

The author's depiction of Jiddah's economy proceeds as follows: the port's florescence as a trading center in the Mamluk period, its gradual supplanting of Aden as the primary docking facility for ships arriving from south and east Asia, its markets and their influence on daily life, economic crises and their consequences for market activities, measures and weights (with interesting facts on the reckoning of quantities), monetary transactions (also providing significant data on currencies used in transactions), Jiddah's relations with international centers of trade, land and maritime trade routes, customs and collection enforcement, agrarian and pastoral activities (the latter section mentioning tribal groups rather than analyzing economies of husbandry), and craft industries: shipbuilding (the most intriguing commodity discussion in the monograph, with interesting details on timber scarcity and hulls designed for navigation through coral reefs), tanning of hides,

preparation of confections, braiding of mats, manufacture of rosaries (*masābiḥ*), minerals and metallurgy, pottery and ceramics, marble and plaster work.

Readers seeking to place the commercial history of Jiddah within the wider context of the Hijaz economy as a whole under the Mamluks are advised to consult the recent articles by Richard Mortel, with special emphasis on his ″Prices in Mecca during the Mamlūk Period,″ *Journal of the Economic and Social History of the Orient* 32, no. 3 (October, 1989), pp. 279-334; and ″The Mercantile Community of Mecca during the Late Mamlūk Period,″ *Journal of the Royal Asiatic Society* (third series) 4 (1994), pp. 15-35.

WAEL B. HALLAQ, *Ibn Taymiyya against the Greek Logicians*. (Oxford: Clarendon Press, 1993). Pp. 204.

REVIEWED BY DAVID C. REISMAN, Yale University

This work, Professor Hallaq′s most recent, is almost unique to modern studies of Ibn Taymīyah and for this reason deserves our attention. Hallaq has proved an enormously capable writer in his field, the study of logic, specifically of that variety of logic employed in medieval Muslim legal theory. He has written a number of articles on the historical development of legal logic as well as on some of the technical terms peculiar to that field. *Ibn Taymiyya against the Greek Logicians* is his first major work; it is something of a mixed blessing. His profound grasp of the discussions in medieval Arabic works on logic is evident here and in that regard it is an important book. As a work on Ibn Taymīyah′s thought in general, however, it is frustratingly incomplete.

The work is made up of three parts. The most substantive of these parts is the translation of an abridgment of Ibn Taymīyah′s *Naṣīḥat Ahl al-Imām fī al-Radd ʻalá Manṭiq al-Yunān* (otherwise known as *al-Radd ʻalá al-Manṭiqīyīn*) by Jalāl al-Dīn al-Suyūṭī (d. 911/1505) entitled *Jahd al-Qarīḥah fī Tajrīd al-Naṣīḥah*. Why Hallaq chose to translate al-Suyūṭī′s and not Ibn Taymīyah′s work will be discussed shortly. The translation is prefaced by an introduction, the strongest aspect of which is the discussion in part 1 of the terms of the argument against logic as Ibn Taymīyah saw them (one of the clearest explanations to date of Ibn Sīnā′s theory of essence and existence is that provided in pp. xiv-xvii), and the weakest aspect of which, in light of its stated aim, is the discussion in part 2, ″Sources of the Critique.″ The reader perhaps would have benefited more from solid research into lines of transmission of anti-logic writings than the speculation he is given; the notes on later medieval Latin and early modern European anti-logic writings and the striking similarity between Ibn Taymīyah′s conclusions and those of these writings are no more than a curiosity.[1] The section does have a certain value, however, in that it places Ibn Taymīyah′s thought within a broader context while stressing the distinctive and original nature of Ibn Taymīyah′s contribution. The annotated commentary to the translation is extensive and superb. It evinces Hallaq′s wide and discriminating reading of Arabic works

[1]The similarity between Ibn Taymīyah′s views and those of the British empiricists was noted by S. S. Nadvi as early as 1927; an extract of his article, originally appearing in *Islamic Culture*, was quoted in the introduction (p. 14) to al-Kutubī′s 1949 edition of *al-Radd ʻalá al-Manṭiqīyīn*.

on logic and Greek and Arabic philosophy in general. He has taken great pains to trace Ibn Taymīyah's uncited references to opinions of other thinkers; where this has proved difficult, he has delineated the general field of enquiry. Specific issues, the articulation of which in the text might initially strike the reader as abstruse, are precisely explained, often with original examples from Hallaq who, it would seem, is as much a logician as he is an historian of logic—a fortunate state of affairs.

Before turning to the translation, a major criticism regarding Hallaq's choice of work to translate must be raised. Much of the secondary literature on Ibn Taymīyah is either out of date or labors under the misapprehension that the defining characteristic of Ibn Taymīyah's thought is reactionary diatribe. This may or may not be the result of an overemphasis on his role as a social reformer, or even of current social and political climates. The topic is certainly too large to be tackled here. Hallaq's study is the first (recently) to present us with Ibn Taymīyah as a thinker, one who, in the case of logic, has a profound grasp of his topic, is capable of formulating precise and well-founded responses to his opponents, one who has the "extraordinary ability to define and isolate the crucial and fundamental principles upon which the most complex systems of thought are erected" (p. xiv). Why, then, has Hallaq chosen to translate al-Suyūṭī's abridgment and not the *Radd ʻalá al-Manṭiqīyīn* itself? Ibn Taymīyah's express purpose in refuting Greek logic and its proponents among Arab philosophers, theologians, and Sufis was the discrediting of the systems of metaphysics in vogue among those groups, systems which were based on that logic. Hallaq is aware of Ibn Taymīyah's larger goal (pp. xi-xii) but argues that al-Suyūṭī's abridgment, stripped of the corollary arguments against the metaphysics of these groups (and against its implications for the doctrinal theology of Islam as Ibn Taymīyah conceived of it), "is a more effective critique of logic than that originally formulated by Ibn Taymiyya" (p. liv).[2] Certainly what was advantageous to al-Suyūṭī's goal (on which, see p. liii) does little service to a proper understanding of the larger context of Ibn Taymīyah's program of thought. In part 3 of his introduction, Hallaq further argues that Ibn Taymīyah's work is characterized by digression, repetition, and a certain imbalance between criticism advanced and solutions proposed, this because the aim of Ibn Taymīyah's mission was "persuasion, if not outright dissuasion" (p. l). With particular regard to the issue of digression, Hallaq notes that this mode of discourse "leaves the modern reader with a sense of frustration" (p. li). Two immediate responses come to mind. First, since when is the modern reader's ease of understanding a criterion for the assessment of the intellectual worth of a medieval treatise? Second, a much more profound examination of Ibn Taymīyah's style and methodology needs to be undertaken before we can place a negative value on a given characteristic of that style. From one perspective, Hallaq has produced an important work on the development of opinions about logic among medieval Arabic thinkers, from another, he has largely dismissed the historical and intellectual context of that development.

Translation is a notoriously difficult business. A judicious balance between, on the one hand, an unreadable literal translation and, on the other, a readable but overly paraphrastic translation is the desired end. It is worth arguing that Hallaq's translation of technical terms should become standard for future studies of logic in Arabic. However, the

[2]Hallaq also says that scholars like Brunschvig and van Ess expressed similar opinions (p. liv, n. 185). Brunschvig characterized the abridgement as "assez fourni" and van Ess noted that al-Suyūṭī had "carefully abridged" Ibn Taymīyah's work; these statements in no way buttress Hallaq's opinion.

reader who is interested in Hallaq′s topic and who can read Arabic would be advised to make a careful comparison of the Arabic text with Hallaq′s translation as a whole. There are numerous errors, the result of excessive paraphrase, inconsistency in the translation of basic terms, lack of attention to tense, and an outright disregard for certain Arabic particles. Thus, the particle *innamā* would seem anathema to Hallaq as he only rarely translates it. A few examples only: for ″the concept of a quiddity is obtained by real definition″, p. 8 (85, l. 16),[3] read ″the concept of a quiddity is obtained only by real definition″; for ″he cannot be said to have formed a concept of the meaning upon hearing that definition″, p. 10 (86, ll. 14-15), read ″he cannot be said to have formed a concept of the meaning only by hearing that definition″; for ″The claim that definitions lead to forming a concept of things is that of the Greek logicians . . .″, p. 12 (88, l. 4), read ″Only the Greek logicians . . . claim [that definitions lead to forming a concept of things]″, etc. The particle *qad* with the imperfect is often left unnoticed; thus, for ″. . . because the one who forms a concept does so without words. The hearer [of this definition] can also form a concept without being told anything at all″, p. 10 (87, ll. 1-3), read ″. . . for the speaker might (*or*: will sometimes) form a concept of the meaning of what he says without articulating [it] and that is [equally] possible for the hearer, without being told anything at all.″

Disregard for tense is often evident, particularly in conditional sentences. Hallaq translates, p. 10 (85, ll. 12-15): ″If the concepts of things were dependent upon definitions, and if until this day people have not yet formed [*sic*] a concept for any of these matters, and if a judgment is contingent upon conception, so that when a concept is not formed, a judgment is not formed either, then men would have no knowledge of the great majority of their sciences.″ Read: ″If the concept of things had been dependent upon definition and if to this day people had not formed a concept for any of these matters, and if a judgment had been contingent upon a concept—so whenever a concept is not formed, a judgment is not formed—man would have no knowledge of the great majority of his sciences.″ Further, Hallaq translates, pp. 8-9 (85, l. 16 to 86, l. 2), ″Such a definition is either impossible or difficult to come by, as they themselves admit. Hence, it is not always or often possible to form a concept of a particular reality. But since concepts of realities are actually formed, it is known that concepts are not in need of definition.″ Read: ″This definition being either impossible or difficult [to come by], as they themselves have admitted, it would not have been always or often possible to form a concept of a particular reality, but concepts of particular realities have been formed, so it is known that concepts do not stand in need of definitions.″

One example of inconsistency in the translation of basic terms will suffice here. Hallaq translates both *dhihn*, p. 6, and ʻ*aql*, p. 9, as ″intellect.″ *Dhihn*, of course, is better rendered ″mind,″ reserving the philosophical term ″intellect″ for ʻ*aql*. The temptation to paraphrase is often considerable, but equally often it does damage to a precise point an author wants to convey. Hallaq translates, p. 5 (83, ll. 6-7), ″. . . although refuting them would require (*yaḥtamil*) much more than what I have said″. Ibn Taymīyah is *not* confessing an insufficiency in his treatise; in fact, he is noting the opposite. ″Would require″ should read ″admits of″ or ″allows for,″ the implication being that his treatise comprises the bulk of a compelling refutation. Hallaq, p. 6 (84, ll. 6-8), translates: ″Since this statement is not based on knowledge, and [*sic*] it is the first that they have established,

[3]The reference in parentheses is to the Arabic text.

how can it be the basis of the criterion of knowledge and of their claim that logic [*sic*] is a canonical instrument the correct use of which safeguards the intellect from error." Read: "Since this is a statement not based on knowledge, being the first that they have established, how can it be the basis of the criterion of knowledge and of what they claim is a canonical instrument regard for which safeguards the mind against stumbling in (lit.: slipping from) its examination."[4] Hallaq's translation, as it stands, serves as a good but rough guide to reading Ibn Taymīyah's treatise; it could have stood a few more revisions.

Finally, Ibn Taymīyah wrote another treatise against logic (unnoticed by Hallaq), with specific reference to its use in dialectic argumentation (*jadal*). The work is entitled *Tanbīh al-Rajul al-Ghāfil ʻalá Tamwīh al-Jadal al-Bāṭil* and would seem to be a comprehensive refutation of the *Muqaddimah fī al-Jadal* by Burhān al-Dīn al-Nasafī (d. 684/1285). Future research into some of the problems involved in Ibn Taymīyah's views on logic (e.g., that discussed by Hallaq, pp. xxviii-xxxii) might benefit from an edition and translation of this work.[5]

Despite some significant problems, Hallaq's work should be viewed as an important contribution to Ibn Taymīyah studies, one that *largely* appreciates and critically evaluates the thought of this important intellectual of the Mamluk period.

REUVEN AMITAI-PREISS, *Mongols and Mamluks: The Mamluk-Īlkhānid War, 1260-1281*. (Cambridge: Cambridge University Press, 1995). Pp. 272.

REVIEWED BY JOHN E. WOODS, University of Chicago

Until relatively recently, those interested in tracing the broad outlines of the history of the Mamluk state of Egypt and Syria (1250-1517), one of the longest-lived political entities in Islamic annals, were confronted with an astounding dearth of scholarly articles and monographs. This is certainly true of the study of Mamluk foreign relations, especially those with powers in the East—the Mongols and their successors down to the rise of the Safavid dynasty in Iran. Nevertheless, aspects of the Mamluk "Eastern Question" have been delineated in several pioneering works such as Ahmad Darrag's survey of the Mamluk state under one of the most important sultans of the first half of the fifteenth century, *L'Égypte sous le règne de Barsbay, 825-841/1422-1438* (Damascus, 1961); S. Zakirov's study of the "alliance" between the Mamluks and the Mongols of Russia, *Diplomaticheskie otnosheniya Zolotoi Ordy s Egiptom, XIII-XIV vv.* (Moscow, 1966), and Fāyid Ḥammād ʻĀshūr's monograph on relations between the Baḥrī Mamluks and the

[4]What Hallaq translates "logic" is, in the text, an attached pronoun the immediate antecedent of which is *mā*; *innahā* (p. 84, l. 7) is incorrect and should be read *innahu*. I would argue that the conjunctive *mā* does not replace "logic" (*manṭiq*), as Hallaq has it, but rather "definition" (*ḥadd*).
[5]George Makdisi discussed the MS in "The Tanbīh of Ibn Taimīya on Dialectic: The Pseudo-ʻAqīlian Kitāb al-Farq," in *Medieval and Middle Eastern Studies in Honor of Aziz Suryal Atiya* (Leiden: E. J. Brill, 1972), 285-294. At least some of the introduction to this work, missing in the MS, can be found in ʻAbd al-Hādī's *al-ʻUqūd al-Durrīyah min Manāqib Shaykh al-Islām Aḥmad ibn Taymīyah*, ed. Muḥammad Ḥāmid al-Fiqī (Beirut: Dār al-Kutub al-ʻIlmīyah, 1938), 29-35.

Mongols of Iran, *al-ʻAlāqāt al-Siyāsīyah bayna al-Mamālīk wa-al-Mughūl fī al-Dawlah al-Mamlūkīyah al-Ūlá* (Cairo, 1976).

A consideration of these and other works reveals a number of persistent geo-political, economic, demographic, ideological, and cultural themes in the dealings of the Mamluks with their eastern neighbors extending throughout the two and a half centuries of Mamluk independence. The principal areas of direct conflict—the cities of inland Syria and southeastern Anatolia—were frequently the local counterparts of larger patterns of competition for the control of land and sea commercial routes. Among the most important demographic aspects of the period was the influx into the Mamluk state and along its frontiers of large numbers of refugees, renegades, and political enemies from states in the East in the second half of the thirteenth century. After the collapse of the Chingizids in Iran following the death of Abū Saʻīd Bahādur Khān in 1335, moreover, there was a reflux of Mongol and Turkish tribes from Anatolia and Syria westward onto the Iranian plateau. In the late fourteenth and early fifteenth century, Tīmūr's policy of peopling Transoxiana by the forced migrations of artisans, craftsmen, and nomads from the territories he conquered also contributed to the dynamic nature of the population history of the period. Finally, the establishment of Shīʻism as the state religion in Safavid Iran in 1501 caused many individuals and groups to seek asylum in India, the Ottoman Empire, and the Arab world. In terms of political and religious ideology, from the Mongol conquests to the rise of the Ottomans, the Mamluks were preoccupied with the threat to Syria and Egypt posed by an infidel, apostate, or heterodox potentate in the East, be it "the king of the Tatars," Tīmūr the Lame, or the Sufi Shah Ismāʻīl Ṣafavī.

Most of the literature on Mamluk-Eastern relations focuses on legal and military issues. (A notable exception is the provocative essay by Michael Rogers, "Evidence for Mamluk-Mongol Relations," in *Colloque internationale sur l'histoire du Caire*, Cairo, 1974, pp. 385-403.) Much ink continues to be spilled, for example, on the subject of the alleged "law code" (*yasa*) of Chingiz Khan and its influence or lack of influence on the Mamluks. The second topic that unfailingly occupies the interest of researchers and amateurs alike is the Battle of ʻAyn Jālūt, the defeat inflicted by the Mamluk army in 1260 upon the forces of Hulagu, Chingiz Khan's grandson and the conqueror of Baghdad. The present study falls into this category.

Beginning in 1260 and ending with the peace treaty of 1323, hostilities between the Mamluks and the Mongols went on for more than sixty years. During this period, the Ilkhanid Mongols launched six offensives against their Mamluk enemies, invading Syria in 1260, 1281, 1299, 1300, 1303, and 1312. They also carried out a defensive campaign against them in Anatolia in 1277. Amitai-Preiss has provided us a detailed account of the first two invasions of Syria as well as Baybars's "intervention" in Anatolia, or one-third of the period of the Mamluk-Ilkhanid wars.

His scheme of presentation is informed by two major factors. The first is heuristic and lies in the relative abundance of Mamluk historical materials and the consequent paucity of Mongol sources. He acknowledges this state of affairs somewhat tautologically: ". . . most of the information at our disposal on the Mamluk-Ilkhanid conflict is derived from the pro-Mamluk Arabic sources. It is true that the corpus of Mamluk historical works is much larger than its pro-Mongol counterpart, and this might be one reason for this phenomenon . . ." (p. 7). This results in far more space and detail accorded the Mamluk component of the narrative, although Persian, Syriac, and Armenian sources are listed in the bibliography.

The second factor determining the shape of his presentation is the centrality given the personality of the second Mamluk sultan Baybars, who ruled for almost seventeen years from 1260 to 1277. Amitai-Priess even designates the second battle of Homs in 1281 ″Baybars′s posthumous victory.″ A more appropriate title for the book thus might be *Baybars Fights the Ilkhanids*.

His method of presentation, moreover, is essentially chronological, focusing on political history. The three battles—ʻAyn Jālūt (1260), Elbistan (1277), and Homs (1281)—are the pegs on which the narrative is suspended and, when the Mamluks and Mongols are not fighting each other, they are engaged in waging a ″Cold War,″ maneuvering diplomatically, and conducting espionage. Economy, demography, and ideology receive only passing mention. The last two chapters of the work, however, do deal in some detail with several thematic aspects—mainly military and strategic—of the conflict.

The text is illustrated by three plates—photographs of the Jezreel Valley, Birecik, and the plain of Elbistan—which are unfortunately not very well reproduced in the book. Eight maps, four dynastic and genealogical tables, and a glossary are appended to the text. Especially useful are the maps of the areas of the major battle sites and those of the Fertile Crescent and northern Syria-southeastern Anatolia. In connection with the latter, Amitai-Preiss gives the Arabic forms of locales in modern Turkey (e.g., Abulustayn for Elbistan) and these maps facilitate their location. There is a problem, however, with the toponym Dokat, identified as ″the family castle″ of the Anatolian Saljuq sultan (pp. 166, 174, index). This is certainly the town and fortress of Tokat, usually spelled Tūqāt in Arabic.

The philology of the work is fundamentally sound, but the following points should be noted. The term *bahādur* is identified as a Mongol word (p. 108) although it may in fact be earlier, traced by Sir Gerard Clauson in his *Dictionary of Pre-Thirteenth Century Turkish* to a Hunnish (Hsiung-nu) proper name. The expression *yāsāh* on page 121 is probably a transliteration mistake for *yasākh* ← *yasāq*. Finally, on the meaning of *parvāna*, an element in the name of Anatolian Saljuq strongman Muʻīn al-Dīn Sulaymān, Amitai-Preiss quotes the derivation of Claude Cahen in *Pre-Ottoman Turkey* and cites the Persian-English dictionary of Steingass as an authority. Here, he should have consulted works such as Muḥammad Muʻīn′s edition of *Burhān-i Qāṭiʻ* or the *Lughat-nāma* of Dikhudā—he would hardly have used Hans Wehr for the meaning of a Mamluk technical term.

There are some technical problems in the dating of several sections. Between pages 169 and 176, for example, the chronology of Baybars′s campaign to Anatolia in 1277 is increasingly bungled.

Page	Amitai-Preiss Date	Correct Date
169	Monday, 6 Dhū al-Qaʻdah/12 April	Sunday, 6 Dhū al-Qaʻdah/11 April
172	Friday, 10 Dhū al-Qaʻdah/15 April	Thursday, 10 Dhū al-Qaʻdah/14 April
175	Tuesday, 20 Dhū al-Qaʻdah/25 April	Sunday, 20 Dhū al-Qaʻdah/25 April
176	6 Dhū al-Ḥijjah/16 May	6 Dhū al-Ḥijjah/11 May
176	10 Dhū al-Ḥijjah/20 May	10 Dhū al-Ḥijjah/15 May

There is another error on page 185 where 29 Jumādá II 679 is identified with 2 November 1280 whereas the correct conversion is 26 October. Here, Amitai-Preiss has given the Gregorian rather than the Julian date.

In conclusion, these are minor flaws in an otherwise competent and workman-like piece of research. We need more detailed monographs of the sort Amitai-Preiss has produced in order to undertake the broader issues discussed at the beginning of this review.

ʻALĪ AL-SAYYID ʻALĪ, *al-Ḥayāh al-Thaqāfīyah fī al-Madīnah al-Munawwarah: ʻAsr al-Salāṭīn al-Mamālīk 642-923 H.* (Cairo: ʻAyn lil-Dirāsāt wa-al-Buḥūth al-Insānīyah wa-al-Ijtimāʻīyah, 1414/1994). Pp. 304.

REVIEWED BY RICHARD T. MORTEL, King Saud University

One of the major difficulties facing the historian of the Arabian Peninsula in pre-modern times—with the possible exception of the Yemen—is the paucity of primary source material. This is particularly true of Medina, for which we have no contemporary annals comparable to those produced by several generations of native historians of Mecca beginning in the ninth/fifteenth century with al-Fāsī.

Having myself experienced the problems involved in seeking to reconstruct the political history of Medina during the medieval period, I welcomed the invitation to review a work which promised to discuss cultural life in the second holiest city of Islam during the Mamluk era, in anticipation that the author had discovered hitherto unknown contemporary source materials—a rather unlikely prospect, I am forced to concede—or else had dealt with his chosen subject using a methodology based on a thorough review of all relevant Mamluk-era historical and biographical literature, in order to extract the data pertinent to a study of cultural life in Medina, which would then be subjected to rigorous analysis.

After a careful reading of the work I must, however, confess to a serious disappointment. ʻAlī al-Sayyid′s book, instead of describing Medinese cultural life during Mamluk times, appears to this reviewer as a verbose and quite undisguised apology for the Mamluks, lacking in sophistication or the application of any identifiable modern historical methodology, written with the aim of fostering an exaggerated and oftentimes simplistic perception of the extent of Mamluk political, economic, and cultural penetration in the Hijaz, without any awareness of historical progression. The underlying assumption of the work, repeated *ad nauseam*, is that the Mamluks of Egypt had vanquished both the Crusaders and the Mongols, and had thereby assumed primacy in the Islamic world, and must—of necessity—have controlled the Hijaz in general, and Medina in particular, from the middle of the seventh/thirteenth century (see pp. 5ff., 59, 79, 235-236). The author′s thesis is that the existence of ″cultural life″ in Medina was due—almost *in toto*—to Mamluk political suzerainty, economic superiority, and, naturally, largesse. Whatever cultural life existed in Medina, he seems to be telling the reader, must be the product of Mamluk influence.

Without, however, denying the significance of Mamluk influence in the Hijaz, I do call ʻAlī al-Sayyid′s point of view into question. Although the Mamluks repeatedly attempted to extend their sovereignty over the Hijaz from the reign of Sultan Baybars, the

Hijaz in general cannot be said to have fallen completely into the Mamluk orbit until the early ninth/fifteenth century. What we do certainly observe, during the seventh/thirteenth and eighth/fourteenth centuries, is a pattern of gradually increasing Mamluk involvement in the political life of both Mecca and Medina. Moreover, I have been unable to discern in ʻAlī al-Sayyid's book any awareness or understanding of the modalities of the evolution of Mamluk control over Medina, and its ramifications on Medinese cultural life. Specifically, to what extent is the author justified in referring to Medina as a "Mamluk city"? (p. 162)

Earlier, I have alluded to the scarcity of data for the history of Medina during the Mamluk period, whether political, economic or cultural history is intended. ʻAlī al-Sayyid is himself also acutely aware of the parameters of this dilemma, and frequently complains of the scarcity of information specific to Medina (pp. 90, 102, 249, 279), a situation which unfortunately leads him to vapid generalizing from non-Hijazi sources, including *ḥisbah* manuals, Egyptian *waqf* documents, Mamluk histories, etc., under the assumption that the same or similar circumstances must have prevailed in Medina (e.g., pp. 81ff.). Thus, when he discusses the *madrasah* (in Medina), he finds himself forced to describe that institution as it developed in Mamluk Cairo (pp. 99-109). There is no doubt in the mind of this reviewer that, if the author had restricted himself to a consideration of the data pertaining exclusively to Medina, the size of the resultant work would have been greatly diminished, but its potential importance would have been similarly increased.

A number of serious flaws mar the book. The author—although he makes frequent mention of Ibn Farḥūn as a historian of Medina—is unaware of the existence of at least one manuscript copy of his *Naṣīḥat al-Mushāwir wa-Tasliyat al-Mujāwir*, an indispensable mine of information on political and cultural affairs in Medina during the seventh/thirteenth and eighth/fourteenth centuries.

Equally serious is the absence of any background concerning the precise religious affiliation of the sharifs of Medina or political developments in the amirate. Although ʻAlī al-Sayyid is aware of the Shīʻism of the Husaynid sharifs of Medina, he makes no mention of their specific sectarian allegiance within Shīʻism as a whole, i.e. Imāmī, or Twelver, Shīʻism, as opposed to the Zaydism of their Ḥasanid cousins in Mecca. Indeed, ʻAlī al-Sayyid appears to be completely unaware of political developments in the two amirates of Mecca and Medina, as opposed to external influences, to the extent that he claims that Jammāz ibn Shīḥah (d. 704/1304) was the last of the line of Husaynid amirs of Medina! The reality of the matter is that the Husaynids retained control of the amirate for several centuries thereafter. Elsewhere (p. 35), he asserts that the history of the Husaynid sharifs of Medina was distinguished—compared with the history of their cousins the Ḥasanid sharifs of Mecca—by the notable absence of factional strife and struggle for control of the reins of power; once again, the facts simply do not support this statement.

Finally, the author's discussion of the factors which he believes promoted the development of cultural life in Medina lacks credibility, in that he gives primacy of place to economic factors, particularly the India trade. A careful examination of both the primary and secondary literature on economic life in the medieval Hijaz will, I believe, clearly demonstrate that Mecca—with its Red Sea port of Jiddah—and not Medina, was the principal beneficiary of the dramatic increase in the volume of this trade which begins to be observed in the eighth/fourteenth century. In comparison, Medina and its port of al-Jār, are relegated to a position of total insignificance. Furthermore, ʻAlī al-Sayyid's contention that the expansion of the India trade in the Red Sea-Hijaz region was a result of Mamluk policy

(pp. 13 ff.) is simply not substantiated by the facts. On the contrary, it was the disastrous economic policies of the Mamluk administration in Cairo, beginning with the reign of Sultan Barsbāy when *de facto* Mamluk suzerainty came to be imposed on the Hijaz, that led to the decline and eventual disappearance of the India trade in the Red Sea-Hijaz region.

In summation, ʻAlī al-Sayyid's work should be seen, not as a consideration of indigenous manifestations of cultural life in Medina during Mamluk times, but rather a discussion of cultural contacts between Mamluk Egypt and Medina, or, perhaps, Mamluk contributions to cultural life in Medina. Even with this caveat in mind, a potential reader must also be prepared for sweeping generalizations, and a historical methodology based upon an uncritical repetition of material found in the primary sources, with little or no attempt at comparison and analysis.

JONATHAN BERKEY, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education*. (Princeton: Princeton University Press, 1992). Pp. 238.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester
AND DEBORAH DERYLAK, University of Chicago

In this work based on dissertation research, Jonathan Berkey provides a detailed description of religious education in Mamluk Cairo (1250-1517). Berkey's main focus is on higher education, primarily Islamic jurisprudence—the study of one or more of the four major schools of Sunnī law—which, not surprisingly, was the preserve of the scholarly elite (*ʻulamāʼ*) and their students. Berkey, however, moves beyond this select group to discuss other aspects of the education system including the place in it of women and the ruling Mamluk military elite, as well as the educational institutions themselves and their place in the urban setting of medieval Cairo. Throughout, the author contends that the transmission of religious knowledge in Mamluk Egypt was vital to easing certain social boundaries as it brought together individuals from groups that otherwise might not have mingled so easily.

When first examining the *ʻulamāʼ*, Berkey focuses on the personal. He draws much of his data from medieval biographical dictionaries, which encourage such an approach because their biographies tell us more about their subjects' teachers than about the places where any given individual studied. Concomitantly, while texts were obviously central to instruction, these texts were not only read, but were, ideally, orally passed from teachers to students. As Berkey notes, "the belief that only oral transmission is truly legitimate, lies deeply embedded in the Islamic educational system" (p. 24). Thus it was largely the *ijāzah*—the "license" to teach a given work with its chain of transmission from shaykh to student—which afforded one scholarly authority. A close personal relationship between master and student, then, was at the heart of this system of normative education with its rather elastic institutional structure.

Personal contact was likewise essential to patronage, for as Berkey observes:

> Urban society in the Mamluk period was characterized by a web of patronage that bound the ulama as a group to the military elite. In exchange for protection from external enemies and income from bureaucratic and legal appointments, the educated elite legitimized the Mamluk regime by enjoining obedience on the local population, mediating the government's needs for tax revenues, and performing a host of tangible and intangible services to the state (p. 101).

In several instances, Berkey reveals some of the ties between specific individual benefactors of schools and certain instructors there, and here, too, we see the informality of the system and the fluid way in which schools were administered. Wealthy endowers of institutions often appointed instructors, while ruling sultans who might not be directly affiliated with a school could make appointments. Scholars, too, took similar liberties by reserving and endowing posts for their sons and favored students.

Berkey provides his strongest evidence for the flexibility of the system of religious education in his discussion of the institutions themselves. This chapter is based primarily on a careful study of *waqf* documents, deeds of charitable endowment which, in this case, provided for the erection and maintenance of schools, specific classes to be taught, the staff and, usually the faculty. Berkey makes several cogent observations, noting in particular that the diverse structure of higher education "resulted from the complete absence of any overarching state or ecclesiastical authority responsible for shaping Islamic education, or indeed any aspect of Islamic religious culture. Norms might be established, in practice as in belief, by consensus within the Muslim community" (p. 60).

Berkey underscores this diversity by noting the difficulties historians have had in even defining the term *madrasah*, the most common historical marker for a school of Islamic jurisprudence. He states that, "[n]ot all madrasas were exclusively or even principally educational institutions, and, as in earlier periods, much serious legal and religious instruction took place outside of madrasas" (p. 47). Mosques and Sufi convents, for example, also frequently supported and maintained similar educational endeavors.

Just as higher education was not solely the property of any single type of institution, the '*ulamā*' themselves were rarely bound exclusively to a single institution for their support. Some scholars often held several posts at once and even moved from institution to institution in what might be regarded as a medieval version of "double-dipping." Further, scholars also participated in teaching circles held outside of their respective institutions, and these gatherings served to extend religious education beyond the realm of jurisprudence and higher education, to a larger body of interested non-academics.

Clearly the schools were by no means limited to instruction in jurisprudence. Other subjects taught included Quranic exegesis, *ḥadīth*, the linguistic sciences, and occasionally, medicine, and many classes were open to a larger public. In particular, women and Mamluk amirs—although rarely numbered among the scholarly elite—often excelled in the popular study of *ḥadīth*, even to the point of receiving *ijāzah*s from their instructors which they in turn passed on to their students.

Just as important, most classes and nearly all education, for that matter, took place in a religious setting. Many of the most important educational institutions were part of a

madrasah-mosque complex with classes and study periods organized around the times for formal daily prayers, and surrounded by other pious and devotional activities such as the public recitation of the Quran or *ḥadīth*. As Berkey insightfully observes, the transmission of religious texts ″took place alongside, and sometimes as part of Sufi activities, public sermonizing, and popular religious celebration, and those who devoted themselves to education did not necessarily see their efforts as something fundamentally distinct from public worship″ (p. 50).

Throughout his study, Berkey explicitly moves from the personal to the societal, highlighting the major roles that Islamic education and its institutions played in Mamluk Cairo. Thus, Berkey reserves most of his conclusions regarding education′s important social dimension for his final chapter. Perhaps this discussion would have been more nuanced had it woven together and extended certain strands mentioned in earlier chapters. For instance, Berkey might have addressed the question of why certain schools attracted a large number of foreign students. Given that students were drawn more to individual teachers than to institutions, how did the presence of a large foreign contingent affect an institution′s place within Cairene society? Again, given the prominent functions of educational institutions as centers for worship and education for the public as well as for the scholarly elite, Berkey might have offered further analysis of the factors involved in an individual′s decision to endow an institution besides political interests and the accrual of social and symbolic capital.

Finally, Berkey′s passing comparisons to western medieval education might have been expanded somewhat to enhance his arguments. He pointedly concludes:

> For centuries in the medieval West, higher education, often literacy itself, was the almost exclusive prerogative of a clerical elite consecrated to the service of an established Church. Islam, of course, has neither a church nor a clergy, and therefore lacks two fundamental impediments to broad social interest and participation in education. . . . In particular, the emphasis on the personal as opposed to institutional contacts and relationships, and the unquestioned superiority of the spoken as opposed to the written word guaranteed the persistent openness and informality of the system of education (p. 216).

Nevertheless, while the earliest medieval ″universities″ in Europe were mobile guilds or corporations of students and scholars sanctioned by papal or imperial authority, they were not bound to any particular location. By contrast, higher education in Mamluk Cairo was in some sense often linked to, though not defined by, its endowed institutions. Further, though these early European guilds were degree-awarding institutions, the license to teach conferred by them might have been usefully compared to the Muslim *ijāzah* and the authoritative masters who controlled its granting.

These few observations aside, Jonathan Berkey′s *The Transmission of Knowledge* is a patiently researched and well-written study of a fundamental aspect of medieval Muslim religion and society. Berkey′s work is insightful and stimulating, and it lays fertile ground for further research.

REVIEWED BY WARREN C. SCHULTZ, DePaul University

Scholarship on Mamluk economic and monetary history has come a long way over the past fifty years. The numerous studies by Ashtor, Bacharach, Balog, Ehrenkreutz, the Fahmīs (father and son), Labib, Popper, Rabie, Shoshan, and Udovitch are well known and have provided a strong foundation for the field. Still, as seen by the three works reviewed here, there is work to be done and scholarship continues, albeit with varying levels of usefulness. And, as is often the case, that level of usefulness is often related to the facility with which the author handles both the literary and numismatic sources.

The subject matter of *Zayf al-Nuqūd al-Islāmīyah* is both more and less than that which its title claims. More in that this short book goes beyond an English definition of the word counterfeiting to include such matters as governmental issues of lightweight or debased coinages, and less in that it provides an overview only of the Arabic-speaking lands (from North Africa to Iraq), ignoring the Islamic lands to the East. The author makes no claim to thoroughness for such a wide ranging topic over such a long time frame, promising only to give an overview of the problem and terminology of counterfeiting and to provide well known examples of it from Islamic history. The work is organized around lists (thus we have the eighteen ways of counterfeiting, the eight reasons for counterfeiting, and the four ways to detect it, etc.) followed by notable examples drawn from the Arabic chronicles. By far the largest number of these anecdotes are drawn from the Mamluk period (pp. 33-37).

Despite the convenience of having so many Mamluk era citations gathered between two soft covers, Mamlukists will find little of benefit in this work. The reasons are numerous. First of all, there is nothing new. All of the events cited are known and have been discussed in previous work on Mamluk money. Secondly, there is little analysis or interpretation of the anecdotes cited, and what little there is often cannot be trusted. Examples of this last problem are best illustrated by the following three categories: an uncritical and sometimes careless use of the sources, a concern only with the normative, and a lack of awareness of the numismatic record.

Al-Zahrānī's careless use of sources is illustrated by the following examples. In the discussion of the events of the end of the eighth/fourteenth century (p. 51), we read that the Ustādār Maḥmūd ibn ʻAlī "opened" a mint in Alexandria during the second reign of al-Ẓāhir Barqūq. A careful reading of what al-Maqrīzī and other Mamluk authors had to say about this event reveals that Maḥmūd ibn ʻAlī only reopened a previously closed mint. This

is an apparent minor point when taken out of context, but it is important when considering the total picture of the actions of Barqūq and his *ustādār*. Similarly, al-Zahrānī claims (p. 36) that the many different types of coins mentioned by the sources as circulating in the early to mid-ninth/fifteenth century are proof of the monetary chaos of the period, yet he ignores that those same sources often include exchange rate information revealing how merchants and money changers did business in such a marketplace. Al-Zahrānī's uncritical approach to the literary sources is seen most vividly in his dubious assertion (p. 33) that the Mamluk period saw more counterfeiting than any other period in Islamic history. While it is likely that we have more accounts of counterfeiting from the Mamluk era than any previous period of Islamic history, it must be asked whether this is only a reflection of the fact that we have more sources about the Mamluks to draw upon. This is especially crucial to consider given the numerous counterfeit coins from many Islamic dynasties that can be examined in major collections around the world.

It must also be stressed that this is a normative work based on normative attitudes. Despite the number of stories drawn from the chronicles, the book is concerned with how money ought to be, and not how it actually was. Al-Zahrānī begins his overview of Islamic money and counterfeiting with a brief survey of relevant Quranic, *ḥadīth*, and legal material as well as a brief discussion of the first truly Islamic coinage, that of the Umayyad Caliph ʻAbd al-Malik. His subsequent discussion of numerous citations from the next eight centuries is then based on the unstated assumption that the money of ʻAbd al-Malik is the only true Islamic coinage, and any deviation from its standards must represent a form of counterfeiting. Given the tremendous diversity of coinages issued by the many subsequent Islamic dynasties—similar in some ways but varying widely in others—this is essentialism in the worst way. It even ignores that Islamic jurists reconciled themselves to the existence of different coinages, and concentrated their legal rulings on the basic requirements needed for the money used by Muslims. This essentialism leads to several anachronistic assumptions. Al-Zahrānī cites authors as far apart temporally as al-Jāḥiẓ and al-Qalqashandī in his description of the characteristics of "Islamic coinage" ignoring the reality that over the seven plus centuries between these two men not only did the money change but even the definitions of basic terms had varied. Thus al-Qalqashandī is quoted in the discussion of early Islamic silver *dirham*s, resulting in the assertion that early Islamic *dirham*s were only two-thirds silver, when it is known that they are over 90 percent pure. Furthermore, this example hinges on al-Qalqashandī's use of the term *nuqrah* to indicate an alloy of two-thirds silver and one-third copper, yet Ayyubid and some Mamluk sources assert that *nuqrah* indicated fine silver. Let the reader beware.

Finally, nowhere is this normative concern more evident than in al-Zahrānī's lack of awareness of the numismatic evidence. While coins that were clipped, broken, of varying weights and alloys, and of foreign origin do not fit in his definition of a proper Islamic coinage, it is known that coins such as these circulated in Mamluk markets. This shortcoming extends beyond the borders of Egypt, as when the author asserts (wrongly) that the Ashrafī *dīnār* of al-Ashraf Barsbāy was the first Muslim gold coin to be issued to a non-*mithqāl* weight standard. There are numerous lighter-weight gold coins from earlier Muslim states as any perusal of coin dealers' lists would reveal. There is also no acknowledgment that numismatic evidence indicates that even the weight value of the *mithqāl* unit changed over time and place. In conclusion, Mamlukists interested in the matter of counterfeiting in the sultanate would be best served by skimming this work and

devoting their time and their attention to studies such as Bacharach′s ″Foreign Coins, Forgers, and Forgeries in 15th Century Egypt″ in *Actes du 8ème Congrès international de numismatique* (Paris, 1976), pp. 501-511.

Unlike the first book reviewed, Ra'fat al-Nabarāwī′s *al-Sikkah al-Islāmīyah fī Miṣr: 'Aṣr Dawlat al-Mamālīk al-Jarākisah* is based on a thorough familiarity with both the literary and numismatic sources. As Ḥasan al-Bāshā notes in his forward, this book addresses an important period in the monetary history of Egypt, that of the reign of the Circassian Mamluk sultans, 784-922/1382-1517. Al-Nabarāwī examines this topic first by analyzing the surviving numismatic evidence, classified by stylistic analysis (section one), and then surveying the exchange rate information found in the contemporary literary sources (section two). These extensive discussions are sandwiched between a brief introduction and a short conclusion.

As anyone who has worked on Mamluk money can testify, the chief obstacle to its study is access to the coins. Collections are scarce, sometimes limited in scope, or even closed to examination. Thus, the chief value of this work lies not in any new interpretation of the Mamluk monetary system, but in the wealth of data packed into it. This is especially true of the numismatic section, in which the author states that he has published 636 new coin types (p. 348). There the reader will find not only information about previously published Mamluk coins but also the results of the author′s personal and in-depth examination of four major collections: those of the American Numismatic Society, the Egyptian Library, the Islamic Art Museum in Cairo, and the personal holdings of the noted collector Dr. Henry Awad. The last two are unpublished and especially welcome additions. Thus the book is a very useful and much more detailed supplement to the relevant sections of the long out of print *The Coinage of the Mamlūk Sultans of Egypt and Syria* by Paul Balog (New York: American Numismatic Society, 1964). Indeed, for those who cannot locate a copy of Balog′s corpus, al-Nabarāwī′s book along with Sāmiḥ 'Abd al-Raḥmān Fahmī′s *al-Waḥdāt al-Naqdīyah al-Mamlūkīyah: 'Aṣr al-Mamālīk al-Baḥrīyah* (Jiddah, 1403/1983) will make an adequate substitute.

Some minor comments are in order. First, it is worth asking why the rather artificial distinction of Circassian period (vis-à-vis the Baḥrī or Turkish period) has been followed. The many shortcomings of following this division have been pointed out by scholars interested in other aspects of the Mamluk Sultanate, and similar shortcomings are found in the field of monetary history. A wider perspective reveals that the money issued by al-Ẓāhir Barqūq and subsequent Circassian sultans can only be understood in the context of the money issued by the earlier sultans. If any major break in monetary practice is to be emphasized, it is better to look at events in the reigns of al-Nāṣir Faraj, al-Mu'ayyad Shaykh, and/or al-Ashraf Barsbāy and not the reign of al-Ẓāhir Barqūq.

Second, while the claim of 636 new coin types is technically true, it must be noted that quantity does not always equal importance. In classical numismatic terminology, any variation in coin legend, design, style or other factors can constitute a new type. While changes of these types may be extremely significant and of major importance to the economic historian, it may also happen that such differences are insignificant and of interest only to the collector. Many of the changes noted here fall into the latter category. For example, a large number of the new types cited occur in the copper coinage from the reigns of Barqūq. Almost all are the result of minor changes in legend placement, and, in the

opinion of this reviewer, have about as much economic significance as changes in date on the American quarter dollar.

Third, the book´s stylistic analysis of Circassian Mamluk coins would have benefited from a change in format. Long term trends in coinages are illustrated much better when the coins are arranged in mint series rather than by reign of individual sultan. Fourth, it should be noted that al-Nabarāwī´s exchange rate data—while useful—has been superseded by that found in Ḥamūd al-Najīdī´s *al-Niẓām al-Naqdī al-Mamlūkī*, (Alexandria, n.d.). On the other hand, the book also contains a helpful glossary of Mamluk monetary terminology (pp. 339-345). While this is a welcome aid in keeping track of all those adjectival labels the Mamluks applied to their money, it also contains an oft-repeated error: al-Nabarāwī repeats Balog´s assertion that the *dirham* (*min al-*) *fulūs* was a copper coin weighing one *dirham* (2.97 grams), a conclusion not borne out by the numismatic or chronicle evidence.

Finally, there are sixteen plates featuring 134 coins. These photographic reproductions are of much better quality than is normally encountered in Middle Eastern publications (cf. the poor illustrations found in *Zayf al-Nuqūd al-Islāmīyah*). Unfortunately, however, the coins are reproduced at larger than actual size and not according to any consistent scale. Ashrafī *dīnār*s, for example, are nowhere near an inch in diameter. Anyone unfamiliar with the coinage should use the plates with caution.

Last to be reviewed is *Mamluk Economics: A Study and Translation of al-Maqrīzī´s* Ighāthah, Adel Allouche´s masterful translation of a Mamluk historian and civil servant´s strident criticism of the ruling Mamluk elite and their monetary policies. Many reviewers have already commented upon why this book is a welcome replacement for Gaston Wiet´s 1962 French translation, and those reasons need only be endorsed and not repeated here. This reviewer has also written a long discussion of Allouche´s book for the *American Journal of Numismatics*, and what follows is a synopsis of the comments found there. Briefly stated, they are as follows: if this translation does nothing more than eliminate the common misunderstanding that *Ighāthat al-Ummah bi-Kashf al-Ghummah* is about famines, then Allouche will have achieved a great deal. Allouche´s study goes beyond that, however, by providing an elegant and highly readable translation of this important economic treatise. That said, Allouche´s only passing familiarity with the numismatic evidence necessitates treating with caution the monetary analysis found in the translation´s introduction and supporting material.

Allouche´s translation is based upon the Cairo 1940 Arabic edition. The *Ighāthah* itself is a short work; in this volume the translation fills but sixty-three pages. Following the lead of the text itself, Allouche has divided the *Ighāthah* into nine sections. The translation is supplemented by a twenty-page introduction and nine useful appendices. The first of these appendices is in effect a glossary, while the remaining eight are tabular presentations of exchange rates and commodities prices. These appendices and the accompanying notes to the text bear witness to Allouche´s thorough familiarity with the relevant contemporary literary sources.

Allouche argues persuasively that it is in the context of al-Maqrīzī as critic that the *Ighāthah* should be understood, calling it a polemical treatise (p. 13). In it al-Maqrīzī blames the Mamluks for Egypt´s economic problems. Unlike earlier crises, which he states were caused by natural phenomena, al-Maqrīzī believes the difficulties of the first decade

of the ninth/fifteenth century were caused by the ″malfeasance and negligence of the public good″ exhibited by Egypt′s rulers (p. 24). While also condemning Mamluk practices such as the selling of offices and high taxation, al-Maqrīzī devotes the bulk of his critique to the Mamluks′ monetary policies, specifically their excessive issuance of copper coinage. If the government were to abandon copper coins and return to silver and gold, argues al-Maqrīzī, the troubles would cease (pp. 80-81). Regardless of whether al-Maqrīzī′s antidote was correct or not, Allouche rightly emphasizes that al-Maqrīzī′s concern about economic and monetary matters was rare for the time, and it is those issues and not famines which are the true subject of the work (pp. 5, 13).

In Allouche′s introduction to the translation he promises both a ″presentation and [an] explanation of a number of relevant issues″ (p. x). After a short historical overview, the introduction is broken up into five sections addressing five issues: Contemporary Views of the Early Circassians; The Date of al-Maqrīzī′s *Ighāthah*; The Notion of *Ghalā*'; The Scope of the *Ighāthah*; and A Discussion of al-Maqrīzī′s Views. Woven throughout the introduction are several conclusions drawn about Mamluk money. It is clear that Allouche has based his conclusions primarily upon the evidence found in the chronicles. While the author does make frequent reference to Balog′s corpus of Mamluk coins (mentioned above), it is evident from his discussion that he is not intimately familiar with the coins themselves. As a result, his brief analysis of Mamluk money, while better than many which have preceded it, should still be treated with caution.

I will limit my discussion to two examples. First of all, it is no longer universally accepted that the Mamluk monetary system was ever ″based″ on any particular metal as al-Maqrīzī claims and Allouche (and others) have repeated. The numismatic record is quite clear that coins in all three metals—gold, silver, and copper—were in existence throughout the entire Mamluk period, albeit subject to temporary shortages and frequent changes in supply and demand. Thus when al-Maqrīzī alleges that (a) silver coins were not minted in the reign of al-Ẓāhir Barqūq, and (b) silver was no longer minted by ″about″ 1403 (p. 15), the numismatic evidence indicates that these scenarios were (a) not true, and (b) only a temporary interruption in minting. Furthermore, because one particular coin was more commonly cited in price quotations or exchange rates does not mean that it was the ″basis″ of the system, merely that it was a common currency at that time. Exchange rates, by definition, require the presence of two types of money. Thus, Allouche′s frequent assertions that the Mamluk monetary system was based first on gold, then silver, and later on a ″copper dirham of account″ (pp. 15-20) should be discounted.

My second comment concerns this ″copper *dirham* of account.″ In his preface, Allouche rightly acknowledges the tremendous difficulties encountered in understanding Mamluk monetary terms (p. x). These terms are used inconsistently in the sources and frequently have multiple meanings. Nowhere are these problems more evident than in the phrase *dirham/darāhim min al-fulūs* found in the Mamluk era texts. Separately, the term *dirham* may refer to either a silver coin or a weight unit, while *fulūs* (sg., *fals*) always refers to copper coins. But as Allouche points out, when these words are linked together, the resulting phrase has caused much confusion among modern scholars. It has been interpreted (and translated) many ways, ranging from the assumption that it was still a silver coin to the definition that it was a copper coin weighing a *dirham* (as seen above in al-Nabarāwī′s book). Neither of these is correct. The phrase refers to a unit of account, and it means the amount of copper coins (*fulūs*) necessary to achieve the value of one silver

coin (*dirham*). Allouche rightly recognizes this term as a unit of account, and his translation is the better for it.

Throughout the book, however, Allouche renders *darāhim min al-fulūs* as "dirham of account." While this usage is better than William Popper's "trade-dirham," it is still problematic. Contrary to Allouche's belief, this "dirham of account" was not the only unit of account in use in the Mamluk domains (pp. 9, 17). Given the extremely irregular weights of Mamluk gold and silver coins struck before the reform issues of the 1420s, it is probable that these coins were weighed for all transactions. The value of the weighed amount of coins was then determined by comparison to their respective unit of account. Thus Mamluk money was no different from other contemporary monies in that it consisted of two parts: the coin itself and the unit of account by which its value was determined. The inherent problem of Allouche's use of "dirham of account" for *darāhim min al-fulūs* is that his phrase could easily be confused with the unit of account specific to the silver *dirham*. A more accurate and less misleading (albeit inelegant) rendering of the Arabic phrase would be "a silver *dirham*'s worth of copper coins." Better yet, why not use the transliterated Arabic phrase itself?

A final word on the *Ighāthah* itself is needed. The powerful indictment by al-Maqrīzī notwithstanding, it should not be forgotten that many modern scholars have reached a different conclusion regarding the economic troubles that beset the Mamluk sultanate, arguing that the monetary policies followed were a reaction to economic difficulty, not a cause of it. That should be kept in mind lest the reader be swept aside by Allouche's flowing translation of al-Maqrīzī's polemic.

MUḤAMMAD ḤAMZAH ISMĀʻĪL AL-ḤADDĀD, *al-Sulṭān al-Manṣūr Qalāwūn: Tārīkh Aḥwāl Miṣr fī ʻAhdihi, Munshaʼatuhu al-Miʻmārīyah* (Cairo: Maktabat Madbūlī, 1993). Pp. 245.

REVIEWED BY LINDA S. NORTHRUP, University of Toronto

Al-Manṣūr Qalāwūn, whose reign (1279-1290) was of considerable importance, both with respect to the establishment of the Mamluk sultanate in Egypt and Syria and within the broader context of world history, has recently been the subject not only of a monograph but also of numerous articles treating various aspects of his rule. His reign is also covered in some recent general histories of the Mamluk period. Yet, despite the relatively intense scrutiny to which this sultan and his reign have been subjected, Qalāwūn remains a rather enigmatic, even somewhat colorless, personality.

Until recent studies brought attention to the political and military importance of his reign, Qalāwūn was perhaps best known for his monumental complex in Cairo, comprising a *bīmāristān* (hospital), *qubbah* (dome), and *madrasah* (school), whose remains, with the exception of the hospital, still stand today. The hospital in particular, as one of the most advanced medical institutions of its day and well-documented, has attracted scholars interested in social, cultural, and medical history.[1] The complex as a whole—the first multi-

[1]For example, Muḥammad Muḥammad Amīn, *al-Awqāf wa-al-Ḥayāh al-Ijtimāʻīyah fī Miṣr 648-*

purpose institution of its kind in Egypt—has been a focus for architectural historians with respect to both plan and decoration.[2]

Notwithstanding the apparent scope of the monograph as indicated by the title, one would expect that, as an archaeologist by training and a lecturer (*mudarris musāʻid*) in the College of Archaeology (Kullīyat al-Āthār) of Cairo University, al-Ḥaddād's real focus would be this complex. Integrating the findings of his archaeological survey within the wider historical and socio-cultural framework of the period might enable him to cast new light on this sultan and his reign. Expectations are raised by the fact that this book was submitted to, and won first prize in, a competition sponsored by the Historical and Archaeological Committee of the High Council for Culture in Egypt. It is also recommended by two of Egypt's most eminent medieval historians, Saʻīd ʻAbd al-Fattāḥ ʻĀshūr and Suʻād Māhir Muḥammad (inside back cover).

Al-Ḥaddād divides his monograph into two parts: historical narrative and description of the monuments. Part 1, entitled "Sultan Qalāwūn and the Condition of Egypt during His Reign," is subdivided into three chapters: (1) "Qalāwūn and the Sultanate"; (2) "The Internal Condition of Egypt during the Reign of Qalāwūn"; and (3) "External Relations." Part 2, "The Extant Monuments of Sultan Qalāwūn in the City of Cairo: The Architectural Complex in Mu'izz al-Dīn lillāh Street," comprises an introduction and four chapters. Each of the first three chapters is devoted to one component of Qalāwūn's complex (*bīmāristān*, *qubbah*, *madrasah*), while the fourth is intended as an analytical study of the entire complex. The text is embellished with notes, as well as with plans and photographs (unfortunately not well reproduced). The work includes a bibliography of primary and secondary sources used, but lacks an index.

There are, in my opinion, two problems with this study, the first of which is methodological. There is no apparent thesis. Further, the author fails to define the relation between the historical and descriptive sections of the work. The length of the two parts suggests that they have equal importance; the historical narrative occupies ninety-two pages, while the study of the monuments consumes eighty-six pages. The function of part 1, the historical narrative, however, is puzzling. The basic outline of Qalāwūn's reign has been traced elsewhere by Surūr, ʻĀshūr, Ḥasan, Rabie, and myself,[3] and the most insightful accounts of Qalāwūn's sultanate published to date are found in Robert Irwin's *The Middle East in the Middle Ages* and Ulrich Haarmann's contribution in *The*

923/1250-1517 (Cairo: Dār al-Nahḍah al-ʻArabīyah, 1980), especially 156-172; also Ahmad Issa Bey, *Histoire des bimaristans (hôpitaux) à l'époque islamique* (Cairo: Imprimerie Paul Barbey, 1928), passim; published in Arabic as *Ta'rīkh al-Bīmāristānāt fī al-Islām* (Damascus: Maṭbūʻāt Jamʻīyat al-Tamaddun al-Islāmī, 1939).

Linda S. Northrup, *From Slave to Sultan: The Career of al-Manṣūr Qalāwūn and the Consolidation of Mamluk Rule in Egypt and Syria (678-689 A.H./1279-1290 A.D.)*, under review for publication.

Encyclopaedia of Islam article ″Miṣr.″[4] Al-Ḥaddād brings neither new information nor a new perspective to his narrative. Nor does he use his synthesis as a framework within which to interpret the findings of his survey of the monuments.

The archaeological (i.e., descriptive) survey of Qalāwūn′s complex which constitutes part 2 is, perhaps, somewhat more useful. In addition to providing a physical history of the complex and the various modifications to it as well as detailed descriptions of its plan, architectural components and decoration, the author on occasion usefully compares and contrasts textual descriptions with the actual remains of the structure (e.g., p. 123). But when he delves, for example, into social history, repeating what the endowment deeds and historical accounts say about health care, the clientele of the hospital and its employees, al-Ḥaddād contributes little that has not been said elsewhere.[5] His most interesting, and perhaps most important, observation, based on a comment of Ibn ʻAbd al-Ẓāhir, is that the sultan does not seem to have intended the *qubbah* as his burial place, for the tomb itself was not part of the original structure; it was built only after Qalāwūn′s death (pp. 140-141). Rather, the *qubbah* served an architectural function, to draw attention to the complex; it was also the site of religious activities: Quran recitation, discussions of *ḥadīth*, teaching of Quran commentary and *fiqh* (p. 141). Rather than serving as a conclusion in which the results of the archaeological survey are analyzed within the historical and historiographical context, the final chapter provides a discussion of the scholarly literature regarding the main features of the three principal components of the complex. Several questions remain unanswered. What does this descriptive archaeological survey add to what we learn from documents and texts? Are there considerations other than those mentioned in the sources which might have stimulated Qalāwūn to build such a complex, incorporating a hospital? If inspired by Nūr al-Dīn′s hospital, as some sources relate, is it possible to detect the influence of Nūr al-Dīn′s hospital on Qalāwūn′s, either physically or in terms of functions? To what degree was the sultan himself involved in the plan? Do the archaeological remains shed any further light on his reign, character or personality?

A second criticism concerns the historiographical basis of al-Ḥaddād′s monograph. Although Ibn ʻAbd al-Ẓāhir and Baybars al-Manṣūrī (*Zubdat al-Fikrah fī Taʼrīkh al-Hijrah*) have been used, several other important contemporary sources (e.g., Baybars al-Manṣūrī′s *al-Tuḥfah al-Mulūkīyah fī al-Dawlah al-Turkīyah* and Shāfiʻ ibn ʻAli′s *al-Faḍl al-Maʼthūr min Sīrat al-Malik al-Manṣūr*, among others) in which the complex has been discussed have not been consulted. Noticeably, the sources most frequently cited date to the later Mamluk period: al-Maqrīzī, al-ʻAynī, Ibn Taghrībirdī, and Ibn Iyās. Although these sources often contribute new information, in at least one instance their uncritical use results in an anachronistic use of terminology.[6] An account of Qalāwūn′s reign, based on a much wider range of contemporary and later Mamluk literary sources, first analyzed historiographically, will be found in my own study on Qalāwūn.[7]

---

[4](Carbondale and Edwardsville: Southern Illinois University Press, 1986); and Section 5: ″The Mamluk Period 1250-1517,″ 2nd ed., 7:165-177, respectively. See also Northrup, *Slave to Sultan*.

[5]E.g., al-Ḥaddād, 55-57, 128-139. Cf. Amīn, *al-Awqāf wa-al-Ḥayāh al-Ijtimāʻīyah*, 156-172; idem, in the appendix to his edition of Ibn Ḥabīb′s *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh* (Cairo: al-Hayʼah al-Miṣrīyah al-ʻĀmmah lil-Kitāb, 1976), 295-396.

[6]The terms *mushtarawāt*, *ajlāb* and *julbān* (al-Ḥaddād, 42) to describe categories of *mamlūk*s are not, to my knowledge, found in the sources for Qalāwūn′s reign.

[7]*From Slave to Sultan*.

Similarly, on several occasions al-Ḥaddād cites the endowment deed for Qalāwūn′s complex, drawn up by ʿAbd al-Raḥmān Katkhudā, leader of the Qāzdughlīyah janissary unit in Egypt during the second half of the eighteenth century and *nāẓir* at that time of Qalāwūn′s hospital, rather than Qalāwūn′s original deeds, without telling us why. Though the existence of Katkhudā′s deed has been known for some time, this document has not been widely available to scholars until recently,[8] and it would have been appropriate to note the importance of this source, which, (though not having seen it myself) I suspect, includes the endowment deed for the *madrasah,* which is not found among the extant documents dating to the thirteenth century.

Although al-Ḥaddād has used current secondary literature in Arabic, his failure to supplement older, and still valuable, foreign scholarship with more recent research—whether with regard to the historical narrative or description of the complex—is unfortunate. Important recent foreign studies treating aspects of Qalāwūn′s reign are not cited in the historical narrative.[9] Of more importance, no study of Qalāwūn′s monuments in a Western language later than Creswell′s foundational study, *The Muslim Architecture of Egypt*, vol. 2 (1959) is cited. He accuses ″Orientalists″ of neglecting the role of local tradition as an influence on the elements of the *madrasah*, but makes no reference to Michael Meinecke′s important, detailed analysis of the decorative system employed in the complex in which local influences *are* traced.[10] He might also have mentioned the plans of the World of Islam Festival Trust to restore this monument.[11] For whom is this work intended? If meant for a lay public, with a general interest in Egypt′s history and monuments, al-Ḥaddād′s work presents a clearly written and generally accurate synthesis of Egyptian and, albeit, older foreign scholarship. The specialist, however, will likely be disappointed. Having failed to interpret the findings of the archaeological survey in the light of the historical conditions of Qalāwūn′s reign or to make use of important documentation and research, whether original sources or the most recent foreign scholarship, an opportunity has been lost to illumine further Qalāwūn′s life and reign.

REVIEWED BY JOHN L. MELOY, University of Chicago

This book consists of four studies in the administrative and social history of the Mamluk period, with an emphasis on the Baḥrī period and the reign of al-Nāṣir Muḥammad ibn Qalāwūn in particular. The author′s preface is unnecessarily apologetic for the book′s limited purview in light of the fact that a complete study of the period′s civilization would be a vast undertaking. In fact, the range of topics, like those covered in the author′s many other published works, is quite broad: the papers collected here deal with the fields of administration, law, education, and medicine. The preface also unnecessarily justifies the exploration of the articles′ topics on the basis of the unique achievements of Islamic civilization during this period. This claim comes across as more than a bit overstated and is based in part on a number of unsubstantiated assertions, for example, that the Mamluks′ unbounded enthusiasm for Islam was the foundation of the civilization and that half of Upper Egypt′s population converted to Islam during the reign of al-Nāṣir Muḥammad.

The first article, entitled "al-Taqsīm al-Idārī fī Miṣr Zaman al-Mamālīk al-Baḥrīyah" (The Administrative Division of Egypt at the Time of the Baḥrī Mamluks), discusses the *iqṭāʻ* system in Egypt by way of a description of the cadastral surveys and land distributions ordered by Sultan Ḥusām al-Dīn Lājīn and Sultan al-Nāṣir Muḥammad ibn Qalāwūn (*al-rawk al-ḥusāmī* and *al-rawk al-nāṣirī*, respectively). The author presents information on both surveys as well as the economic importance of the latter; unfortunately, the conclusion offers little synthetic analysis beyond the assertion that *al-rawk al-nāṣiri* was long-lived because it was an administrative organization that conformed to Egypt′s political, economic, and social conditions. The third paper, "Min Mazāhir Niẓām al-Taʻlīm fī Miṣr Zaman al-Mamālīk" (On Features of the Educational System in Egypt at the Time of the Mamluks) consists of a series of discussions on the various institutions—mosques, *madrasah*s, *khānqāh*s, *ribāṭ*s, and *zāwiyah*s—that offered instruction, as well as sections on faculty, students, certification, libraries, and *maktab*-*sabīl*s. This article, too, is descriptive, and offers no argument about the nature of education in Mamluk Egypt. Both papers appear to have been published previously; I have partial references to articles of the same titles by the author in *Majallat Dirāsāt al-Sharq al-Awsaṭ* and *Majallat al-Jāmiʻah al-Mustanṣirīyah*, although I have not been able to identify the issues.

The second and fourth articles are slightly revised versions of articles that appeared earlier, although there is no reference to this fact. The first of these, "al-Qaḍā' wa-al-Quḍāh fī Miṣr fī ʻAhd al-Nāṣir Muḥammad ibn Qalāwūn (709-741 H./1309-1341 M.)" (The Judiciary and Judges of Egypt in the Reign of al-Nāṣir Muḥammad ibn Qalāwūn) appeared in *Dirāsāt: al-ʻUlūm al-Insānīyah*, vol. 13, no. 12 (1986): 65-95. The version in this book includes a number of new paragraphs and a conclusion. The article begins with a very brief discussion of the institution of chief judgeships for each of the four Sunnī legal *madhhab*s during the reign of Baybars and developments during the reign of Qalāwūn. The body of the article covers various aspects of the judiciary during the reign of al-Nāṣir Muḥammad. The conclusion, like the introduction, poses broader questions about aspects of the judiciary. The uniqueness of the Mamluk judiciary with respect to the chief judgeships is

substantially diminished when one considers that the Fatimids sponsored chief judges in both Shīʻī and Sunnī *madhhab*s, and that Nūr al-Dīn Zangī appointed chief judges in a number of *madhhab*s as well. The article entitled "al-Bīmāristān al-Manṣūrī mundhu Ta'sīsihi wa-ḥattá Nihāyat al-Qarn al-Thāmin" (The Manṣūrī Hospital from Its Foundation to the End of the Eighth Century) consists of discussions on the *waqfīyah* of the hospital, apparently (there is no explicit reference) as published by Muḥammad Muḥammad Amīn in his edition of Ḥasan ibn Ḥabīb's *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh*. It also contains discussions of the hospital's equipment, its medical, financial, and administrative organization, and the study of medicine in the hospital, and it concludes with a discussion of the hospital in the following century. This article, the book's fourth and last piece, first appeared in *al-Majallah al-ʻArabīyah lil-ʻUlūm al-Insānīyah*, vol. 8, no. 29 (1988): 6-35. The version under review includes only a few changes.

These four articles use a wide range of chronicle and encyclopedic sources, both published and unpublished. In each of the papers, the author presents a great deal of information; the papers, however, are informed by only the briefest references to secondary literature in any language, and the conclusions offer little in the way of synthetic analysis. Since the book does not approach the sources with any particular methodological strategy, these articles serve only as introductory surveys and do not offer substantial insights into their respective topics.

P. M. HOLT, *Early Mamluk Diplomacy (1260-1290): Treaties of Baybars and Qalāwūn with Christian Rulers*. (Leiden: E. J. Brill, 1995). Pp. 161.

REVIEWED BY ANNE F. BROADBRIDGE, University of Chicago

P. M. Holt's latest work, *Early Mamluk Diplomacy*, combines two of his main research interests: the political and military history of the Levant during the epoch of the Crusades and the critical translation of Arabic sources into English. These interests have already emerged in such works as his *The Eastern Mediterranean Lands in the Period of the Crusades* (Warminster, 1977), *The Age of the Crusades: The Near East from the Eleventh Century to 1517* (London, 1986), and *The Memoirs of a Syrian Prince* (Wiesbaden, 1983), a translation of Abū al-Fidā' Ismāʻīl ibn ʻAlī's *al-Mukhtaṣar fī Akhbār al-Bashar*.

The work under review is the twelfth volume in the series entitled *Islamic History and Civilization: Studies and Texts*, edited by Ulrich Haarmann. In it Holt presents translations of eleven truces and treaties negotiated by the Mamluk sultans Baybars and Qalāwūn with various Christian states of both the Middle East and Europe. Previously, Holt published a number of these texts in assorted scholarly journals; the remaining material was hitherto unavailable in English. All of the texts are pertinent to the history of the thirty-year period between 1260 and 1290, which witnessed both the consolidation of the Mamluk Sultanate as a significant power in the eastern Mediterranean, and the obliteration of the Frankish Crusader states in the Levant, which was assured by the 1291 Mamluk conquest of Acre.

Although the main body of the book consists of the translations, Holt does include a concise analytical introduction. This accounts for the bulk of the critical analysis found in the book; despite its brevity, it is clear and thoughtful. In it he discusses the sources in which he found the various truces and treaties, details the status of the truce in its various forms as it was known and used in Mamluk diplomatic practice, and provides a concise description of Mamluk relations with such powers as the European Christian kingdoms, the Levantine Crusader and Armenian states, and the Byzantine Empire. He briefly addresses several overarching regional strategic and economic issues, and highlights the specific strategic policies undertaken by Baybars and Qalāwūn in their dealings with the Christian states. Finally, he situates each truce historically and explains how it reflects the changing military and political situation in the region.

Two maps of the northern and southern Fertile Crescent follow the introduction. While these maps are pertinent to those truces negotiated by the Mamluk sultans with the Frankish Crusader or Armenian states, they do not cover regions mentioned in other treaties. Therefore another map, perhaps of the entire Mediterranean basin, would have been welcome, especially for those texts concerned with Genoa, Aragon, and the Byzantine empire.

Holt introduces each annotated translation by clarifying the immediate circumstances of the truce, pinpointing its location in the sources, and referring to existing medieval or modern translations. Where necessary, he also translates variant copies of the text in the form of appendices. The book concludes with two indices, one of persons and one of places.

This work is a useful compilation of important primary sources, which so far have not been presented in a unified collection. Holt provides a skilled translation of the texts, thereby making them more accessible to Middle East historians and historians of the Crusades. Although the translations account for the bulk of the book, he furnishes a coherent historical context for each truce and establishes its relevance to the overall events of the time. *Early Mamluk Diplomacy* is a useful handbook for scholars investigating the political and diplomatic issues of the time period, and can also be used to introduce original sources to students.

MOHAMED TAHAR MANSOURI, *Recherches sur les relations entre Byzance et l'Égypte (1259-1453) (d'après les sources arabes)*. (Tunis: Université de Tunis 1. Faculté des Lettres de la Manouba, 1992). Pp. 309.

REVIEWED BY WALTER E. KAEGI, University of Chicago

This is a useful but nevertheless disappointing and rather superficial first attempt to write a comprehensive history of Byzantine-Mamluk relations. A comprehensive examination of Byzantine-Mamluk relations is an important desideratum of late Byzantine history. Unfortunately, this effort cannot fill that need. The author rightly stresses his use of Arabic and not Greek sources, and it is this fact that does indeed provide the principal value of the book, especially for Byzantinists and historians of Mediterranean trade who are not Arabists.

The author writes in general, sometimes excessively broad terms. Pages 1 to 90 are merely derivative background, without any original evidence or new interpretations. He describes how the Mamluks attempted to bar more Crusades through diplomacy with Byzantium (pp. 97-98), the continuation of Italian commerce with the Mamluks, and the Mongol menace. However, in examining Mamluk-Mongol relations (pp. 104-111), he fails to use the 1984 Indiana University dissertation of Bruce Lippard on ″The Mongols and Byzantium, 1243-1341.″ He rightfully emphasizes the Mamluk need for slaves and horses and therefore the mutuality of interests of Byzantium and the Mamluks in keeping navigation open in the Bosphorus and Dardanelles. He briefly refers to Byzantine Emperor Michael VIII Palaeologus′s need to turn toward the Mongols, his detention of a Mamluk envoy to the Kipchaks for two years to avoid Mongol displeasure (p. 111). His real discussion of Byzantine-Mamluk relations begins on page 113. He notes that Mamluk sources do not give details about the reception of Byzantine envoys (p. 119). He notes that both parties used Melkite Christians as envoys (p. 118). He concludes that there is little evidence about the backgrounds of Mamluk ambassadors to Constantinople. His references to these embassies from Arabic sources, however, are valuable for Byzantinists.

The author′s delineation of Arabic sources′ descriptions of Byzantine qualities on page 137 are similar to some that Nadia Maria El-Cheikh Salibi has found in Arabic sources for earlier medieval periods in her 1992 Harvard University dissertation ″Byzantium Viewed by the Arabs.″

Mansouri assesses how the fifteenth century Emperor John V established Byzantine consular representation at Alexandria. He reviews commercial relations on pages 147-149, including the Mamluk need to import slaves. However, he provides no statistics, probably because none exist, on the number of slaves who passed through Byzantine-controlled navigational routes to Mamluk Egypt. Mansouri notes that there is little information on Byzantine merchants in Egyptian ports in the Muslim sources. He speculates that some horses may have come to Mamluk Egypt via Byzantium (pp. 164-165). There is nothing new in the author′s description of relations between Emperor Manuel II (r. 1391-1425) and the Mamluks. He gives a useful description of growing relations between the early Ottomans and the Mamluks, on pages 203-205.

While the Byzantinist will learn something from this book about Arabic sources on the Mamluks and some of the problems that pushed the Mamluks to seek relations with the Byzantines, he will find nothing new here about Byzantium and the Byzantines. In short, it is the author′s collection and citation of Muslim, that is, Arabic, sources on Mamluk-Byzantine relations that is the greatest contribution of this book. Even more desirable would have been the translation and analysis of these references for the use of non-Arabists, whether Byzantinists or medievalists, as A. A. Vasiliev did in his *Byzance et les arabes* for an earlier period of Byzantine-Muslim relations.

Mansouri does not show an up-to-date knowledge of the latest scholarship on Byzantium in this period. He omits reference, for example, to Kenneth Setton′s magisterial *Papacy and the Levant*, to books and articles on Byzantine economic history by Michael Hendy, other work on Palaeologan history by Alice-Mary Talbot and Speros Vryonis, studies on relevant aspects of Byzantine Jewish history by Zvi Ankori (on the Karaite Jews), and Steven Bowman generally on Jews in the Palaeologan Byzantine Empire. His familiarity with more specialized modern scholarship in article form seems to disappear early in the 1980s. He does not cite the latest editions of some important Byzantine sources

such as Niketas Choniates and George Pachymeres. Although Mansouri could not have known it when he finished the manuscript of his book, the 1995 doctoral dissertation (History, University of Chicago) of John B. Williams on the Genoese slave trade, ″From the Commercial Revolution to the Slave Revolution: The Development of Slavery in Medieval Genoa,″ provides valuable comparative material on the contemporary slave trade in the central and western Mediterranean, even though Genoa′s slave trade in the central and western Mediterranean was not a direct source for Mamluk slaves. This book is useful, but a more thorough and rigorous study is still desirable, together with a fuller exploration of the sources and their ambiguities. Mamluk historians should use this book with great caution as a guide or introduction to Byzantine topics, because the author is simply unfamiliar with some of the most important recent work and interpretations of the relevant Byzantine historical context.

STEFAN HEIDEMANN, *Das Aleppiner Kalifat (AD 1261): Vom Ende des Kalifates in Bagdad über Aleppo zu den Restaurationen in Kairo*. (Leiden: E. J. Brill, 1994). Pp. 424.

REVIEWED BY LUTZ WIEDERHOLD, Martin-Luther-University Halle-Wittenberg

Students of Mamluk history are often envied by their colleagues who work on other periods and areas of Islamic civilization for the abundance of historiographical and prosopographical sources at their disposal. It is true that certain phases of Mamluk rule over Egypt and Syria are documented in a much greater number of narrative sources than the preceding and subsequent periods of the history of Egypt and Syria—not to speak of other areas of the Islamic world. However, it must be kept in mind that, in these sources, certain periods and aspects of Mamluk history are hardly documented at all. Furthermore, over the past decades, students of Mamluk history have become more and more aware of the fact that the historiographical accounts cannot be taken at face value but must be examined from various perspectives.

The incompleteness and the potential tendentiousness of information in narrative sources has been a general problem of modern western historiography since its emancipation as an autonomous scholarly discipline, that is, since the beginning of the eighteenth century. It was at that time that western historians started to utilize systematically the results of smaller specialized scholarly disciplines—described as auxiliary sciences—in their attempts to reconstruct historical reality. In the book that is reviewed here, one of these auxiliary sciences, numismatics, serves as a critical tool in the examination of an important political and ideological aspect of the early history of Mamluk rule. According to the author, Stefan Heidemann, it was a number of coins struck in Aleppo in the name of the Caliph al-Ḥākim bi-Amr Allāh (659/1261) that aroused his interest in the particulars of the transfer of the Abbasid Caliphate from Baghdad to Cairo (pp. XI, 134). Generally, Heidemann′s focus is on the events between the murder of the last Abbasid of Baghdad, al-Mustaʻṣim, by Hülägü′s soldiers in 656/1258 and the demise of al-Ḥākim bi-Amr Allāh, the second Abbasid Caliph after the fall of Baghdad (d. 701/1302).

The contents of the book are organized in eleven chapters. In the first ten chapters, Heidemann provides a description of events that is mainly based on narrative sources (Mongol and Mamluk) and is occasionally compared with numismatic evidence. He presents a painstaking analysis of the relationship between the main protagonists of the fall and the restoration of the Caliphate. He devotes particular attention to the conflict between the two pretenders to the Abbasid Caliphate after the fall of Baghdad, al-Mustanṣir billāh and al-Ḥākim bi-Amr Allāh, and to the role of the military elite as represented by Sultan al-Ẓāhir Baybars (r. 658/1260-667/1269) and the Amir Aqqūsh al-Burlī. Chapter 11 contains a description of 161 coins and a discussion of their historical relevance. At the end of the book, 137 of these 161 coins are reproduced in plates.

CRITIQUE OF PREVIOUS STUDIES, GENERAL FRAMEWORK, AND THESES

Heidemann premises his study with some critical remarks on the current state of research on the Mamluk-Abbasid Caliphates of Aleppo and Cairo and on the role of Sultan Baybars (pp. 3-9). He describes the view prevalent among contemporary Western and Arab historians as oscillating between two different positions. According to one, Baybars restored the Caliphate in order to legitimate his regime ("Herrschaftslegitimation"); according to the other he did so in order to realize his own political aims ("Machtpolitik," p. 8).

Heidemann's approach, as he states, differs from previous studies in the following respects: (1) He views the overthrow of the Baghdad Caliphate not merely as the necessary result of the Mongol occupation but as the consequence of the differing ideological positions of the various groups involved. (2) Furthermore, he promises an explanation of the Mamluk-Abbasid Caliphates that is not exclusively based on ideological patterns like the justification of political power ("Herrschaftslegitimation"), but mainly on the reconstruction of the sequence of political events ("die Abfolge tagespolitischer Ereignisse," p. 9).

In his introduction, Heidemann refers to a great number of earlier studies on his subject. However, some of his general remarks on the present state of research and his project appear to be based on an artificial polarization of phenomena and approaches that might equally be viewed as interdependent. This, for example, is the case when he makes a distinction between an approach based on ideological patterns like "Herrschafts-legitimation," and one that focuses predominantly on the politics of the day when he explains the emergence of the Caliphates of Aleppo and Cairo (pp. 9, 11, 12). Also, his usage of the term "Caliphate" does not always indicate whether he means the abstract concept of caliphal rule, or the Caliphate as a political institution in interrelation with other institutions of legislative and executive power (pp. 9, 24, 27, 28 n. 2).

SOURCES AND METHODOLOGY, RESULTS

Heidemann's book is, among other things, an essay on the dialectics of event and description. He points to the fact that different historiographers—according to their confessional affiliation—put the overthrow of the Baghdad Caliphate into different perspectives (pp. 12-16). It is one of the strengths of the book that the author keeps in view these differences in the evaluation of historical information. In cases where his sources contradict each other or do not provide a full picture of events, he does not fill the gaps with presumptions. (One may find a few exceptions to this observation, as, for

example, the remark on rivalries between the tribes of the Āl ʻAlī and the Āl Muhannā, p. 131. But, even in cases like this, a hypothesis is clearly identifiable to the attentive reader.) One should also mention the fact that Heidemann largely refrains from obscuring the borderline between information and interpretation. Verbatim quotations of the Arabic text (in transliteration) on several occasions (pp. 26, 41, 62, etc.) enable the reader to form his own opinion.

The incorporation of numismatic evidence into his argumentation is of particular interest. He points to the importance of the *sikkah* (the mentioning of rulers on coins) for the chronology of political events (pp. 209-211). According to him, the *sikkah*—often neglected besides the *khuṭbah* as another expression of the submission to a superior power—is in some cases the only material source for the reconstruction of historical events. This is illustrated by a number of concrete examples. To mention one of them, the only non-literary proof for the existence of the Caliphate of Aleppo are several *dirham*s struck in the name of al-Ḥākim bi-Amr Allāh in 659/1261 (p. 134; on the mentioning of the Caliphate of Aleppo in narrative sources, see p. 133).

On the other hand, Heidemann emphasizes that, for the time examined, coins must not be regarded as a substitute for missing historiographical evidence. For example, the subjugation of local rulers of northern Mesopotamia like Badr al-Dīn Lu'lu' by the Mongols is not confirmed by numismatic evidence since the Mongols did not consider this form of recognizing their supremacy as important (p. 36).

In his conclusions, Heidemann makes reference to his methodological approach. He describes various historical developments as the result of political events (pp. 107, 197) as well as of diametrically opposed ideological positions among the Mongols and the Muslims concerning the notion of legitimate power (pp. 36, 44, 55, 56-57, 61, 102, 195).

Philologically, the book is sound. Only occasionally one finds cases of inconsistency in the transliteration of Arabic (for example *"ilā an-nabī"* against *"ʻalā d-darāhimi,"* pp. 72, 134 n. 9). One clear mistake is the transliteration of the Arabic term for civil strife as *"fiṭna"* instead of *"fitna"* (pp. 61, 62, 65).

To conclude, Heidemann has produced a valuable study on a subject which called for a comprehensive analysis. In view of the deficiencies of narrative sources his endeavors to incorporate numismatic evidence into his argumentation are useful. In principle, his methodological approach is identical with that of Reiske and other early representatives of Islamic numismatics. However, the wide range of sources and the critical discussion of the secondary literature lead him to original conclusions which offer a basis for further studies on Islamic coinage and on the early Mamluk period.

M. L. BENHASSINE, *Deux études sur la pensée économique d'Abderrahmane Ibn Khaldoun dans "Al Muqaddima"* (Algiers: Editions El-Adib, 1991). Pp. 54.

REVIEWED BY GILLES HENNEQUIN, Centre national de la recherche scientifique

From reading the preface (pp. 7-9), one might think that the author intended to rework his two articles dating from the 1970s into a single text. Ultimately he seems to have been content with a pure and simple reproduction of the originals in apparent

expectation of an Arabic translation to be made by one of his colleagues. The second article (pp. 25-46) is actually the older of the two (written in 1974, though released only in 1980), the other text (pp. 11-24) dating from 1977. In either case, M. L. Benhassine implicitly confesses to his having knowledge of the *Muqaddimah*[1] only from the first edition of the French translation by Vincent Manṣūr Monteil.[2]

The article from 1974 is entitled, with great precision, ″La pensée économique d′Ibn Khaldoun dans le chapitre V, tome II.″ Benhassine insists that it is indeed in that very chapter entitled ″Comment gagner sa vie?″ (″How to make a living″) that Ibn Khaldūn has collected ″l′essentiel de ses réflexions économiques″ (p. 25). The article from 1977 purports to complement the former by exploiting the wealth of the rest of the *Muqaddimah* (ibid.: ″. . . digressions, . . . remarques passagères sur la vie économique et ses imbrications avec le corps social de la société maghrébine des quatorzième et du quinzième siècles . . .″ -*sic*-scattered ″dans d′autres parties de l′oeuvre″), and proclaims its ambition for synthesis through the title ″La pensées économiques d′Abderrahmane Ibn Khaldoun (1332-1406)″ (p. 11).[3]

One need not stand on the authority (?) of Friedrich Engels to observe that ″les penseurs des formations sociales précapitalistes ont développé une réflexion économique et sociale″ preceding largely ″l′économie politique du capitalisme″ which did not become a science until the seventeenth century. Concerning the very purpose of the *Muqaddimah*, namely, how to understand ″les causes de la naissance, de l′évolution et de la décadence ou de la disparition de la civilisation,″ Benhassine apparently takes exception to Ibn Khaldūn′s alleged failure to resort in a more systematic fashion to the explication ″par l′activité économique.″ This Marxist infatuation, still common in the 1970s, seems ridiculous in the wake of the ideological collapse of the self-proclaimed ″socialisme scientifique″ (p. 8). The developments assigned to the principal concepts of Ibn Khaldūn are hardly original.[4] One can readily admit that on certain points—labor-value, intervention of the state in economic life, etc.—Ibn Khaldūn did make an appreciable advance over his contemporaries, but it is unlikely that one can speak meaningfully of ″identité conceptuelle entre les éléments de pensée économique d′Ibn Khaldoun et les fondateurs de l′économie politique classique anglaise″ (p. 44). His observations about money are largely illusory: one fears that a large part of what Benhassine believes he has discerned in the corresponding passages of Ibn Khaldūn are but a figment of his own imagination. The numerous and sometimes lengthy allusions of Ibn Khaldūn to gold and silver, to the *sikkah*, etc., (see index, p. 47) unfortunately contain nothing, as far as perception and comprehension of economic phenomena are concerned, that marks any substantial advance over, say, the period of the

---

[1]″Prolégomènes″ consisting of introduction (comprising invocation, foreword, and introduction *stricto sensu*) and book 1 (comprising preface and chapters 1-6) of *Kitāb al-ʿIbar*, or ″Reflections on the History of the Arabs, Persians, and Berbers.″

[2]Ibn Khaldūn, *Discours sur l′histoire universelle (al-Muqaddima)* new translation, preface, and notes, 3 vols. (Beirut, 1967, 1968). Second edition, revised (3 vols.) (Paris, 1978); the only significant addition to the first edition is to be found in vol. 1, pp. xli-xlviii: ″À la recherche d′Ibn Khaldûn.″

[3]Ibn Khaldûn, *Économie politique*, trans. Vincent Monteil, Classiques arabes, 6 (Paris, 1981) conveniently gathers together the most significant ″economic″ passages of the *Muqaddimah* drawn from the Beirut-Paris publication: chaps. 5, pp. 1-22; 3, pp. 36-41, 45, 48; 4, pp. 11-20.

[4]See Monteil, préface, vol. 1 (Beirut, 1967), xxv-xxxiv; M. Talbi, ″Ibn Khaldūn,″ *Encyclopédie de l′Islam*, 2nd ed., 3:849-855.

Geniza.[5] One is led to believe that the author of the *Muqaddimah*, like the author of the ″Traité des monnaies″[6] and of *al-Ighāthah*,[7] who happened to be his student at al-Azhar,[8] would continue to maintain with money the same kind of relationship that Monsieur Jourdain had with prose.[9]

The only change made in the new edition is the ″Index abrégé des terms économiques utilisés dans Al-Muqaddima″ (pp. 47-53) that Benhassine, ″pour permettre un suivi ou un approfondissement de l′étude des problémes économiques″ and according to highly subjective and therefore largely arbitrary standards, has compiled from the second edition[10] of the translation of Monteil and which is little more than a useless repetition of the ″Index des notions et des institutions″ figuring in the former (vol. 3, Paris, 1978, pp. 1365-1372).

Even if Benhassine′s arguments are not always persuasive to the reader, one would not want to mince matters with an author who, on the theme—as real today as six centuries ago—of the decline of the Maghrib, visibly and understandably shares the anguish previously experienced by Ibn Khaldūn. French speakers will add their unreserved admiration for the mastery demonstrated by Benhassine in his handling of their language.

ALEXANDER SCHEIDT, *Das Königheit von al-Karak in der mamlūkischen Zeit: Aus dem arabischen Geschichtswerk von Muḥammad ʻAdnān al-Bakhīt übersetz und ausführlich erläutert*. (Frankfurt: Peter Lang, 1992). Pp. 288.

REVIEWED BY DONALD P. LITTLE, McGill University

As all students of Mamluk history know, Karak was the seat of one of the seven provinces into which Mamluk Syria was divided, each being ruled by a governor appointed by the sultan in Cairo. More than any of these provinces, Karak was focused on a fortress, which bore its name. Constructed on a high spur by Crusaders in 1142, it commanded pilgrimage and caravan routes. This strategic prize was captured for Islam by the Ayyubids in 1188 and eventually fell to the Mamluks in 1263 during the reign of Baybars. Thereafter, while retaining its military and administrative importance in Transjordan, it figured frequently as a place of banishment and retreat for Mamluk dignitaries, most prominently for al-Malik al-Nāṣir Muḥammad, who used it as his headquarters before returning to power in Cairo for the third time and later sent four of his sons there for training, away from the various vices of the big city.[1] As one of the most imposing and celebrated fortresses of the Mamluk Empire, with numerous references in the sources to it and the province it controlled, it is not surprising that it should be chosen as a subject for separate research.

This was first done by no less a scholar than Muḥammad ʻAdnān al-Bakhīt, known in the West primarily as the convener of the Bilād al-Shām conferences held in Amman but also as author of several works relating to the history of Muslim Syria. As a young scholar at the American University of Beirut he submitted an M.A. thesis in 1965, later revised and published in 1976 as *Mamlakat al-Karak fī al-ʻAhd al-Mamlūkī*. In order to make this somewhat inaccessible work better known to Western scholars Alexander Scheidt translated, corrected, and amplified it, which he, in turn, submitted to Heidelberg University. If only as a curious specimen of an M.A. twice removed, the present work is a noteworthy piece of scholarship.

The book is divided into nine chapters plus an appendix, covering the following topics: (1) A sketch of the history of Karak under the Crusaders and Ayyubids. (2) The boundaries of the province of Karak and a description of its towns and villages under the Mamluks. (3) Pilgrimage sites located in the principality. (4) Its inhabitants, sedentary and Bedouin, Muslim and Christian. (5) Economic aspects. (6) Administrative officials, military and civilian. (7) History of Mamluk Karak. (8) Sketches of notables. (9) Notes, bibliography, indices. The appendix contains Scheidt's own brief survey of the history of Karak under the Crusaders, Ayyubids, and Mamluks.

Since almost all the chapters consist mainly of annotated lists of people and places, and since the notes, bibliography, and indices constitute half the book, it is obviously designed for reference rather than sustained reading. As such, it should be useful to scholars who might be interested in taking a more conceptual approach to the role of this province in the Mamluk state.

CARL F. PETRY, *Protectors or Praetorians? The Last Mamluk Sultans and Egypt′s Waning as a Great Power*. (Albany: State University of New York Press, 1994). Pp. 226.

REVIEWED BY MICHAEL WINTER, Tel-Aviv University

As the readers of *Mamluk Studies Review* are well aware, the Mamluk Sultanate has been the subject of numerous important studies, in part owing to the unusual wealth of the source material for that period (1250-1517). There are excellent studies about the army, bureaucracy, economy and finance, cities, religious life, higher education, minorities, art and architecture, and historiography of the Mamluk era. There are suprisingly few monographs about Mamluk sultans, and not enough orderly, detailed, and authoritative narrative history.[1] Carl F. Petry′s two books about the reigns and personalities of the Mamluk sultans al-Ashraf Qāytbāy (872-901/1468-1496) and Qānṣawh al-Ghawrī (906-922/1501-1616)[2] are a much needed addition to the list of sultans′ monographs and a coherent narrative history of the last half-century of Mamluk history. The two sultans were by far the most important rulers in the late Mamluk period. Their reigns were long and both were clever, experienced and powerful sultans, whose very different personalities dominated Egypt′s domestic and foreign policies.

Professor Petry has an unparalleled knowledge of the last half-century of the history of that sultanate, and his earlier contributions, particularly his *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981), have established his reputation as one of the leading historians in the field. The first book, *Twilight of Majesty*, presents a lucid and authoritative political history of the two sultans′ reigns. The book is a highly readable account of dramatic events, internal politics and international diplomacy, and wars. The focus is on the personalities and strategies of both sultans, but also gives fascinating profiles of their top military and civilian assistants and officers. Petry has based his narrative on the excellent Arabic sources, primarily the chronicles of Ibn Taghrībirdī, al-Ṣayrafī, al-Malāṭī, and Ibn Iyās. The writing is done with sensitivity, insight and empathy, yet with a scholar′s critical caution. Moreover, Petry demonstrates real literary talent. The style is rich and idiomatic, yet the second volume, *Protectors or Praetorians?* in particular,

[1]There are exceptions, some quite recent: Peter Thorau′s study of Sultan Baybars I (1987), Amalia Levanoni′s book about al-Nāṣir Muḥammad ibn Qalā'ūn (1995) and Ahmad Darrag′s study of Sultan Barsbāy (1961). As for political history, one should mention Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate*, *1250-1382* (London: Croom Helm, 1986) and P. M. Holt, *The Age of Crusades: The Near East from the Eleventh Century to 1517* (London: Longman, 1986), a useful introductory survey.

[2]Petry has decided to use the variant Qānṣūh rather than the more common Qānṣawh. In the list of the Mamluk sultans on page ix of *Twilight of Majesty*, there is an error concerning al-Ghawrī′s reign which was 1501-1516 (not 1517), and Ṭūmānbāy′s reign which was from 922 to the first days of 923 (1516 to the first days of 1517) and not 922/1517. This is obviously a technicality; the dates in the relevant chapters are correct.

has compelled the present reviewer, who is not a native speaker of English, to consult his dictionary more frequently than usual, to find many of the text′s words and phrases defined as ″formal,″ ″literary,″ or even ″old use.″

The second book, *Protectors or Praetorians?*, is more thematic than chronological and is an analysis of the Mamluk regime′s characteristics and the strategies employed by the two sultans to survive against internal and external threats. Petry examines the ways the rulers exercised power and ponders over the historical, societal, cultural, and even ethical meanings of the mechanics of Mamluk government in that period.

The main theme that runs through both books is the comparison between the two sultans. This approach is natural, and was done by their contemporaries, most notably Ibn Iyās, the last and one of the greatest representatives of Mamluk historiography. Qāytbāy was regarded by his contemporaries and by the following generations as a model sultan: a just ruler, a pious Muslim, a brave warrior, a wise and benevolent monarch. Qāytbāy was also successful in his foreign policy. He was victorious over Shāh Suwār, the Turcoman chief who challenged Cairo′s suzerainty in Anatolia, handled skillfully the aggression of Uzun Ḥasan on the sultanate′s northern borders, and even forced the mighty Ottomans to respect the *status quo* in the buffer zones separating the two empires in Anatolia after a series of fierce battles from 1484 to 1491. In his obituary of Qāytbāy, Ibn Iyās eulogizes him in superlatives: ″His career developed in glory and majesty. . . . He was serene and dignified, correct in decorum, invariably respected, projecting an aura of majesty to official ceremonies. . . . Although tainted by greed, he was the noblest of Circassian rulers, their finest.″[3]

Inevitably, Qānṣawh al-Ghawrī was compared to Qāytbāy and was found wanting. Here is what Ibn Iyās has to say in his obituary of the last effective Mamluk sultan: ″Al-Ghawrī′s sultanate lasted fifteen years, nine months, twenty-five days, each of which weighed down on the people like a thousand years. . . . Truly the list of al-Ghawrī′s misdeeds was endless.″[4] Ibn Iyās acknowledges al-Ghawrī′s strong personality and talents, but presents him as a selfish and cruel *bon vivant*, and a grasping tyrant.

Petry is careful to look at the chronicler′s judgment critically. He calls Qāytbāy ″Revered Conservator,″ and defines his main goal and achievement as the maintenance of the *status quo*: ″That Qāytbāy had not a single new idea about governing his realm not one of his biographers found blameworthy.″[5] It is worth noting that Qāytbāy′s image as almost the ideal ruler was adopted not only by Ṭūmānbāy, al-Ghawrī′s nephew and successor, who demonstratively followed Qāytbāy′s (and not al-Ghawrī′s) style of rulership, but even the Ottomans, who fought him in Anatolia and finally destroyed the Mamluk Sultanate. The *Qānūn-nāme-i Miṣir*, of 1525, the code regulating the administration of Ottoman Egypt, expressly calls for adherence to ″Qāytbāy′s laws″ in administrative or fiscal matters.

While recognizing the unsavory sides of Qānṣawh al-Ghawrī′s character, Petry correctly notes that we are almost wholly dependent for the description of al-Ghawrī on one source—the chronicle of Ibn Iyās, who makes no secret of his intense dislike for him, especially when compared to Qāytbāy. Petry finds al-Ghawrī far more original and interesting than his revered predecessor, and calls him ″Vilified Innovator.″ Indeed, Petry

[3]Translated by Carl Petry, *Twilight of Majesty*, 15-16. Petry notes that Ibn Taghrībirdī′s opinion of Qāytbāy, whom he served personally, was more reserved and critical.
[4]Ibid., 119, 121.
[5]*Twilight of Majesty*, 234; *Protectors or Praetorians?*, 224.

emphasizes the contrast between the deeply conservative Qāytbāy, who left things as they were, and al-Ghawrī, who ″experimented with artillery, recruited new military units from outside the Mamluk caste[6] or manipulated *waqf*s to pay them.″ Predictably, these innovations raised apprehensions and opposition. Petry even speculates what could have happened, had the Ottomans not put an end to the Mamluk state and with it to al-Ghawrī′s military and financial experiments before they had the opportunity to mature into substantive reform.[7] I am not sure that these speculations do not go too far; after all, al-Nāṣir Muḥammad, Qāytbāy′s incompetent son and successor (1496-1498), also tried to create a corps of arquebusiers, and Qāytbāy too converted income from his *waqf* funds into a private reserve, the sultan′s personal fisc, as Petry himself shows.[8] My own feeling is that precisely since Ibn Iyās′s evidence is almost all we have about al-Ghawrī′s personality, Petry′s judgment of him is too lenient. As Petry′s own account demonstrates in many instances, the sultan was justly ″vilified″; it is his achievements as innovator which I doubt. Yet these slightly different evaluations are admittedly subjective, and impossible to prove conclusively in a scholarly argument.

The personal contrasts between the two sultans are well documented, and convincingly pointed out by Petry. For example, both sultans faced a similar predicament when they had to decide how to host an Ottoman prince who sought shelter in their court from the sultan in Istanbul, Cem in Qāytbāy′s case, Qurqud in al-Ghawrī′s. The Mamluk sultan had to weigh the obligation of royal hospitality (and possible political benefits in the future) against the need to refrain from antagonizing the Ottoman sultan. Petry concludes: ″Restraint marked Qāytbāy′s approach, excess al-Ghawrī′s.″[9] Or consider the two sultans′ entirely different approach to religion: for Qāytbāy piety influenced his actions, while for the other, display compensated for his oppression. Piety versus pomp: most of Qāytbāy′s lavish expenditures promoted rituals or structures devoted to religious service; al-Ghawrī preferred festivals or edifices that advertised the regime′s beneficence in more secular ways.[10]

The second of Petry′s books surveys the central issue of Mamluk foreign policy, including the position of Syria in the sultanate,[11] but its most original contribution is the writer′s discussion of Mamluk government and economy, again relying on the chronicles and other literary sources, as well as on his pioneering study of the *waqf* documents. Petry examines the conditions of the exploited subjects of the sultanate, who suffered from the rulers′ growing demand for funds. During Qāytbāy′s reign extra money was needed in the first place to finance his sixteen northern campaigns; al-Ghawrī needed the money mainly to withstand the pressure of his troops. Assessing Egypt′s agriculture, Petry writes: ″The evidence, such as it is, depicts an inordinate heightening of demand rather than a decline in output.″[12] Egypt′s craft industries in the late Middle Ages were as accomplished and sophisticated as ever, but there were few changes in methods of production. Part of the

[6]The arquebusiers, who were armed with hand guns which the Mamluk horsemen could not and would not use.
[7]*Protectors or Praetorians?*, 225.
[8]Ibid., 199-200.
[9]*Twilight of Majesty*, 182.
[10]*Protectors or Praetorians?*, 158-159.
[11]Ibid., chap. 3.
[12]Ibid., 107-108.

explanation is that craftsmen had little incentive to increase their output if they faced the certainty of its expropriation.[13] Likewise, commerce exhibited signs of languor—local stagnation and foreign rivalry. The late Mamluk period witnessed stasis instead of growth.[14]

Chapter 6 examines methods, norms and practices of the people′s exploitation by the sultans. Petry rightly focuses his attention not on bureaucratic structures but on clientage, rewards, and risks of the sultans′ men. The stakes were high, but as Petry writes ″al-Ghawrī′s agents, excepting Zaynī Barakāt, came to violent ends at his hands. When their usefulness no longer matched the antipathy they provoked from his soldiers, al-Ghawrī turned on them and they suffered a scapegoat′s fate.″[15] Al-Zaynī Barakāt ibn Mūsá is indeed the most colorful figure among al-Ghawrī′s assistants—a man who rose from obscure origins to unprecedented power, owing to his resourcefulness in expropriating funds from the rich through extortion and torture and serving at the same time as a popular *muḥtasib* (market inspector), who alone succeeded in maintaining price stability. It should be mentioned also that the Ottoman authorities later found him indispensable. Another fascinating example of an opportunist in the sultan′s service presented by Petry is Sarī al-Dīn ibn al-Shiḥnah, a Syrian jurisconsult who betrayed his professional and religious conscience in al-Ghawrī′s service. The book describes and discusses the uses and limits of loyalty, confiscation, and torture in a thoughtful and vivid way which has not been done before in Mamluk studies.

Clearly, the author of *Protectors or Praetorians?* believes that by the late fifteenth and early sixteenth century the Mamluks merited the epithet of Praetorians due to their venality and lawlessness. He shows that the Mamluk regime became responsible for economic lethargy: ″A regime dedicated to upholding the status quo rarely encourages entrepreneurship.″[16]

In concluding this review of two truly remarkable additions to the growing research library on the Mamluk period, I would make two suggestions: (a) *Twilight of Majesty* could have benefited from a chapter bridging the reigns of the book′s two protagonists. The intervening five years, 1496-1501, during which four lesser sultans reigned, should have been covered, even if the study rightly focuses on the two great sultans. Students would benefit from a complete chronological coverage of the period. (b) The account of military and diplomatic relations between the Mamluk Sultanate and its neighbors, particularly the Ottoman Empire, is entirely based on the Arabic chronicles. The study could benefit from a view from Istanbul about the development of the Mamluk-Ottoman rivalry. There are important primary and secondary sources in Turkish whose findings could be integrated into Petry′s book (this applies especially to *Twilight of Majesty*).

NASSER O. RABBAT, *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture*. (Leiden: E. J. Brill, 1995). Pp. 339.

REVIEWED BY DORIS BEHRENS-ABOUSEIF, University of Munich

Nasser Rabbat′s study of Cairo′s Citadel consists of eight chapters that describe the genesis and evolution of the Citadel until its apogee in the last phase of al-Nāṣir Muḥammad′s reign. Chapter 1 relates the history of Ṣalāḥ al-Dīn′s foundation of Cairo′s Citadel as the seat for Egypt′s government following the fall of the Fatimid Caliphate, and shows that it was conceived as a defensive structure reflecting the founder′s military upbringing and the Syro-Mesopotamian and east Anatolian tradition of that period, to which the founder belonged. Chapter 2 describes the Citadel in its present configuration. Here not only primary and secondary sources and various plans are used for the topography, but also recent excavations of the 1980s. In his capacity as architect the author is moreover able to provide his own plans of certain areas made especially for this study. Someone who is not already familiar with Cairo′s Citadel may find it difficult, however, to follow certain passages, the descriptions not always being lucid. Perhaps some architectural details, such as the measurements, should have been left out of the topographical text, and either dealt with separately or simply indicated in the scales of the figures.

Chapter 3 is a reconstruction of the Citadel in its Ayyubid form, discussing Casanova′s and Creswell′s previous interpretations and placing it in the historical context of the period. Rabbat gives Ṣalāḥ al-Dīn′s foundation inscription special attention. In the course of this discussion, he makes a comparison between the use of Sūrat al-Fatḥ in the inscription and the citation of this Quranic text at the Mashhad al-Juyūshī built by Badr al-Jamālī in 1085, concluding that Ṣalāḥ al-Dīn′s inscription, which commemorated his ascendancy and celebrated his victory by citing this same Quranic text, was emulating at the same time Badr al-Jamālī′s military victories. A few pages later the author states that Ṣalāḥ al-Dīn′s inscription has extraordinary features such as a ″break with established epigraphic tradition″ in order to express the great significance the Citadel had for its builders (p. 73). There is a contradiction here with the former comparison, but the latter interpretation is more convincing. It is difficult to believe that the colossal Citadel would need any reference to Badr al-Jamālī′s tiny construction erected one hundred years earlier. Sūrat al-Fatḥ is universal and appropriate to be used for any victory commemoration. When he compares the inscription′s style with that of al-Qāḍī al-Fāḍil, Ṣalāḥ al-Dīn′s famous secretary, suggesting that it might have come from al-Qāḍī′s own pen, Rabbat makes a very interesting statement.

The statement that ″a citadel in an Islamic city would have had a congregation mosque, so Ṣalāḥ al-Dīn′s plan must have provided for one, although no source credits him with building it″ (p. 65) needs rectification. Friday mosques were not common in citadels at that time in Egypt or elsewhere; al-Ṣāliḥ Najm al-Dīn′s citadel at Rawḍah, for example, did not have a *jāmi‘*. The Ayyubids, who adhered to the Shāfi‘ī rite, were cautious not to have more than one Friday mosque within an urban agglomeration, a dogma shared also by the Mālikī rite. Therefore Ṣalāḥ al-Dīn canceled Friday prayer at al-Azhar, leaving only al-Ḥākim′s mosque as the *jāmi‘* of al-Qāhirah and ‘Amr′s mosque as that of al-Fusṭāṭ. In spite of its significance, the Citadel in the Ayyubid period was not conceived from the

outset as a city in its own right. It was al-Ẓāhir Baybars who allowed more Friday mosques to exist in Cairo; Friday prayer at the Citadel was probably due to al-Ẓāhir′s, and not to an Ayyubid, initiative. A pre-existing *masjid*, however, could have been transformed into a *jāmi'*.

Chapters 4 through 7 go on with the reconstruction of the Citadel in the respective periods of the early Baḥrī Mamluks, the early Qalāwūnid dynasty, al-Nāṣir Muḥammad′s early reign (1310-25) and, finally, his third period (1333-41). Here the author exploits thoroughly the copious descriptions of Mamluk literary sources and tries to extract an image as exact as possible from the texts. Whereas the Citadel′s walls survive in very good condition, the Mamluk residential structures, where most of the architectural iconography was concentrated, have almost entirely disappeared.

Chapter 5 includes a comment on the fragment of a mosaic panel from an *īwān* that Rabbat identifies as the Īwān Ashrafī, recently excavated at the Citadel. The panel represents an architectural structure, which the author interprets as a celebration of conquests and territorial expansion. There are, however, Mamluk art objects with similar architectural representations: An anonymous bowl at the Museo Nazionale of Florence, published by D. S. Rice,[1] shows three houses with pergola amongst trees, very reminiscent of the one published in this book (p. 163, fig. 23). Architectural settings can also be seen on early Mamluk glass beakers at the Walters Art Gallery, Baltimore, published by Esin Atıl.[2] Whereas the bowl is uninscribed, the beakers bear votive inscriptions for an anonymous sultan together with Christian themes. The architectural structures on the beakers belong to the pleasance type as do those on the bowl and at the Īwān Ashrafī, where they are set amidst trees and birds and with pergolas including figures. It is possible, therefore, that architectural representation was a decorative topos in early Baḥrī Mamluk art, referring to royal pastimes, as do musical scenes, thus bearing auspicious meanings.

In his lexicographic discussion of architectural terms, the author is looking for an ″exact meaning″ (p. 217), which, as he shows, proves to be impossible. This is not surprising; there is a large number of similar examples that rather indicate the ambivalent character of architectural terms used in historiography as well as in *waqf* documents, and that cannot be pinned down to a specific architectural form. The word *masṭabah* in the Mamluk period refers to a bench, to a stage, and to a hippodrome; *qā'ah* refers simultaneously to a reception hall, to an entire palace, and also to a factory or workshop; *rīwāq* means a gallery in a mosque, an apartment, and a hall in a palace; *isṭabl* designates a stable and it refers to an important palace, Isṭabl Qūṣūn. Epigraphy refers to some mosques and palaces alike with the vague term *makān*.

Coming to the origin of al-Nāṣir Muḥammad′s Īwān Kabīr, which is a basilical plan combined with a dome, the author rightly refers to the Umayyad tradition of basilical audience halls (p. 256). In fact, the combination of the tripartite ground plan with a dome already exists at al-Aqṣá Mosque in Jerusalem and it is taken over, in a less oblong shape, in Fatimid shrines. Rabbat rejects, however, the continuity of this pattern in Fatimid shrines, which I demonstrated earlier, with the argument that the shrine plan derives from

2*Renaissance of Islam: Art of the Mamluks* (Washington, DC: Smithsonian Institution Press, 1981), 125, 126, 144.

the *majlis*.[3] He overlooks here a fundamental difference between the shrine and the *majlis*, which is the absence of the dome in the latter. The Fatimid shrine plan is not only a combination of a tripartite plan with a dome, but it shares with the Īwān Kabīr, furthermore, the square instead of the oblong configuration and moreover, as at Sayyidah Ruqayyah and Yaḥyá al-Shabīh, the ambulatory passage around the dome, which in both cases fulfills ceremonial functions. Being chronologically, geographically, and formally closer to the Īwān than the Umayyad Syrian tradition, the late Fatimid shrine plan must represent an intermediary stage.

Rabbat identifies the Dīwān al-Ghūrī mentioned by Evliya Çelebi as the Īwān Kabīr, arguing that it was misnamed Dīwān al-Ghūrī before its name changed again to Dīwān Yūsuf (p. 245). There is confusion here. Evliya makes a clear distinction between what he calls ″Divanhane-i Sultan Gauri″ and the Īwān Kabīr or Divanhane of Qalāwūn [*sic*] and also the *qaṣr* which he calls Yusuf Köşkü. The Īwān Kabīr is described as Old Divanhane, having forty-four columns (*'amūd*) made of stone known only from Aswan (i.e., granite). He attributes it, wrongly however, together with the mosque, to Qalāwūn instead of to his son.[4] What Evliya calls the ″Yusuf Köşkü″ is the *qaṣr*, known in the Ottoman period as Qaṣr Yūsuf and used at that time as a factory for the *kiswah* of the Ka'bah (p. 566). When referring to the Dīwān al-Ghūrī, Evliya mentions it as having a flat roof resting on wooden poles (*direk*), without dome, and being used as audience hall of the Ottoman pashas (p. 179). The pashas never dwelt at the Īwān or that part of the Citadel, but only in the Ḥawsh section, which had been rebuilt almost entirely by al-Ghūrī.[5] Not only these clear descriptions but also his placement of al-Ghūrī′s hall as connected to administrative buildings and next to Qāytbāy′s ″Divanhane,″ itself overlooking the mausoleum of Imam al-Shāfi'ī, leave no doubt that it was part of the Ḥawsh and could not have been mistaken for the Īwān. Evliya Çelebi dwelt many years at the Citadel and knew its history and read its inscriptions. We should trust him in this matter.

To complete the picture of the Īwān, Rabbat reconstructs as well the Dār al-'Adl ceremonial that took place therein, and connects it with the spatial organization, illustrating this with drawings. The last chapter, ″The Citadel and the Mamluk System,″ offers an interesting and convincing interpretation of the Citadel′s topography, which Rabbat links with the structure of the Mamluk army, distinguishing between the private or inner (*juwānīyah*, *khāṣṣakīyah*) troops of the sultan, and the rest of his *mamlūk*s, showing the correspondence between the function and status of the various contingents and their settlement in relation to the Sultan′s palace. By linking the apogee of the Citadel with Cairo′s expansion, the author fills out the context of the royal residence to show its impact on the neighboring areas, al-Qāhirah′s southern quarters, and to demonstrate al-Nāṣir′s ambitious schemes for his capital.

Nasser Rabbat′s book demonstrates a sound knowledge of Mamluk history and society together with good bibliographical work and informative architectural surveying. The author also consulted *waqf* documents when dealing with lexicographic analysis, admitting that they were not of great help, however, for his research on the Citadel. His investigative methods are very thorough; occasionally the author tends toward

overinterpretation, which makes the reading sometimes tedious. The great merit of this book is its approach, which always connects the architecture with its social and historical setting, seeking the function it was created to fulfill and the circumstances that accompanied its evolution, making it intelligible and interesting. The book succeeds in revealing the greatness of a monument, unique in many respects, not only in Islam but probably in the whole medieval world.

MARTINA MÜLLER-WIENER, *Eine Stadtgeschichte Alexandrias von 564/1169 bis in die Mitte des 9./15. Jahrhunderts: Verwaltung und Innerstädtische Organisationsformen*. (Berlin: Klaus Schwarz Verlag, 1992). Pp. 331.

REVIEWED BY CARL F. PETRY, Northwestern University

The revision in approaches to the social history of the Muslim Middle Ages that began with the publication of Ira Lapidus's *Muslim Cities in the Later Middle Ages* (Cambridge, 1967) almost three decades ago has transformed our thinking about many aspects of urban life in the central Islamic lands. Yet an overwhelming focus on a few prominent cities, those that inspired a diverse group of writers to pen a range of sources sufficiently broad and textured to enable a meaningful qualification of assertions appearing in narrative chronicles, remains a methodological problematic, if not a defect, of this revision.

The author's attempt to write a coherent analysis of Alexandria during the Ayyubid and Mamluk periods therefore represents a laudable initiative. Anyone familiar with the secondary literature, in both Arabic and Western languages, generated over the preceding thirty years is well aware that Cairo, Damascus, and Aleppo have been worked over to a degree verging on excess. This writer's own concentration on the Egyptian capital is a case in point. Yet, as Müller-Wiener's monograph abundantly substantiates, such a concentration did not occur because of happenstance infatuation on the part of modern historians with the "grande métropole," at the expense of important provincial towns. The sources available have themselves oriented even revisionist scholars toward the capital cities. Even so vital a center of commerce and manufacture as Alexandria did not induce contemporary writers to compile a series of works showcasing the medieval city. The author confronts this situation in her opening chapter addressing the coverage provided by surviving texts. She notes that the late medieval prosopographer al-Sakhāwī mentions four so-called histories of Alexandria in his treatise on historiography: *I'lān bi-al-Tawbīkh*. One of these was misclassified, since it is in fact a biography of Alexander the Great. The three others do not provide significant data on the city's administration or economy. Müller-Wiener has thus turned to the published sources that focus primarily on the capital Cairo, and mention events or persons prominent in Alexandria's history as asides. This monograph was conceived as a library exercise, with no on-site consultation of either archival documents (charitable trusts [*awqāf*] for the most part) or unedited manuscripts. Whether such an inquiry would have significantly altered the author's findings about the political economy of medieval Alexandria is open to question.

The monograph begins with an outline of Alexandria's political history to the extent that it may be gleaned from the sources examined. This survey essentially presents a list of events or crises that attracted the attention of writers based in Cairo or the Syrian capitals, along with a discussion of individuals salient in these developments. The author observes that the status of Alexandria, traceable from the Fatimid era onward, evolved from a semi-autonomous border entrepôt to a district within the west Delta province of al-Buḥayrah, and finally, after 767/1365, reverted to an autonomous province. The year 1365 was important since the author regards an event in that year as the pivotal event in the city's decline. Peter I of Lusignan, King of Cyprus, launched a maritime invasion against Alexandria that left much of the town in ruins and implanted an abiding paranoia over Frankish aggression in the Mediterranean within the Mamluk regime. The authorities in Cairo augmented the military rank and defensive capability of the city's governor. They replaced the *wālī,* a junior amir of forty subordinate to superiors in both Damanhūr and Cairo, with a *nā'ib* who was a senior amir of one hundred empowered to act independently on the sultan's behalf for the city's protection.

The author's subsequent discussions: of Alexandria's administrative patterning, and the roles of its senior jurists, financial supervisors, market inspectors, religious scholastics and Sufi mystics, rely heavily on generic descriptions of these figures in Arabic texts and secondary literature. Much of this material covers ground thoroughly trodden by specialists in the field, who will be the monograph's primary audience. Although the author has persuasively demonstrated the paucity of data illuminating classes of society below the military, mercantile, and scholastic elites that predictably dominated the city's ruling hierarchy, one does ponder the lack of attention paid to the contexts of commercial organization or urban unrest as these were manifested in this particular setting.

Many of the author's explanatory discourses deal with urban conditions that prevailed widely throughout the central Islamic lands, with little specific relevance to Alexandria. It is possible that the Arabic sources are not conducive to the production of a study similar to Jean-Claude Garcin's masterful analysis of Qūṣ in Upper Egypt.[1] The latter work also recognizes lacunae in primary sources, but it delves further than the book under review into the distinctive consciousness of the regional entity it reconstructs. One could hardly argue that Alexandria loomed less vividly in the imagination of contemporary writers than did Qūṣ, a smaller and more isolated garrison base defending the overland spice route between the Nile and the Red Sea. Garcin himself readily acknowledged the fortuitous survival of al-Udfuwī's biographical compendium[2] that preserved many intimate details on individuals active in that town. Nonetheless, one comes away from Garcin's nuanced analysis with a heightened respect for the insights an extended encounter *in situ* with the sources can promote.

The author also states that an objective of her monograph is to assess Alexandria's decline from an affluent commercial metropolis to a depressed regional port. This is indeed a significant issue, but one minimally elucidated since the monograph terminates rather abruptly with the mid-fourteenth century when the Levant trade with Europe was still important. The extensive commentary by the late fifteenth-century chronicler Ibn Iyās, who

[1]*Un centre musulman de la haute-Égypte médiévale: Qūṣ* (Cairo: Institut français d'archéologie orientale, 1976).

[2]*al-Ṭāli' al-Sa'īd al-Jāmi' Asmā' Nujabā' al-Ṣa'īd* (Cairo: al-Dār al-Miṣrīyah lil-Ta'līf wa-al-Tarjamah, 1966).

attributed the deterioration of Alexandria to the rapacity of the Circassian sultanate, is largely omitted (with the exception of his lament over the city's woeful condition in 1515, p. 89).

The preceding remarks should not be construed as a dismissal. The author's claim about the state of the sources should indeed give pause to those seeking a detailed understanding of Islamic urban history outside the heavily documented centers. She has thoroughly sifted through the texts available in published editions to produce a study that plausibly traces the evolution of Alexandria's position within the administrative structures of medieval Egypt—no small feat. I do believe that a study of this kind would benefit from on-site research and reflection. Such questions as the relevance of surviving *waqf* documents to the elite sponsorship of charitable foundations in the city could be explored.

The monograph, despite careful preparation, is dotted with a few errors, due more to typographical misprints than to author oversight. The example of Shaykh Abū al-'Abbās, which should read Abū al-Ḥasan, in reference to the founder of the Shādhilī order (p. 269, line 19) may be attributed to a mistake by the typist or word processor. These are minor and do not detract from the monograph's value.

BERNADETTE MARTEL-THOUMIAN, *Les civils et l'administration dans l'État militaire Mamlūk (IXe/XVe siècle)*. (Damascus: Institut français de Damas, 1991). Pp. 516.

REVIEWED BY W. W. CLIFFORD, University of Chicago

Since Weber's famous designation of the bureaucracy of the New Kingdom of Egypt as the historical model of all later bureaucracies, any study of Egyptian administration is necessarily welcome. Looking into the late Mamluk period, Martel-Thoumian has chosen to study not so much bureaucracy as bureaucrats themselves. Certainly there is some justification for this. Weber after all had little to say about such administrators except that they represented an "Oriental-Egyptian type." That is, they were organically stratified, tradition-bound, and irrationally oriented empiricists shaped by the eternal dynamic of Egypt's *Naturalwirtschaft*. Whatever the structural relationship between ancient and medieval Egypt, Martel-Thoumian has wisely moved beyond Weber's idealization of a functional bureaucratic personality to study actual civilian administrators in the round. Indeed, her attempted reconstruction of their social milieu has led Jean-Claude Garcin, who wrote the preface to her book, to embrace Martel-Thoumian's work as an example of the new "Histoire 'totale'."

Still, Martel-Thoumian's study does allow one to see something of the extent to which the administrative environment reflected a Weberian division between bureaucratic and patrimonial/prebendal societies. Did administrators, for instance, enforce a guild-like closure of their elite? Martel-Thoumian claims they maintained "an open milieu" (pp. 84, 433), preserving especially their provincial ties (p. 85). Did administrators enjoy tenure of office? Martel-Thoumian makes clear that they served entirely at the pleasure of the ruler, with whom they enjoyed at best a relationship "always full of ambiguity" (p. 161). Were public and private resources segregated? Since, as she suggests, the guiding vision of civil administrators was to acquire as much wealth and property as possible during their

uncertain tenures, that separation seems unlikely. Was pecuniary compensation regulated? She finds little evidence of salaries, only monthly rations (p. 348), which may have encouraged at least some functionaries to supplement their earnings through parallel commercial careers (p. 350). To what extent were careers based on seniority? She argues that they were established and regulated almost entirely on the bases of heredity, clientelism, and venality. Without any apparent collegial organization to engender group solidarity, there were no collective norms in which seniority might have prevailed, ultimately, to protect civil administrators from sultanic whim. Clearly Martel-Thoumian means us to see ninth/fifteenth century Egypt not as a *Beamtenstaat* but a mere *Bureaukratie*—a civil officialdom full of arbitrary, grasping, and politically dependent families serving their own parochial interests.

Indeed, the family looms large in her study. Like the earlier efforts of Joan Gilbert and Carl Petry, her work affirms the value of prosopography as a tool for reconstructing historical elites through their personal lives, in this case, lives dedicated to the transformation of bureaucratic families into administrative dynasties. This is best reflected in perhaps the most original feature of her analysis—the social uses of matrimony. Martel-Thoumian theorizes in fact two types of marriage strategies: the ″political strategy″ and ″economic strategy.″ The former, based on exogamy, was meant to reinforce the prominent but often uncertain social status experienced by civil administrative families. The latter, based on endogamy—particularly with the daughter of the paternal uncle (*bint al-ʿamm*)—was intended to help preserve family resources. Unfortunately, she can shed no light on the impact of polygamy in the ″economic strategy.″

The ″political strategy″ centered around concluding marriage alliances principally with the *umarā*ʾ as well as with other prominent administrative families. Martel-Thoumian is not really on any new ground in her assertion that the civil administrators of Circassian Egypt identified closely with the *umarā*ʾ, whose *dīwān*s formed a ″nursery″ (*pépinière*) for state bureaucracies (p. 131). Indeed, she largely reiterates conclusions reached by Petry a decade ago about the close clientelistic relationship between the *umarā*ʾ and administrators, especially those of Syrian or Coptic origins. She argues more provocatively, however, that civil administrative families held other social elites—clerical, judicial, and mercantile—in considerably less matrimonial esteem. She believes marriage relationships with clerical and judicial groups were infrequent because often such people were clients of prominent administrators, who exercised their ″discretionary powers″ to obtain posts on their behalf. With commercial groups, there were no matrimonial affiliations whatever. She, at any rate, can find no trace of them (p. 369), despite the likelihood that some civil administrators must have come themselves from commercial backgrounds (p. 130). The mystery deepens since a majority of the administrative families studied lived in two of the most important centers of economic activity in Cairo—al-Qāhirah and Būlāq. Moreover, she believes that in al-Qāhirah at least some of the lesser functionaries living around the *sūq*s may have owned shops; she further speculates that other civil administrators engaged in parallel commercial careers.

The lack of intimate ties between administrative and especially mercantile elites does not seem readily explicable, certainly when compared with other societies such as China, where merchants and bureaucrats were often closely intertwined historically. Ultimately, Martel-Thoumian has been unable to develop our understanding about the place of merchants in the Circassian civil elite much beyond where Petry left it more than a decade

ago. The problem is deserving of greater discussion since any relationship between governmental and entrepreneurial elites bears on the larger issue of capital formation in traditional societies. One possible answer to this social distance lies in her suggestion that prominent civil administrative families, through their acquisition of landed property largely for conversion into *awqāf*, may have developed an attitude ″latifundiaire″ (pp. 384, 430). This cultural identification, reinforced no doubt by their social climbing among the Mamluk *Landadel*, may have inhibited administrative families from greater social intercourse with other groups, including those who derived their incomes chiefly from commerce rather than land.

Martel-Thoumian provides little cultural context for evaluating such things as social attitudes. She has described in great detail the origins, functions, and careers as well as marital connections of civil administrators. Yet, the sum total of these empirical observations does not seem to account entirely for their social role in the Circassian period. Indeed, this underscores the central paradox of Martel-Thoumian′s study: although these administrators possessed a social milieu they did not ultimately constitute a ″coherent social group.″ This is all the more curious since she maintains that, while perhaps geographically and confessionally diverse, these functionaries issued generally from the same social (secretarial/judicial) environment.

This paradox is an issue of no small importance for Circassian history. Scholars have long viewed the ninth/fifteenth century as a period of systemic decline of Mamluk society driven largely by a financial collapse in which Mamluk bureaucrats were highly complicit. Martel-Thoumian has not perhaps explored this issue as fully as it deserves. She does suggest that civil-administrative families were too socially fragmented by competition for status and resources to develop the same sort of social solidarity which, she believes, allowed the ʻ*ulamā*ʼ to act autonomously of Mamluk rapacity. Though this is a largely materialist view, she also indicates a more cultural explanation for this lack of ″esprit de corps.″ Though pious and educated, civil administrators, she believes, failed to extend their role as ″cultural guardians.″ One infers that, unlike the earlier Confucian *chün-tzu* or the later Prussian *Berufsmensch*, ninth/fifteenth century Egyptian civil administrators did not constitute an intelligentsia. Though educated, they were not it seems an intellectually unitary group whose actions reflected a social knowledge of the relationship between structure and belief in their society. They exercised no mediatory function between social groups and cultural ideas; they were content apparently to remain passive transmitters of ruling class interests. Certainly they did not act as spokesmen for social groups unable to speak for themselves. Martel-Thoumian does not share Petry′s view about the constructive, if symbolic, social role played by the Circassian civil administrative elite in society; in any case, she does not see these administrators intervening meaningfully on behalf of the communities that they oversaw.

Though certain administrators enjoyed access to rulers, the administrative elite did not seek to play a role equivalent to the ʻ*ulamā*ʼ in influencing the direction of state policy; weak matrimonial links between administrators and clerics perhaps underscore this disparity in social consciousness. Certainly, civil administrators made no intellectual claim to a ″Mandate of Heaven″ by which they might have converted personal influence over rulers into direct power. As Martel-Thoumian puts it, they were hardly a ″noblesse de robe″ (p. 435). No Mamluk sultan need have feared a *Beamtenrevolution* conducted by radicals ″in dressing gown and slippers.″ Still, Petry has suggested recently that late

Mamluk government experienced ″tokens of propensity for change at the final hour.″ Was a cultural rift emerging between ″traditionalists″ and ″modernists″ within the late Mamluk bureaucracy, such as affected the late Ottoman administrative elite a half millennium later? Might this rift have been reflected in a split between secular and *adab* education? In light of the recent works of Jonathan Berkey and Michael Chamberlain, one regrets Martel-Thoumian′s failure to discuss more fully the role which education may have played in shaping the social identity of the civil administrative elite, particularly how it may have reoriented them culturally in the final, crucial years of the Classical Mamluk state.

As valuable as Martel-Thoumian′s empirical generalizations about the civilian administrative elite are, one regrets her decision not to raise more substantive issues about structure and process in Mamluk administration itself. She might easily have broadened her description of the lives of bureaucrats to engage, for instance, the long-standing functionalist-interactionist debate about the sociology of the bureaucratic profession. Were the actions of civil administrators in late medieval Egypt totally structured by their competitive social environment or was there a functional pattern of institutional behavior which created some collective orientation among them? Did civil administrators operate among themselves entirely on the basis of intimidation and autonomy, or were their actions in some way shaped by such things as trust and collegiality? Only by raising new types of questions about Mamluk society are scholars ever likely to realize Garcin′s ultimate hope, expressed about Martel-Thoumian′s otherwise admirable book, that we be able ″to modify our vision of the Mamluk military state.″

MICHAEL CHAMBERLAIN, *Knowledge and Social Practice in Medieval Damascus, 1190-1350*. (Cambridge: Cambridge University Press, 1994). Pp. 199.

REVIEWED BY JOHN L. MELOY, University of Chicago

Scholars have long investigated the place of elite culture, and in particular the role of learning, in the medieval Middle East, and in recent years researchers have started to explore the popular manners and customs of this time and place. At its core, *Knowledge and Social Practice* investigates one feature of the manners and customs of the learned elite of Damascus: ″the practices by which power and status were acquired, exerted, and asserted″ (p. 2). Michael Chamberlain argues that ″it was the elite household (*bayt*; pl., *buyūt*), and not the state, the agency, or the autonomous corporate or religious body, that held power, and that exercised it in most of its social, political, cultural, and economic aspects″ (p. 2). The subjects of this study are the *a‘yān* of Damascus during the years 1190-1350, when ″Syria and Egypt maintained a strong and fairly stable position within Mediterranean and Indian Ocean patterns of trade,″ and which saw the arrival of people from a variety of ethnic groups. The end of this period is marked by ″the beginning of the end,″ when the Black Death swept the Middle East starting in 748/1347 (pp. 25-26). However, the author has a much broader aim: he poses the fundamental problem in such a way that the entire exercise serves as a critique of the study of the medieval Middle East, examining a variety of issues and themes in Islamic history. In so doing, Chamberlain has taken on various methodological and historical objectives, perhaps too many, to the extent

that the impact of this book is somewhat diminished in its attempt to solve fundamental issues in the study of the medieval Middle East.

Chamberlain′s introduction presents a necessarily wide-ranging discussion of the historical and methodological issues germane to the book′s elaborately constructed problem. The author′s thesis, that ″[t]he a‘yān of Damascus advanced their strategies of social survival through cultural practices associated with knowledge,″ enables an understanding of ″how elite households constructed their fundamental social bonds, competed among themselves and with others, and passed on their status in time″ (p. 23). The argument is built on three concepts: ″maladroit patrimonialism,″ *manṣab*, and *fitnah*. What made the social position of the civilian elite so intriguing during this period, the author writes, was that with the rise of the military patronage state from the time of the Zangids, the civilian elite′s hold on property weakened. Chamberlain asserts that the civilian elite were never fully incorporated into the state apparatus and the bureaucracy was never established as a strong and permanent force in society. The result of this social and political configuration was that the military rulers ″never had the knowledge, the agencies, and the independent coercive power to coordinate and control the subordinate elites upon whom they depended to rule. Rather, power was diffused among the households of powerful amīrs and a‘yān″ (p. 8). The political order of ″maladroit patrimonialism″ compelled the elite to use *manṣab*s, ″stipendiary posts″ (p. 24), as a means to maintain status and power, just as the military elite struggled over *iqṭā*‘s. Chamberlain argues that elite practices, such as lecturing, reading, writing, reproducing texts, debating, and scholarly discipleship, have been misinterpreted as educational endeavors; instead, these should be treated as forms of social and political competition. This leads the author to ″show how both amīrs and a‘yān had similar relations to rulers, similar forms of social and political competition, and imagined the social and political universes in similar ways″ (p. 8). Thus it is *fitnah* that embodies the distinctively political character of the city′s social relations:

> By studying the competitive practices of fitna as exercised by both amīrs and a‘yān, we come to understand on a more general level what historians have formalized as the distinct spheres of ″society,″ ″culture,″ and the ″state.″ We can also undermine the anachronistic notion of the existence of ″state″ and ″society″ as distinct entities, and of political and social competition as the separate domains of amīrs and a‘yān respectively. Fitna . . . was not the temporary breakdown of a preexisting legitimate order, but in concert with maladroit patrimonialism formed the central dynamic of all elite social and political life. It imposed its logic on most of their political and social relationships. (p. 9)

Five chapters follow the introduction. Chapter 1 reviews the changes in power relations that occurred with the establishment of the military patronage states, elaborating also the concepts of ″maladroit patrimonialism″ and *fitnah*. The discussion provides comparative material from the Latin West and Sung China. Chapter 2 reviews the *madrasah*, the *dār al-ḥadīth*, and the *waqf*, mainly in terms of previous scholarship, and discusses how these issues have been misunderstood, all of which sets up arguments laid out in the following chapters. Chapter 3 argues that the foundation of *waqf*s, which offered *manṣab*s, changed social life by offering objects of social struggle, rather than the objects

of higher education. Chapter 4 discusses the means by which the civilian elite gained social distinction and passed it on within households. The chief proposition here is that these practices cannot be reduced to a matter of higher education; in medieval Damascus, these practices ″are better studied as a single group of ritual, mimetic, and performative practices″ (p. 108). Chapter 5 describes the civilian elite′s control over the production of knowledge in social struggles, relying on a description of ″how the a‘yān imagined the social world and the nature of social competition″ (p. 153). Thus ″law,″ ″education,″ and ″the suppression of heresy″ were fields of social contest between members of the *‘ulamā’*, rather than scholarly endeavors.

Chamberlain′s methodological premise is that by asking how the elite used writing, we can make more effective use of the surviving literary sources, chiefly the biographical dictionaries. By means of this methodological framework, the author claims to solve a variety of related problems—principally Eurocentrism and the inappropriate and ineffective use of sources—that have plagued studies of the medieval Middle East. Western scholars, in looking for their native social categories in the medieval Middle Eastern situation, have found only ″a nightmarish reversal of the European social order″ (p. 4). The result has been that Islamic ″institutions″ have been measured against those of Europe and interpreted as ″corrupt,″ or at best as ″informal.″ A reconsideration of the available sources, biographical dictionaries in particular, entails also a critique of those who have lamented the paucity of documentary sources from the medieval Middle East and who have failed to see the value of the sources that we do possess. Chamberlain′s approach consists of three elements: (1) A critical use of the sources (p. 3), founded on the recognition that biographical dictionaries are sources for the cultural practices of the learned elite mentioned above (p. 7); (2) A comparative ″Eurasian″ perspective, in an effort ″to see more clearly the distinctiveness of the social and cultural history of Damascus, and of the Middle East more broadly″ (p. 28). The author believes this is necessary because ″it enables us to criticize the mistaken imposition of European notions of order on the high medieval Middle East″ (p. 24); and (3) A more precise understanding of ″informality″ in medieval Islamic societies (p. 4), which, when used as a category is drained of its ″particularity and complexity″ (p. 7). This aspect of the investigation is built upon the notion of the reproduction of social practice, as elaborated by Pierre Bourdieu.[1] The quest here is for the ″deeper structures″ of medieval Middle Eastern social life, particularly, the use of ″symbolic capital″ as a means of competing for and perpetuating relationships of power (p. 23).

Chamberlain′s approach to the notion of informality is probably the most innovative aspect of the book. The interpretation of these cultural practices as performative and mimetic is an illuminating approach, although I am not convinced that this interpretation is sufficient to explain why some individuals succeeded and others failed in obtaining *manṣab*s, or why others refused them. To what extent might intellectual convictions have affected any of these actions? Can the substance of their scholarly endeavors be divorced from their cultural practices? It seems to me that this approach would be that much more illuminating if it acknowledged the educational aspects of these practices. As for the thesis that the *bayt* was the principal repository of social power, the role of households of civilian elite remains disappointingly unclear. The author′s portrayal of social competition between

---

[1]See, for example, *Outline of a Theory of Practice*, trans. Richard Nice (Cambridge: Cambridge University Press, 1977) and *The Logic of Practice*, trans. Richard Nice (Stanford: Stanford University Press, 1990).

scholars is plausible, but how this competition occurred between households, a number of which are mentioned on occasion, is not described at all. Some of these households were wealthy, by the author′s own account, and it is difficult to imagine that material resources played no role in the consolidation of their positions, even among the scholarly community. Had the author described the social interaction of even one typical household synchronically or diachronically, the book′s argument in this regard would perhaps have been more convincing.

The other two aspects are not tackled so successfully. Quite frankly, the Eurasian perspective reveals little about the Middle Eastern situation. As for a critical use of the sources, Chamberlain is quite right to investigate the sources for evidence concerning cultural practices and to see in prosaic educational activities a more telling cultural function. However, a critical use of the biographical dictionaries should entail a discussion of camps within the scholarly community and the differential treatment of entries; not to do so is simply to regard them as documentary information, a problem all too often encountered in the historiography of medieval Islam. This feature of his approach is based on a subsidiary argument that medieval Middle Eastern archives are not preserved because ″the document collections that existed appear not to have had the critical role in political and social competition characteristic of state, corporate, or household archives elsewhere″ (p. 17) and that ″[t]he scarcity of original documents thus represents a fundamental difference in the social uses of writing″ (p. 18). This argument is flawed. Chamberlain assumes divergent cultural attitudes based on the differential preservation of evidence; subsequent attitudes toward cultural heritage must be considered first. Indeed, chronicle authors frequently mention anecdotes suggesting that medieval Middle Easterners did ″brandish″ documents, and both chancery and notarial manuals testify to a demand for documentation. What is clear is that the individuals, families, and institutions that had any reason to store documents simply did not survive for centuries.

Two stylistic points, though minor, are frequent and obvious enough to deserve attention here as well. First, transliteration systems, obnoxious to read as they are, must be tolerated, and effective ones conform consistently to Arabic orthography. Chamberlain uses a version of the transliteration system used by the *International Journal of Middle Eastern Studies*, modified with respect to several features, of which the treatment of some is troubling: ″without assimilation of the definite article or elision of the hamza al-waṣl.″ These, we are told, are how ″titles and proper nouns are spelled in data bases and research resources″ (p. 26). The first feature is not followed consistently while the second is by no means standard practice in libraries with romanized catalogs. His treatment of the *tā’ marbūṭah* in construct is inconsistent as well. ″Tā’rīkh,″ used throughout the book, is plain wrong. In general, the transliterated text needs a thorough editing. Second, the prescriptive nature of the prose, while enthusiastic, nonetheless betrays a certain blindness to the historiographic perspectives that, for better or worse, have shaped our field: ″if we learn to read the sources more carefully . . .″ (p. 21), and ″[i]n all cases we have to read these sources critically, and we must be especially concerned to take into account the motives of their authors in writing them.″ (p. 20). Unfortunately, this study does not include a thorough discussion of the motivations and attitudes that may have guided the compilers of biographical dictionaries, and the possibility of differential treatment of scholars from competing households, so that there is a tendency to treat the information in these sources as documentary. This is by no means a problem unique to this study, since our field′s

sources require all historians, perhaps more than other fields of history, to be historiographers.

In spite of these criticisms, there is no doubt that Chamberlain′s investigation of how knowledge was used by the *a‘yān* of Damascus is a significant and incisive methodological contribution to medieval Islamic history, illuminating new aspects of research in daily culture and education in the medieval Levant. As can be seen from the summary above, the author has set for himself a problem with many ramifications, and it may well be the author′s attempt to deal with all of them that lends the book a rather unfocused quality, notwithstanding the attempts to sharpen conceptual aspects of the argument. Social historians of medieval Islam will nevertheless find it stimulating reading.

BOAZ SHOSHAN, *Popular Culture in Medieval Cairo*. (Cambridge: Cambridge University Press, 1993). Pp. 148.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

Inspired by Peter Burke′s *Popular Culture in Early Modern Europe* (1978), Boaz Shoshan has undertaken the study of popular culture in Cairo during the period corresponding approximately to the Mamluk era (1250-1517). Readers should be warned, however, that the product of Shoshan′s research thus far is not a comprehensive treatment of the subject—as his book′s title might suggest—but rather a small collection of disparate essays whose subjects touch upon particular aspects of what Shoshan has designated as popular culture. In the introduction, Shoshan raises several pertinent points regarding the specter of death looming over the masses, and the question of how people spent their leisure time. This leads to the thorny problem of the definition of ″popular culture,″ which Shoshan tends to equate with ″those socially inferior to the bourgeoisie; hence, supposedly also illiterate, at least by and large″ (p. 7).

Leaving aside further discussion of definition, Shoshan turns in his first essay to Sufism and its importance to the religious life of Mamluk Cairo. Shoshan notes the contributions made by the Sufi orders to congregational life, and the vital role of the Sufi shaykhs and their sermons for disseminating Islamic doctrines and religious obligations. Shoshan pays particular attention to the sermons of the famous Shādhilī Sufi master Ibn ‘Aṭā’ Allāh (d. 1309), which stress the importance of faith, repentance, and avoiding the wiles of Satan and sin, as well as the performance of prayer, religious duties, and *dhikr*. Ibn ‘Aṭā’ Allāh also extols visiting the tombs of the pious saints, who have the ability to perform miracles and acts of grace.

Shoshan then briefly considers the *mawlids,* or ″saints′ days,″ and some of their rituals and licentious behaviors that were rumored to have occurred during these times of popular revelry. He then concludes this chapter by probing Sufism′s ″reintroduction into Islam of the old association of religion and magic″ (p. 18). He reports several lively cases of charlatans and con-men to be found in Mamluk sources, together with Ibn Taymīyah′s legal opinion condemning many Sufi tenets regarding the saints and their miracles. Shoshan also cites a number of miracles ascribed to various Sufis and saints, and the

mediation by some of these figures between the Mamluk regime and the larger Cairene populace.

The various reports of saints and sinners recounted by Shoshan are quite engaging, and he is also to be commended for selecting the often ignored popular sermons as a source and instrument to probe religious life in medieval Islam. However, Shoshan falls victim to the still pervasive misreading of Islam as having an ″orthodoxy.″ Shoshan consistently contrasts Sufis to ″orthodox scholars *(ʻulamāʼ)*″ (p. 21; also see pp. 11, 13) when many Sufi shaykhs were, in fact, respected members of the *ʻulamāʼ* having a special expertise in the study and practice of mysticism. Shoshan appears to regard conservative legal scholars, such as Ibn Taymīyah, as the ″orthodox″ men of religion, though most of them, too, (including Ibn Taymīyah) regarded mystical dimensions of Islam to be a vital and nourishing part of their faith. Further, the doctrines and practices reviewed by Shoshan including the belief in saints and miracles, the visitation of their shrines, and celebration of their *mawlids*, clearly were not held by the illiterate alone, but as Mamluk sources explicitly report, they were embraced by elite and commoner alike and so were quite ″popular,″ though not in Shoshan′s restricted sense of the word.

Without transition or logical connection, Shoshan proceeds to his second chapter on a biography of Muḥammad ascribed to the story-teller Abū al-Ḥasan al-Bakrī (fl. 13th century?). Shoshan details the arrangement and contents of the work, which was quite popular in its own day, and is still influential today. Shoshan maintains that al-Bakrī′s account of the Prophet does not differ substantially from similar works composed by medieval Muslim scholars, yet many of the latter group denounced al-Bakrī as a liar and teller of tall tales. Shoshan seems at a loss to explain this discrepancy, attributing it to ″the personalities involved much more than the nature of the material itself″ (p. 38).

A more logical explanation than Shoshan′s undocumented assertion of conflicting personalities is class or career conflict. Many story-tellers and popular preachers were not the product of the educated elite, though they often dealt with the same religious subjects, albeit in a more entertaining fashion. This fact, together with the story-tellers′ popularity, posed a threat to the religious establishment and its control of the sacred canon. Thus in order to preserve true religion and to protect the common herd from going astray, unauthorized teachers of religion, such as al-Bakrī, had to be vigorously opposed, even if a particular work or teaching by them was in general agreement with scholarly consensus.

Turning to chapter 3, Shoshan examines the Cairene celebration of Nawrūz, a spring festival that was popular for some time and ″celebrated by both the elite and the ordinary people″ (p. 42). Shoshan discusses the early Iranian origins of the festival, possible influence on it from ancient Egyptian, Roman, and Coptic sources, and the incorporation of the holiday into the Muslim calendar. Then he comparatively analyzes the festival and its rituals in terms of the medieval European carnival with its reversal of status and its uninhibited, wanton celebration. Shoshan concludes that Nawrūz may have served to ease social tensions between Cairo′s elite minority and the struggling lower classes, while at the same time conveying the poor′s frustration, anxiety, and dissatisfaction to the authorities.

Similar matters involving public protest are the subject of chapter 4 as Shoshan examines the issue of ″moral economy.″ He begins the chapter with an insightful account of the Cairene public′s demand for a ruler who was a born Muslim, and hence the mass demonstrations in support of the young sultan al-Nāṣir Muḥammad against his foreign-

born, convert rival. Shoshan builds on this example to postulate the presence in Cairo of what E. P. Thompson has labeled a ″moral economy,″ ″a consistent traditional view of social norms and obligations, of the proper economic functions of several parties within the community″ (p. 65). Shoshan supports his assertion by a careful and detailed analysis of the Mamluk grain trade, and the grain riots and protests resulting from abuses which frustrated the masses′ expectations and/or violated accepted government policies.

Chapter 5 serves as a kind of conclusion to this book which Shoshan describes as being ″about the culture of ordinary people in medieval Cairo″ (p. 67). However, the acceptance and active participation of Mamluks and members of the scholarly class in many of the matters involving Sufis, Nawrūz, and public protests would suggest otherwise. Though the regime and some religious scholars might call for the banning of certain popular celebrations or practices (particularly if public morality or sexual promiscuity were an issue), Shoshan′s assertion that ″the learned and the rulers″ exhibited a ″general hostility . . . toward the culture of the commoners″ (p. 70) appears extreme, if not plain wrong. In fact, in this final chapter, Shoshan cites additional accounts of royal and scholarly participation in popular events and festivals (e.g. the Hajj caravan, and the ″Plenitude of the Nile″), and the veneration of Sufis. In the end, Shoshan, too, seems to sense the limitations and inadequacy of viewing Islam through the distorting lens of high vs. low cultures or its religious equivalent—and, perhaps origin—in orthodoxy vs. heterodoxy when he says (pp. 77-78):

> [W]e come to the argument that, in the final analysis, a refined approach to the history of culture should transcend the ″-chotomous″ view, the tendency to emphasize the dichotomy between ″high″ and ″low″. . . . The Cairene case was no exception: in medieval Cairo the cult of saints created a common ground for the people and the elite.

Shoshan′s approximately eighty pages of essays are followed by an appendix listing chronologically forty-two Sufi shaykhs of the Mamluk period and some of the sources which mention them. Why Shoshan included this appendix is not at all clear, though scholars of Sufism may find it of some use. After this appendix are forty-two pages of copious endnotes and a select bibliography, which underscores Shoshan′s laudable comparative approach to popular culture. Nevertheless, while he cites important studies on Europe, he ignores relevant studies on Islam. For example, concerning Islamic preaching, preachers and story-tellers Shoshan neglects the pioneering work of Johannes Pederson (1948, 1953) as well as Merlin Swartz′s edition and translation of Ibn al-Jawzī′s *Kitāb al-Quṣṣāṣ* (1971). Regarding the Muslim cult of the saints, Shoshan mentions that he knew of but did not consult Christopher Taylor′s 1989 dissertation on the important pilgrimage guide by Ibn al-Zayyāt; I am curious to know why, since Taylor′s dissertation is easily obtained through dissertation reprint services, or why Shoshan did not consult Ibn al-Zayyāt directly. Further, Shoshan incorrectly ascribes ʻAlī al-Sakhāwī′s *Tuḥfat al-Aḥbāb* to the famous Mamluk biographer Muḥammad al-Sakhāwī.

Such shortcomings aside, Boaz Shoshan′s *Popular Culture in Medieval Cairo* does contribute to the nascent research field of medieval Muslim popular culture while, at the same time, underscoring the need for the further sustained study of medieval Muslim societies.

MOHAMED-MOAIN SADEK, *Die Mamlukische Architektur der Stadt Gaza*. (Berlin: Klaus Schwarz Verlag, 1991). Pp. 700.

REVIEWED BY JONATHAN M. BLOOM, Richmond, New Hampshire

This book is the text of a doctoral dissertation submitted to the Freie Universität, Berlin in 1990 concerning architecture in the Palestinian city of Gaza during the Mamluk period. German doctoral dissertations, which must be published, normally represent work at a level between an American M.A. and a Ph.D., and this book is no exception. The first of its eight sections is an introduction to the city of Gaza, including discussion of topography, history, meaning (i.e., historical role), and population. The second through sixth sections present the surviving buildings of the Mamluk city, including nine mosques, two *madrasah*s, one *zāwiyah*, the governor′s palace, and a *qaysārīyah*. The seventh section discusses additional buildings that are known to have existed but are now destroyed: these include twenty-six mosques, seven *madrasah*s, a *zāwiyah*, a *ribāṭ*, the birthplace of the Imam al-Shāfiʻī, four tombs, a *masṭabah*, a palace, a *maydān*, a bath, a hospital, two caravanserais and three water-dispensaries. The book concludes with an assessment of the style of Mamluk architecture in the city, in which the author considers such features as plans, architectural elements—including courts, minarets, entrances, arches, and domes—and finally decoration—including *muqarnas*, *ablaq*, and vegetal, geometric, and epigraphic ornament. The book is illustrated with over two hundred pages of plans, sections, and rather gray, small and sometimes amateurish (e.g., nos. 36, 39, etc.) photographs. The plan of the city in the pocket was originally published in the *Zeitschrift des Deutschen Palästina-Vereins* in 1888.

This is a straightforward book which presents the material in a methodical and logical, if not particularly exciting, fashion. The typical presentation of a building comprises several parts, including discussion of its location, dating and history, a general description, discussion of restorations, analysis of the exterior, description of special ornament, a review of the documentary sources, and a presentation of the inscriptions. The author is not especially interpretive or critical of his sources, but, considering the alternatives, this can be seen as a blessing. The book′s value lies in documenting largely unfamiliar material before it disappears and making it accessible for further study. Considering that the field of Islamic art and architecture is now over a century old, the author′s potted recapitulations of the early history of such features as the mosque, *miḥrāb*, and minaret are of little interest, particularly since the Gaza material offers little, if anything, new on the subject. The decision to present the material in a typological, rather than chronological, framework means that the monumental evidence is hardly used to help explain why and illustrate how Gaza developed as a regional center during the Mamluk period.

This study invites comparison with several other recent works on Mamluk and Syrian architecture. The most important is, of course, the late Michael Meinecke′s masterpiece, *Die Mamlukische Architektur in Ägypten und Syrien* (Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe, 5-6. Glückstadt: J. J. Augustin, 1992), which represents the culmination of over two decades of the author′s work on the subject. Despite the earlier publication date of Dr. Sadek′s book, he was able to consult Meinecke′s work in proof, and Meinecke was able to incorporate Sadek′s

findings in his far more integrative and detailed study, which will remain the book of first reference for Mamluk architecture for many decades. It might be fairer to compare Dr. Sadek′s book with recent studies about architecture in provincial Mamluk cities, in which case it stands between Michael Hamilton Burgoyne′s magisterial *Mamluk Jerusalem, an Architectural Study, with additional historical research by D. S. Richards* ([London]: World of Islam Festival Trust, 1987) and Hayat Salam-Leiblich′s *The Architecture of the Mamluk City of Tripoli* (Cambridge, Massachusetts: Aga Khan Program for Islamic Architecture, 1983). Nasser O. Rabbat′s imaginative work, *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture* (Leiden: E. J. Brill, 1995), successfully integrates architectural and archaeological information with historical sources for the Mamluk period. Perhaps the most innovative of recent studies is Terry Allen′s work on Ayyubid and early Mamluk architecture based on an extraordinarily close reading of texts and examination of masonries. The evidence of the stones themselves reveals how individual masons worked and demonstrates how they moved from one project to another. Not only is Dr. Allen′s methodology innovative, but so is the electronic form in which he is publishing his new book. It can be found on the World Wide Web at:
http://www.wco.com/~books/readmeaa.html.

AMALIA LEVANONI, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad Ibn Qalāwūn (1310-1341)*. (Leiden: E. J. Brill, 1995). Pp. 221.

REVIEWED BY W. W. CLIFFORD, University of Chicago

Readers may gain the impression from Levanoni′s title that her monograph is exclusively about the third reign of al-Nāṣir Muḥammad. In fact, she ranges widely over the whole of the Baḥrī period and even well into that of the Circassian. Indeed, Levanoni′s ultimate concern is with the Mamluk army of the Circassian period, and her task is to demonstrate precisely how ″the spreading of professional and moral laxity in the Mamluk army″ of the ninth/fifteenth century ″set in during al-Nāṣir Muḥammad′s [third] rule″ (pp. 98-99). In doing so, Levanoni has broken significantly with the ahistorical model of the Mamluk system often associated with David Ayalon. Levanoni′s focus on the problems of change within the early eighth/fourteenth century Mamluk army recalls similar efforts made twenty years ago by R. Stephen Humphreys to question the stasis of the Syro-Egyptian military structure during the mid-seventh/thirteenth century. Humphreys′s controversial admonition at the time that the early Mamluk army ″should not be understood teleologically,″ as he believed Ayalon understood it, ″but as a series of responses to . . . a changing sociopolitical context″ has clearly struck a responsive chord in Levanoni.[1]

The ″dynamic″ nature of the Mamluk system was manifest, Levanoni believes, in its sudden transition from normative to anomic social behavior in the early eighth/fourteenth century. In short, al-Nāṣir Muḥammad′s third reign generated regressive changes in traditional practices of ″training, advancement and remuneration″ within the Mamluk military—changes which led later in the century to a proletarianization of the army and a

[1] R. Stephen Humphreys, ″The Emergence of the Mamluk Army,″ *Studia Islamica* 45 (1977): 69.

collapse of internal social discipline. In the half century before al-Nāṣir Muḥammad, she argues, social solidarity among the Mamluks had been much more cohesive, based on ″norms,″ that is, one infers, idealized cultural constraints on action. These were represented by the ″principle of loyalty″ and ″a specific code of conduct which included modesty, order, and strictness,″ and which tended ″to foster a sense of respect for authority″ as well as ″underpin master-mamluk relations″ (pp. 14-19, 34). Levanoni seems to be arguing that the early Mamluks, owing to a high degree of both primary and secondary socialization, were actually able to internalize such norms, though she readily concedes we know little of the system by which *mamālīk* were raised and advanced (p. 3).

Yet, how reflective were such ″norms″ of a common value system among the early Mamluks? Levanoni suggests elsewhere that the motivation behind their social behavior may have been more material than normative, secured ultimately by Baybars′s linkage of ″rank″ and ″economic power″ through ″military hierarchy″ (p. 10). Perhaps the social stability Levanoni perceives in the early period reflects not so much internalized cultural definitions of behavior as individual responses to a common material stimulus. In any case, Levanoni′s functional assumptions about the effectiveness of early Mamluk socialization largely ignore the role of coercion in maintaining early consensus; she appears to hold to the Durkheimian view that conformity to social norms is better achieved through socialization than external sanctions. Yet, early sultans, including Baybars, relied heavily on a system of external rewards and penalties to regulate already highly dynamic social relationships among the Mamluks. Levanoni has obligated herself to argue, somewhat naively, that the same sociopolitical tensions extant in the early eighth/fourteenth century were not already present just fifty years earlier at the formation of the Mamluk state.

If Levanoni indeed accepts that there was a consistency of belief, values, and norms among the early Mamluks, how then did this cultural system collapse so soon and so completely? Conformity to norm is of course a matter of degree; actors always bring something with them to their social encounters. Norms can and do change, therefore, and any concept of social process has to explain how this occurs. Levanoni′s explanation is rather *deus ex machina*. She believes largely that al-Nāṣir′s ″general laxity″ and ″permissiveness″ were the root cause of ″decline″ of the Mamluk system. Indeed, one detects a certain Khaldunian censure of al-Nāṣir Muḥammad—a ruler like the Umayyad Hishām or the Abbasid al-Muʻtaṣim whose reign marked the end of true *siyāsat al-mulk wa-al-sulṭān*. Levanoni argues ultimately that al-Nāṣir consciously intended to destroy the social fabric of the Mamluk system through his dissociative behavior, though she relies somewhat incautiously on Circassian sources for this controversial observation (pp. 30-31, n. 13). While heeding Humphreys′s advice elsewhere, she seems to have ignored his admonition against conflating the authority of non-contemporary Circassian with contemporary Baḥrī chroniclers.[2]

Like many before her, then, Levanoni cannot finally resist reducing Mamluk history to the personal idiosyncrasies of Mamluk rulers. Yet, political cultures rarely change so dramatically for such simplistic reasons. And even an unstructured and conflictive environment such as Levanoni has described eventually creates pressure for the

---

[2] R. Stephen Humphreys, ″The Emergence of the Mamluk Army (Conclusion),″ *Studia Islamica* 46 (1977): 179; ″. . . we must abandon our traditional reliance on al-Maqrīzī and Ibn Taghrībirdī, for both men . . . tend to reinterpret their sources (while ostensibly reproducing them) in light of the conditions and issues of their own time.″

development of new norms through a new process of mediation, negotiation, and compromise. What, then, were the new cultural definitions that emerged after al-Nāṣir Muḥammad? Levanoni can seem to suggest only normlessness as a new norm. This sort of argumentation, which plays neatly into the Orientalist myth of Mamluk anarchy, may still resonate among traditional scholars, but modern social historians, historical sociologists and political anthropologists of the Middle East, who arguably could have been Levanoni's most appreciative audience, are not likely to find this sort of reductionism particularly persuasive.

It is equally unlikely, though for different reasons, that the doyen of Mamluk studies, David Ayalon, will find Levanoni's arguments any more compelling. She has after all fundamentally rejected his basic assumptions about the ideal nature of the *mamlūk*'s relationship with his patron (*ustādh*) and comrades-in-bondage (*khushdāshīyah*). Indeed, Ayalon made what might be considered a pre-emptive criticism of Levanoni when, in 1990, he suggested that any future attempt to undercut his *idée fixe* about the Mamluk system would be "a very erroneous and most unwelcome tendency."[3] Ayalon has, of course, admitted that discipline and training declined later, during the Circassian period, and with it the loss of the "feeling of solidarity" within the Mamluk system as a whole, but he is unlikely to concede its origins scarcely a half century after the rise of Baybars. Ayalon's ready admission that the auxiliary military arm, the *ḥalqah*, began its disintegration in al-Nāṣir's day is of course tied precisely to his belief that the *ajnād al-ḥalqah* lacked in any case the very "feeling of solidarity linking companions in slavery and freedom (*al-khushdāshīyah*)."[4]

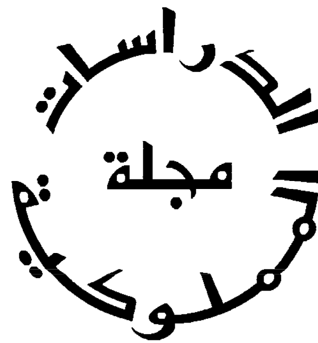
Levanoni's own evaluation of the Mamluk army's poor relation, the *ḥalqah*, conforms to Ayalon's general view that it experienced an administrative "down-grade" over the course of the eighth/fourteenth century (pp. 106-109). Levanoni, however, suggests a further interesting ramification. The *ḥalqah* may have emerged after al-Nāṣir's death as an open recruiting ground for the *umarā'* in their political squabbles. One wonders if the *ajnād al-ḥalqah*, as they endured official *déclassement*, might also have made their experience and services available to the *'āmmah*, improving perhaps the paramilitary competence of proto-militia like the *ḥarāfīsh*. Unlike Ayalon, Levanoni has not attempted to distinguish between the conditions of the *ḥalqah* of Egypt and that of Syria. Did the Syrian *ḥalqah* suffer ultimately a fate similar to its Egyptian counterpart? It is, of course, tempting to see a degraded *ḥalqah* as a paramilitary link in Syrian urban history between the high medieval *aḥdāth* and the late medieval *zu'ar*. Certainly, the image of disaffected *ajnād al-ḥalqah* buttresses Levanoni's larger argument about the proletarianization of the Mamluk army by rowdy "rank-and-file mamluks" (pp. 61-72).

In trying to differentiate her belief in the radical social transformation affected during al-Nāṣir's third reign from earlier interpretations, Levanoni has perhaps inevitably overstated her case at points. Her contention, for instance, that until the death of al-Nāṣir Muḥammad "the common people, *al-'āmmah*, lacked all influence on matters of rule and government" (p. 109) overlooks the impact the Cairene populace already had on the politics of al-Nāṣir's second reign. Or, Levanoni believes that "the formative years of the Mamluk

[3] David Ayalon, "Baḥrī Mamlūks, Burjī Mamlūks—Inadequate Names for the Two Reigns of the Mamlūk Sultanate," *Tārīḫ* 1 (1990): 46.
[4] David Ayalon, "Studies on the Structure of the Mamluk Army—II," *Studies on the Mamlūks of Egypt (1250-1517)* (London: Variorum Reprints, 1977), 456.

state″ witnessed an almost perfect solidarity between master and man. Her argument that it was only after al-Nāṣir′s reign that amirs and sultans ″could no longer count on the loyalty of their own mamluks″ (pp. 86, 115) ignores the humiliation, mistreatment, and betrayal suffered, for instance, by early sultans such as al-Malik al-Saʻīd Barakah, Baybars′s son, or al-Malik al-Muẓaffar Baybars al-Jāshnakīr, al-Nāṣir Muḥammad′s predecessor, at the hands of their own *mamālīk*.

Levanoni′s provocative break with the traditional interpretation of the Mamluk system seems, ultimately, more instinctual than conceptual. She has broached important issues of historical sociology and even anthropology but, without the benefit of even the most basic social scientific texts, has been unable to develop them analytically. Without such a discursive framework she has not perhaps gotten the most out of her own discussion; certainly, she has missed a valuable opportunity to provide the sort of modern insight into problems of medieval Middle Eastern social structure and process which, for instance, Michael Chamberlain has recently done. Nevertheless, Levanoni′s work stands as both a credible alternative to the ahistorical view of David Ayalon, as well as the most detailed current study of al-Nāṣir Muḥammad, somewhat better overall than the only other modern monograph, that of Hayat Nasser al-Hajji, which curiously she fails to cite.[5]



Levanoni has effectively circumnavigated the unremarkable if well-established modern tradition of political biography of Mamluk rulers by focusing on some of the linkages between the problems of one reign and those of others. In doing so, she has perhaps unintentionally delineated one of the principal shortcomings of Mamluk studies: the inability to envision the Mamluk polity as a holistic sociopolitical system—a state—whose operation possessed an internal logic capable of transcending the temporal limitations of individual reigns and personalities. This myopia has long been abetted by unrealistic historiographic perceptions of the Mamluk as an atavistic and regressive superimposition on indigenous Syro-Egyptian civilization. Fortunately, recent scholarship has begun to draw attention to certain socialized aspects of Mamluk behavior—desire for political consensus, leisure, education and manners, progressive agricultural management, and affiliation with local religious custom; no doubt the evolving study of women and family structure will help to portray the Mamluks in an even more socializing environment.

In sum, Levanoni has painted a rather grim picture of the Mamluk system scarcely a half century after its foundation. Yet, despite her rigorous claims of ″decline″ in the early eighth/fourteenth century, the Classical Mamluk state remained intact for another two centuries, and even afterward Mamluk political culture continued to thrive almost into the modern period. Perhaps we should be assessing the Mamluk achievement not in terms of its putative early failure but, rather, its obvious viability as a sociocultural phenomenon. The ultimate value of Levanoni′s book, ironically, may be to awaken in scholars the need to rethink more incisively what we mean by Mamluk ″decline.″

MAMLŪK STUDIES
REVIEW

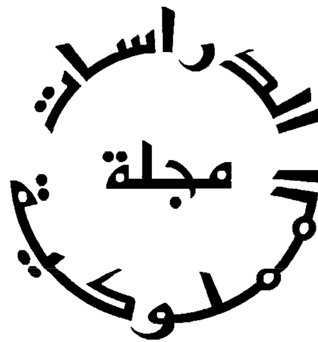
Published by the MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. The print copy should have full and proper diacritics, but the disk copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to the searchable primary and secondary Mamluk bibliographies maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA

MAMLŪK STUDIES
REVIEW

Editor´s Note

In the front matter of every volume of *Mamluk Studies Review* you will find a statement that ″. . .the editorial board will periodically issue volumes devoted to specific topics and themes.″ With the partial exception of the first volume, with its heavy emphasis on ″state of the art″ essays, this is the first such volume. The topic addressed is the ″literary culture″ of the Mamluk era, and the hope of the editors is that these essays may serve to inspire a fresh and unbiased look at a topic that has too frequently been relegated to a sort of scholarly oblivion.

It has been my good fortune to have had the assistance of Professor Th. Emil Homerin, of the University of Rochester, as my collaborator in the planning and execution of this volume. I want to take this opportunity to acknowledge his contribution as guest editor, and to thank him for his patience, energy, and insight. It should also be noted that Professor Donald P. Little lent a hand with the editing of several articles, and that his efforts have improved the volume substantially. Marlis Saleh has, as always, contributed significantly to the final product. Finally, thanks are due the individual contributors, who responded with enthusiasm to the opportunity to produce a volume on Mamluk literature.

Mamluk Literature

When the Mamluks took power first in Egypt and then in Syria, there must have been many who viewed their ascendancy with dread. During the 650s/1250s the Ṣāliḥī Bahri mamluks had acquired a reputation as rapacious thugs. The Mamluk Sultan Baybars (r. 658–76/1260–77), who was feared by his subjects rather than loved, had no literary culture and was, indeed, illiterate. Nevertheless, he did listen to readings of history. Specifically, he listened to the chronicle of his own exploits, the *Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir,* read to him by its author, the historian and senior chancery official Muḥyī al-Dīn ibn ʻAbd al-Ẓāhir. The sultan al-Manṣūr Qalāwūn showed little or no interest in literature and his Arabic was notably poor. However, as we shall see, even in that first generation of the Mamluk regime there were some amirs who took a serious interest in literature. More literate and literary mamluks emerged from the second and third generation of the military elite, for the Mamluk regime in Egypt and Syria relied on an unusually literate military elite. This was because the training of a young mamluk in the Cairo Citadel did not just include exercises with sword, lance, and bow. Twice every week, Arab scholars from the city came in to instruct the young mamluks how to speak and read Arabic, as well as the tenets of Islam. There was a *faqīh* assigned to each barrack *(ṭabaqah)* whose job it was to teach the young mamluks the Quran, the Arabic script, and elements of the shariʻah.[1] Evidence survives from the fifteenth and sixteenth centuries that the sultans′ young mamluks in the Citadel were put to work copying manuscripts in the royal library.[2]

The Ayyubid library in the Citadel, the *khizānat al-kutub,* had been destroyed by a fire in 1292, and it is not clear what steps were taken to replace the lost volumes. Subsequently, the wealthy amir and friend of Ibn Khaldūn, Jamāl al-Dīn Maḥmūd ibn ʻAlī al-Ustādār, provided his Jamālī madrasah with a large collection of books purchased from the royal citadel. The sultans al-Mu'ayyad Shaykh and al-Ẓāhir Jaqmaq were fanatical book collectors, but it is not clear whether the books they collected ended up in the royal library of the Citadel. The chief concentration of institutional libraries was in the mosques and madrasahs of the

[2]Barbara Flemming, ″Literary Activities in Mamluk Halls and Barracks,″ in *Studies in Memory of Gaston Wiet*, ed. Myriam Rosen-Ayalon (Jerusalem, 1977), 249–60.

Bayn al-Qaṣrayn.[3] To mark the restoration of the mosque of al-Ḥākim after the earthquake of 702/1302–3, Baybars II presented the mosque with a library of 500 volumes on the religious sciences, literature, and history.[4] There were also private libraries amassed by some of the great amirs. The Cairo palace of Badr al-Dīn Baysarī al-Shamsī (d. 1298) had a grand collection of Arab books, as well as a certain ″Turkish book″ that so fascinated the historian Ibn al-Dawādārī.[5] The wealthy vizier Amir Badr al-Dīn Baydarā similarly amassed a great library. According to Ibn al-Ṣuqā'ī, Baydarā liked *adab* and singing.[6]

Al-Maqrīzī once composed some verses in which he claimed that people who loitered about in markets were up to no good. The only exceptions he allowed were loitering in the weapons market or the book market. The main book market used to be in Fustat, east of the Mosque of 'Amr. This market declined steeply in the fourteenth century, but al-Maqrīzī could still remember buying books there as a boy. In 700/1301, however, a new book market, the Sūq al-Kutubīyīn, had been founded, close to the goldsmiths′ market. This market was part of the *waqf* of the Manṣūrī Bīmāristān. Another, smaller cluster of bookstalls was to be found close to the Azhar Mosque (and close also to the candle market, where the prostitutes used to hang out). In the fifteenth century, the Sūq al-Warrāqīn, or market of copyists, was close to Barsbāy′s madrasah. Bookshops were, of course, also copying shops and some of them also doubled as circulating libraries.

Barracks, libraries, and bookshops apart, prisons also sometimes served as a somewhat unexpected learning environment for members of the Mamluk elite. Baybars al-Jashinkīr studied Arabic in prison before becoming sultan. The sultan al-Nāṣir Muḥammad already had Arabic when he was imprisoned, and he used it to study al-Bayhaqī′s eleventh-century writings on hadith. The theologian and jurist Ibn Taymīyah wrote copiously in prison. Shihāb al-Dīn al-'Umarī got much of his (rather inaccurate) information about Europe from a fellow-prisoner who was Genoese. Ibn 'Arabshāh was presumably in prison when he wrote his unfinished eulogistic chronicle of the achievements of Jaqmaq.

Some amirs seem to have identified strongly with Arabic culture. Sanjar al-Dawādār wrote poetry. Baybars al-Manṣūrī wrote history. Ṭaybughā al-Ashrafī wrote a treatise on archery. The brutal amir Uzdamur al-Kāshif had memorized al-Ḥarīrī's *Maqamāt,* as well as much Arabic poetry. Quite a few amirs and mamluks interested themselves in Hanafi or Shafi'i jurisprudence or in collecting and transmitting hadiths. However, although it is not uncommon to come across references to sultans, amirs, and mamluks who spoke and wrote in Arabic, there seems to be more evidence of this level of culture in the fifteenth century than in earlier periods.[7]

The literary culture of the Mamluk period was Turkish as well as Arabic, though the production of literary works in Turkish mostly seems to have been a late development that reached its peak in the Circassian period. Turkish works composed within the frontiers of the Mamluk Sultanate were written in Kipchak, Oghuz, or a mixture of the two. It is one of the curious features of the Circassian period that, on the evidence of what has survived, more works were then translated from Arabic or Persian into Kipchak or one of the other Turkish dialects than in the preceding Kipchak Turkish Mamluk period. It seems probable that, despite the increased numbers of Circassians imported into Egypt and Syria in the later Mamluk period, some form of Turkish remained the military lingua franca. It is difficult to consider the Turkish literature of Mamluk Egypt in isolation from that of the Golden Horde, Khwarizm, Anatolia, and Azerbaijan. The legacy of Khwarizmian Kipchak literary culture and its continuation in the lands of the Golden Horde was at first particularly important. Later on, translations into Oghuz Turkish, the dialect of the Anatolian and, more specifically, of the Ottoman Turks became more common. However, even towards the end of the Mamluk period, in the reign of Qānṣūh al-Ghūrī, a mamluk called Asanbāy min Sūdūn copied a Hanbali religious treatise by Abū al-Layth in the Kipchak dialect for the royal library. Much of what was translated into Turkish was instructional in nature, dealing with jurisprudence, hippology, or *furūsīyah* and hence of no interest to the student of literature in the narrow sense.

It seems that the earliest text on Turkish grammar to circulate in the Arab lands was produced by an Andalusian immigrant. Athīr al-Dīn Muḥammad Abū

[7]On the Arabic culture of the mamluks, see Ulrich Haarmann, "Arabic in Speech, Turkish in Lineage: Mamluks and Their Sons in the Intellectual Life of Fourteenth-Century Egypt and Syria," *Journal of Semitic Studies* 33 (1988): 81–114; Jonathan Berkey, "'Silver Threads Among the Coal': A Well-Educated Mamluk of the Ninth/Fifteenth Century," *Studia Islamica* 73 (1991): 109–25; idem, "Mamluks as Muslims: The Military Elite and the Construction of Islam in Medieval Egypt," in *The Mamluks in Egyptian Politics and Society,* ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 163–75; Robert Irwin, "The Privatization of 'Justice' Under the Circassian Mamluks," *Mamlūk Studies Review* 6 (2002): 69–70.

Ḥayyān al-Gharnāṭī (654–745/1256–1344) was born in Granada, but like so many of his literary contemporaries, he ended up in Cairo, where he enjoyed the patronage of Sayf al-Dīn Arghūn, the *nā'ib al-salṭanah* in Egypt. Although Abū Ḥayyān was primarily a grammarian and linguist, he also enjoyed a considerable reputation as an elegant, stylish poet, who produced verses on a wide range of themes. In particular he made use of poetry to expound grammar. An expert linguist, he wrote in Turkish and Persian. His *Al-Idrāk li-Lisān al-Atrāk* is an exposition of the Turkish language as it was spoken in Cairo. Bärkä Faqīh's translation of part of *Khusraw and Shirin* from Persian into Kipchak Turkish in 1386 was the first work of high literature to be produced in Turkish in the Mamluk lands. A few years later Sayf-ı Sarāyī arrived in Egypt. Sayf-ı Sarāyī, as his name suggests, came to Egypt from the capital of the Golden Horde and was the most prominent writer of Turkish verse to reside in the Mamluk lands. He translated Sa'dī's *Gulistan* into Kipchak Turkish, and added an appendix of poems, most of which were his own.[8] More generally, Turkish scholars and littérateurs were likely to receive a favorable reception from the Mamluk elite. Sayf al-Dīn Sarghitmish al-Nāṣirī, one of the most powerful amirs in the decades that followed the death of the sultan al-Nāṣir Muḥammad and a fanatical partisan for the Hanafi *madhhab,* founded a Hanafi madrasah that became a magnet for *fuqahā'* from all over the Turkish-speaking world.[9] Ibn 'Arabshāh's and al-'Aynī's knowledge of Turkish almost certainly helped bring them to the favor of the Mamluks.[10]

The sultan al-Ẓāhir Tātār (r. 824/1421), besides studying Hanafi jurisprudence and the shari'ah in Turkish, was fond of listening to poetry, especially Turkish poetry, which he memorized, and he was said to understand the principles of its composition. He also collected books in Turkish. According to Ibn Taghrībirdī, he was the second Mamluk sultan, after al-Mu'ayyad Shaykh, to have had a taste for the sciences *('ulūm),*

[10]Annemarie Schimmel, "Some Glimpses of the Religious Life During the Later Mamluk Period," *Islamic Studies* 7 (1965): 356–57.

arts, and literature.[11] Ibn Taghrībirdī's obituary of al-Mu'ayyad Shaykh states that that sultan was fond of poetry, though what kind is not stated.[12] Those military men who did interest themselves in literary culture were likely to write in both Arabic and Turkish—and, in a few cases, in Persian as well. Sayf al-Dīn Taghrībirmish al-Jalālī (d. 1448), an expert in *fiqh,* composed in both Arabic and Turkish.[13]

The brutal Amir Yashbak min Mahdī (d. 1480), the terror of the Arabs of Upper Egypt and a notorious sadist, was also a key figure in the literary culture of the late fifteenth century. Besides bringing peace of a desolate sort to Upper Egypt, he presided over the defeat of Shāh Sūwār in Anatolia and opened hostilities against Uzun Ḥasan in Iran. One can describe him as the power behind Qāytbāy's throne, though in fact he was such a prominent statesman and soldier that he could better be described as the power in front of the throne. Judged as a whole, Yashbak's personality and career are strongly reminiscent of his near-contemporary, John Tiptoft, Earl of Worcester (ca. 1427–70), for Tiptoft was notorious as England's chief torturer and impaler and famed, also, as a pious and cultured humanist.[14] Yashbak wrote a genealogy of the Prophet, as well as soulful religious poems in Turkish. He was also a passionate collector of books and an important cultural patron. He was especially fond of Persian scholars. He was the patron of the Persians Ya'qūb Shāh and Pīr Ḥajjī. Yashbak commissioned the production of beautiful books, for example the copy of al-Būṣīrī's poem of praise of the Prophet, *Al-Kawākib al-Durrīyah,* which is preserved in the Chester Beatty Library.[15] This and other acts of religious patronage may raise doubts about Ibn Taghrībirdī's claim that Yashbak hated religion. Much of what we know about Yashbak comes from his client, Shams al-Dīn Muḥammad ibn Maḥmūd ibn Khalīl Ibn Ajā al-Ḥalabī (d. 881/1476). Ibn Ajā, a former student of Ibn Ḥajar's, also wrote poetry in Turkish. Ibn Ajā served Yashbak as military qadi and envoy and he produced a fascinating chronicle of Yashbak's campaigning against the Dhu al-Qadrid prince Shāh Sūwār. He also translated al-Wāqidī's *Futūḥ al-Shām* into Turkish for Yashbak.[16] Al-Sakhāwī, who praised Yashbak's generosity to *fuqarā',* hajjis, and

[16] On Yashbak's political and literary career, see Muḥammad ibn Maḥmūd ibn Khalīl Ibn Ajā, *Tārīkh al-Amīr Yashbak al-Ẓāhirī,* ed. 'Abd al-Qādir Aḥmad al-Ṭulaymāt (Cairo, 1974); Carl Brockelmann, *Geschichte der arabischen Litteratur* (Weimar and Leiden, 1898–1902, 1943–49), S2:78; Haarmann, "Turkish Legends," 98; Bernadette Martel-Thoumian, "Les dernières batailles

plague victims, wrote the chronicle *Al-Tibr al-Masbūk fī Dhayl al-Sulūk* at his request, and al-Sakhāwī added that Yashbak later carried the book about with him and showed it to other people. However, having celebrated Yashbak's discrimination and enthusiasm, al-Sakhāwī gloomily and typically added that all that "is a thing of the past. Nothing now remains but stupidity, boorishness, and an interest in worldly trifles."[17] Yashbak's master, the sultan al-Ashraf Qāytbāy (r. 872–901/1468–96), shared his henchman's literary interests. He composed Turkish *ghazal*s, as well as Arabic religious poetry and *muwashshaḥ*s, and he composed Sufi *awrād* and *adhkār* in Arabic. Muḥammad ibn Qāytbāy followed in his father's literary footsteps. As we shall see, the penultimate Mamluk sultan, al-Ashraf Qānṣūh al-Ghūrī, was at least as cultured as his former owner, Qāytbāy.[18]

The literacy in Arabic of many amirs and mamluks may explain the number of manuscripts produced in this period devoted to *furūsīyah,* hunting, hippology, and perhaps also chess (a game that was considered as a training in strategic thinking). Treatises on *furūsīyah* that aimed at the mamluk market were mostly of a practical nature and thus quite unlike the devotional treatises in what was nominally the same genre produced by such pious Arabs as Ibn Qayyim al-Jawzīyah. Even so, literary and antiquarian elements might creep in and, for example, al-Aqsarā'ī's *Nihāyat al-Su'āl wa-al-Umniyah fī Ta'līm A'māl al-Furūsīyah* recycled parts of Aelian's *Tactica*, a second-century A.D. Greek treatise on strategy that must have been of negligible use for fourteenth-century Mamluk cavalry.[19]

Evidently, the bookish tastes of the Mamluk elite had some part in shaping the literature of medieval Egypt and Syria. However, the role of the *awlād al-nās* was

[18]On al-Ghūrī's literary culture, see Mohammad Awad, "Sultan al-Ghawri: His Place in Literature and Learning (Three Books Written under His Patronage)," in *Actes du XXe Congrès international des orientalistes* (Louvain, 1940), 321–22; Flemming, "Šerīf," 81–93; idem, "Aus den Nachtgesprächen Sultan Gauris," in *Folia Rara: Wolfgang Voigt LXV. Diem Natalem Celebranti ab Amicis et Catalogorum Codicum Orientalium Conscribendorum Collegis Dedicata* (Wiesbaden, 1976), 22–28. On Turkish literature of the Mamluk period more generally, see János Eckmann, "Die Mamluk-kiptchakische Literatur," in *Philologiae Turcicae Fundamenta*, ed. Jean Deny et. al. (Wiesbaden, 1959–), 2:296–304; Omeljan Pritsak, "Das Kiptschakische," in ibid., 1:74–87; Ananiasz Zajaczkowski, *Vocabulaire Arabe-Kiptchak de l'époque de l'État Mamelouk: Bulġat al-Muštaq fī Luġat at-Turk wa-l-Qifžaq* (Warsaw, 1958); Bodrogligeti, "Collection of Turkish Poems"; Flemming, "Zum Stand der Mamluk-Türkischen Forschung."

[19]Geoffrey Tantum, "Muslim Warfare: A Study of a Medieval Muslim Treatise on the Art of War," in *Islamic Arms and Armour,* ed. Robert Elgood (London, 1979), 194–96.

perhaps even more crucial. The *awlād al-nās,* sons of mamluks, many of whom had married into Arab elite households, acted as cultural intermediaries between the Mamluk elite and their Turkish subjects, and many of them also wrote books. The subject has been the subject of an excellent study by Ulrich Haarmann.[20] The ranks of the *awlād al-nās* included such writers as Ibn al-Dawādārī, Nāṣir al-Dīn Muḥammad ibn Jankalī al-Bābā, al-Ṣafadī, Ibn al-Turkumānī, Ibn Manglī, Ibn Sūdūn, Ibn Taghrībirdī, and Ibn Iyās. In most cases, the identification of the *awlād al-nās* with Arabic culture was total. However, the historian Ibn al-Dawādārī took an interest in Turkish legends and folklore and Ibn Taghrībirdī was famous for his expertise in Turkish matters, though some of his critics doubted that expertise.

A remarkably large part of the literature of the Mamluk age was produced by Arab officials working in the employment of the state, either in the *inshā'* (chancery) or in one of the *dīwān*s. The income from state employment may have cushioned their writing activities. On the other hand, in many cases the bureaucrats seem to have been producing literature in the expectation of advancing their careers. Ibn ʻAbd al-Ẓāhir, ʻIzz al-Dīn Ibn Shaddād, Shāfīʻ ibn ʻAlī, Ibn al-Mukarram, and Ibn Abī Ḥajalah were among the chancery men who wrote chronicles celebrating the achievements of ruling sultans.[21] In the case of Ibn ʻAbd al-Ẓāhir, his chronicles, especially the one devoted to the deeds of Qalāwūn, seem to have largely served as a framing device for Ibn ʻAbd al-Ẓāhir's own drafts of diplomatic pieces and occasional displays of fine prose.[22] (The elaborate official drafts produced earlier in the Ayyubid period by such figures as al-Qāḍī al-Fāḍil and ʻImād al-Dīn al-Isfahānī furnished the model for this sort of thing, and Ibn Nubātah, who worked in the Syrian and Egyptian chanceries, was to produce a collection of al-Qāḍī al-Fāḍil's letters, as an act of literary piety.) That chancery prose was esteemed and enjoyed as a form of belles-lettres is indicated by the inclusion of a chapter on the subject in al-Ghuzūlī's *Maṭāliʻ al-Budūr* (on which see below).

Besides histories, officials in the *inshā'* also produced extensive manuals on the running of the chancery and the *adab,* or culture, that the scribes who worked in it might be expected to have. Saladin's officials ʻImād al-Dīn al-Isfahānī and al-Qāḍī al-Fāḍil served as prose models for writers in the service of the Mamluk *inshā'*.

The chancery official Muḥammad ibn Manẓūr′s chancery treatise, *Tadhkirat al-Labīb wa-Nuzhat al-Adīb,* has not survived (though it was one of Ibn al-Furāt′s and al-Qalqashandī′s sources). However, Muḥammad ibn Manẓūr, also known as Ibn Mukarram (630–711/1233–1311), was also well known as a philologist and lexicographer, whose chief claim to fame was his compilation of one of the great dictionaries of the medieval period, the *Lisān al-ʿArab.* The *Lisān* was no mere glossary of words and their meanings. Because of its numerous citations of illustrative fragments of poetry and other material, it was in effect a literary chrestomathy.[23]

Shihāb al-Dīn Aḥmad al-Nuwayrī (667–732/1279–1332) worked in government service as a scribe and financial official. However, he only wrote his encyclopedia, *Nihāyat al-Arab fī Funūn al-Adab,* after leaving government service. Successive volumes dealt with the universe, poetry, female singers and administration, fauna, flora, and history. (The historical section provided disproportionately a large tail to this learned dog.) The *Nihāyah,* like some of its successors, was more of a copious display of knowledge than a seriously useful office manual. Similarly, the *Masālik al-Abṣar fī Mamālik al-Amṣār,* by Shihāb al-Dīn Aḥmad ibn Faḍl Allāh al-ʿUmarī (700–49/1301–47), was pre-eminently a work of *adab,* rather than a serious work of reference for the scribe in office. (The same author′s *Al-Taʿrīf bi-al-Muṣṭalaḥ al-Sharīf* would have been more useful in the latter respect.) Like so many authors in this period, al-ʿUmarī was a polygraph, and he wrote a history of his family of distinguished jurists, as well as various other shorter works, including poems.[24] Shihāb al-Dīn Aḥmad ibn ʿAlī al-Qalqashandī (756–821/1335–1418) compiled the *Ṣubḥ al-Aʿshá fī Sināʿat al-Inshā',* which contains an unusually large number of official documents in it, so that the work comes close to constituting an archive of templates for drafts of official documents. Al-Qalqashandī also wrote a *maqāmah* on secretaryship, as well as a treatise on Arab tribes.[25] Almost all the officials briefly discussed wrote on a disconcertingly wide range of matters. It was a feature of the age. Poets doubled as biographers and authors of religious treatises. Pornographers wrote poems in praise of the Prophet and treatises on dream interpretation. The disinclination of writers to tie

themselves down to any particular genre makes it more or less impossible to present an orderly picture of Mamluk literature.

After the golden age of the Hamdanids in Northern Syria in the tenth century, there was little in the way of a sustained culture of poetry and belles-lettres in Syria or Egypt until the late twelfth century. There was, however, a literary renaissance in the Ayyubid and early Mamluk period. Like all true renaissances, it had a backward-looking flavor and it harked back to the manners and literary productions of eighth– and ninth-century Abbasid Iraq, so that al-Mas'ūdī and al-Jāḥiẓ served as models for Mamluk prose stylists. The poets of Cairo and Damascus studied the old Baghdadi prescriptions on how to court beautiful slave girls, cultivate male friendships, dress elegantly, and perfume themselves. There was then an antiquarian feel to much of Mamluk belles-lettres and poetry, as its authors looked back on the cult of the *nadīm* (cup-companion) and the *ẓarīf* (dandy). Around the mid-thirteenth century, the poets Bahā' al-Dīn Zuhayr and Taqī al-Dīn ibn Daqīq al-'Īd (who wrote poetry but was better known as a qadi and an alchemist) embraced fairly self-conscious roles as *ẓurafā'*. In the following generation, Ibn 'Afīf al-Tilimsānī, the composer of elegant poetry about wine and love, was also known as al-Shābb al-Ẓarīf (the Young Dandy). Al-Ghuzūlī's fifteenth-century belles-lettres compilation included a chapter on the *nadīm,* and another on the repertoire of stories of the *nadīm*, both of which drew largely on Abbasid material. Al-Suyūṭī's later treatise on women, *Al-Mustaẓraf,* dealt mostly with slave girls of the Abbasid period and the passions they aroused, and this too was essentially part of the old culture of the *ẓarīf*. The code of the *ẓarīf* was not confined to the written page and, for example, the fifteenth-century Amir Jānibak al-Ashrafī dressed and behaved like a *ẓarīf*.[26] The personnel and manners of the *ẓurafā'* overlapped somewhat with those of the gay community. Al-Tīfāshī remarked how it had become fashionable in literary circles to affect homosexual mannerisms. Besides the cages of singing birds, the chessboard, and bottles of wine, the typical gay man's apartment contained books of poetry, love romances, and magical treatises.[27]

Apart from the example of old Baghdad, the court culture of al-Andalus and the Maghrib also provided models for the would-be courtier and writer. Sharaf al-Dīn Abū al-'Abbās Aḥmad ibn Yūsuf al-Tīfāshī (580–651/1184–1253) was an immigrant from Tunisia whose *Mut'at al-Asmā'* was a treatise dedicated to the pleasures of music, dance, shadow theatre, and wine drinking. His account of the etiquette of court concerts, in which music, song, and wine came together, drew

[26]On the persistence (or was it a revival?) of the culture of the *ẓarīf,* see Mhammaed Ferid Ghazi, "Un group sociale: 'Les Raffinés' (*ẓurafā'*)," *Studia Islamica* 1 (1959): 59.
[27]Aḥmad ibn Yūsuf al-Tīfāshī, *Nuzhat al-Albāb fīmā la Yūjadu fī Kitāb,* ch. 5. René Khawam's translation of this work, as *Les Délices des coeurs* (Paris, 1981), should be treated with caution.

sharp contrasts between eastern and western ways of holding these entertainments. Al-Tīfāshī was also author of a literary encyclopedia, *Faṣl al-Khitāb fī Madārik al-Ḥawāss al-Khams,* and a well-known treatise on precious stones, *Azhār al-Afkār fī Jawāhir al-Aḥjār,* as well as various works of erotica.[28] He was one of several well-known North African immigrants who found a patron in the amir Jamāl al-Dīn Yūsuf ibn Yaghmūr (d. 663/1265). Abū al-Ḥasan ʻAlī Ibn Saʻīd al-Maghribī (d. 673/1274), the poet, anthologist, and geographer, was another. Indeed Ibn Yaghmūr′s salon, where poets used to compete with one another at capping lines, was known as *kāhf al-maghāribah* (or Cave of the Maghribis).[29] Ibn Yaghmūr was a friend of the father of the historian al-Yūnīnī. (Other writers and scholars from North Africa who found patronage in Egypt or Syria later on in the Mamluk period included such distinguished figures as Ibn Manẓūr, Ibn Abī Ḥajalah, and Ibn Khaldūn.) The strong interest of Egyptian and Syrian poets in the *muwashshaḥ* form is yet another indication of the literary influence of Andalusia.

Since the poetry of the Mamluk period is still only partially explored, it is difficult to offer generalizations about its development or confidently to single out the important poets of the period.[30] At first at least, little panegyric poetry was written in praise of Mamluk sultans (presumably because those sultans were not really interested in poetry). Instead poetic praise *(madīḥ)* tended to be addressed to the Prophet and to ulama and holy men. Bahā' al-Dīn Zuhayr (581–656/1186–1258) wrote panegyrics in the hope of securing patronage, but with only modest and intermittent success, and in the end he died in poverty. His less grandiose lighter pieces, hedonistic, satirical, and urbane, are more pleasing to a modern sensibility. Above all his verses commemorated fleeting passions and regrets for wasted youth.[31]

The hedonistic celebration of love and wine gardens was continued by Bahā' al-Dīn′s successors. Only a few representative figures will be singled out here. Ṣafī al-Dīn al-Ḥillī (657–ca. 750/1278–ca. 1349) was born and died in Iraq. He also spent time in Egypt and Syria. He frequented the court of the Ayyubids of

Ḥamāh, and al-Ṣafadī introduced him to the sultan al-Nāṣir Muḥammad in Egypt. Ṣafī al-Dīn wrote playful and licentious verse (addressed to both sexes). Unlike Bahā' al-Dīn, he was a master of word play and of the elaborate *badī'* style, and more generally he seems to have delighted in displaying his versatility in all the forms of poetry in favor at the time. He wrote *qaṣīdah*s and *muwashshaḥ*s. He also produced a treatise on popular Arabic poetry of his time, entitled *Al-'Āṭil al-Ḥālī.* However, by far and away his most interesting work is his *Qaṣīdah al-Sāsānīyah,* in which he made use of a wide range of rather esoteric underworld jargon in order to describe the modus operandi of the Banū Sāsān (that is to say the beggars, charlatans, and low life entertainers).[32] (On the Mamluk preservation of the old literary cult of rogues, beggars, and freeloaders see below).

Ṣafī al-Dīn al-Ḥillī also produced a panegyric *qaṣīdah* in honor of the Prophet, *Al-Badī'īyah al-Nabawīyah.* This was modeled on an earlier *qaṣīdah,* the *Burdah* of Sharaf al-Dīn al-Būṣīrī (608–ca. 694/1212–ca. 1294). Al-Būṣīrī was a minor figure in the Mamluk administration, who wrote *khamrīyah,* as well as poetry on a variety of other themes, including attacks on Copts and corrupt officials. The *Burdah,* though famous and still widely esteemed today for its wonder-working therapeutic properties, is of little literary interest.[33] Ṣafī al-Dīn al-Ḥillī's version, however, was a much more elaborate and artful affair, which made use of a different rhetorical figure in each of its lines. The latter's way of emulating and outstripping the *Burdah* was to be widely imitated by poets who came after him, including Ibn Ḥijjah (whose version was so obscure that its author felt impelled to produce a commentary on it) and 'Ā'ishah al-Bā'ūnīyah (a learned Sufi who died in 922/1516).[34]

Jamāl al-Dīn Muḥammad Ibn Nubātah (686–768/1287–1366) was, like Ṣafī al-Dīn al-Ḥillī, a poet who found patronage at the puppet court of the Ayyubids of Ḥamāh. His edition of al-Qāḍī al-Fāḍil's letters has already been mentioned. The historian prince al-Mu'ayyad Abū al-Fidā' was one of his patrons and the panegyrics Ibn Nubātah wrote for him were collected and entitled *Al-Mu'ayyadāt*. After the deposition and death of Abū al-Fidā''s son and successor al-Afḍal, Ibn Nubātah wrote a lament for the end of the Ayyubid dynasty. Though he later briefly found employment in the service of the Mamluk sultan al-Nāṣir Ḥasan, it is hard not to feel that Ibn Nubātah's growing interest in Sufism and his production of *zuhdīyāt*

(poetry of asceticism) indirectly at least reflected his straitened circumstances. He died in poverty.[35]

The impulse to demonstrate literary diversity is exemplified by the oeuvre of Shihāb al-Dīn Ibn Abī Ḥajalah (725–76/1325–1375). Born in Tlemcen, Ibn Abī Ḥajalah was a poet, anthologist, and jack-of-all-literary-trades. He produced a much-admired anthology on profane love, the *Dīwān al-Ṣabābah* (Divan of ardent love), which covered roughly the same ground as the eleventh-century Andalusian Ibn Ḥazm′s famous work on the *adab* of love, *Ṭawq al-Ḥamāmah,* and which mostly drew on older materials. However, his literary production was quite diverse and also included *qaṣīdah*s in praise of the Prophet, a *qaṣīdah* on Peter of Cyprus′s attack on Alexandria, a compilation designed to console those who mourn over the death of a child entitled *Sulwat al-Ḥazīn fī Mawt al-Banīn,* a chess *maqāmah* entitled *Unmudhaj al-Qitāl fī Li'b al-Shatranj*, several treatises on the plague, and a chronicle of the reign of the sultan al-Nāṣir Ḥasan, as well as an account of the revolt of the *julbān* (newly imported mamluks) against that sultan. The *Sukkardān al-Sulṭān* (Sugar-bowl of the sultan), dedicated to al-Nāṣir Ḥasan, is one of his most curious works, as it harps on the importance of the number seven to the history of Egypt.[36]

Abū Bakr Taqī al-Dīn Ibn Ḥijjah al-Ḥamawī (767–837/1366–1434) was another who spread himself widely in his literary productions. He started out as a button-maker, but later became a minor chancery official in Syria and, like so many of his colleagues, he produced his chancery treatise (entitled *Qahwat al-inshā',* or Intoxication of the chancery). His major work, however, was his anthology of poetry and prose, the *Thamarāt al-Awrāq* (Fruits of the leaves). This wonderfully miscellaneous compilation included an account of a journey that the author made from Cairo to Damascus and another trip through Anatolia, the history of Hūlāgū in Baghdad, as well as all sorts of curious anecdotes about Umayyad, Abbasid, and Mamluk personalities. Another of his anthologies, the *Khizānat al-Adab* (The Ornate treasury), assembled the best-known poetry of his time. He wrote a treatise on *badī'*, which besides setting out the principles of this elaborately rhetorical form of poetry was also an anthology of contemporary *badī'* poetry. He wrote

[36]Aḥmad ibn Yaḥyá Ibn Abī Ḥajalah, *Kitāb Sukkardān al-Sulṭān* (Beirut, n.d.); Lois Anita Giffen, *Theory of Profane Love Among the Arabs* (New York, 1971), 38–41; Umberto Rizzitano, ″Il diwan as-sababa dello scrittore magrebino Ibn Abī Ḥajalah,″ *Rivista degli studi orientali* 28 (1953): 35–70; Michael Dols, *The Black Death in the Middle East* (Princeton, 1977), 326–27; Weintritt, *Formen*, 192–200.

badī‘ poetry himself. He also collected jokes, and his decidedly miscellaneous writings include a *risālah* on the burning of Cairo by Barqūq in 791/1389, as well as poetry in praise of chess and horses.[37] Ibn Ḥijjah's friend, al-Nawājī, was unkind enough to write a study of his plagiarisms.

Muḥammad ibn Ḥasan Shams al-Dīn al-Nawājī (788–859/1386–1455) studied under al-Damīrī (on whom see below), taught hadith at a couple of madrasahs and had Sufi links, but he is best known for his anthology devoted to wine, *Ḥalbat al-Kumayt* (The Racecourse of the bay). *Kumayt* refers both to a dark bay horse and to a reddish brown wine, cups of which, in al-Nawājī's metaphor, circulated round the convivial table like race horses. Besides celebrating the joys of wine, al-Nawājī's anthology also devoted a lot of space to the ambient pleasures, such as gardens, furniture, flowers, candles, and lamps that went best with an amiable drinking session. Al-Nawājī's *Kitāb al-Ṣabūḥ* was devoted to the more specialized pleasure of drinking in the morning. Both works followed the conventions of an extensive earlier literature of *khamrīyah* (works devoted to wine), and it is unclear whether al-Nawājī's work reflected a genuine enthusiasm for alcohol or whether it was just another example of the literary antiquarianism that was so pervasive in the Mamluk period. The same question applies to his anthology devoted to beautiful boys, *Marāti‘ al-Ghazlān* (The Prairie of gazelles), which also included some of his own poems on the subject. Al-Nawājī also compiled the *‘Uqūd al-La'āl,* strings of pearls, a *muwashshaḥ* anthology, that drew heavily on Ibn Sanā' al-Mulk and al-Ṣafadī.[38]

Much of Mamluk poetry consists either of light-hearted verses d'occasion or of experiments with riddles, chronograms, and similarly artful and taxing devices. These sorts of productions have not survived well compared to the work of older poets—to, say, the more directly hedonistic poetry of an Abū Nuwās or to the warrior's rhetoric of an Abū Firās. It is hard to point to much that was distinctively original. Nevertheless, despite the general conservatism of Mamluk poetry (and the *badi‘,* or "original" poetry, was at least as conservative as anything else) there were some developments, including a growing readiness to experiment with folk genres, including the *muwashshaḥ,* the *zajal,* and the *mawwāl*. Andalusian influence was a factor here. Panegyrics were generally to the Prophet and to the ulama rather than to the Mamluk elite. Panegyrics to members of the Mamluk elite, while not unknown, were not so very common. However, Mamluk taste may lie

behind the common choice of a Turkish boy rather than an Arab girl as the object of affection in the *ghazal,* or love poem.

Though the Mamluk era was an age of compilations and anthologies, it was hardly more so than the centuries that preceded it. It seems to have been a point of pride to write upon any and every topic. Short treatises were written on all manner of subjects; al-Ṣafadī wrote on tears, al-Maqrīzī wrote about bees, and al-Suyūṭī wrote on the legality of wearing the furs of squirrels that had been strangled, on jokes about Saladin´s governor Qarāqūsh, and much else besides. However, the most popular topics for longer compilations of prose and poetry continued to be love and wine-drinking, and the most pious figures had no hesitation in writing about profane love and partying. Ibn Qayyim al-Jawzīyah, the Islamic rigorist and Sufi (on whom see below) compiled a treatise on love. So did ʻAlā' al-Dīn Abū ʻAbd Allāh Mughulṭāy ibn Qilīj al-Ḥanafī (ca. 690–762/ca. 1291–1361), who was a Hanafi professor and specialist in hadith, *nasab* (genealogy), and biography. His *Al-Wāḍiḥ al-Mubīn fī Dhikr Man Ustushhida min Muḥibbīn* (The Clear and eloquent in speaking of those lovers who became martyrs), as its title suggests, argued for the reliability of a hadith to the effect that those who die of love are martyrs on the path of God.[39] Al-Tīfāshī´s and al-Nawājī´s compilations which dealt with wine-drinking and its attendant pleasures have already been mentioned.

Much of that kind of material was also brought together by ʻAlā' al-Dīn ibn ʻAlī al-Ghuzūlī (d. 815/1412), a citizen of Damascus, in his *Maṭāliʻ al-Budūr fī Manāzil al-Surūr* (Risings of full moons regarding the pleasures of households). The *Maṭāliʻ* is a literary anthology on the pleasures of life. These pleasures including sex, candles, speaking birds, slave girls, chess, animals, cooling breezes, wine, and visits to Birkat al-Raṭlī (one of Cairo´s pleasure lakes). One chapter, ″Fī al-Ṣāḥib wa-al-Nadīm,″ dealt with what was expected of a friend in the way of elegant behavior and conversation. Such a friend was a latter-day *ẓarīf,* whose uniform included the *qalansuwah* (a pointed hat), *mandīl* (handkerchief), expensive green silken belt, and so on. The next chapter consists of a collection of tales suitable to be told by *nudamā'* in the evenings. The stories date from Abbasid times or even earlier.[40]

A number of important story-collections were put together in this period, of which the best known (after *Alf Laylah wa-Laylah,* that is) was *Al-Mustaṭraf fī Kull Fann Mustaẓraf,* compiled by the Egyptian Bahā' al-Dīn Muḥammad ibn Aḥmad al-Ibshīhī (790–ca. 850/1388–ca. 1446). This was a vast anthology of prose and classical and folk poetry. The prose material included stories of the

[39] *GAL,* 2:48; ibid., S2:47–48; Sallām, *Al-Adab,* 1:127; Giffen, *Theory of Profane Love,* 33–34, 80.
[40] ʻAlā' al-Dīn ibn ʻAlī al-Ghuzūlī, *Maṭāliʻ al-Budūr fī Manāzil al-Surūr,* 2 vols. (Cairo, 1882–83); *GAL,* 2:55; *GAL,* S2:55; Sallām, *Al-Adab,* 2:32–34.

Prophet and of Sufi saints, proverbs, animal fables, and entertaining stories. Many of the stories were of an improving nature and most of it fairly unsophisticated. Stories about simple saints and poor artisans carried a message that the reader should be patient with his lot and content with what God had decreed. However, some tales seem to have been included simply for the comic or erotic pleasure they afforded.[41]

By contrast with al-Ibshīhī's well-known collection, the *Fakihāt al-Khulafā' wa-Mafakihāt al-Ẓurafā'* of Aḥmad ibn Muḥammad ibn ʻArabshāh (791–854/1392–1450) has had little attention paid to it in recent centuries. The *Fakihāt,* in which animals tell entertaining and improving tales, was modeled on the Persian *Marzubān-nāmah* of al-Warāwīnī, and, like its prototype, it aimed at an exalted audience, for it was a work in the mirror-for-princes genre. It considerably expanded on its Persian original and included quite a lot of material concerning recent Mongol and Timurid history. Ibn ʻArabshāh modeled his style as well his content upon Persian exemplars and wrote in a torturous and metaphor-laden rhymed prose. Having spent his youth in Samarkand, he had travelled widely since then, and he wrote copiously in both Arabic and Turkish (but it is dispiriting to find how little attention has been paid to his literary oeuvre). Ibn ʻArabshāh's *Al-Ta'līf al-Ṭāhir* was both a royal biography and a mirror-for-princes, with the Sultan Jaqmaq as the model ruler that other princes should follow. Though it seems to have been written in the hope that the exemplary prince would release Ibn ʻArabshāh from prison in Cairo, in fact its author was released only a few days before his death. His better-known *ʻAjā'ib al-Maqdūr fī Nawā'ib Tīmūr,* a history of the career of the villainous Tīmūr, or Tamerlane, was written in Arabic, but again in the Persianate manner. Although it was a popular subject of study for eighteenth- and nineteenth-century Orientalists, it seems to have had little or no influence on chroniclers of the Mamluk period, perhaps because of its rebarbative, ornate style, so different from the workaday prose of al-Maqrīzī or Ibn Taghrībirdī. Even so, it should be noted that Ibn Taghrībirdī was a fan of Ibn ʻArabshāh and got an *ijāzah* to teach his writings.[42]

Ibn ʻArabshāh has suffered from being treated by modern scholars as merely a historian. But the same is true of Badr al-Dīn al-ʻAynī (762–855/1361–1451) and his collection of entertaining stories about various classes of people, the *Majmūʻ Mushtamil ʻalá Ḥikāyāt wa-Ghayrihā,* has received even less attention than the *Fakihāt.*[43] His current reputation is based primarily on his authorship of the chronicle *ʻIqd al-Jumān* (Necklace of pearls), which he used to read in Arabic to the sultan Barsbāy, and then explain in Turkish. Of more purely literary interest are his presentation chronicles, *Al-Sayf al-Muhannad fī Sīrat al-Malik al-Mu'ayyad* and *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir,* addressed to the sultans al-Mu'ayyad Shaykh and al-Ẓāhir Tātār respectively, which have a belles-lettres quality, as they are not so much chronicles of the sultans′ achievements as panegyrics to the qualities of an ideal ruler. The two texts include disquisitions on cosmology, numerology, genealogy, and pre-Mamluk history, as well as advice of the mirror-for-princes type.[44] Much of al-ʻAynī′s prestige among his contemporaries rested neither upon his historical nor on his more literary productions, but on his commentary on al-Bukhārī′s hadith collection, *ʻUmdat al-Qārī.* The work of Muḥammad ibn al-Qāsim al-Nuwayrī al-Iskandarānī (fl. 670s/1370s) has similarly hitherto only attracted the attention of historians. His *Kitāb al-Ilmām fīmā Jarat bihi al-Aḥkām al-Maqḍīyah fī Waqiʻat al-Iskandarīyah,* which has as its pretext an account of Peter of Cyprus′s attack on Alexandria in 767/1365, is nevertheless better considered as *adab,* since documentary reporting is crowded out by information about early Arab shipping, stories about Alexander and Aristotle, and other dubiously relevant material.[45]

Although al-Nuwayrī al-Iskandarānī′s work may be cited as an instance of what may be called the ″literarization of history,″ it is questionable whether there was a single trend. Sayf al-Dīn Abū Bakr Ibn al-Dawādārī (d. 713/1313) inserted snippets of Turkish and Mongol folklore into his chronicles.[46] Ibn Iyās similarly

enlivened his chronicle of sixteenth-century Egyptian affairs with stories of a folkloric nature. As has already been noted, some chroniclers used their histories as display books for examples of fine chancery prose. The Baʿalabakkī chronicler Qutb al-Dīn al-Yūnīnī (640–726/1242–1326) included a striking amount of poetry in what was formally an annals of Syrian history. In doing so, he was perhaps following the earlier example of Abū Shāmah, the Syrian chronicler of Ayyubid times. (But al-Yūnīnī's readiness to include satirical poetry and poetry which celebrated love and wine-drinking is curious given the chronicler's ascetic tendencies, his devotion to hadith studies and his admiration for the austere Ibn Taymīyah.[47]) Muḥammad ibn Muḥammad Ibn Ṣaṣrā's late fourteenth-century chronicle of Damascus was peppered with fables, proverbs, and moralizing advice.[48] Nevertheless, there were limits to the literarization of history writing, and most chronicles of the Mamluk period were rather uninterpretative, pedestrian chronicles of public affairs whose authors do not seem to have dreamt of emulating such earlier stylish writers of history as al-Masʿūdī or Miskawayh.

Like the chronicle, the bestiary could also serve as a pretext for the kind of erudition befitting an *adīb*. For example the *Ḥayāt al-Ḥayawān* (Lives of beasts) by Kamāl al-Dīn Muḥammad ibn Mūsá al-Damīrī (745–808/1344–1405) more closely resembles al-Jāḥiẓ's classic *Kitāb al-Ḥayawān* than it does a work of scientific zoology, as al-Damīrī repeatedly digressed into literature and folklore and, for some reason, he chose to add the caliphs to his collection of beasts. However, he was more systematic than al-Jāḥiẓ in that he dealt with his creatures in alphabetical order. Al-Damīrī, who ended up as a *faqīh* in Cairo, had started off as a tailor and his career, like that of al-Nawājī, who also started as a tailor, indicates that the life of an alim was a career open to all the talents.[49] The earlier bestiary *Kitāb Manāfiʿ al-Ḥayawān* (Usefulness of beasts) of Tāj al-Dīn ʿAlī Ibn Durrayhim (712–62/1312–66) is not so very scientific either, but in Ibn Durrayhim's

case, discussion of the flora and fauna was skewed by the author′s interest in the occult and healing properties of things. Ibn Durrayhim, an immigrant from Mosul who became a professor at the Umayyad Mosque in Damascus, wrote on a range of occult and related subjects, including code-breaking, dream interpretation, magic mirrors, and physiognomy.[50]

Al-Ṣafadī took an interest in various occult subjects. The Egyptian chroniclers al-Maqrīzī and Ibn Iyās had a strong interest in the legendary history of ancient Egypt with its tales of talismans, treasures, and lost esoteric knowledge. But, in general, this was not a great age for occultism. Ibn Qayyim al-Jawzīyah and Ibn al-Ḥājj (on both of whom, see below) denounced the pursuit of such studies. Al-Suyūṭī declared that all of the *ʻulūm al-awāʼil*, or ancient sciences, were forbidden by God. (These included not just the occult arts, but also logic.) From the thirteenth century onwards, learned magic, which drew on Greek and other non-Arab traditions, was giving way to a pietist Sufi magic that depended on invocations of the names of God, magic squares, manipulations of the mysterious letters at the heads of certain surahs of the Quran and similar procedures. In the early thirteenth century Muḥyī al-Dīn al-Būnī had been the leading proponent of this kind of magic. Thereafter, Shādhilī Sufis disseminated it.[51] It is true that there were still some interesting representatives of the older tradition of Islamic occultism, including Abū al-Qāsim al-ʻIrāqī, the author of the thirteenth-century magical compendium *ʻUyūn al-Ḥaqāʼiq* (Wellsprings of truth), and ʻIzz al-Dīn Aydamur ibn ʻAlī al-Jildakī (d. ca.743/1342), the author of several alchemical treatises. However, though they were impressively learned, this knowledge was marginal to the concerns of the scholarly and literary elite, and such figures were rarely, if ever, accorded the dignity of an entry in a biographical dictionary.[52]

The boundaries between high and low culture were fluid—so much so that it hardly makes sense to speak of boundaries at all. Many writers took pride in demonstrating their command of both *fuṣḥá* and colloquial Arabic. Piety and pornography were not mutually exclusive, and members of the elite in the Mamluk period imitated their Abbasid and Buyid predecessors in taking a curious interest

in the manners, customs, and argot of the Banū Sāsān and other disreputable types. In these respects, the career and writings of Shams al-Dīn Muḥammad Ibn Dāniyāl (ca. 646–709/1248–1310) are instructive. Ibn Dāniyāl, who came from Mosul and who made a living as an oculist, with a shop just inside Cairo′s Bāb al-Futūḥ, had distinguished friends. They included the historian Ibn al-Dawādārī, Muḥammad ibn Jankalī al-Bābā (the cultured son of a *wafidī* amir, who was an expert on medicine, hadith, music, and grammar), and, above all, Qalāwūn′s son, Khalīl (later to rule as al-Ashrāf Khalīl). Ibn Dāniyāl wrote a long medical poem, several verse panegyrics on Mamluk amirs, *qaṣīdah*s and *muwashshaḥ*s, and a perfectly respectable and respected verse history of the judges of Egypt. But he also produced scripts for three shadow plays that deal with characters who live in or on the edges of the social underworld. *Ṭayf al-Khayāl* (Shadow of the imagination) is about the quest for marriage of a disreputable old soldier. *'Ajīb wa-Gharīb* presents a parade of members of the Banū Sāsān and similar folk, each of whom in turn describes their precarious and disreputable modes of making a living. *Al-Mutayyam wa-al-Ḍā'ī' al-Yutayyim* (The Love-stricken one and the lost orphan) is about a homosexual passion, pursued while watching a series of fights between beasts. The plays celebrate most of the vices of the age, and their concluding scenes of repentance are perfunctory. The plays all have a strong pornographic content and make extensive use of low-life slang. (Ibn Dāniyāl also wrote several poems with a similar content, dealing with wine, hashish, and acting.) Even so, Ibn Dāniyāl′s audience did not necessarily consist entirely or even primarily of the low-lifers who frequented taverns in the more disreputable parts of Cairo. The plays, though perfunctorily plotted, show considerable sophistication in the use of language and literary allusion and it is clear that Ibn Dāniyāl considered himself to be writing in the tradition of the *maqāmah*s. There are several explicit references in the plays to al-Ḥarīrī′s work. Certainly Ibn Dāniyāl was read and cited by al-Ṣafadī, Ibn Ḥajar, al-Suyūṭī, and Ibn Iyās, among others. Al-Ṣafadī was probably his greatest fan.[53]

Ibn Dāniyāl′s plays were composed at the request of 'Alī ibn Mawlāhum al-Khayālī, a presenter of shadow plays in Cairo who was possibly the brother of

Muḥammad ibn Mawlāhum al-Khayālī, the author of two *maqāmah*s on tradesmen.[54] An Ibn Mawlāhum, as well as Ibn Dāniyāl and the disreputable twelfth-century Spanish poet Ibn Quzmān, is saluted as an esteemed predecessor by ʿAlī al-Baghdādī in the preface to his *Kitāb al-Zahr al-Anīq fī Lubūs wa-al-Taʿnīq* (The Book of delicate flowers regarding the kiss and the embrace). ʿAlī al-Baghdādī's collection of bawdy tales about wily women was written perhaps in the 1350s. Although the tales are mostly of considerable antiquity (and some have their analogues in *The Thousand and One Nights*), they are presented as having happened to real, named and often identifiable figures in the early Mamluk period.[55]

Khalīl ibn Aybak al-Ṣafadī (d. 764/1363), a member of the *awlād al-nās* who worked as a government official, wrote in broadly the same tradition as Ibn Dāniyāl. Among much else, al-Ṣafadī wrote *Lawʿat al-Shākī* (Plaint of the lovelorn), a languorous and elaborate commemoration in rhymed prose and poetry of the narrator's love for a Turkish horse-archer. Al-Ṣafadī also compiled a homoerotic anthology on beautiful boys, a treatise on the *khāl,* or beauty spot, and a *maqāmah* on wine. However, he spread himself even more widely than his admired predecessor, Ibn Dāniyāl. He also produced a series of eminently respectable biographical dictionaries. *Al-Wāfī bi-al-Wafayāt* (The Abundant book on dates of death) is a comprehensive biographical dictionary of Muslim personalities, whereas *Aʿyān al-ʿAṣr* (Leading figures of the age) was restricted to contemporaries. Al-Ṣafadī's fame and usefulness as a biographer has tended to eclipse awareness of his writings in other areas. Apart from composing and compiling works of belles-lettres and erotica, he also wrote about alchemy and *malāḥim* (apocalyptic prophecies).[56]

Although it is not possible to cover in this short survey all those writers who devoted themselves to writing bawdy and entertaining pieces, nevertheless no survey of Mamluk literature would be complete without reference to ʿAlī ibn Sūdūn al-Bashbughāwī (ca. 810–68/ca. 1407–64). The son of a Circassian mamluk, Ibn Sūdūn was educated at the Shaykhūnīyah madrasah, but failed to establish himself as a successful alim and after serving as a poorly-paid imam at several mosques, he set about pursuing an alternative career as a satirical poet and buffoon. He acquired notoriety as a hashish addict and after he was expelled from Cairo, he moved to Damascus where he worked as a copyist, but supplemented that income by occasional poems and other literary exercises, including poetry readings and quasi-dramatic performances beneath the Damascus citadel. His collected work

the *Nuzhat al-Nufūs wa-Muḍḥik al-ʿAbūs* (The Diversion of souls and the gloomy person′s jester) is in two parts. The first part contains serious panegyrics and love poetry, followed by some humorous material. The second part includes comic *qaṣīdah*s, trumped-up stories, some (silly) *muwashshaḥ*s, other popular verse forms, and brief accounts of wondrous curiosities and strange novelties. According to al-Sakhāwī, Ibn Sūdūn′s poetry was popular with the *ẓurafā'*, who fought to get hold of copies of it.[57]

A great deal of literature of a broadly popular nature was produced in the Mamluk period that was devoted to such matters as heterosexual and homosexual love, jokes, the wiles of women, hashish-taking, and the jargon of (legal and illegal) crafts and trades. So far this vast body of literature by Muḥammad al-Bilbaysī, ʿAbd al-Raḥīm al-Ḥawrānī, Taqī al-Dīn Abū Bakr al-Badrī, and others has hardly been explored.[58] Whatever the literary merits of such materials, they are certainly of historical interest. Besides literary entertainments by named authors, the Mamluk age was pre-eminently a period in which anonymous epics and story collections were compiled, elaborated, and expanded. The oldest substantially surviving manuscript of *Alf Laylah wa-Laylah* (The Thousand and one nights) dates from the fourteenth or fifteenth century, and some of the stories contained in it reflect, in however fanciful a manner, the social and economic realities of life under the Mamluk sultans. The lengthy pseudo-historical epics, however, seem to have been more popular. Of these the most famous was the *Sīrat ʿAntar,* which was put together sometime between 1080 and 1400. It was the favorite stock-in-trade of street-corner story-tellers. Despite this epic′s notional setting in pre-Islamic Arabia, some of its episodes are based on the Muslims′ encounters with the Byzantines and Crusaders. Similarly the *Sīrat Sayf ibn Dhī Yazan,* though set in the Yemen in a fanciful version of the sixth century A.D., shows clear signs of having been composed in Egypt much later. This saga, like so many of its rivals, has an episodic plot, or rather a straggling series of plots. Its chief merit lies in its wild and colorfully inventive deployment of vivid imagery of a magical realist sort—including Snatcher the Jinn who has smoke instead of blood in his veins, the glass bed, and the woman who has been jointly impregnated by a wolf, smoke, and her husband.[59] The *Sīrat al-Ẓāhir,* devoted to the legendary exploits of the

Mamluk sultan al-Ẓāhir Baybars, has a similar lack of narrative sophistication that is only partially compensated for by its madly inventive energy. It is not clear how much of this epic was in existence in the Mamluk period.[60] (The oldest surviving manuscript is sixteenth century and the existing versions are full of Ottoman terminology, as well as mockery of the stupidity and thuggishness of Ottoman Turks.) One of the curious features of the story is the hostility shown to the amir (later sultan) Qalāwūn. Equally curious is the co-option of the Ismaili Assassins to be Baybars′ allies in his struggle against Franks, Mongols, sorcerers, and corrupt amirs. The relationship of the story of this epic to real historical events was very slight.[61] Nevertheless, as Franz Rosenthal has observed, it ″was through these novels that history filtered deep down into the hearts of the people.″[62]

The fantasies purveyed in these popular anonymous *sīrah*s was not so very different from the romances dealing with the origins of Islam, the exploits of ʻAlī, and the early Islamic conquests that were attributed to a certain Abū Ḥasan Aḥmad al-Bakrī al-Wāʻiẓ. It seems likely, however, that attribution to ″al-Bakrī″ denoted a literary genre, rather than the real authorship of an actual individual.[63] Whatever the truth of the matter, al-Dhahabī and al-Qalqashandī denounced the lies found in this sort of material. The popular romances suffered the opprobrium of the intelligentsia. Tāj al-Dīn al-Subkī, writing on the various offices and trades in the Mamluk lands, advised the *nāsikh* (copyist) not to copy ″those deceptive books . . . by which God does not offer any useful thing, such as *Sīrat ʻAntar* and the books by the *ahl al-mujūn* (the pornographers).″[64] Similarly Ibn al-Ḥājj, in his treatise against unacceptable innovations, inveighed against booksellers who traded in the stories of romantic heroes and most notably in the story of ʻAntar.[65] To those who thought like Ibn al-Ḥājj, it was reprehensible to trade in any books that sought merely to amuse. In this period, the literature of vulgar entertainment and

delight competed with its opposite, a literature of piety and rigorism (and there were even a few authors who tried their hands at writing both types of literature).

Taqī al-Dīn Aḥmad Ibn Taymīyah (661–728/1263–1328) was the leading figure in the religious campaign against unacceptable innovations in religious and social practices. He issued fatwas and wrote to denounce a wide range of deviations from pure Islam, many of them of folkloric or Sufi origin. His attacks on Sufi deviations into heterodoxy (for example his assault on what he perceived to be the thirteenth-century Andalusian Sufi Ibn ʻArabī′s monism) were particularly controversial, and many of the Mamluk elite supported Ibn Taymīyah′s pro-Sufi opponents. However, Ibn Taymīyah was not a root-and-branch enemy of Sufism. Like his chief disciple, Ibn Qayyim al-Jawzīyah, he was a Qādirī Sufi himself. Moreover, in engaging in polemical controversy with the other members of the religious elite and their Mamluk patrons, he offered at least one hostage to fortune, as his extreme version of Hanbalism allowed his enemies to accuse him of the heresy of anthropomorphism regarding the attributes of God. Despite occasional clashes with the Mamluk regime, he was in general a political quietist. ″To demand ideal qualifications in a ruler is a sin against God″ was one of his observations. He enjoyed a great following not just among the masses (who were ready to riot on his behalf), but also among prominent members of the Mamluk elite, including Kitbughā al-Manṣūrī and Arghūn al-Nāṣirī. Even al-Ṣafadī seems to have been an admirer of Ibn Taymīyah.[66]

Ibn Taymīyah′s disciple Shams al-Dīn Abū ʻAbd Allāh Muḥammad Ibn Qayyim al-Jawzīyah (691–751/1292–1350) was a prolific writer on the Quran, the shariʻah, and other spiritual matters. In particular, he wrote verse and prose to popularize Hanbali mysticism, and he denounced the occult sciences at length. His *Rawḍat al-Muḥibbīn* (Garden of the lovers) is a fairly conventional treatise on profane love, only with a more spiritual slant than is common in the genre. His treatise on *furūsīyah,* though it assembles a number of religious precepts on the subject, would have been of no practical use whatsoever to a mamluk horseman.[67] Ibn

---

[66]The literature on Ibn Taymīyah is vast. See especially Henri Laoust, *Essai sur les doctrines socials et politiques de Takī-d-Din Ahmad b. Qayyim al-Jawzīyah was based in Egypt, but Ibn Taymīyah was also quite widely admired and supported by what has been called the "codex-swapping crowd" in Syria. Most fourteenth-century historians and compilers of biographical dictionaries in Syria, including al-Jazarī, al-Birzālī, al-Yūnīnī, and al-Dhahabī seem to have supported Ibn Taymīyah in his struggles with the authorities, even though by no means all of them were Hanbalis. Ibn Kathīr, who died in 774/1373, was the last important representative of this tradition. Generalizing rather broadly, this group of scholars conceived of history as the handmaiden of hadith studies.[68]

Egyptian chronicles tended to be somewhat more secular and court-centered in their orientation. However, plenty of treatises calling for a stricter observance of Islam were produced in Mamluk Cairo. The best known of such works was the *Madkhal,* a treatise on *bida‘* by the Maliki jurist Abū ‘Abd Allāh Ibn al-Ḥājj al-‘Abdarī (d. 737/1336). The *Madkhal*'s detailed evocation of hedonistic pursuits, albeit couched in the negative (silk carpets not to be displayed, pleasure gardens not to be visited, picnics not go to on and so forth), makes it an invaluable source on social history. Ibn al-Ḥājj denounced the corrupt practices of the Cairenes with all the vigor of an immigrant from the freshly purified Maghrib. However, his main target seems to have been the pleasures of the lower classes; the mamluks on the whole escaped criticism.[69] Idrīs ibn Baydakīn al-Turkumānī also produced a treatise, the *Kitāb al-Luma‘ fī al-Ḥawādith wa-al-Bida‘,* sometime in the fourteenth century, which took a similarly dour view of popular pleasures and local superstitions. Some of al-Turkumānī's targets were conventional, but others were unusual, even eccentric, such as his diatribes against crossbowmen.[70] In the *Madkhal*, Ibn al-Ḥājj had stressed on the importance of *nīyah,* or good intention, and this theme was taken up by Tāj al-Dīn al-Subkī (728–77/1327–69 or 70) in his *Kitāb Mu‘īd al-Ni‘am wa-Mubīd al-Niqam* (The Restorer of favors and the restrainer of chastisements), which is devoted to good intention in the various

(But Labīb misidentifies crossbowmen as musketeers.)

ranks, offices, and crafts in Mamluk Egypt. "Be as the corpse in the hands of the washer" was the book's quietist, Sufi burden.

A considerable quantity of edifying uncontroversial Sufi literature was produced in this period, mostly in the form of poems, sermons, or short biographies of Sufi holy men. Ibn Abī Ḥajalah wrote Sufi poetry. ʻAbd Allāh ibn Asad al-Yāfiʻī (ca. 700–ca. 768/1299–1367) compiled *Rawḍ al-Riyāḥīn fī Ḥikāyāt al-Ṣāliḥīn,* which contained the biographies of over five hundred Sufis. His collection was later drawn upon by al-Ibshīhī and by the anonymous continuators of the *Arabian Nights.* The Shādhilī Sufi Aḥmad ibn Muḥammad Ibn ʻAṭā Allāh (d. 709/1309) produced collections of spiritual aphorisms and sermons. Both al-Yāfiʻī and Ibn ʻAṭā Allāh were implacable opponents of Ibn Taymīyah.[71] However, the most heated debates throughout the whole Mamluk period concerned the disputed orthodoxy of two Sufis of the pre-Mamluk period, Sharaf a-Dīn ʻUmar Ibn al-Fāriḍ (576–632/1181–1235) and Muḥyī al-Dīn Ibn ʻArabī (560–638/1165–1240). Fierce debates raged about the meaning of their poetic output and about whether it was legitimate to use apparently blasphemous metaphors in order to express holy things. Ibn al-ʻArabī and Ibn al-Fāriḍ avoided official condemnation, and Ibn al-Fāriḍ's verses in the *badī*ʻ manner were widely imitated by poets of the Mamluk age.[72] Even so, al-Dhahabī declared that Ibn al-Fāriḍ's writings were "pastry laced with venom." Other distinguished hostile critics included Ibn Abī Ḥajalah, Ibn Khaldūn, and Ibn Ḥajar.

A student of Ibn Ḥajar's, Burhān al-Dīn Ibrāhīm al-Biqāʻī ibn ʻUmar (ca. 809–85/ca. 1407–80) was perhaps the most interesting and certainly the most venomous of the critics of the two famous Sufi poets. Al-Biqāʻī can be considered as a writer as man of action, since he participated in Mamluk raids against Cyprus and Rhodes. He was a stylish and embittered author who wrote on a great range of subjects, including hadith, history, biography, famous lovers, and mathematics. Given the Mamluk court's tendency to look kindly on Sufism, his onslaught on monism and other alleged Sufi excesses was doomed, and he died in disgrace in Damascus. Since no one else was likely to, he had written his own eulogy.[73]

Although al-Biqāʻī was unusual in the range and quality of the enemies he accumulated, the ninth/fifteenth century was a great age for *odium theologicum* and scholarly rancor. Ibn Ḥajar and al-Maqrīzī hated al-ʻAynī, a sentiment that was reciprocated. Al-Maqrīzī and al-Sakhāwī attacked Ibn Taghrībirdī. Al-Suyūṭī and al-Sakhāwī feuded.[74] The intensity of these and other feuds reflected the intensity of the competition for patronage. Writers of ability, or, if not actual ability, at least ambition, flooded into Cairo from Syria, Upper Egypt, Iraq, Anatolia, and North Africa. Many of the leading (and feuding) intellectuals of the fifteenth and early sixteenth century are esteemed today as compilers of useful chronicles and biographical dictionaries. It is certainly true that history writing had a more central role in the literary culture of this period than it had, say, under the Abbasids or the Ayyubids. Even so, few of those who compiled the useful chronologies and obituaries were merely chroniclers of their times and, in some cases, their main interest lay elsewhere. Shihāb al-Dīn Aḥmad ibn Ḥajar al-ʻAsqalānī (773–852/1372–1449) was the leading intellectual figure of the fifteenth century. He had started out on his literary career as an *adīb* and poet. His *Dīwān* starts with panegyrics of the Prophet, then of rulers and other members of the elite, followed by love poems, followed by verses on miscellaneous themes, and finally *muwashshaḥ*s. Horribly industrious, he wrote some 250 books. He is known today chiefly for his biographical dictionary of fifteenth-century people, the *Durar al-Kāminah,* and his much-read chronicle *Inbāʼ al-Ghumr* (Informing the uninstructed). But in his own time, the reputation of Ibn Ḥajar rested on his expertise in hadith studies and on the many distinguished students he had taught in this field, including al-Sakhāwī, al-Biqāʻī, Ibn Taghrībirdī, al-Qalqashandī, and al-Nawājī.[75]

Ibn Ḥajar, while a political quietist, was anti-Turkish and hostile to those who, like al-ʻAynī, identified themselves too closely with the interests of the Mamluk regime. The same was true of Aḥmad ibn ʻAlī al-Maqrīzī (766–845/1364–1442). It is clear that al-Maqrīzī's main interest was history, though he wrote more widely than that, including works on various occult and cosmological matters, Arab tribes, the Sudan, lives of the artists, and, of course, like almost every writer of the Mamluk period, he fancied himself as a poet. His masterpiece, the *Kitāb al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (The Book of warning and taking example from places and ruins) is a survey of Cairo and Egypt more generally, in which topography serves as the pretext for literary nostalgia and lamentations about the corruption of the age the author lived in.[76] Al-Maqrīzī's

[76]The literature on al-Maqrīzī is vast, but see, for a general orientation, Franz Rosenthal, "Al-Maḳrīzī," *EI*², 6:193–94 and, on one aspect of al-Maqrīzī's literary output, Aḥmad al-Ghawaby,

rival Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī (ca. 812–74/ca. 1409 or 1410–69) was similarly primarily a historian, but he also wrote a treatise on the errors that Arabs and Persians make with Turkish names, a collection of proverbs, a treatise on music, and, of course, poetry.[77] Shihāb al-Dīn Muḥammad ibn Aḥmad Ibn Iyās (852–ca. 930/1448–ca. 1524), besides writing a well-known chronicle, the *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* was a prolific poet.

Ibn Iyās had studied with al-Suyūṭī, but, true to the rancorous age he lived in, he did not think much of him. The latter has already been referred to several times above. This is hardly surprising, for Jalāl al-Dīn al-Suyūṭī (849–911/1445–1505) was one of the last Muslim scholars who aimed to cover everything. His autobiography *Al-Taḥadduth bi-Ni'mat Allāh* (Speaking of God's bounty), despite its moralistic exordium, which offered the work as thanks to God and the life as an example for others to emulate, was a sustained piece of boasting riding on an academic's *curriculum vitae*. In the *Taḥadduth*, al-Suyūṭī listed 283 of his works. Al-Sakhāwī accused him of being too bookish. Certainly al-Suyūṭī's scholarship was of a backward-looking nature, and most of the books he boasted of having read were written at the beginning of the Mamluk period or even earlier. If modern scholars have regarded the Mamluk age as one of intellectual and literary decline, it is worth bearing in mind that this view was widely shared in the Mamluk age itself. Al-Suyūṭī deplored what he perceived to be an unprecedented dearth of scholarship and concomitant spread of ignorance throughout the Mamluk lands. Despite his faith in himself as a *mujaddid,* or renewer of the religious sciences, al-Suyūṭī shared al-Maqrīzī's gloom about the future. Fires and earthquakes were omens of further troubles to come and, although he loved Egypt, he predicted the land's ruin.[78]

In the Indian summer of the Mamluk sultanate, a number of literary salons flourished under the presidency of members of the Mamluk court. One such was established by Nāṣir al-Dīn Muḥammad ibn Jaqmaq (847/1444), the son of the Sultan al-Ẓāhir Jaqmaq and the heir apparent to the Mamluk sultanate. According to Ibn Taghrībirdī, the main source here, the prince was learned in history, rare anecdotes, and Turkish and Arab poetry. He was also fond of the Sufi practice of *samā'* (and this passion for music and song may have been part of a youthful revolt against his learned but austere father, who certainly disapproved of that sort

[78]There is an extensive literature on al-Suyūṭī. See in particular Elizabeth Sartain, *Jalāl al-Dīn al-Suyūṭī,* 2 vols. (Cambridge, 1975); Jean-Claude Garcin, "Histoire, opposition politique et piétisme traditionaliste dans le Ḥusn al Muḥādarat de Suyûti," *Annales Islamologiques* 7 (1967): 33–91.

of thing). The prince seems to have held soirees almost every evening, for Ibn Ḥajar attended regularly two evenings a week, while one of his enemies also attended two nights a week, but on different nights. The prince was the patron of both Ibn Ḥajar's *Inbā' al-Ghumr* and Ibn Taghrībirdī's *Al-Nujūm al-Zāhirah.* According to Ibn Taghrībirdī, Nāṣir al-Dīn Muḥammad "almost flew for joy" when he heard that Ibn Taghrībirdī had commenced work on his chronicle.[79] Alas for Ibn Taghrībirdī's hopes, the prince died of a diet that involved drinking vinegar on an empty stomach.

Although we have no detailed account of the way in which Nāṣir al-Dīn Muḥammad's salon conducted its affairs, at the very end of the Mamluk period the sultan Qānṣūh al-Ghūrī presided over one of the grandest and best-recorded salons. The sultan has already been mentioned as a poet in Turkish and Arabic. He also boasted of fluency in several other languages, and he commissioned the translation by Sharīf Ḥusayn ibn Ḥasan of Firdawsī's *Shāhnāmah* into Ottoman Turkish.[80] According to Sharīf's preface to the *Shāhnāmah,* al-Ghūrī knew Persian well, but he wanted to make the great work accessible to his amirs. He also presided over regular soirees, of which records were kept and placed in the royal library. The subjects that came up in the sultan's soirees ranged over history, geography, mythology, current affairs, and jest, but most commonly the topics bore upon religion. How can Ramadan be observed in the Arctic Circle? When and in what circumstances has the hajj ever been suspended? Is there anything in the hadith to license the playing of chess? The soirees were recorded in two sources: the *Nafā'is al-Majālis al-Sulṭānīyah* by Ḥusayn ibn Muḥammad called Sharīf, covering a few months in 910/1505, and the *Kawkab al-Durrī fī Masā'il al-Ghūrī,* set in 915/1513–14, of which the first half is missing. Despite the participation of leading Egyptian Arab ulama in these sessions, one thing that emerges is the Turco-Persianate formation of court culture, and there are many references to Maḥmūd of Ghaznah, the *Shāhnāmah,* and the ideal ruler, Alexander (as featured in the *Shāhnāmah*). Al-Ghūrī's salon does not seem to have been particularly interested in the famous poets and prose writers of traditional Arab literary culture.[81] Like al-Ghūrī's enthusiasm for gardening on a grand scale in the Ottoman Turkish manner, the soirees provide evidence of the openness of the sixteenth-century Mamluk court to foreign exemplars and, more broadly, of the spread of an international court culture throughout the eastern Islamic lands.

The debt in all the above to the still scanty and patchy secondary literature

must be evident and it is certain that many important and exciting discoveries remain to be made in the *terra incognita* of Mamluk literature. Although the backward-looking nature of so much Mamluk poetry and prose has been stressed here, this feature should not necessarily be identified with decadence.[82] For if Mamluk authors imitated and sought to surpass their Abbasid predecessors, it was also true that Abbasid authors had looked back on and imitated their pre-Islamic and Umayyad precursors. In both periods originality was only valued within quite close constraints. In his *Literary History of the Arabs*, R. A. Nicholson, while confessing to "a desultory and imperfect acquaintance with their work," ventured that even the best of the poets of the Mamluk period were "merely elegant and brilliantly accomplished artists, playing brilliantly with words and phrases, but doing little else."[83] In *Arabic Literature,* Sir Hamilton Gibb characterised the literary production of the Mamluk age as follows: "the output was enormous throughout, but the qualities of originality, virility, and imagination, weak from the first, die away completely by the sixteenth century."[84] While it is hard to dissent from these timeworn verdicts, it is nevertheless the case that modern western literary theory accords originality and "virility" a status that writers and critics of the Mamluk period would have found excessive. On the other hand the versatility, erudition, and literary stamina of most of the writers mentioned above is quite astonishing.

Poetry for Easy Listening: *Insijām* and Related Concepts in Ibn Ḥijjah´s *Khizānat al-Adab*

If one considers the history of the indigenous Arabic tradition of poetics and rhetoric one cannot help being impressed by the ever-growing terminological sophistication in the study of figures of speech, the schemes and tropes of *ʿilm al-badīʿ*. In the late third/ninth century the poet and prince Ibn al-Muʿtazz set the trend in his modest but seminal treatise with a mere handful of terms: five principal ″novel″ kinds called *badīʿ* and some thirteen further ″embellishments″ *(maḥāsin)*. Ibn Abī al-Iṣbaʿ, who died early in the Mamluk period, in 654/1256, discusses 125 kinds,[1] claiming to have discovered thirty of them himself. From then on, the rate of growth decreases. Nearly two centuries later, Ibn Ḥijjah al-Ḥamawī (d. 837/1434) lists 142 kinds,[2] and another three hundred years on ʿAbd al-Ghanī al-Nābulusī distinguishes 150 kinds.[3]

A study of these works, which also serve as anthologies of prose and above all poetry, might give an impression of the increasing sophistication and artfulness of the poetry itself, or even its growing artificiality and obscurity. To some extent there is truth in this, although the poetry in these works is carefully selected in order to illustrate the schemes and tropes, the puns and ornaments, and is therefore not truly representative of poetic practice as a whole. It is well known that general works on Arabic literary history often speak of ″decadence″ after the Abbasid period. This decadence is seen, on the one hand, in the alleged ornateness and flowery rhetoric of elite style, and on the other hand in the alleged influence of so-called Middle Arabic and the colloquial language, resulting in simplification and the infringement of ″pure″ syntax and style by ″vulgarisms.″ In short, according to this view one either finds what is obscure and difficult but vapid and trivial, or what is simple but stylistically marred and, as often as not, equally empty, trivial,

---

[1]He himself says 121; see *Taḥrīr al-Taḥbīr* (Cairo, 1383), 621.

[2]I have used the edition Būlāq 1291 [1874] of the *Khizānat al-Adab* along with a modern (but uncritical) one by ʿIṣām Shaʿaytū, 2 vols. (Beirut, 1987). The references are given to both, separated by a slash.

[3]ʿAbd al-Ghanī al-Nābulusī, *Nafaḥāt al-Azhār* (Būlāq, 1299); Pierre Cachia, *The Arch Rhetorician or The Schemer´s Skimmer. A Handbook of Late Arabic badīʿ drawn from ʿAbd al-Ghānī an-Nābulusī´s* Nafaḥāt al-Azhār ʿalā Nasamāt al-Asḥār (Wiesbaden, 1998).

and banal. ″The best of them,″ said Nicholson in his *Literary History of the Arabs,* speaking of poets in the Mamluk era, ″are merely elegant and accomplished artists, playing brilliantly with words and phrases, but doing little else.″[4] These words are quoted by Homerin, reviewing the neglect of poetry from the Mamluk period;[5] in fairness to Nicholson, one should add that he admits that ″until they have been studied with due attention, it would be premature to assert that none of them rises above mediocrity.″

It is extremely unlikely that the reigning view on the superiority of the older poets will ever change, but the generally negative and disparaging remarks on post-Abbasid poetry may well be replaced by more balanced judgements as post-Abbasid poetry is slowly beginning to be investigated in more detail. Here I shall concentrate on the concept of stylistic and poetic ″easiness″ as we find it in Ibn Ḥijjah′s work on *badīʿ*. Ibn Ḥijjah, poet and *kātib,* wrote his *Khizānat al-Adab* on the model of *Sharḥ al-Kāfiyah al-Badīʿīyah* by the well-known poet Ṣafī al-Dīn al-Ḥillī (d. 749/1349): both works are commentaries on *badīʿīyah* poems composed by the authors themselves, in *basīṭ* meter and rhyming in *-mī,* in praise of the Prophet (like, before them, al-Būṣīrī′s celebrated ode), each verse of which exemplifies a particular figure of speech or stylistic embellishment. *Khizānat al-Adab* contains a large quantity of poetry from all ages, much of it from post-Abbasid or Mamluk times. Since normally a figure of speech or trope does not exceed the compass of one or two lines, most of the quotations are short, but one also finds longer fragments and poems, including *muzdawijah*s of 133 and 158 couplets.

Most of the ″embellishments″ are thought of as features that are somehow changed from or added to an underlying basic utterance: a metaphor instead of the literal word, a pun, antithesis, syntactical or semantic parallelism that can be superimposed on plain expressions. Instead of adding, one could presuppose other mutations: suppression in the case of ellipsis and conciseness, permutation in the case of some syntactic rearrangements. There are also ″figures″ that cannot so easily be described, for instance the more impressionistic concepts of *nazāhah,* ″chaste diction,″ particularly when in biting lampoons one manages to avoid obscenities,[6] or *salāmat al-ikhtirāʿ,* ″originality.″[7] The same is valid for a few chapters that deal with easy diction and smooth style, which form the subject of this article.

The most important of these is the section on *insijām,* "fluency."[8] It is obviously a concept that is dear to Ibn Ḥijjah, for the section is the longest of all by a wide margin, apart from the only section that surpasses it, the very extensive chapter on *tawriyah.*[9] A later author, Ibn Maʿṣūm, who completed his large-scale *badīʿīyah* commentary *Anwār al-Rabīʿ* in 1093/1682, goes even further, making *insijām* by far his longest chapter.[10] The term *insijām* is derived from a root denoting flowing, streaming, and pouring forth of water. In the metalanguage of *badīʿ,* the dominant semantic fields are those of jewelry, embroidery, and other sartorial imagery;[11] it is appropriate that the limpidity of streaming water is used for what comes down to the *absence* of ornament. For, paradoxically, *insijām* is a kind of *badīʿ* that is defined by being devoid of *badīʿ*.[12] "Water" implies not only smoothness and fluency, but sparkle and lustre: in Arabic, as in English, one speaks of the "water" of a sword. It is unique among drinks and food in that its tastelessness is praised and called sweetness. Ibn Ḥijjah's description of *insijām,* given at the beginning of the chapter, is as follows:

> By *insijām* is meant that [the text] flows like water when it runs down *(inḥidār),* because it is free from complexity *(ʿaqādah),* so that it would almost stream forth *(yasīl)* in its elegance *(riqqah),* because of the smoothness of its construction *(suhūlat tarkībih)* and the sweetness of its diction *(ʿudhūbat alfāẓih)*. . . . The scholars of *badīʿ* are unanimous in defining this kind of *badīʿ* as being remote from artificiality and free from kinds of *badīʿ* *(an yakūna*

[10]ʿAlī ibn Aḥmad Ibn Maʿṣūm, *Anwār al-Rabīʿ fī Anwāʿ al-Badīʿ,* ed. Shākir Hādī Shukr (Karbalāʾ, 1968–69), 4:5–194.

[11]Among the few who have dealt with this topic is Abdelfattah Kilito, "Sur le métalangage métaphorique des poéticiens arabes," *Poétique* 38 (1979): 162–74.

[12]*Khizānah,* 236/1:417; cf. Ibn Abī al-Iṣbaʿ, *Taḥrīr*, 429; idem, *Badīʿ al-Qurʾān,* 166; al-Ḥillī, *Sharḥ,* 264; al-Nābulusī, *Nafaḥāt,* 295.

> *ba‘īd min al-taṣannu‘ khālī min al-anwā‘ al-badī‘īyah),* except when this happens easily and unintentionally.

He adds that *insijām* in rhymed prose means that the rhymes appear to be unintentional and spontaneous. In the Quran it is seen in the occasional short passages that scan as poetic meters; Ibn Ḥijjah gives examples at some length.[13] Another paradox seems to be lurking here: *insijām* in metrical speech implies that it sounds almost like prose, and conversely, when prose chances to come out according to one of the recognized poetic meters, it is *insijām* too. As far as we can judge, *insijām*, as a separate section in lists of *badī‘*, started its life precisely as the last-mentioned kind: prose that fortuitously turns out to be metrical, for this is how Usāmah Ibn Munqidh, the first to do so, defines and illustrates the term in his work on *badī‘*.[14] *Insijām* in its broader sense is first found in Ibn Abī al-Iṣba‘.

Immediately after defining *insijām* Ibn Ḥijjah says that ″most of the poetry of al-Shaykh Sharaf al-Dīn ‘Abd al-‘Azīz al-Anṣārī, *shaykh al-shuyūkh* of Ḥamāh… corresponds to this definition.″ This poet, also known as Ibn al-Raffā‘, died early in the Mamluk period, in 662/1264;[15] later in the chapter, Ibn Ḥijjah quotes six fragments or short poems by him, with a total of 57 lines, which illustrate his ″amatory fluency″ *(insijāmātuh al-gharāmīyah)*.[16] It appears that *insijām* and love poetry are closely connected, for Ibn Ḥijjah says at the outset that the masters of this style are *ahl al-ṭarīq al-gharāmīyah,* ″the people of the amatory path,″[17] or *aṣḥāb al-madhhab al-gharāmī.*[18] This love may be profane or mystical, or even both at the same time; it is not always possible to distinguish between the two categories. Before we look at the poetry in more detail, consider the following short text, a lover′s complaint:

> Khabbirūhū tafṣīla ḥālī jumlatan; fa-‘asāhū yariqqu lī wa-la‘allah!
> Kam tanaḥnaḥtu idh tabaddá, ḥidhāran min raqībī, wa-kam takallaftu

---

[13]*Khizānah,* 236–38/1:417–21.

[14]Usāmah, *Badī‘*, 131–32; he discusses prose that is unintentionally metrical but does not mention the Quran. Ibn Abī al-Iṣba‘, *Taḥrīr*, 429 discusses the Quranic phenomenon and refers to a book of his, *Al-Mīzān,* on this topic. See also Ibn Qayyim al-Jawzīyah, *Al-Fawā'id* (Cairo, 1327), 219–20; al-Suyūṭī, *Al-Itqān fī ‘Ulūm al-Qur'ān* (Cairo, 1975), 3:296–97 (ch. 58).

[15]Ibn al-Raffā‘, ‘Abd al-‘Azīz ibn Muḥammad ibn ‘Abd al-Muḥsin, was born 586/1190; see Khalīl ibn Aybak al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 18:546–56, where he is highly praised for his beautiful and artful poetry, full of wit *(nukat),* punning (*tawriyāt),* easy rhymes, ″sweet syntax″ *(al-tarkīb al-‘adhb),* correct diction, and eloquent ideas.

[16]*Khizānah,* 249–51/1:436–39.

[17]Ibid., 236/1:417.

[18]Ibid., 238/1:421.

su'lah! Laysa lī 'an hudá hawāhu ḍalālun, akthara al-lawma 'ādhilī aw aqallah. Rukkibat fī jibillatī nashwatu al-'ishqi; wa-ṣa'bun taghyīru mā fī al-jibillah.

Sādatī, 'āwidū riḍākum wa-'ūdū 'an jafākum, fa-mā baqiya fīya faḍlah! Dhubtu shawqan, fa-'ālijūnī bi-qurbin; muttu 'ishqan, fa-ḥanniṭūnī bi-qublah! Wa-ishghulūnī 'an lā'imin mā atānī bi-rashādin atat'hu āfatu ghaflah: Qultu, "Billāhi, khallinī!", fa-tamādá. Wa-qalīlun man yatruku al-sharra lillah.

[Tell him the details of my state, and all of it; perhaps he will have pity on me, maybe . . . ! How often did I say "Ahem" when he appeared, being wary of my watchful guard; how often did I feign a cough! I do not stray from the right path of loving him, however much or little critics may reproach me. Intoxication by love's passion is a part of me by nature: and it is hard to change what's in one's nature.

My masters, let me have your favor once again, after your harshness, for I cannot bear it any longer! I've pined away with passion; cure me now with nearness! I've died of love; embalm me with a kiss! Distract me from a censurer—as soon as he tells me how to behave, he's plagued by inattentiveness: I say, "For God's sake, leave me!" But he perseveres. Few people will abandon evil "for God's sake."]

A pleasant piece of literary prose? Perhaps the recurrent rhyme in *-lah* has given the game away: it is in fact poetry, by the above-mentioned Ibn al-Raffā', as the following layout makes clear.[19]

Khabbirūhū tafṣīla ḥāliya jumlah
    fa-'asāhū yariqqu lī wa-la'allah
Kam tanaḥnaḥtu idh tabaddá ḥidhāran
    min raqībī wa-kam takallaftu su'lah
Laysa lī 'an hudá hawāhu ḍalālun
    akthara al-lawma 'ādhilī aw aqallah
Rukkibat fī jibillatī nashwatu al-'ish-
    qi wa-ṣa'bun taghyīru mā fī al-jibillah
Sādatī 'āwidū riḍākum wa-'ūdū

[19]Ibid., 249–50/1:438. In the "prose" version I have cheated a bit in giving prose forms instead of "poetic" deviations and rhymes (thus *ḥālī*, *jumlatan, 'ishq, baqiya*, whereas the poem has *ḥāliya, jumlah, 'ishqi, baqī*).

'an jafākum fa-mā baqī fīya faḍlah
Dhubtu shawqan fa-'ālijūnī bi-qurbin
muttu 'ishqan fa-ḥanniṭūnī bi-qublah
Wa-ishghulūnī 'an lā'imin mā atānī
bi-rashādin atat´hu āfatu ghaflah
Qultu billāhi khallinī fa-tamādá
Wa-qalīlun man yatruku al-sharra lillah

[Tell him the details of my state, and all of it;
perhaps he will have pity on me, maybe . . . !
How often did I say ″Ahem″ when he appeared, being wary of
my watchful guard; how often did I feign a cough!
I do not stray from the right path of loving him,
however much or little critics may reproach me.
Intoxication by love´s passion is a part of me by nature:
and it is hard to change what´s in one´s nature.
My masters, let me have your favor once again,
after your harshness, for I cannot bear it any longer!
I´ve pined away with passion; cure me now with nearness!
I´ve died of love; embalm me with a kiss!
Distract me from a censurer—as soon as he
tells me how to behave, he´s plagued by inattentiveness:
I say, ″For God´s sake, leave me!″ But he perseveres.
Few people will abandon evil ″for God´s sake.″]

This gives an idea of what Ibn Ḥijjah calls ″fluency″: no intricate word-play, the few antitheses are simple (line 3: *hudá/ḍalāl, akthara/aqalla;* line 5: *riḍākum/jafākum*), as is the syntactic, semantic, and phonetic parallelism in line 6. Both halves of the poem (lines 4b and 8b) end with a maxim-like sentence, the latter being a little joke in that it gives a twist to the imprecation *billāh* in 8a, and using the colloquial *lillah* with short *a* in the last rhyme. If, as the earliest known treatment of *insijām,* by Usāmah Ibn Munqidh, suggests, the ″figure″ was originally conceived as prose unintentionally coming out metrically, as poetry, then an important criterion is apparent artlessness. A test for poetry would consist in writing it out as prose, as I have done above, and see how long it takes for a new reader to discover that it is in fact poetry.

Ibn Ḥijjah quotes some 112 different poets in the chapter (including himself, with a piece of 19 lines).[20] Many are well-known, others are obscure or wholly

---

[20]Ibid., 274/1:475.

unknown. The majority are late, but there are some lines by early poets: Imru' al-Qays, with a line from his *Mu'allaqah* ("A-gharraki minnī anna ḥubbaki qātilī . . .") and the line that ends with the well-known words ". . . wa-kullu gharībin lil-gharībi nasībū" [a stranger is related to every other stranger].[21] Many other early poets are also represented by a few lines. Poets from the Abbasid era are better represented, some by longer quotations, such as al-Sharīf al-Raḍī (30 lines) and Mihyār al-Daylamī (26 lines). High scores among pre-Mamluk poets are for Bahā' al-Dīn Zuhayr (d. 656/1258), with 48 lines, and especially Ibn al-Fāriḍ (d. 632/1235), with 130 lines (half of them from what looks like a conflation of his two *Tā'īyah*s), which is remarkable in view of the profusion of figures of speech in his verse. Among the Mamluk poets are al-Shābb al-Ẓarīf and his father 'Afīf al-Dīn al-Tilimsānī, Jamāl al-Dīn Ibn Nubātah, Ibn al-Wardī, and Burhān al-Dīn al-Qīrāṭī. I shall quote and translate short poems or fragments by all five of these.

Shams al-Dīn Muḥammad ibn al-'Afīf al-Tilimsānī, nicknamed al-Shābb al-Ẓarīf, "the Decent Young Man" (*ẓarīf* also means "elegant, witty, charming") was born in Cairo in 661/1263 and died at Damascus at the very young age of 26, in 688/1289, two years before his father.[22] Ibn Ḥijjah quotes seven pieces or fragments by him, with a total of 51 lines, all of them love lyrics. His verse is indeed smooth and fluent, though not without obvious rhetorical craftsmanship. An example:

Lā takhfi mā fa'alat bi-ka al-ashwāqū
    wa-ishraḥ hawāka fa-kullunā 'ushshāqū
Fa-'asá yu'īnuka man shakawta la-hu al-hawá
    fī ḥamlihī fa-al-'āshiqūna rifāqū
Lā tajza'anna fa-lasta awwala mughramin
    fatakat bi-hi al-wajanātu wa-l-aḥdāqū
Wa-iṣbir 'alá hajri al-ḥabībi fa-rubbamā
    'āda al-wisālu wa-lil-hawá akhlāqū
Kam laylatin as'hartu aḥdāqī bi-hā
    wajdan wa-lil-afkāri bī iḥdāqū
Yā rabbu qad ba'uda al-ladhīna uḥibbuhum

[21] *Dīwān,* ed. Abū al-Faḍl Ibrāhīm (Cairo, 1969), 357; it does not sound very authentic.

Shākir Hādī Shukr [thus in preface; on title page and cover: Shakr] (Beirut, 1405/1985), with some 2500 lines.

‘annī wa-qad alifa al-rifāqa firāqū
Wa-iswadda ḥaẓẓī ‘indahum lammā sará
fīhī bi-nāri ṣabābatī iḥrāqū
‘Urbun ra’aytu aṣaḥḥa mīthāqin lahum
an lā yaṣiḥḥa ladayhimū mīthāqū[23]

[Don′t hide what love has done to you:
display your passion; we are lovers all.
If you complain of love to someone, he
may help you bear it: lovers are all friends.
You must not grieve, you′re not the first who loves
and has been killed by murderous cheeks and eyes.
Be steadfast when your love deserts you, for
you may be reunited. Passion has its ways.
So many nights I kept my eyes awake,
love-sick, besieged by thoughts all round.
Lord! Those I love are far from me;
parting from friends is part of normal life.
My luck with them has blackened, with
the scorching fire of passion burnt.
They′re Bedouin nomads, most reliable, I find,
in that one never can rely on them.]

The ″fluency″ consists in the absence of difficult words and intricate syntax. The few instances of word-play are simple: *aḥdāq* and *iḥdāq* (line 5), *rifāq* and *firāq* (line 6). A sprinkling of antitheses adds clarity to the ideas expressed (hiding/displaying, grief/steadfastness, parting/union). As in the poem quoted above, several lines end with a general statement resembling a maxim (lines 1, 2, 4) and the poem is rounded off (at least in the curtailed version given in the *Khizānah*) with a neat paradox, a line that stands out in being the only one that does not contain a reference to love or lovers.[24] There is a contrast or even a conflict, not resolved, between on the one hand the optimistic and consoling first four lines, addressed to the lover (or perhaps spoken by the lover to himself), and on the

[23]*Khizānah,* 252/1:441; cf. *Dīwān*, 161, which adds one line after vs. 1 and three more at the end. In line 6, *Khizānah* has *al-firāqa firāqū*, which does not make sense; the version of the *Dīwān* has been followed instead. In the last line one might read *yaṣiḥḥu,* instead of the subjunctive, since no wish or effect is involved.

[24]Vs. 1 has *ashwāq, hawá* and *‘ushshāq*, vs. 2 *hawá* and *‘āshiqūn,* vs. 3 *mughram,* vs. 4 *ḥabīb* and *hawá,* vs. 5 *wajd,* vs. 6 *uḥibbuhum,* vs. 7 *ṣabābatī.*

other hand the unredeemed misery described in the second half of the poem, where the second person singular (comfortingly included in ″all of us″) is replaced by the first person singular throughout, apparently isolated from ″them.″ It could be argued, of course, that such sudden changes of mood are normal in the love-stricken.

Ibn Ḥijjah also quotes the following four lines by him:

Bi-tathannī qawāmika al-mamshūqī
    wa-bi-anwāri wajhika al-maʿshūqī
Wa-bi-maʿnan lil-ḥusni mubtakarun fī-
    ka wa-qalbin ka-qalbiya al-maḥrūqī
Jud bi-waṣlin aw zawratin aw bi-waʿdin
    aw kalāmin aw waqfatin fī al-ṭarīqī
Aw bi-irsālika al-salāma maʿa al-rī-
    ḥi wa-illā fa-bi-al-khayāli al-ṭarūqī[25]

[By the swaying of your slender body,
    and the lights of your beloved face,
By a rare and novel beauty in you,
    and a heart burnt black like my own heart:
Come live with me, or visit me, or promise me,
    or say something, stop briefly on the street,
Or send a greeting with the wind; if not,
    then visit me at least at night in dreams!]

This little poem is more unified than the previous one; it consists of only one sentence that is long but transparent, neatly divided into two equal halves. The lines are devoid of any puns, and employ none but the simplest metaphors; the only art lies in the artless diction and the pleasing anticlimactic series in the last two lines, in which the requests become, on the whole, progressively longer and emptier.

More intricate word-play and greater frequency of it are not incompatible with *insijām.* Here is a piece by the father of al-Shābb al-Ẓarīf, ʿAfīf al-Dīn al-Tilimsānī (610–690/1213–1291).[26] By calling him one of the *ʿārifūn,* Ibn Ḥijjah indicates that the verses should be given a mystical interpretation:

---

[25] *Khizānah,* 252/1:441. In the *Dīwān* (167–68) the poem has 13 lines, of which Ibn Ḥijjah offers 1, 2, 4, and 5. Instead of *wa-qalbin ka-qalbiya al-maḥrūqī* the *Dīwān* has *wa-khaṣrin ka-qalbiya al-masrūqī.*

[26] Krenkow-[Yalaoui], ″Tilimsānī″; Brockelmann, *GAL,* 1:258, S1:458.

Ludh bi-al-gharāmi wa-ladhdhati al-ashwāqī
　　wa-ikhtar fanā'aka fī al-jamāli al-bāqī
Wa-ikhla' sulūwaka fa-huwa thawbun mukhlaqun
　　wa-ilbas jadīda makārimi al-akhlāqī
Wa-tawaqqa min nāri al-ṣudūdi bi-shurbatin
　　min mā'i dam'ika fa-huwa ni'ma al-wāqī
Wa-idhā da'āka ilá al-ṣibā nafasu al-ṣabā
　　fa-ajib rasūla nasīmihi al-khaffāqī
Wa-idhā sharibta al-ṣirfa min khamri al-hawá
　　iyyāka taghfalu 'an jamāli al-sāqī
Wa-ilqa al-aḥibbata in aradta wisālahum
　　mutaladhdhidhan bi-al-dhulli wa-al-imlāqī
A-wa-laysa min aḥlá al-maṭāmi'i fī al-hawá
　　'izzu al-ḥabībi wa-dhillatu al-'ushshāqī[27]

[Take refuge in love and the pleasure of passion
　　and seek your extinction in beauty that lasts.
Take off the old cloak, now worn out, of your solace;
　　and get yourself dressed in a new set of virtues.
Seek protection ´gainst fire of rejection by drinking
　　the water of tears: they´re the safest protection.
When the zephyr invites you to amorous folly,
　　obey then the messenger sent in its fluttering breeze.
And when you have drunk the unmixed wine of passion,
　　be careful to notice the cupbearer´s beauty.
And meet those you love, if you wish to be one with them,
　　while you relish in being submissive and poor.
For isn´t this one of the sweetest ambitions in love:
　　the beloved exalted, and humbled the lovers?]

The poem is based on an often-expressed paradox: a lover´s true happiness exists in being miserable, and it ought to be his highest ambition to be lowly and submissive. This is expressed through various instances of paronomasia: *ludh*/*ladhdha*, *mukhlaq*/*akhlāq*, *tawaqqa*/*wāqī, ṣabā*/*ṣibā, mutaladhdhidh*/*dhull,* and of antithesis: *fanā'*/*bāqī, ikhla'*/*ilbas*, *mukhlaq*/*jadīd*, *nār*/*mā'*, *'izz*/*dhillah*. Combined, these two figures suggest a punning antithesis of *ladhdhah* ″pleasure″ and *dhillah*/*dhull* ″submission″ that here, exceptionally, goes beyond the confines

[27]*Khizānah,* 260/1:453.

of a single line (see lines 1, 6 and 7) and is reinforced by the fact that the very first word, *ludh* (from a different root), is a palindrome of *dhull*. Yet, in spite of all this apparent artifice, one can understand that Ibn Ḥijjah cites it as an example of *insijām* ″that stirs the passions and ardent emotions.″

Not all poems quoted are on love secular or mystical. The longest poem, by Ibn Nubātah (686–768/1287–1366), is a *muzdawijah* of 158 *rajaz* couplets in praise of the ruler of Ḥamāh, al-Malik al-Afḍal. After a brief description of nature, it turns into a hunting poem, with a brief panegyric at the end.[28] The poem reads smoothly indeed, and approaches prose not only in being relatively free of obscure diction and far-fetched imagery, but also because it is basically a narrative, from the beginning of the hunt (line 23: ″When the time for the shoot[29] approached, we set out . . .″) until the returning, with a heavy bag (lines 137–39: ″God, what a fine and blessed sight, the manner we returned from the mountain′s summit, our hands filled with the spoils, thankful for the bounty bestowed upon us, thronging round the Victorious King, al-Malik al-Manṣūr[30] like comets round the luminous moon″). Within a framework of verbs in perfect tense at intervals (*sirnā . . . ḥattá nazalnā . . . wa-ibtadara al-qawm . . . wa-aqbalat mawākibu al-ṭuyūr . . . sirnā . .* ., etc.), the action and scenes are depicted in the intervals by means of circumstantial clauses, extended attributive clauses, similes (*ka-annahā* . . .), exclamative sentences (*fa-yā la-hā . . ., fa-ḥabbadhā . . ., kam . . ., wāhan la-hā . . .*) and other constructions. Shooting turns to hawking and to hunting with hounds and cheetahs, and all of it underlines both the bounty and the bloodshed that is customarily ascribed to rulers in panegyric poetry. Ibn Ḥijjah, praising the poem, says that ″If the Sharīf could have seen it, he would have sponged off of *(taṭaffala)* the breeze of its verses [i.e., plagiarized them], and he would have acknowledged that *The Chanter and the Groaner* does not chant and warble as sweetly.″ He refers to Ibn al-Habbārīyah (d. ca. 509/1115) and his collection of poems in *rajaz* meter with mostly animal fables, even though Ibn Nubātah′s poem is more akin to the model set by Ibn al-Mu‘tazz and Abū Firās.[31]

Ibn Ḥijjah is enthusiastic, too, about a poem by Ibn al-Wardī (691–749/1292–1349) which is a versified deed of purchase, improvised when challenged on 14 Ramaḍān of the year 715/1316.[32] It begins as follows:

---

[28]Ibid., 267–72/1:466–72. The edition of the poem by Muḥammad As‘ad Ṭalas in *Majallat al-Majma‘ al-‘Ilmī al-‘Irāqī* 2 (1952): 302–10 has 177 couplets.

[29]With pellets, *ramy al-bunduq,* for shooting birds.

[30]Ibn Ḥijjah explains that al-Malik al-Afḍal′s earlier name was al-Malik al-Manṣūr.

[31]See, e.g., James E. Montgomery, ″Abū Firās′s Veneric *Urjūzah Muzdawijah*,″ *Arabic and Middle Eastern Literatures* 2 (1999): 61–74, esp. 69.

[32]*Khizānah,* 272–73/1:473–74. The date, as can be expected here, is given in the poem itself.

Bi-ismi ilāhi al-khalqi hādhā mā ishtará
Muḥammadu ibnu Yūnusa ibni Sunqurā
Min Māliki ibni Aḥmada ibni al-Azraqī
Kilāhumā qad ʻurifā min Jilliqī

[In the name of the God of all creatures: this is what has been bought
By Muḥammad Ibn Yūnus Ibn Sunqur
From Mālik Ibn Aḥmad Ibn al-Azraq,
Both known persons from Damascus.]

Truly fluent like prose, it is versification, *naẓm,* but not everyone would call it poetry, *shiʻr*. It is perhaps not strange that the poem is not found in Ibn al-Wardī's *Dīwān*.[33] Ibn Ḥijjah could have used the second and third hemistichs of this fragment as illustrations of another "figure" of *badīʻ*, called *iṭṭirād* (lit. "uninterrupted sequence"), which consists in using personal names in poetry in a seemingly artless manner.[34]

The Egyptian poet Burhān al-Dīn al-Qīrāṭī (726–81/1326–79),[35] a friend of Ibn Nubātah, is represented with three fragments taken from one poem, the first two being the following:

Akhadhat Bābilu ʻanhū / baʻda tilka al-nafathātī
Fa-huwa ghuṣnun fī inʻitāfin / wa-ghazālun fī iltifātī
Ḥasanātu al-khaddi minhū / qad aṭālat ḥasarātī
Kullamā sā'a faʻālan / qultu «Inna al-ḥasanāti . . .»
Wa-li-sū'i al-ḥaẓẓi ṣārat / ḥasanāti sayyi'ātī
Aʻshaqu al-shāmāti minhū / wa-hiya asbābu mamātī
. . . .
Bi-abī laḥẓu ghazālin / qā'ilin fī al-khalawāti:
"Inna lil-mawti bi-aqdā- / ḥi jufūnī sakarātī"
Qultu "Qad mittu gharāman" / Qāla lī "Mut bi-ḥayātī"[36]

[Babylon took from him
some of these magic spells:[37]
He is a twig the way he bends,
a gazelle the way he turns.
The beauties of his cheek
have prolonged my miseries.
Whenever he behaves badly
I say, «Surely the good deeds . . .»[38]
But to my misfortune my good deeds
have turned into evil deeds.
I am in love with his moles
though they be the causes of my death.
. . . .
O, how dear to me is the glance of a gazelle
saying in the desert,[39]
″Death′s throes[40] are in
the cups of my eyelids″
I said, ″I am dying of passion!″
He replied to me, ″Die, by my life!″]

The usual motifs—the twig, the gazelle, magic charms, cheeks, moles or beauty spots, and finally death by love—make for easy listening, together with the smooth syntax, short lines, and easy diction. There is hardly anything deep in such a poem, although one notices little touches that lift it above the wholly trite. By saying that the ″prehistoric″ Babylonians derived their magic from the beloved, it is suggested that he[41] is a timeless, primeval being, perhaps an angel fallen from heaven like Hārūt and Mārūt. The lover, in turn, pretends to have fallen: in love and into sin. His beloved′s bad deeds have literally been ″taken away″ by the incompleteness of the Quranic quotation as well as by his beauty; conversely, the lover′s goodness has turned into badness as stated in the next line and implied by

---

[37]Babylon is associated with the fallen angels Hārūt and Mārūt and with magic.

[38]« . . will take away the evil deeds» (Quran 11:114).

[39]Ḍayf, who quotes these lines (*ʿAṣr al-Duwal,* 293, omitting vss. 4–5), places this line at the beginning. He interprets *qāʾil* as from the root *qyl* (″taking a midday nap″), which is possible. In the version quoted by Ibn Ḥijjah ″saying″ is more appropriate, since the following line must be spoken by the ″gazelle.″

[40]Literally, ″intoxications,″ hence the ″cups.″

[41]Ḍayf, child of his time, assumes that the beloved is female.

the mention of drunkenness further on. There is an obvious play on the two meanings of *ḥasanāt,* aesthetic and moral ″beauties.″ The last word is a linguistic joke, playing on two meanings of the preposition *bi-* in ″by my life″: either an implied oath: ″(I swear) upon my life,″ or literally ″by means of my being alive.″

There are two other sections in *badīʿ* lists, including Ibn Ḥijjah′s *Khizānah,* that are not wholly unlike *insijām.* Ibn Ḥijjah deals with them in two much shorter consecutive sections. The first is *suhūlah,*[42] which means, of course, ″easiness, smoothness, facility″; as we have seen, Ibn Ḥijjah uses the word when describing *insijām.* He is aware that the concepts are related, as appears from the following:

> *Suhūlah* is mentioned by al-Tīfāshī in connection with the figure of *ẓarāfah* (″elegance″);[43] some people associate it with *insijām.* It is mentioned by Ibn Sinān al-Khafājī in his book *Sirr al-Faṣāḥah (The Secret of Eloquence),* where he says that it consists of the words being free from artificiality, complexity, and tortuousness in the expression *(khulūṣ al-lafẓ min al-takalluf wa-al-taʿqīd wa-al-taʿassuf fī al-sabk).*[44] Al-Tīfāshī defines *suhūlah* as ″easy expressions, that are distinguished from others even to those literate people who have the least taste, and which bespeak of a sensitive feeling, a fine nature, and a sound reflective mind.″[45]

Almost all the illustrations are from Bahāʾ al-Dīn Zuhayr, ″who holds the reins of this kind.″ No attempt is made to distinguish between *insijām* and *suhūlah* and it is doubtful that Ibn Ḥijjah would insist on a distinction; he is bound to follow his

[42]*Khizānah,* 554–7/1:478–81; cf. al-Ḥillī, *Sharḥ*, 311–13; Ibn Maʿṣūm, *Anwār,* 6:270–78 (calling it *tas′hīl*); al-Nābulusī, *Nafaḥāt,* 311–16; Cachia, *The Arch Rhetorician,* 119 (no. 163), where it is translated as ″smoothness.″

[43]Aḥmad ibn Yūsuf al-Tīfāshī (d. 651/1253), author of works on precious stones and sex, also wrote a work on *badīʿ* which has not been preserved. See al-Ḥillī, *Sharḥ*, 72; Ibn Abī al-Iṣbaʿ, *Taḥrīr*, 91; Aḥmad ibn Muṣṭafá Tāshkubrī′zādah, *Miftāḥ al-Saʿādah wa-Miṣbāh al-Siyādah* (Hyderabad, 1977–1980), 1:182 (spelled as al-T.ghāshī); Bahāʾ al-Dīn Aḥmad ibn ʿAlī al-Subkī, *ʿArūs al-Afrāḥ fī Sharḥ Talkhīṣ al-Miftāḥ,* in Masʿūd ibn ʿUmar al-Taftāzānī et al., *Shurūḥ al-Talkhīṣ* (Cairo, 1937) 4:467 (here spelled as al-Shāshī). Before al-Tīfāshī, Usāmah Ibn Munqidh *(Badīʿ*, 134–39) offered a chapter on *al-ẓarāfah wa-al-suhūlah.*

[44]Not found in the consulted editions of Ibn Sinān al-Khafājī (d. 477/1074), *Sirr al-Faṣāḥah* (Cairo, 1932 and Beirut, 1982). Until this point, Ibn Ḥijjah is quoting, or near-quoting, al-Ḥillī′s commentary (*Sharḥ al-Kāfiyah*, 311), which has *ṭarāfah* instead of *ẓarāfah*).

[45]*Khizānah,* 554/1:478.

model, al-Ḥillī, who, in turn, merely collected those terms of *badī‘* that were current. Judging by the examples, *suhūlah* seems to be applied even more than *insijām* to poetry that is ″easy,″ in that it avoids difficult words, difficult syntax, and difficult thoughts. One example, by al-Bahā’ Zuhayr, is on the old conceit of offering to return a kiss as if it were a present that could be given back:[46]

Man lī bi-qalbin ashtarī- / hi min al-qulūbi al-qāsiyah
Wa-ilayka yā malika al-milā- / ḥi waqaftu ashkū ḥāliyah
Innī la-aṭlubu ḥājatan / laysat ‘alayka bi-khāfiyah
An‘im ‘alayya bi-qublatin / hibatan wa-illā ‘āriyah
Wa-u‘īduhā la-ka lā ‘adim- /ta bi-‘aynihā wa-kamā hiyah
Wa-idhā aradta ziyādatan / khudhhā wa-nafsī rāḍiyah[47]

[Who has a heart for me that I could buy, a hard one!
To you, O king of pretty ones, I′ve come with my complaint.
I want one thing; it will not be unknown to you:
Please make me happy with a kiss: a gift, or else a loan;
You′ll have it back precisely as it was, my dear!
But if you′d like some more, please take them, it′s my pleasure.]

The other, following section is entitled *ḥusn al-bayān,*[48] a term that should be taken in a vague and general sense, such as ″beautiful exposition, or clarity of expression.″ Ibn Ḥijjah describes it as follows:

> They say that it means the clear expression *(ibānah)* of what is in the soul in eloquent words that are remote from intricacy *(lubs)*, since the intention of it is to utter the sense by means of a lucid picture *(ikhrāj al-ma‘ná ilá al-ṣūrah al-wāḍiḥah)* and to convey it to the understanding of the recipient in the easiest manner.

---

[46]Cf. the joke told in Ibn Qutaybah, *‘Uyūn al-Akhbār* (Cairo, 1925–30), 2:55 and other sources; see Ulrich Marzolph, *Arabia Ridens* (Frankfurt am Main, 1992), 2:47 (no. 175).

[47]*Khizānah,* 556/2:480–81; Bahā’ al-Dīn Zuhayr ibn Muḥammad, *Dīwān,* ed. and transl. Edward Henry Palmer (Cambridge, 1876–77), 1:297–98 (text), 2:331 (rhymed translation, changing the gender of the addressee). The *Dīwān*′s version has ten lines (Ibn Ḥijjah quotes 2–3, 5–8). Some lines are quoted in *The Thousand and One Nights* (*Alf Laylah wa-Laylah* [Cairo, n.d.], 2:42–43).

[48]*Khizānah,* 557–58/2:482–83; see al-Ḥillī, *Sharḥ*, 309–10; Ibn Ma‘ṣūm, *Anwār,* 6:290–95; al-Nābulusī, *Nafaḥāt,* 321–22; Cachia, *The Arch Rhetorician*, 112–13 (no. 153, translated as ″articulateness″); Ibn Abī al-Iṣba‘, *Taḥrīr*, 489–93; idem, *Badī‘ al-Qur’ān*, 203–6; Badr al-Dīn Ibn Mālik, *Al-Miṣbāḥ* (Cairo, 1341), 92–93, al-Suyūṭī, *‘Uqūd,* 140.

In view of the more precise sense of ″imagery″ that the term *bayān* carried in Ibn Ḥijjah′s time, according to the more formal and scholastic study of eloquence and style, one might believe that here, too, he refers above all to imagery, seeing moreover that he speaks of a ″picture/image.″ Yet in the rest of the chapter and its illustrations this is not borne out.

Although *insijām* and related terms were introduced in studies on *badīʻ* at a relatively late stage, this does not mean that the concepts of fluency and seeming ease were absent from earlier phases. Both terms for eloquence, *bayān* and *balāghah,* near-synonyms before they acquired more specialized technical meanings, stress the clarity and communicativeness of eloquence that seem to favor easiness over obscurity. Jaʻfar Ibn Yaḥyá al-Barmakī is reported to have described true *bayān* as ″what is far from artifice *(ṣanʻah),* free of complexity *(taʻaqqud),* and not in need of interpretation *(ta'wīl)*″; this view was endorsed by al-Jāḥiẓ and many others.[49] *Suhūlah* is mentioned often, usually favorably. It is the first of forty-six stylistic traits of the poetry of ʻUmar Ibn Abī Rabīʻah listed in *Al-Aghānī* and attributed to Muṣʻab Ibn ʻAbd Allāh al-Zubayrī (uncle of al-Zubayr Ibn Bakkār, d. 256/870).[50] Particularly common is the concept of the ″seemingly easy,″ often expressed as *al-sahl al-mumtaniʻ,* or *al-muṭmiʻ al-mumtaniʻ* but found in other expressions. Ibn al-Muqaffaʻ is reported to have defined eloquence as ″what an ignorant person hears and thinks (mistakenly) he can do equally well.″[51] Isḥāq al-Mawṣilī (d. 235/850) called the poetry of Manṣūr al-Namarī ″easy of diction, difficult to aspire to″ *(sahl kalāmuh, ṣaʻb marāmuh).*[52] Ismā'īl, son of ʻAbd al-Ḥamīd Ibn Yaḥyá *al-kātib* (d. 132/749), defined a good prose writer as ″he who writes a letter so that people reading it imagine they can do as well, but when they try they cannot.″[53] Al-Aṣmāʻī is credited with a definition of poetry as ″what is concise, easy, delicate, and subtle of meaning; if you hear it you think you can reach that level, but if you try it, you find it far from your grasp. All the rest is mere versification.″[54] Ibrāhīm, son of al-ʻAbbās Ibn al-Aḥnaf, describing his father′s

poetry, said he had never found anything by a modern poet that was ″more difficult while being easy″ *(aṣʻab fī suhūlah).*[55] Similar sayings abound.

This preference for easy comprehension in poetry seems to contrast with the opinion that the basic difference between poetry and prose is that the former tends to obscurity and the latter to limpidity. In his epistle on the difference between prose and poetry, Abū Isḥāq Ibrāhīm Ibn Hilāl al-Ṣābī (d. 384/994) wrote that as a consequence of its prosodic restrictions ″the most splendid *(afkhar)* poetry is what is obscure *(mā ghamuḍa)* and only gives up its purport after some delay,″ whereas ″the most splendid epistolary prose *(tarassul)* is what has a clear meaning and gives up its purport as soon as one hears it.″[56] Al-Ṣābī, himself a prose writer, exaggerates: certainly in his day, the prestigious epistolary style tended to rival or surpass poetry in obscurity and ornateness. The issue of obscurity in Arabic literary criticism, from the scattered remarks by al-Jāḥiẓ to the important contribution on the topic by the sixth/thirteenth-century theorist Ḥāzim al-Qarṭājannī, has been studied by Albert Arazi in his article on this epistle.

Although critics and theorists, ancient and modern, often pay lip-service to the ideals of clarity and easiness in general terms, these are not very rewarding concepts to them since, like happy families to novelists, they offer few opportunities to show one′s critical and analytical skills. Easy poetry offers not enough of a challenge, nor does the concept of easiness itself. We must be grateful to Ibn Ḥijjah and other writers of *badīʻīyah* commentaries that they did not disdain to deal at length with easy poetry, stooping from being critics to being ″merely″ consumers of pleasant verse. To them, *insijām* and related ″figures″ are an excuse for quoting good or occasionally excellent poetry which does not depend primarily on artifice. The chapters serve to redress the balance to some extent between the artful and the seemingly artless. It is not strange that the *insijām* chapter is so extremely lengthy in Ibn Ḥijjah′s *Khizānah* and Ibn Maʻṣūm′s *Anwār al-Rabīʻ*: it helped them to give their works more of the character of a representative anthology. ″Fluency″ is neither absent from the poetry of the Mamluk period, nor particularly common in it: it is found in all periods. The phrase ″easy listening″ in the title of

Communication and Emotion: The Case of Ibn Nubātah´s *Kindertotenlieder*

THE SPEECHLESSNESS OF DEATH

> Ibn Nubātah said, bewailing the death of his son:
> Qālū ″fulānun qad jafat afkāruhū / naẓma al-qarīḍi fa-lā yakādu yujībuhū″
> Hayhāta naẓma al-shiʿri minhū baʿdamā / sakana al-turāba walīduhu wa-ḥabībuhū
> [″This man,″ they say, ″has turned away his thoughts from verse, he′ll barely give an answer.″
> Composing poetry? Impossible for him whose child / *Walīd*, whose dear beloved / *Ḥabīb* has settled in the earth![1]]

Speechlessness is a natural reaction to the death of one′s own child, and it seems as if it was the normal reaction for most Arabic poets, too. Only a small number of elegies on the death of a poet′s child has come down to us. Most, however, are remarkable indeed. The Hudhaylian poet Abū Dhu'ayb (d. ca. 28/649) composed an elegy on the death of his sons (*A-min al-manūni wa-raybihā tatawajjaʿū,* meter *kāmil),* which is not only Abū Dhu'ayb′s unquestioned masterpiece, but also one of the finest and most famous poems of the early Islamic period in general.[2] In the Abbasid period, Ibn al-Rūmī′s (d. 283/896) elegies on his relatives stand out, especially his exceedingly long dirge commemorating the death of his mother. But he also composed several shorter poems on the death of two of his sons.[3] Even more famous, however, are two of several cases in which poets were induced by the loss of their children to compose a whole series of dirges. The first case is

[1]Ibn Nubātah, *Dīwān* (Cairo, 1333/1905), 51 (meter *kāmil*). *Tawriyah*s are noted in my translations in the following way: The primarily intended meaning is underlined, the secondarily suggested meaning written in italics. In reading aloud, the words in italics should be omitted.

[2]Another early poem ascribed to a certain Bint al-Ḥārith is discussed in Gert Borg, *Mit Poesie vertreibe ich den Kummer meines Herzens: Eine Studie zur altarabischen Trauerklage der Frau* (Istanbul-Leiden, 1997), 199–204. Borg considers this poem as ″one of the peaks of Arabic literature″ (203).

[3]Pieter Smoor, ″Elegies and Other Poems on Death by Ibn al-Rūmī,″ *Journal of Arabic Literature* 27 (1996): 49–85.

Abū al-Ḥasan al-Tihāmī (d. 416/1025), whose three poems on the death of his son Abū al-Faḍl became the pillar of his fame, especially the ode rhyming in *–ārī* (meter *kāmil*) to which we will return later. The second case is Ibn Nubātah al-Miṣrī (d. 768/1366), who doubtlessly was, after Ṣafī al-Dīn al-Ḥillī, the greatest Arabic poet of the eighth/fourteenth century. His *dīwān,* which was compiled by his pupil al-Bashtakī from several smaller collections published previously by Ibn Nubātah himself, contains seven poems on the death of a child. At least three of these poems commemorate the death of a son named ʻAbd al-Raḥīm, but the others are so similar in tone and content that one may well assume that most of them were composed on the same occasion. Three of them are epigrams comprising two lines (one of them was quoted above), one is a seven liner, probably from Ibn Nubātah′s collection *al-Sabʻah al-Sayyārah*,[4] and the remaining three poems are long, sophisticated odes comprising 34 *(askanta qalbiya laḥdak*, meter *mujtathth),* 38 *(abkīka li-al-ḥasanayni al-khalqi wa-al-khuluqī*, meter *basīṭ),* and 57 *(Allāhu jāruka inna damiʻya jārī*, meter *kāmil)* lines respectively. Here I will focus on the last one.

Al-Tihāmī and Ibn Nubātah are not the only cases in which a poet composed a series of poems on the death of a child. One can name at least three other Arabic poets,[5] but there are also two such collections in German literature. Nearly simultaneously (without knowing of each other′s enterprises) Joseph von Eichendorff wrote a cycle of ten poems *(Auf meines Kindes Tod)* after the death of his daughter in 1832,[6] and Friedrich Rückert reacted to the death of two of his children in 1833–34 with the composition of an ensemble of more than five hundred (!) so-called *″Kindertotenlieder,″*[7] a term that seems suitable to me also for the (albeit much smaller) collections of al-Tihāmī and Ibn Nubātah. Obviously, the death of one or more children may have caused a similar reaction in completely different epochs and cultures. Instead of losing their speech, poets may seek recourse to speech itself, or rather, an artistic transformation of speech. Composing poetry could have complied with the emotional needs after the tremendous experience of losing a child; in other words, it could have had a cathartic effect on the poet.

---

[4]ʻUmar Mūsá Bāshā assumes that all seven lines in al-Bashtakī′s recension stem from Ibn Nubātah′s collection *Al-Sabʻah al-Sayyārah;* see ʻUmar Mūsá Bāshā, *Ibn Nubātah al-Miṣrī: Amīr Shuʻarāʼ al-Mashriq* (3rd ed., Cairo, 1992), 250–51.

[5]Other poets who composed similar sets were Ibn ʻAbd Rabbih (d. 328/940), ʻUmārah al-Yamanī (d. 569/1174), and Usāmah ibn Munqidh (d. 584/1188), but since there is nothing to suggest that Ibn Nubātah′s poems presuppose knowledge of these poems, we will not dwell upon them.

[6]Joseph von Eichendorff, *Werke*, ed. Jost Perfahl (3rd ed., Düsseldorf-Zürich, 1996), 1:243–48.

[7]Friedrich Rückert, *Kindertodtenlieder,* ed. Hans Wollschläger (Nördlingen, 1988); cf. also Eda Sagarra, ″Friedrich Rückert′s *Kindertotenlieder*,″ in *Representations of Childhood Death,* ed. Gilian Avery and Kimberley Reynolds (New York, 2000), 154–68.

At first sight, this process seems easy to understand. A poet is shaken by overwhelming emotions, whereupon he sets about to express them in a poem. The resulting poem would thus reflect the poet's emotions. But things are not so simple. Yet it is this simplification that made Ibn Nubātah's *Kindertotenlieder* attractive to some literary historians who are accustomed to criticizing Mamluk poetry for its allegedly mannered and unnatural style and are glad to find in Ibn Nubātah's elegies on the death of his son(s) poetry that conveys the immediate, unaffected expression of "genuine feelings."[8] Close inspection will reveal, however, that neither assumption is tenable: Mamluk poetry is not extraordinarily mannered, and Ibn Nubātah's dirges are highly rhetorical. Of course, nobody can seriously doubt the sincerity of Ibn Nubātah's feelings. But to transform emotions into literature means not only to transform them into speech, but also to transform them into an act of communication that conforms both to the rules of everyday communication and, furthermore, to the rules of a far more complex communication system of literature.

This can be shown clearly by the epigram initially quoted. Its two lines follow exactly the pattern of an ideal apologetic epigram. In line one, the problem is identified: in this case, the poet is reproached for his speechlessness. In line two, a justification for the criticized behavior must be given, usually in the form of a point which is often based on linguistic or literary ambiguity. In our sample, the poet justifies his silence by the death of his child. This justification is given a pointed form by the use of a *tawriyah* (double entendre). The words which designate the child, *walīd* "child" and *ḥabīb* "beloved," have a double meaning. They are also the names of the two classical poets al-Walīd al-Buḥturī and Abū Tammām (whose name was Ḥabīb ibn Aws). Together with the child, so we can understand the line, the poet lost his Buḥturī and his Abū Tammām. One can hardly imagine a better expression of the fact that a very individual, personal grief is not easy to communicate by means of a culturally prefigured and historically shaped set of rules. Ibn Nubātah's epigram is an accurate and intelligent (as well as intelligently ambiguous) formulation of this experience. The epigram is remarkable in another respect. Its point is achieved by a *tawriyah*, a form of witty wordplay, which in modern eyes would hardly be considered appropriate to the somber occasion. But, as this poem shows, one has to be very careful about generalizing our own prejudices and applying them to other times and cultures. As is shown by the *Kindertotenlieder* of the Arab poets as well as by those of Rückert and Eichendorff, poetry—including its artistic and playful element—can be helpful in coping with the grief of the loss of one's own beloved, for poets as well as for their public. It

---

[8]See my review of *Al-Ghazal fī al-'Aṣr al-Mamlūkī al-Awwal*, by Majd al-Afandī, *Mamlūk Studies Review* 3 (1999): 214–19.

may help the poet to prove his own abilities to create a work of art, and by way of the act of active creativity he may cope with the experience of loss. He may find relief from the experience of helplessness and passive suffering and prove to himself that he still has a share in life. Even more important may be the fact that a poem (or any other work of art) is a means to break the speechlessness of death, to resume communication and thereby to reassume a social role without having to interrupt the process of mourning.[9] Several such attempts to communicate about the death of one´s own child proved to be successful, as the collections of dirges on childhood death in Arabic and German literature show. Obviously, the public was willing to lend these poets an attentive ear.

COMMUNICATION WITH THE PAST: IBN NUBĀTAH AND AL-TIHĀMĪ

Arabic poetry is not only a communication with contemporary (and future) audiences, it is always also a communication with the past. From pre-Islamic times onwards, Arabic poetry displays an extraordinary intertextual density. Every line and every concept refers back to many other lines and concepts in a more complex but often direct way than is the case in most Western literatures. Scholars at first had difficulty understanding that a seeming similarity between individual poems and lines was not due to impotence or a lack of originality or the inflexibility of an all-pervading convention, but was rather the result of a closely woven net of intertextual strands that was deliberately cultivated and consciously achieved by the poets. Arabic poems were expected, at all periods, to be original. But the notion of originality was different from that of early modern and modern Europe. After all, there was no hereditary nobility in the Islamic world against which a bourgeoisie had to revolt by setting its own norms of individualism in opposition to the class consciousness of nobility, as was the case in Europe. And since this factor did not exist, there was no need to abolish a poetic tradition that was considered satisfactory and perfectly fulfilled the needs of its participants.

Instead, in premodern Islamic societies an extraordinary importance was given to poetry that can only occasionally be found in European societies. Since the degree of institutionalization was rather low in Islamic societies and social groups were only loosely organized, the most important strategy for the formation of social groups, the integration of their members, and their separation from other groups or social layers, was communication, that is, qualified participation in the group´s dominant discourses. The rank of the individual member was established by his excellence in mastering the respective discourses rather than by the posts

[9]Since the psychological aspects of poetry as a reaction to one´s relative´s death have been dealt with extensively by Th. Emil Homerin, I will touch on this subject only peripherally, see Th. Emil Homerin, ″A Bird Ascends the Night: Elegy and Immortality in Islam,″ revised ed., *Journal of the American Academy of Religion* 59 (1991): 247–79.

and positions he (often all too shortly) held. Now even a brief glance into any collection of biographies of the *a'yān* in the Arab world from the later Abbasid period onwards shows that obviously poetry was one of these discourses, and this is small wonder, since communication was the basic mechanism of the constitution of social groups, and poetry was the most privileged and prestigious form of communication. Therefore, the group of the ulama was equally characterized by their mastering the principles of Islamic law as well as by their participation in permanent poetic communication between its members, as the countless *ikhwānīyāt*, *muṭāraḥāt*, *tahānī'*, and *ta'āzī* [10] show with sufficient clarity—genres that have been deliberately avoided by the scholars of our days (since for experts in the field of literary studies these genres are not ″poetic″ enough, whereas experts in the field of social studies customarily skip poetry anyway). And since this mechanism persisted well into the nineteenth—if not even right into the twentieth—century, there was no reason to abolish the communicative potential that arose from the intertextual nature of Arabic poetry for about one and a half millennia. On the contrary, any fundamental break in tradition would have meant the loss of one of the most important social communication systems and therefore would have led to a social disintegration to nobody′s benefit—a consequence hardly believable in a society for which literature is at best a useless pastime, as it has become in our own times.

Therefore, it is no wonder that the Arabic-speaking—and rhyming—world tried at one and the same time to maintain a common poetic system as a communicative basis for a broad layer of society, as well as to demand originality as one of the most important qualities of a poem. To be original meant to be able to display a creative handling of tradition that surprised the educated public by its novelty and at the same time confirmed the value of tradition. This system functioned perfectly well until the forced introduction of Western literary norms in the second half of the nineteenth century. The fact that in the Mamluk and even in the Ottoman period many of the norms of early Arabic poetry were still considered valid, so that we find lots of poems that are not terribly different from those written by al-Mutanabbī, was ammunition for the European colonial enterprise in the nineteenth century to disparage contemporary Arabic literature and to construct the idea of a period of cultural stagnation and decadence lasting for many centuries in order to justify colonialist intervention (which could not have been sufficiently justified by economic and technological superiority alone). Western nineteenth-

[10]Because of the neglect of the Mamluk period and prejudices towards occasional poetry, these genres are so little studied that they even lack entries in *The Encyclopaedia of Islam* and the *Encyclopedia of Arabic Literature.*

century standards of originality are still prevalent among contemporary Arabic scholars and lead to many misinterpretations.[11]

A characteristic misunderstanding is M. Muḥammad′s treatment of Ibn Nubātah′s *rā'īyah*, the intertextual component of which he simply overlooked, though he did note some pre-Islamic lines, the alleged transformation of which by Ibn Nubātah he considered unsuccessful.[12] In general, however, he regarded the poem as sufficiently original, but criticized its seemingly rather unorganized structure (a point which will be discussed extensively later). He could discern neither a well-formed introduction nor several clearly separated text paragraphs. But in this case he was prepared to excuse the poet for these shortcomings (which they doubtlessly are in his eyes), since they gave testimony to the spontaneity, immediacy, and veracity of the poem: ″He did not allow himself to contemplate the structure of his poem. . . .″[13] ″When Ibn Nubātah started to elegize his son, he did not reflect upon the way in which he would carry out his elegy and relied on his natural disposition that would bring about the elegy in a form inscribed in his imagination. . . .″[14] All these speculations turn out to be futile when we discover that Ibn Nubātah′s poem was not a spontaneous, unpremeditated reaction, but a consciously and very carefully elaborated work of art that was the artistic transformation of another poem.

Ibn Nubātah′s choice was not spontaneous at all. He took as his model the only poem on the death of a child that had really gained fame, and, at the same time, dealt more extensively with the subject of childhood death itself.[15] It is a poem by Abū al-Ḥasan al-Tihāmī, a poet who was born in the Yemen, but spent most of his life in Iraq, Syria, and Palestine, before he died as a prisoner in Fatimid Egypt.[16] During his stay at Ramlah, where he held the office of a preacher, his son Abū al-Faḍl died as a child. Al-Tihāmī reacted by composing three elegies on Abū al-Faḍl′s death, a short one of 13 lines *(kāmil,* rhyme *–3qī*[17]*)* that need not

---

[11]In the case of elegies, the focus on immediacy and originality ″ignores the importance of standardized themes and their repetition, which are crucial to successful elegies as poets attempt to place their personal sorrow within more universal contexts.″ (Th. Emil Homerin, review of *Āfāq al-Shi'r al-'Arabī fī al-'Aṣr al-Mamlūkī,* by Yāsīn al-Ayyūbī, *MSR* 3 [1999]: 238).

[15]In contrast to Abū Dhu'ayb′s *'aynīyah,* which had gained fame enough, but only very superficially deals with the fact that the deceased were children.

[16]On al-Tihāmī see Fuat Sezgin, *Geschichte des Arabischen Schrifttums* (Leiden, 1967–), 2:478–79; Wolfhart P. Heinrichs, ″Al-Tihāmī,″ *The Encyclopaedia of Islam,* 2nd ed., 10:482; G. J. H. van Gelder, ″Al-Tihāmī, 'Alī ibn Muḥammad,″ *Encyclopedia of Arabic Literature,* ed. Julie Scott Meisami and Paul Starkey (London and New York, 1998), 2:772–73.

[17]*-3qī* means that the poem rhymes in *-qī* where *-qī* is preceded by one of the three short vowels,

concern us here, and two lengthy sister poems,[18] one of 81 lines *(ṭawīl,* rhyme *–xrī)* that was obviously an intertextual reaction to a poem by Abū ʿAbd al-Raḥmān al-ʿUtbī (d. 228/842–3) with the same rhyme and meter,[19] and a poem of 90 lines (*kāmil*, rhyme *-ārī*), which was to become al-Tihāmī's most famous poem, in fact, the pillar of his fame.[20]

The lifetime of al-Tihāmī, the later Buyid period, featuring such poets as al-Sharīf al-Raḍī (d. 406/1015), his brother al-Murtaḍá (d. 436/1044), and Mihyār al-Daylamī (d. 428/1036–37), is the first period that was considered by Western scholars as a period of decadence and stagnation, and were it not for al-Maʿarrī (d. 449/1058), its literature would have remained more or less unstudied. For Ibn Nubātah, however, who lived almost three and a half centuries later, al-Tihāmī was a classical author. In Ibn Nubātah's programmatic anthology *Maṭlaʿ al-Fawāʾid*, this period is represented by three authors (of fifteen altogether): al-Sharīf al-Raḍī, al-Tihāmī, and al-Maʿarrī (who, contrary to a common prejudice, was never neglected or even suppressed).[21] Al-Tihāmī's fame rested, as already mentioned, on his elegies for his son, especially on his *kāmil rāʾīyah*. His poems in this field were well known to Ibn Nubātah, who quotes four lines from al-Tihāmī's *kāmil rāʾīyah* and six lines from al-Tihāmī's *ṭawīl rāʾīyah* in the chapter on *rithāʾ* in his *Maṭlaʿ al-Fawāʾid*.[22] He may have quoted these lines without envisaging that one day he would come back to them after having experienced the same loss as their author.

Al-Tihāmī's elegy in *–ārī* is quoted in a great number of sources, to mention only al-Ṣafadī's *Wāfī* and al-Bākharzī's *Dumyah*.[23] One can assume, therefore,

---

a, u, or *i*, while *-xrī,* the next rhyme scheme mentioned, means that *-rī* is preceded by any consonant.

[18]So called in Yāqūt al-Rūmī, *Muʿjam al-Buldān*, ed. Ferdinand Wüstenfeld (Leipzig, 1866–70), 2:819 (article ″Al-Ramlah″).

[19]The poem is quoted (probably fragmentarily) in al-Khaṭīb al-Baghdādī, *Tārīkh Madīnat al-Salām,* ed. Bashshār ʿAwwād Maʿrūf (Beirut, 1422/2001), 3:564, and in other sources.

[20]Its text is quoted according to the following edition: *Dīwān Abī al-Ḥasan ʿAlī ibn Muḥammad al-Tihāmī*, ed. Muḥammad ibn ʿAbd al-Raḥmān al-Rabīʿ (Riyadh, 1982). The *ṭawīl* poem is found on pp. 338–43, the *kāmil* poem on pp. 308–22. In this poem, line 86 is a combination of two originally separate lines. The text has to be corrected according to al-Bākharzī, *Dumyat al-Qaṣr wa-ʿUṣrat Ahl al-ʿAṣr*, ed. Muḥammad al-Tūnijī (Beirut, 1414/1993), 1:140–49. Note that in my quotations of this poem, from line 86 onwards the number of the line in al-Rabīʿ's edition has to be augmented by one.

[21]Jamāl al-Dīn Ibn Nubātah, *Maṭlaʿ al-Fawāʾid wa-Majmaʿ al-Farāʾid,* ed. ʿUmar Mūsá Bāshā (Damascus, 1392/1972). My study on the Mamluk literary anthology with special reference to Ibn Nubātah's *Maṭlaʿ al-Fawāʾid* is in press: ″Literarische Anthologien der Mamlukenzeit,″ in *Die Mamluken: Studien zu ihrer Geschichte und Kultur im Gedenken an Ulrich Haarmann (1942–1999),* ed. S. Conermann and A. Pistor-Hatam (Hamburg, 2002).

[23]Further quotations are listed in al-Tihāmī, *Dīwān,* 320–22.

that the contemporary audience of Ibn Nubātah´s poem realized that this poem is a *mu'āraḍah* to al-Tihāmī´s famous ode, even upon hearing only its first line. Al-Tihāmī´s dirge starts with the following words:

> Ḥukmu al-manīyati fī al-barīyati jārī / mā hādhihī al-dunyā bi-dāri qarārī
> [Death´s judgment makes its rounds among the creatures. This world is not a permanent home.]

Ibn Nubātah´s introductory line refers to his model with the word *jār(ī)*, the most prominent word in al-Tihāmī´s text, because it is its first rhyme word. He does not simply quote it, however, but makes it the object of the hearer´s reflection, since Ibn Nubātah´s *jārī* is a *tawriyah* (the first *tawriyah* in the poem). It can mean "my helper" or "running," and at the same time the less probable meaning "helper" is suggested by the preceding word *jārukā*, which yields a *jinās tāmm* with the rhyme word. One may perhaps also mention the *jinās muḍāri'* between *manīyah* and *barīyah* in al-Tihāmī´s verse, which is echoed by another *jinās muḍāri'* in Ibn Nubātah´s poem (*awṭān*/*awṭār*), to which again more prominence is given in this poem, since it includes the second rhyme word:

> Allāhu jārukā inna dam'iya jārī / yā mūḥisha al-awṭāni wa-al-awṭārī
> [God be your helper as my tears are flowing / *my helpers*, oh you who have forsaken both my home and hope!]

As we can see, Ibn Nubātah uses rhetorical devices here to direct the hearer´s attention to the transformation of his model. But this is not their only function. Al-Tihāmī´s line is a very clear, straightforward, even proverbial statement that brings about sadness and comfort at the same time, for it reaffirms that whatever happens is part of an eternal and stable world order.[24] With Ibn Nubātah´s line, we enter into a troubled world. The first pronoun (in *jāruka*) does not refer to the hearer, as one might first think, but to the deceased child, but this only becomes clear at the end of the line. As unclear as the pronominal reference is the meaning of the first rhyme word, and the prominent similarity between *awṭān* and *awṭār* adds to the impression of uncertainty and ambiguity that is evoked in the hearer´s mind. But this is exactly the main difference between the two dirges. A grave and stately, well-constructed ode by al-Tihāmī is contrasted with a poem that presents a mind that cannot find a way out of a world of despair, uncertainty, and ambiguity. Ibn Nubātah manages to convey this message with his very first line, in which rhetorical devices are obviously far more than embellishments, for they serve not

[24]The most common motif of comfort in Arabic elegies is the statement that everybody must die; cf. Thomas Bauer, "Todesdiskurse im Islam," *Asiatische Studien* 53 (1999): 5–16.

only to refer to the poet´s model, but also to transform it into the poet´s own perspective.

References to al-Tihāmī´s poem permeate the whole of Ibn Nubātah´s *rā'īyah*, but it may suffice here to mention only two. The word *miḍmār* ″race course,″ the rhyme word of line 5, sticks out. The comparison of life to a race course may be more familiar to the reader of German baroque poetry[25] than to the reader of Arabic poetry, where it is—if my memory does not fail—not very common. It occurs, however, in al-Tihāmī´s poem, again with *miḍmār* as rhyme word (al-Tihāmī, line 27):

> La-qad jarayta kamā jaraytu li-ghāyatin / fa-balaghtahā wa-abūka fī al-miḍmārī
> [Towards a goal you ran like me and reached it, while your father is still on the race course.]

Al-Tihāmī´s striking and concise image of the experience of premature death of a beloved person is too good a line to be neglected by Ibn Nubātah. And at first sight his line (line 5) even seems strikingly similar to that of al-Tihāmī:

> Layta al-radá idh lam yada'ka ahāba bī / ḥattá nadūma ma'an 'alá miḍmārī
> [Would that destruction had summoned me as well, when it did not refrain from you, so that we could have pursued the same race course!]

Again al-Tihāmī supplies an interpretation of what happened. Life is a race course that inevitably leads to the same goal. The fact that some runners arrive first even if they had started later is nothing extraordinary; the child´s death is therefore again embedded in the cosmic order. In Ibn Nubātah´s line, the poet and the child are no more on the same race course. Instead, *radan* ″destruction″ (a word common in pre-Islamic poetry but not occurring in the Quran), which is personified here, has summoned only the child and left the father on a road of his own. Only destruction, appearing here as a vague promise, could have united them, but even this hope proved to be futile. Hopeless despair has taken the place of al-Tihāmī´s trust in the cosmic order.

The experience that the body of the deceased is still present in the grave but cannot communicate anymore is cast into the following words by al-Tihāmī (line 24):

---

[25]″Abend″ in Andreas Gryphius, *Gedichte*, ed. Adalbert Elschenbroich (Stuttgart, 1968), 11: ″Diß Leben koemmt mir vor als eine Renne-Bahn.″

> Ashkū bi‘ādaka lī wa-anta bi-mawḍi‘in / law-lā al-radá la-sami‘ta fīhi sirārī
> [How much I complain that you are so far, though you lie in a place in which you could hear my most secret talks were it not for destruction´s work!]

The situation of the father at the grave is transformed into a paradox: although the child is near, it cannot hear nor answer. Ibn Nubātah liked the line and quoted it in his *Maṭla‘ al-Fawā’id.*[26] But when he reverted to the *ma‘ná* in his own poem, it sounds rather different (line 12):

> Nā’ī al-liqā wa-ḥimāhu aqrabu maṭraḥan / yā bu‘da mujtami‘in wa-qurba mazārī

Though the rhyme word is different in this case, al-Tihāmī´s model is clearly visible. But whereas al-Tihāmī explains the paradox (˝if there were not destruction . . .˝), it remains unresolved in Ibn Nubātah´s line. Further, it is condensed to the first *miṣrā‘* of the verse: ˝A long way ´tis to meet him, though his shelter is the nearest spot.˝ There remains a second *miṣrā‘*, but again Ibn Nubātah gives no explanations. Instead, he simply repeats the *ma‘ná* in different words in the intensified form of an exclamation: ˝How far is union, yet how close the place to visit him!˝ This repetitiveness, this persistence in one and the same thought without suggesting to the hearer that there is a way out which is exemplified in this single line, is one of the main characteristics of the poem as a whole, as we shall see. The two *ṭibāq*s in this line *(nā’in/qarīb; bu‘d/qurb)* are again not embellishments, but appear as a logical consequence of the sense the poet wants to convey, just as is the case with his *tawriyāt* and *jināsāt,* as we have already seen.

Several other lines in Ibn Nubātah´s poem turn out to be transformations of a line by al-Tihāmī,[27] but these three examples may suffice for the moment to show that Ibn Nubātah´s *rā’īyah* was in no way a spontaneous creation, but a well-planned and deliberately-composed intertextual response to another poem. And since the author spared no effort in directing attention to exactly this fact, the poem presupposes a reader/hearer who is equally prepared and willing to invest considerable effort to decipher not only the complex poetic language of the poem itself, but also its many intertextual relations. For many readers, however, these efforts must have been rather satisfying, as the fame of this poem proves.

[26]P. 342.

[27]Cf. the chart below, p. 78.

THE TOPICS OF COMMUNICATION: PRIVATE SPHERE AND HEROIC AFFAIRS

As the single lines of the poem are most carefully elaborated, it is hard to believe that the structure of the poem—or rather, the obvious lack of an easily discernible structure—came about by accident. Again a glance at al-Tihāmī's poem may be helpful.

If Ibn Nubātah's *rā'īyah* leaves the impression of being more or less unstructured, one can hardly imagine a more clearly structured poem than al-Tihāmī's *rā'īyah*. The poem starts with an introduction contemplating the transitoriness of human life in general, culminating in a line that is the versification of a famous hadith (line 6):

> Fa-al-'ayshu nawmun wa-al-manīyatu yaqẓatun / wa-al-mar'u baynahumā khayālun sārī
> [Life is sleep, death is awakening, and man between them is a fleeting vision.]

Following this introduction (lines 1–11), al-Tihāmī turns to the *rithā'* proper (lines 12–39), in which he laments the death of Abū al-Faḍl, of which part we have already quoted lines 24 and 27. The third part, however, which stretches from line 40 to 63 and is the central part of the poem, comes somewhat as a surprise, for it is a formidable example of the *fakhr* genre, 33 lines in praise of the poet's "tribe" (whatever this may have been), introduced by the following lines (40–41):

> Law kunta tumna'u khāḍa dūnaka fityatun / minnā biḥāra 'awāmilin wa-shifārī
> Wa-daḥaw fuwayqa al-arḍi arḍan min damin / thumma inthanaw fa-banaw samā'a ghubārī
> [If a chance were given to defend you, young heroes from us had waded into a sea of spear-heads and sword-blades,
> unfolding above the earth a second earth of blood, erecting then, when they return, a sky of dust.]

This collective *fakhr* is followed by a fourth part, a sort of personal *fakhr,* that starts with a complaint about old age (64–75), leading into a passage (76–90) devoted to general wisdom *(ḥikmah),* self-glorification, and a complaint about the vileness of the poet's time and his contemporaries *(dhamm al-zamān)*.

Whereas proverbial expressions of the transitoriness of human glory or the complaint about old age seem to be absolutely appropriate themes for elegies, self-glorification and a praise of military prowess can hardly be reconciled with

our image of mourning. We must, however, take into account two basic premises of premodern Arabic poetry, first, its basically and consciously communicative nature, and second, the conception of the *rithā'* genre.

For Arabic literary theory, *rithā'* was considered a subcategory of *madīḥ,* since the essence of an elegy was praise. The only difference from panegyric poetry was that the object of praise is a dead person.[28] If, however, elegies are nothing but eulogies, it is inevitably difficult to compose elegies for people who could not have been the subject of an eulogy. Still in al-Tihāmī′s time, a poet who wanted to write panegyric poems on persons other than princes, rulers, governors, or generals had a difficult task. Basically, the *mamdūḥ* should be praised for two qualities: generosity and military prowess. Still al-Mutanabbī, forced in his youth to compose poetry on several *aṣḥāb al-qalam,* rarely and briefly mentions their professional proficiency, but instead tries to find some link to the theme of bravery, even if he has to go back to some real or imagined ancestors of the *mamdūḥ,* who may never have had a sword in their hands. If *quḍāh* and *kuttāb* are difficult to praise, it is easy to understand Ibn Rashīq when he stresses that ″one of the most difficult tasks for a poet is to elegize children and women, for he cannot say much about them, since their distinguishing qualities are but few″ *(li-ḍīq al-kalām 'alayhi fīhimā wa-qillat al-ṣifāt),*[29] which is not so much a misogynistic statement as a sober observation that the common poetic themes of *madḥ* are hardly reconcilable with the reality of the life of women and children. Therefore, it is no wonder that earlier poems on childhood death confine themselves mainly to the subjects of death, transitoriness, and mourning, and do not talk much about childhood. Often such poems are more similar to *zuhd* poetry than to *rithā'*. There are basically two ways to bring in the subject of childhood. First, the poet may say that the feelings of a father towards his child are especially intense. This is done by Ibn 'Abd Rabbih and al-Tihāmī several times, but it is a topic that can hardly be extended over more than one or two lines. The second, more important, strategy is the following: since the poetic tradition did not provide a stock of subjects and concepts to talk about what children were, poets instead talked about what the child did not become. If children did not achieve anything worth mentioning in poetry, the poet could nevertheless imagine what the child (in this case, of course, only sons come into question) would have achieved were he not deprived of his opportunities by premature death. By proceeding in this manner the poet was able to bring in all the conventional and indispensable themes of a eulogy and elegy proper and to compose a poem on a subject that was not given a recognized place in literary tradition.

---

[28]Gregor Schoeler: ″Die Einteilung der Dichtung bei den Arabern,″ *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 123 (1973): 9–55.

[29]Ibn Rashīq, *Al-'Umdah fī Ṣinā'at al-Shi'r wa-Naqdihī,* ed. al-Nabawī 'Abd al-Wāḥid Sha'lān (Cairo, 1420/2000), 2:843.

Al-Tihāmī makes use of this device in the most extensive way. In his *ṭawīl rā'īyah* the central part, beginning with line 39, starts with a complaint that the father's grief is doubled by the realization that his son could not take part in heroic military actions. To quote but one example (line 43), he could not prove his prowess:

> Bi-ḍarbin yuṭīru al-bīḍu min ḥarri waq'ihī / shu'ā'an ka-mā ṭāra al-sharāru min al-jamrī
> [With sword strokes so hot that beams are made to radiate like sparks that fly from live coal]

After mentioning other heroic actions that the child could not carry out because of his premature death, al-Tihāmī leads predictably from the subject of military prowess to that of generosity, until he concludes this section in line 54. The only other subject besides military virtues is, in line 51, al-Tihāmī's regret that his son never had the opportunity to bring forth the beauties of prose and poetry, a motif that was taken up by Ibn Nubātah in his lines 17–18. This long, central passage from lines 39–54 in al-Tihāmī's *ṭawīl* poem is the counterpart to the *fakhr* section in the sister poem in *kāmil*. Obviously we will only be able to understand the innovative quality of Ibn Nubātah's poem if we understand the function of these *fakhr* sections in al-Tihāmī's poems and the complete absence of the subject of heroism in Ibn Nubātah's poems.

First of all, we must not fall into the trap of reading these poems as primarily autobiographical. Al-Tihāmī is said to have originated from a family of low birth,[30] for which reason alone one should be admonished not to take the praise of the heroic deeds of his "tribe" too literally. And one would certainly miss the point if the heroic passage in his *ṭawīl* poem were interpreted as reflecting al-Tihāmī's dream that his son would have pursued a military career. In all probability al-Tihāmī did not dream of a son as soldier. Instead, one can conceive of two reasons for the inclusion of the heroic passages.

First, heroism is a good counterweight to the paralysis following the experience of a tremendous loss. Already in pre-Islamic poetry, heroic themes serve to counterbalance the loss of self confidence depicted in the *nasīb*, and the reassurance of one's own value in a social undertaking such as war is again a reasonable way to overcome the isolation, which is a consequence of the bereaved's retreat into his pain and his memories of past bliss.

The second and, I think, more important reason is the fact that a premodern Arabic poem, even if it deals with such an intimate subject as the death of one's own child, still remains primarily an act of communication directed by its author

---

[30]Heinrichs, "Al-Tihāmī," 482a.

to a specific public. From a communicative point of view, however, poems on childhood death are an extremely problematic genre. First, they have no immediate addressee. The child is already dead, the bereaved person is the poet himself (who is most affected, but cannot address a poem to himself), and since the child did not yet play a public social role, there is nobody other than the father/poet himself who can be consoled for having undergone a loss. In this respect, an elegy on children is different from genres like panegyric poetry or love poetry, in which there is an addressee (ruler, beloved) to whom the poem is (at least nominally) directed. In other genres in which there is no direct addressee, like wine, garden, or hunting poetry, still the recitation of the poems formed a part of special social occasions, whereas there was no special social situation for the performance of a poem on childhood death. Islamic funeral rites leave no room for the recitation of elegies. As a small poem, focussing on the subject of transitoriness, it may be used in the same way as any other *zuhd* poem and recited on occasions in which people used to exchange *zuhdīyāt*. But to make a great affair out of the death of a small child was more difficult. Al-Tihāmī wanted to make a monumental poem to match his monumental grief. Therefore he had to have recourse to the accepted ″monumental″ subjects like heroism and magnanimity, and he succeeded in composing a really impressive poem that gained wide circulation and indeed impressed its readers for centuries.

Three and a half centuries later many things had changed. Gradually the *kuttāb* had ceased to form a distinct social group with specific skills and knowledge and its own canon of literature. By the Mamluk period, their functions had been taken over completely by the ulama, a group of scholars who had undergone a more or less identical basic training and socialization. Ibn Nubātah and, a century later, Ibn Ḥajar al-ʻAsqalānī, to mention only two examples, had more or less the same sort of academic training. Both felt especially attracted to the fields of hadith and poetry, and it was by no means inevitable that the first should become a great poet and the other a great *muḥaddith.* And still Ibn Nubātah was the primary transmitter of Ibn Isḥāq′s *Sīrah* in Egypt, and Ibn Ḥajar left a small but fine *dīwān* of excellent poetry. As poets, both of them seized the opportunity to get in contact with the last remaining Arabic-speaking dynasties. Ibn Nubātah found a patron in al-Malik al-Mu'ayyad, the Ayyubid ruler of Ḥamāh, whereas Ibn Ḥajar entered the court of the Rasulids in the Yemen. These patrons gave them plenty of occasions to compose panegyric poems with traditional structure and thematic content, but in the end even for them the poetic relations to their fellow ulama proved to be more important than the favor of princes. Though Ibn Nubātah may have considered his *Mu'ayyadīyāt* as his primary achievement, his *dīwān* contains more poems addressed to the Subkīyūn, the Abnā' Faḍl Allāh and other ulama, and the same is, *mutatis mutandis,* also true for Ibn Ḥajar. Therefore,

in the literary system, the ulama had not only taken over the functions of the *kuttāb,* but also the functions of the princes as patrons, addressees of panegyric poetry, and as models of an ideal personality. Of course, Mamluk poets had no difficulty in praising a qadi, a *muḥaddith,* or a *naḥwī* for his scholarly abilities, and had no need to resort to the subject of military prowess, which had largely lost its former importance in Mamluk literature anyway, since the Mamluks themselves were only peripherally part of the literary system, whereas the civilian elite had (and was supposed to have) little to do with warfare.

The decreasing importance of the military elite in the system of literature did not lead, however, to a decreasing social importance of poetry in general or of the panegyric poem in particular. Just the opposite was the case. The former asymmetric poetic communication between a prince and patron as addressee on the one side and the poet as supplicant on the other had given way to a symmetric communication between ulama who were not only able to judge the literary merits of a poem addressed to them, but also to answer it with a poem of their own. And since the ulama had more or less monopolized poetic discourse, poetry became a means of integration with and delimitation from other social groups.[31] In addition, poetic skill could also serve as a means to distinguish oneself and to acquire social status. Therefore, in the Mamluk period we witness at one and the same time the disappearance of the professional poet as well as an increase in the social importance of poetry.

This new social role of poetry had, of course, consequences for poetry itself. The most obvious consequence is the increasing importance of genres which immediately serve the poetic communication between the ulama, such as congratulation poems *(tahāni'),* poems of condolence *(ta'āzī),* or poetic exchanges *(muṭāraḥāt),* not to mention the countless exchanges of riddles, epigrams (hence the unprecedented popularity of these forms in the Mamluk period), or rhymed *fatwá*s and other, even more occasional, forms of poetry. Poetry in praise of the Prophet is another genre that was particularly successful in Mamluk times since it could satisfy the emotional and religious requirements of the ulama as well as present their values and concerns.

Another consequence of the fact that poetry became more and more a means of communication among the members of a rather closely defined social group is its increasing intimacy. Obviously, ulama started to become interested in each others′ family life. While we know virtually nothing about the wife/wives and children of the most outstanding poets and scholars from the early and middle Abbasid period, al-Sakhāwī (to mention only one) provides the readers of his

Ḍaw' al-Lāmi' with plenty of gossip about the family life of his contemporaries, and gives a very detailed account of the marital crisis of his venerated teacher Ibn Ḥajar in his biography.[32] Unfavorable as his description might appear at first, it was certainly not malicious, since al-Sakhāwī honored his teacher almost as a saint. Instead, he might have considered the exposition of private details rather as a ″human touch″ that would add common interest to his biography and understanding for its subject. Ibn Ḥajar, in turn, was not devoid of this new interest in intimate matters. In one of the longest *ghazal* poems ever written, he made love of his wife and yearning for his child during his pilgrimage its main theme.[33] It is inconceivable that al-Buḥturī or even al-Mutanabbī could have composed a love poem about his own wife! A very striking example of this new tendency is also the fact that Abū Ḥayyān al-Gharnāṭī (d. 745/1344), the greatest grammarian of the Mamluk age, composed a series of nine poems on the death of his daughter Nuḍār, whereas elegies on daughters are hardly found before.[34] One may also mention the poet Ibrāhīm al-Mi'mār (d. 749/1348), a craftsman who was not really accepted as an equal among the ulama, but whose poetry was nonetheless highly esteemed for its striking, witty, and satirical portrayal of the pangs and pleasures of everyday life in Mamluk Cairo.[35] Perhaps the most striking and moving example of this tendency is Ibn Sūdūn′s (d. 868/1464) poem on the death of his mother, ″a very personal and intimate picture of the tender loving mother figure who spoils her little boy and cannot let him go, not even when he is married. . . . There is a certain bitter-sweetness in this poem, a melancholy sense of humor, and certainly a very personal touch.″[36] So unprecedented was this poem that Ibn Sūdūn could not help but include it in the section of *hazalīyāt,* because he could not find a ″serious″ traditional genre that would allow for such intimacy.

Emil Homerin, ″A Bird Ascends the Night″; idem, ″′I′ve Stayed by the Grave′: An Elegy/*nasīb* for Nuḍār,″ in *Literary Heritage of Classical Islam: Arabic and Islamic Studies in Honor of James A. Bellamy*, ed. Mustansir Mir (Princeton, 1993): 107–18; idem, ″Reflections on Poetry in the Mamluk Age,″ *MSR* 1 (1997): 63–85, esp. 80–85. These elegies display also a very private and intimate tone. Since Nuḍār, a very educated woman, was already 28 years old when she died, these poems do not fall into the category of childhood death. Nevertheless it is remarkable that Abū Ḥayyān composed a whole series of poems to commemorate her death, just as the poets who had lost their infant sons did.

As these examples show, people started not only to become interested in the private life of their fellows, but also came to think that other people′s personal fate was relevant for their own life and could provide a model, an encouragement, or a comfort in individual situations. And, as a last step, they considered these topics worthy of being treated in the prestigious medium of poetry. As a consequence, poems on childhood death also acquired a new importance. For now it was no longer more or less unimportant what a person had to say about the death of his child, and one no longer had to have recourse to a topic such as heroism that was publicly accepted as important in order to draw attention to a poem on the death of one′s own child. It seems as if this development had taken place even before recurrent epidemics of the plague made the death of children an everyday experience.

If we consider the social, literary, and public-health circumstances of his time, it is little wonder that Ibn Nubātah′s poems on the death of his children have a conspicuously different starting point from those of al-Tihāmī. Ibn Nubātah could take public interest in his poems for granted, even if he limited himself to the subject of the death of his own child. Therefore, his poems were never a soliloquy, nor can they be interpreted as the poet′s most intimate expression of his own feelings, especially because such feelings met with general appreciation. Instead, these poems were part of a dialogue between the afflicted poet and the literary public of his time; there is no reason to doubt that Ibn Nubātah was aware of this, and one may well assume that for Ibn Nubātah this form of literary conversation added a lot to the comforting effect of the composition of his poems. Of course, these poems were intended for publication. Unfortunately Ibn Nubātah′s own collections of his poetry are not yet published and we only have an anthology of Ibn Nubātah′s pupil al-Bashtakī at our disposal. Nevertheless, we may assume that more than one of the books Ibn Nubātah published himself contained *Kindertotenlieder*. The response given to his work corroborates our assumption. Already al-Bashtakī had enough material to include seven *Kindertotenlieder* in his recension of Ibn Nubātah′s *dīwān*. Ibn Nubātah′s elegies were copied out and exist in manuscripts independent of Ibn Nubātah′s *dīwān*.[37] Indeed, the most important and exhaustive consolation manual for parents who had lost their children was written by Ibn Abī Ḥajalah (725–76/1325–75), a near contemporary of Ibn Nubātah. In this book, entitled *Salwat al-Ḥazīn fī Mawt al-Banīn,* Ibn Abī Ḥajalah quotes first al-Tihāmī′s *kāmil rā'īyah*, followed by 26 lines from Ibn Nubātah′s *munāẓarah* on this poem.[38] And if Mamluk and Ottoman Arabic literature were better known, one would certainly be able to adduce many more examples of the

reception of Ibn Nubātah´s poems. But the examples mentioned may suffice to show that Ibn Nubātah´s poems can only be properly understood when their function in the system of communication of the ulama is taken into account.

Talking about Children

Mamluk society lacked the high degree of institutionalization of comparable Western societies. What was achieved here by institutions had to be achieved there by discourse, that is to say, by communication. This was true not only for scholars, but also for military rulers. As Al-Harithy has shown in a recent article, even the Mamluks themselves gave great weight to communication and tried by means of architecture, the most important form of art for them, ˝to enforce the dialogue between ruler and ruled˝ and developed the façades of their buildings ˝into a sophisticated means for addressing the urban environment and its dwellers.˝[39] It is amazing to see that this increasing importance of communication instead of representation had an effect on architecture that appears strikingly similar to the effect it had on certain forms of literature. Al-Harithy states that ˝the static symmetrical façades of the Fatimid period were replaced by dynamic façades in the Mamluk city . . ., and the emphasis on axial symmetry gave way to an emphasis on continuity.˝[40] This comparison with architecture does not, of course, imply that there was a general tendency towards less strictly structured poems in the Mamluk period. Rather, the bipartite *qaṣīdah* was still the prevalent model, which was applied even to the popular genre of praise of the Prophet. But it should demonstrate that it is not only in architecture that the message of works of art ˝is not literal or direct, but implied as part of the general Mamluk social discourse and practice.˝[41] In literature, this may mean a less ceremonial and representative attitude (one is even tempted to use the word ˝bourgeois,˝ would it not imply too many false connotations); a great flexibility to meet the immediate communication purposes; an increasingly feeble delimitation between the official and the unofficial, the high and the low, the public and the private, the serious and the humorous; and a very high density of messages and signals the reader has to decode.

In the case of Ibn Nubātah´s *rā'īyah*, the consequences are rather the same as noted by Al-Harithy for architecture. Al-Tihāmī´s representative structure—symmetrical, with heroism at its center—gives way to a supple structure that consists of small paragraphs of mostly three lines with a smooth transition between them. There is no clear thematic or structural break in the whole poem.

[41]Ibid.

The theme of heroism is no longer present (lines 49–52 will be dealt with later). Instead, I know of no other poem in which the theme of childhood is treated so extensively as here.[42] First, it is present linguistically through the repetition of the address *yā* / *a-bunayya* ″my little son!″ (lines 4, 20, 24, 25, 33, cf. also *banīya* line 36, *ṭifl* line 30, *al-aṣāghir* line 53) that is scattered over the greater part of the poem. The prevailing notion in dealing with childhood death is its prematureness. In this respect, Ibn Nubātah does not differ from al-Tihāmī. But of course the Mamluk scholar did not complain about heroism manqué. Instead, he focused on a general treatment of premature death. The first line in this series is line 6, which is the transformation of one of the heroic concepts of al-Tihāmī. In his self-praise we learn (line 81):

> Wa-al-nāsu mushtabihūna fī īrādihim / wa-tafāḍulu al-aqwāmi fī al-iṣdārī
> [When they are driven to the water-place, all people are alike. Their different ranks are only visible when they are driven back.]

In this line, coming into life is compared to the cattle′s coming to a watering place, and death, consequently, is the coming back from it. When Ibn Nubātah transformed this famous line, he compared life to a sojourn at a watering place and left out everything heroic. The son should not have proved his rank; he should have simply been given the opportunity to experience the whole cycle of life. Nevertheless, al-Tihāmī′s model remains visible, and I doubt that Ibn Nubātah′s line can be fully understood if one doesn′t know al-Tihāmī′s. Ibn Nubātah says (line 6):

> Layta al-qaḍá al-jārī tamahhala wirdahū / ḥattá ḥasibta ʻawāqiba al-iṣdārī
> [Would that destiny had delayed in its permanent course till you could have imagined the end of the route!]

The theme of premature death is carried on with similar images in line 7 (lightning that did not bring rain) and line 13 (a twig that did not bring forth fruit).

[42]I will not discuss here the importance of Ibn Nubātah′s poems for the study of the history of mentalities. There is, of course, no doubt that these poems reflect a far more intimate relation between fathers and their children than is posited by Philippe Ariès for pre-eighteenth-century Europe. But I suppose that this was already the case in the Abbasid period, even if a poet like al-Tihāmī still had difficulties in communicating it without recourse to motifs of heroism. A discernible change in mentalities between the time of al-Tihāmī and the Mamluk period cannot be established on the basis of the present material. On children in Islam see also Avner Giladi, *Children of Islam: Concepts of Childhood in Medieval Muslim Society* (London, 1992).

Several lines later, Ibn Nubātah for once expresses more concrete ideas. Again he seems to have followed al-Tihāmī´s example. In line 51 of his *ṭawīl* poem, al-Tihāmī mentions a single non-military deed that his son was prevented from performing by his early death. It is the only concession to the fact that he himself is a poet, not a warrior:

> Wa-lam tukhjil al-rawḍa al-anīqa bi-rawḍatin / mufawwafati al-arjā'i bi-al-naẓmi wa-al-nathrī
> [Nor could you shame the graceful garden by a garden, the sides of which are variegated by poetry and prose.]

In al-Tihāmī´s line, prose and poetry fit very well in the enumeration of heroic deeds of which they form a part, for they are seen as achievements the child failed to perform, and the child´s achievements are obviously something of which to be proud.

In Ibn Nubātah´s poem, the father does not complain about his son´s unachieved accomplishments, but about the fact that the father never had the pleasure of hearing his son talk to him (line 17), and when Ibn Nubātah states that his son´s ″feet of intelligence did not wade into the seas/meters of poetry″ (line 18), it is again not the disappointment of a father´s hopes, but rather the son´s missed opportunities that are regretted.[43] There is no connection between the child and the public. The only counterpart to the son is his own father. In this way the more intimate and private nature of Ibn Nubātah´s poem as compared to that of al-Tihāmī becomes visible even in the transformation of a single motif.

The motif of premature death undergoes several developments in the course of the poem. In lines 40 and 41 it is connected with the theme of grey hair that had its exposition in line 26. In lines 20 and 33, it is softened by stating that the son´s fate is everybody´s fate and the disparity between the lifespan of the son and that of the father became but small. In lines 21–22, finally, the motif is inverted altogether. The son´s death was not premature at all, since he did not miss anything in this world, and his death came just in time. Al-Tihāmī´s versification of the hadith saying that man´s life is ″but a fleeting vision″ (Ibn Nubātah clearly alludes to this line by means of the words *al-khayāli al-sārī*) is here pursued to its final consequence and applied to the son´s short life.

Premature death not only means missed opportunities but also avoided guilt. The child´s innocence, which is expressed in line 11, is a theme unknown to me from al-Tihāmī or any other author before Ibn Nubātah. As we see, the consequences

---

[43] Abū Ḥayyān´s daughter Nuḍār lived long enough to develop a good command of literary language. Her father does not fail to mention this in a line with extraordinary rhetorical sophistication; see Homerin, ″´I´ve Stayed by the Grave,´″ 112.

of an early death are illuminated from all angles in this poem, and the respective lines are scattered all over the poem and run through it like a thread. But premature death is not Ibn Nubātah's only way to mention childhood. He could hardly have done without the old motif saying that the death of a small child must not mean small sorrows. Ibn Nubātah presents this well-known motif, which was common already long before al-Tihāmī, skilfully in the form of a dialogue using very simple expressions (line 10). When the son is mentioned for the first time, it is said that he was a light burden when alive, whereas the grief for his death is heavy to bear (line 4). This is one of the few lines in which bodily features of the child play a role, as well as the father's way of dealing with his child. Paternal care is also mentioned in line 31.

It is striking that religion hardly plays a role in this poem. There are several unspecific references to "fate" that could just as well be pre-Islamic, but only two references to Islamic concepts. The first is the statement of line 3 that the child is in paradise (which is also mentioned in lines 22 and 34). This line is, by the way, another transformation of a line of al-Tihāmī, and I cannot help but imagine that whoever grasped this relation must have found it rather funny, despite the earnest subject of the poem. In the final section of al-Tihāmī's *kāmil* poem, the poet boasts of his insuperable virtues and tells us that he feels pity for those who envy him "for the heat of rancor gathered in their breast" (line 76), and he continues (line 77):

> Naẓarū ṣanīʿa Allāhi bī fa-ʿuyūnuhum / fī jannatin wa-qulūbuhum fī nārī
> [When they perceive how God acted towards me, their eyes dwell in heaven, their hearts in hell.]
